DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. District Court—Southern District of New York.

KNEE *v.* KARMIN *et al.*

Decided October 21, 1920.

(274 Fed. Rep., 720.)

PATENTS—1,231,382, FOR FELT WELTS FOR GLOVES, VALID AND INFRINGED.

The Knee patent, No. 1,231,382, for welts for gloves made of felt, and process for making the same, *Held* not invalid for anticipation or prior use and to disclose invention; also infringed.

IN EQUITY. Suit by Louis Knee against Max Karmin and David H. Flamer. Decree for complainant. Decree affirmed, 276 Fed. 724.

Mr. T. F. Bourne for the plaintiff.

Mr. J. G. M. Browne for the defendants.

HAND, *Dis. J.*:

This is the usual suit in equity on a patent to Louis Knee, No. 1,231,382. All five of the claims in the patent are in suit, and infringement is not denied; so that the question depends entirely upon validity.

The object of the patent is to provide felt welts adapted to be sewed in the seams of gloves and other articles of apparel, to be strong and durable, readily manufactured, used, and shipped to manufacturers, and to include certain novel details of improvement and combination of parts which are described in the claims. I need not go into the claims in detail. The first four, which are for the product of the process described in claim 5, are substantially similar in character, and it would serve no purpose to distinguish the slight details of the different elements which they set forth. It is better to describe what the invention is.

At the time the invention was made the patentee supposed that he was the first person who had discovered the use of felt welts in the manufacture of gloves, and in that respect it turned out, after he got into the Patent Office, that he was mistaken, for as early as 1868 there had been an invention of precisely that sort by one Busby, No. 81,855. But it appears from the evidence that Busby's invention never came into active use. In heavy workmen's gloves there were always welts, but until the price of leather, during the Great War, became very high, it was more satisfactory and not too expensive to use leather, instead of felt, and so Busby's invention lay unused and apparently unnoticed. Mr. Knapik, who was well versed in the art, knew nothing of felt welts; so we may safely say that Busby's invention never bore any fruit.

That, I know, makes no difference, because it was there. The patentee was chargeable with it, and he can claim no invention by substituting felt for leather. Therefore his patent must rest (and the Examiner made it rest) upon his manufacture of felt welts upon a single spool. This he did in the following way:

He placed a cardboard core upon the shaft of the well-known Adams machine; to this core he pasted the free end of a roll of felt a yard wide. The Adams machine then wound up the whole roll of felt upon itself; after this the roll was snugly covered with a piece of paper, pasted together so as to give a firm body to the roll. Then a rotary knife was placed upon the periphery of the roll, the roll was rotated in one direction and the knife in the other, and the knife was pressed down until it reached to, but not through, the core. The roll was then moved forward $\frac{1}{4}$ of an inch along the bar, and another slice was made, and so on until there were 40 slices along the whole roll. As in each case the knife did not cut the core, the resulting spool carried a set of 40 convoluted or wound felt strips, $\frac{1}{4}$ of an inch wide, all held upon an uncut cardboard core. This he packed and sent to the trade.

Coming, as it did, at a time when the price of leather was very high, this spool, after a slight hesitation on the part of the trade, met with so much favor that at the present time it has substantially, if not wholly, displaced the use of leather, and will continue to do so until leather becomes much cheaper than it now is. The plaintiff has about 35 per cent. of the trade. Shortly after plaintiff's goods came into the market, there appeared from Gloversville, N. Y., spools of felt welts, of about the same width, wound as any spool is wound, in one continuous strand. This has not successfully competed with the plaintiff's goods, and probably for the reason that it is not as con-

venient as is his, for his welts unroll without any rotation of the spool as a whole, and do not become tangled, as does the Gloversville spool.

The only art cited in the Patent Office, except the patent of Busby, were two other patents—one to Coe, No. 929,537, and one to Smith, No. 1,031,263. Coe's patent was for a roll of metallic leaf, in narrow convolutions, similar in general appearance to the plaintiff's felt welt; but the patentee prescribes that the core shall be cut through. Each of the rolls is therefore a small spool, and as the substance was of a kind which would readily break down, the patentee provided two guards on each side. It is quite clear that he did not think of leaving the core uncut and the metallic leaf all on one large spool.

Smith, who attempted a similar invention for metallic leaf, built up his core in a series of cylinders; but he did not (why, we do not know) cut the leaf when rolled upon the core into slices of the requisite width. Therefore we have, on the one hand, Smith contributing one part of the invention, and Coe contributing the other part, but neither of them combining, even in metallic leaf, the whole invention as the plaintiff combined it. As all three of these patents were cited by the Examiner, I should have to be very clear before I held that there was no invention over them.

There remains, then, the question of the prior art as applied to bindings. The patentee, like many others in New York, had made bindings for various kinds of clothing upon the Adams machine. The general practice was to cut through the core and separate the coils at once. Perhaps it required no invention, once one wanted to use felt welts made upon the Adams machine, to work out the idea of cutting only to the core; on that I need not pass. In any case, it so happens that there is no adequate proof in this case that any one had done it, either in the case of felt or of any other material. There is, to be sure, evidence of such a practice in the case of cambric and cotton bindings; but even in those cases the proof is not sufficient.

The first of these supposed uses is that of the defendant himself, who says that he at several times made up cotton spools on a single core. The only occasion where he specifies the date with any exactness is a sale to a man named Shapiro, in the city of New York, and this date he places in March, 1914, and attempts to corroborate himself by his ledger, which shows an entry of a sale made to Shapiro. This, he says, was made of binding material on a core, which was cut just as the plaintiff's was cut. In the first place, this necessarily rests upon his recollection, for the entry itself does not describe this feature of the article sold, nor indeed does it describe the article in any way at all.

But the date of the entry itself is very doubtful, and really, so far as it is a corroboration at all, depends upon whether you read the page on which it occurs as the first page of the ledger entries against Shapiro, or the second page. The two pages are numbered 88 and 89, and if one supposes that the entries were made in the sequence of the pages there is no reason to assume that the entry was not made in March, 1914. However, at the bottom of page 89 there occurs, apparently in the bookkeeper's handwriting, the words "see page 88," and that to my mind shows that the account was opened on page 89, and, when page 89 was filled, instead of turning over to page 90, the bookkeeper put the rest of the account on page 88. If she had done that, she would make just such an entry at the bottom of page 89 as she did. If one reads it in that sense the sequence of months is entirely consistent, but the year would necessarily be 1916.

The plaintiff's date of invention has been carried back of March, 1916; so it seems to me that the date on which the defendant relied is very far from being proved beyond a reasonable doubt, even if the entry itself was sufficient corroboration, which I do not think it is. So much for the defendant's use.

The only other two uses are of one Kulchinsky and of the plaintiff's own witness, Freydberg. Kulchinsky says he cut binding for sailors' collars in the way in which the plaintiff has done with felt. He places this date in an uncertain way. The first time he testified he said it was six or seven years ago. When he was cross-examined as to the way in which he fixed the date, he said that it was before he had moved from Division street, which was three years ago, and finally in his testimony he said that it was four, five, or six years ago. It is perfectly clear that his recollection was uncertain as to how long before he moved from Division street he did this. The witness, in my judgment, was an exceptionally honest witness; he was telling the truth so far as he could remember it, but he did not remember it accurately enough. Plaintiff's patent has now been dated back to October, 1915, and therefore it must be over five years ago to be a valid anticipation, and it is quite clear that, under the rigid rules which are applicable to proof of anticipation, the defendant cannot succeed. Therefore I do not accept this prior use.

The remaining prior use is of one Freydberg, called by the plaintiff, and, so far as I could see, also an exceptionally reliable witness. He said at a time which he places as eight years ago, although he has no means of fixing it definitely in his mind, that in one stage of the process of making a doubled binder he did not cut through the core. His process was this: On an Adams or similar machine he wound up the fabric, which was a heavy glazed cambric; then he made slices three-eighths of an inch apart, down to the core. He had another machine by which he could fold these three-eighths of an inch slices so as to make three-sixteenths of an inch slices. This second machine he called a gage.

It is quite clear, from his own statement, that this was never an article of manufacture; it was but a step in a process of his own to make something else, and I think it does not come under the requirement of the statute, that the article must be either in public use or offered for sale. Apparently it was done only once in his shop, and, as I have said, as an intermediate step in the manufacture of another article, and it seems to me that it would be improper to say he had anticipated the invention, merely because in one stage of an incompleted process the spools were like the plaintiff's.

Therefore, in the case of all these prior uses, I must find that they are not proved, and the question therefore resolves itself into this: Was it invention on the part of the plaintiff, knowing the method of manufacture of the Adams machine in the case of cottons, cambrics, and so on, to stop the process as usually carried out and to make a new article of commerce? I have already said that, merely as a question of manufacture, once the need was suggested, perhaps that would not be invention; but it seems to me that to make this spool of felt for the purpose of felt gloves, an article which had never been made before, was invention. No one had thought of it. The need was pressing. It leaped at once into very marked approval of the trade, and at least one other manufacture had tried it and had not succeeded.

I do not forget the fact that the general rule is that a mere change in material is not sufficient for a patent; but I must again recur to the fact that the plaintiff not only changed the material, but he made what was in fact novel. Novelty is established; the question is of invention, and that question must depend upon whether the plaintiff, in seeing the opportunity which the high price of leather gave, did not show an ingenuity which justified him in obtaining a patent in the slight modification of the use of the Adams machine, which turned out something never made before, and extremely useful in that particular contingency. I think he did. For that reason it seems to me that I ought not to upset the conclusion of the Examiner that this was a good invention. It may have a very limited life; when the price of leather falls again it may go out altogether, but, in my judgment, it took more than an everyday imagination to perceive the opportunity that the trade offered, and to meet it, as he has alone been able to meet it.

In making his invention he was undoubtedly very happily placed, because he was familiar with the kindred art of rolling of cotton and cambric bindings in a very similar way; but for one reason or another (just what it is impossible now to say) he was the first, and he alone thought of the modification which answered the needs of the moment. That, I think, is sufficient for invention.

Plaintiff may therefore take a decree, with costs, and the decree will be on all claims.

U. S. Circuit Court of Appeals—Second Circuit.

KNEE *v.* KARMIN *et al.*

Decided May 11, 1921.

[274 Fed. Rep., 724.]

APPEAL from the District Court of the United States for the Southern District of New York.

Suit in equity by Louis Knee against Max Karmin and David H. Flanser. Decree for complainant, (274 Fed., 720,) and defendants appeal. Affirmed.

Mr. Barnett E. Kopelman (*Mr. Joseph G. M. Browne* of counsel) for the appellants.

Mr. T. F. Bourne, for the appellee.

Before ROGERS, HOUGH, and MANTON, Circuit Judges.

Per CURIAM:

Decree affirmed.

ADJUDICATED PATENTS.

(U. S. D. C. Md.) The Riley patent, No. 1,152,222, for improvement in underfeed stokers, *Held* valid and infringed. *Sanford Riley Stoker Co.* v. *Frederick Iron & Steel Co.*, 274 Fed. Rep., 864.

(U. S. D. C. Md.) The Taylor patent, No. 778,812, for underfeed stoker, *Held* valid and infringed. *American Engineering Co.* v. *Frederick Engineering Co.*, 274 Fed. Rep., 861.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 292—No. 3. TUESDAY, NOVEMBER 15, 1921. Price—$5 per year.

[PUBLISHED NOVEMBER 22, 1921.]

The OFFICIAL GAZETTE is issued under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Nolan Act—Reciprocity of the Laws of the French Zone of the Shereefian Empire Recognized.

(ORDER No. 2,708.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., November 4, 1921.

Notice is hereby given that the laws of the French Zone of the Shereefian Empire are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) and that consequently all the privileges specified in said act will be extended to its citizens.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 31, 1921.

Golden Laxative Coffee Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Goode & Dunkle, 19 and 21 Pike street, Covington, Ky., and Charles I. Cook, 501 Main street, Menominee, Mich., for registrations of trade-marks and trade-mark registered March 3, 1896, No. 27,803, to Golden Laxative Coffee Co., Ayer, Mass., and a notice of such declaration sent by registered mail to said Golden Laxative Coffee Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Golden Laxative Coffee Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., November 9, 1921.

Adolph Fuchs, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Joseph R. Pellegrino, Massena, N. Y., for patent and patent granted December 18, 1919, No. 1,325,193, to Adolph Fuchs, 238 Holbrook avenue, Detroit, Mich., and a notice of such declaration sent by registered mail to Fuchs at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Adolph Fuchs, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., November 9, 1921.

Russel & Miller Milling Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Edgar O. Challenger, of Produce Exchange, New York, N. Y., for registration of a trade-mark and trade-mark registered December 24, 1895, No. 27,508, to Russel & Miller Milling Co., of Valley City, N. D., and West Superior, Wis., and a notice of such declaration sent by registered mail to said Russel & Miller Milling Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Russel & Miller Milling Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

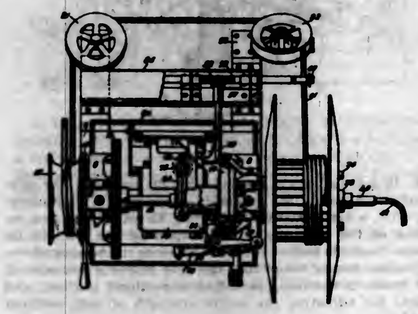
KARL FENNING,
Acting Commissioner.

Full Names of Applicants.

* * * All applications which disclose the full name of the applicant in the preamble of the specification will be received and considered as a sufficient compliance with Rule 40 of the Rules of Practice. (Order 821.)

When the full first name of the applicant does not appear either in his signature or in the preamble to the specification, the Examiner will, in his first official letter, require an amendment supplying the omission, and he will not pass the application to issue until the omission has been supplied, unless an affidavit shall have been filed setting forth that the full first name of the applicant is the one originally given by him. (Order 600.)

Condition of Applications Under Examination at Close of Business November 5, 1921.



Room No.	Divisions, Examiners, and subjects of inventions. (Oldest new case, Nov. 5; oldest amended, Dec. 24.)	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
		New.	Amended.	
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Sectional Unloaders.	June 10	June 9	778
126	2. BALDWIN, M., Bee Culture; Dairy; Medicines; Preparations; Preserving; Prunes; Tents, Canopies, Umbrellas, and Canes; Tobacco; Trees, Plants and Flowers.	Jan. 10	Mar. 26	1,703

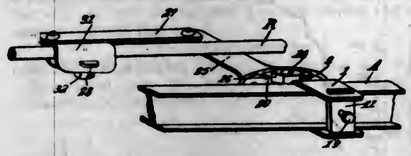
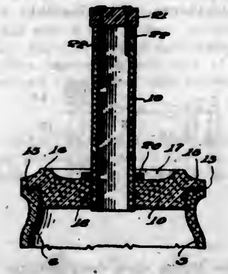
PATENTS



GRANTED NOVEMBER 15, 1921.

1,396,721. CABLE-REELING APPARATUS. GEORGE F. ATWOOD, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 24, 1919. Serial No. 306,462. 2 Claims. (Cl. 254—176.)

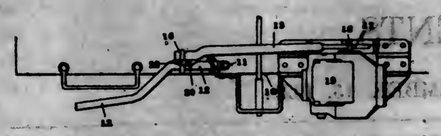


1. In a mechanism for reeling and unreeling a cable, a rotatable shaft, means for rotating said shaft in either direction, a capstan securely fixed at one end of the shaft, a cable reel rotatably mounted at the other end of the shaft, means intermediate said capstan and reel for changing the speed of rotation of the reel with respect to the capstan, and a controlling device operable to control the speed of rotation of said shaft and simultaneously to vary the speed ratio between the shaft and reel.

1,396,722. STEERING ATTACHMENT FOR AUTOMOBILES. EDWARD J. BALMOS, Devine, Tex. Filed Jan. 17, 1918. Serial No. 212,273. 1 Claim. (Cl. 280—89.)

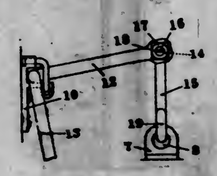
A steering attachment for automobiles, comprising opposed clamping disks having their marginal portions turned toward each other to provide recessed inner faces, friction disks mounted between said clamping disks and surrounded by the marginal portions, dished spring disks mounted on the outer faces of the respective clamping disks and having spaced slots extending thereinto from their peripheries, forming segmental wings, a disk interposed between the friction disks and having segmental wings at its periphery separated by arcuate peripheral recesses, an arm clamped between the clamping disks and having an opening in which the interposed disk is mounted to rotate, there being segmental recesses in the wall of the opening for the reception of these segmental wings, said recesses being slightly longer than the wings to permit a limited relative movement of the arm and interposed disk, a bolt extending through all of the disks and keyed to one of the spring disks, means on the bolt for varying the tension of the spring disks and the frictional engagement between the parts, a link connected to the free end of the arm, means for detachably securing the link to the steering mechanism of a vehicle, and means for detachably securing the clamping disks to a vehicle axle.

1,396,723. JAR AND APPARATUS FOR COLD-PACK METHOD OF CANNING FRUITS AND VEGETABLES. JOHN F. BURNS, St. Louis, Mo. Filed May 26, 1919. Serial No. 299,888. 9 Claims. (Cl. 215—74.)



1. In a jar and apparatus for mold pack method of canning fruits and vegetables, the combination of a jar, a cover therefor provided with an opening extending therethrough, a vent tube adapted to be inserted in said opening, a valve carried at the outlet end of said vent tube, and a resilient collar mounted upon said tube to limit its insertion into said openings and form a seal thereby.

1,396,724. EASEL. JAMES A. CAMERON, Chicago, Ill., assignor to Taprell, Loomis & Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 3, 1920. Serial No. 400,967. 3 Claims. (Cl. 40—148.)

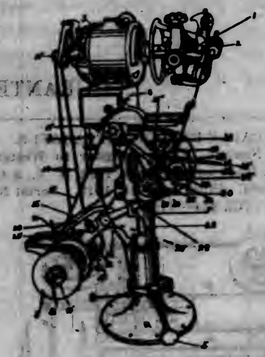


1. In a picture mount or the like, the combination with a backing and lateral flaps adapted to fold into overlapping relationship against the face thereof, or to be swung rearwardly to act as easel supports, of a retaining member extending rearwardly from the backing and provided with shoulders to engage and lock the flaps at their edges, said retaining member being foldable to inoperative position by an endwise bodily movement in the plane of the backing.

1,396,725. COUPLING-RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo. Filed Apr. 6, 1921. Serial No. 458,889. 10 Claims. (Cl. 213—59.)

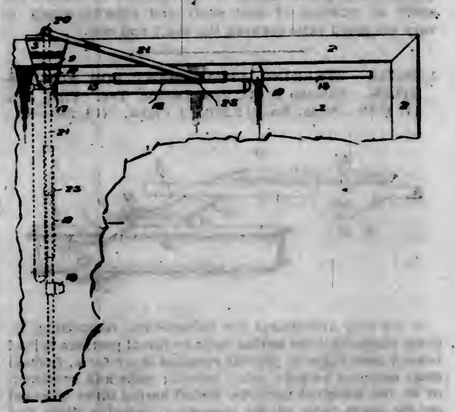
1. In a device of the class described, the combination with a car carrying a coupler provided with a locking pin, of a pivot bracket for the operating lever secured to the car, a push down operating lever pivoted on said bracket, an extension engaging with the locking pin, and a separate connecting bracket carried by said operating lever at a spaced distance outside said first named bracket and engaging with said extension to allow the movement of the latter to compensate for the longitudinal movement of the coupler.

1,396,726. COUPLING-RELEASE RIGGING. STERLING H. CAMPBELL, St. Louis, Mo. Filed Apr. 6, 1921. Serial No. 458,890. 3 Claims. (Cl. 213—59.)



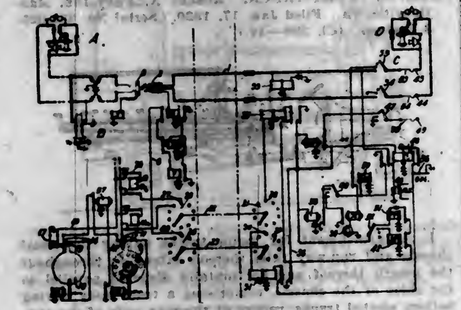
1. In a device of the class described, the combination with a car having a vertical plane coupler head provided with a locking pin, of a rock shaft carrying an integral operating arm provided with a horizontal eye formed in an integral portion of the arm, and a rigid connecting member pivoted in said eye to move only in a vertical plane in the direction of the length of the coupler, said member having an elongated open sided loop engaging with the eye of the coupler locking pin to allow lateral movement of the coupler head.

1,396,727. RUNNING-BOARD SADDLE. GRANT E. CARSON, Albany, N. Y. Filed July 29, 1921. Serial No. 488,268. 20 Claims. (Cl. 105—457.)



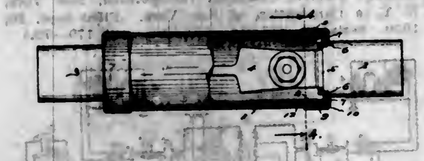
8. A running board saddle comprising a metal saddle member for supporting the running boards, a bearing block supporting the central portion of the saddle member and bearing blocks supporting the end portions of the saddle member, the saddle member having upwardly extending portions at the ends thereof to prevent the running boards from slipping off thereof.

1,396,728. UNREELING AND TENSION DEVICE. PENROSE E. CHAPMAN, St. Louis, Mo. Filed Apr. 24, 1917. Serial No. 164,115. 10 Claims. (Cl. 242—156.)



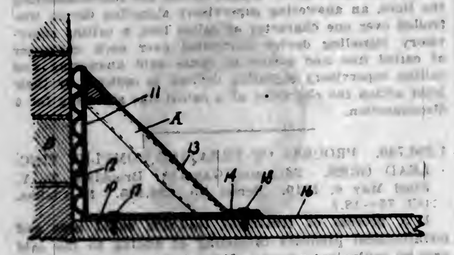
1. In a device of the character herein described, the combination of means for rotatably supporting a reel carrying wire, a brake mechanism acting to retard the free rotation of the reel, means acted upon by the wire in its course from the reel arranged to move as the tension thereon varies, means connecting the said movable means with the brake mechanism, including a resilient portion, and means for adjusting the active strength of said resilient portion.

1,396,729. CLEAR-VISION DEVICE FOR WINDSHIELDS. WILLIAM M. CHRISTOPHER, Tonawanda, N. Y. Filed Nov. 11, 1920. Serial No. 423,206. 7 Claims. (Cl. 15—50.)



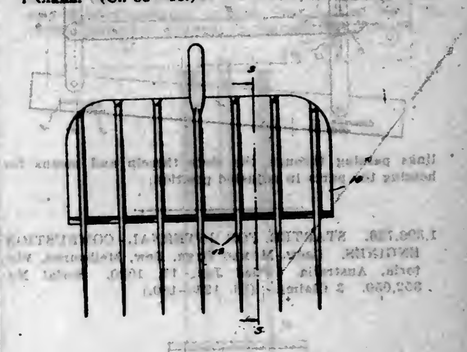
1. In a clear vision device for windshields, the combination with a pivotally mounted reservoir and a wick carried thereby which is fed by the reservoir, of means for attaching the device to a windshield, said reservoir and wick being arranged so that the reservoir will be in non-feeding position when turned one way and in feeding position when turned another way.

1,396,730. TELEPHONE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, and CHARLES L. GOODEUM, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1918. Serial No. 268,661. 10 Claims. (Cl. 179—27.)



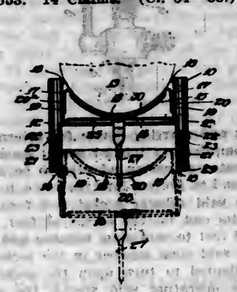
1. In a telephone system, a plurality of trunk lines, a plurality of switches at which each trunk line terminates, a circuit independent of and co-extensive with said trunk lines and means operating in synchronism for controlling any of said switches over said independent circuit.

1,396,731. CARTRIDGE-FUSE. ROBERT C. COLE, Hartford, Conn., assignor to The Johns-Pratt Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 24, 1920. Serial No. 353,752. 9 Claims. (Cl. 200—131.)



1. A cartridge fuse comprising a tubular insulating casing having undercut mortises in its ends, contact terminals extending through the ends of the casing, a fusible link connecting the terminals within the casing, key plates engaging the terminals and having lugs fitting the mortises in the ends of the casing, and caps thrust upon the ends of the casing over the key plates and held against removal thereby.

1,396,732. FLASHING. LOUIS W. CRAMER, St. Joseph, Mo. Filed July 23, 1920. Serial No. 398,347. 6 Claims. (Cl. 108—26.)

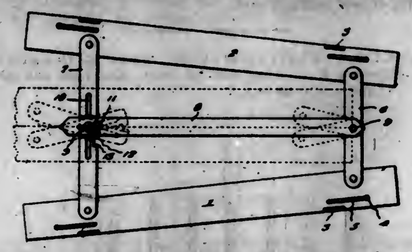


6. A flashing comprising a base, a vertical wall and an inclined wall connecting the base and vertical wall to provide a substantially triangular construction in cross section, and reinforcing elements secured to the inner face of said inclined wall.

1,396,733. CULTIVATOR-HOE. JOHN E. CUMMINGS, Wyoming, R. I. Filed Jan. 18, 1921. Serial No. 438,188. 1 Claim. (Cl. 55—44.)

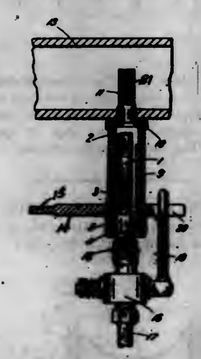
A tool of the class described comprising a tapering blade provided with a longitudinal cutting edge, a handle secured to the opposite edge of said blade, and a plurality of spaced tines secured to one side of said blade and extending beyond the cutting edge thereof.

1,396,734. JOURNAL-BOX LUBRICATOR. THOMAS W. DEMARREST, Pittsburgh, Pa. Filed Jan. 5, 1920. Serial No. 349,553. 14 Claims. (Cl. 64—35.)



1. A lubricating device comprising, in combination with a casing, of a distributer, a lubricant-supporting follower or riser, and a spring device arranged in said casing outside of the path of movement of said distributer and riser, and adapted to cause said riser to approach said distributer, the body of the spring device being below the riser when the riser is in its uppermost position, and above the riser when the riser is in its lowermost position.

1,396,735. TROUSERS-STRETCHER. ASHTON H. DOYLE, Johnson City, Tenn. Filed Aug. 17, 1920. Serial No. 404,091. 1 Claim. (Cl. 223—19.)

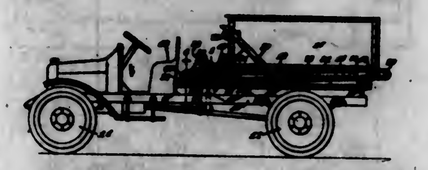


A device of the class described comprising two pairs of clamping plates, means for hinging together the plates of each pair at their outer edges, said plates having holes formed therein adjacent their outer edges, U-shaped springs having their cross pieces engaging said holes, links pivotally connected to said plates, one pair of links

being slotted, an operating bar to which the inner ends of the links are pivoted, the pivot pin for the slotted

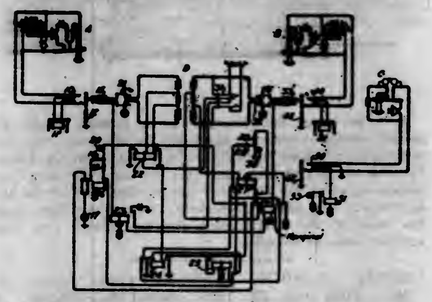
links passing through the slots therein and means for holding the parts in adjusted position.

1,396,736. STARTER FOR INTERNAL-COMBUSTION ENGINES. CECIL MUNRO DYER, Kew, Melbourne, Victoria, Australia. Filed Jan. 17, 1920. Serial No. 352,050. 3 Claims. (Cl. 123—180.)



1. A priming and starting device for internal combustion engines, comprising a tubular socket member having a hollow perforated extension adapted to be fitted to an induction pipe and to project into the same, a stem member fitting into said tubular socket and formed with a perforation at its end for the egress of fuel, means for supplying liquid fuel to said stem member and means for rigidly securing said stem member in the socket member, and a sleeve adapted to turn upon the socket member, with means for operating said sleeve, the sleeve and socket member having perforations therein which can be brought into and out of register by such turning movement.

1,396,737. BODY FOR MOTOR-CARS AND OTHER MOTOR AND RAILWAY VEHICLES. ERNEST WILLIAM EDWARDS, Carshalton, England. Filed June 10, 1920. Serial No. 388,007. 3 Claims. (Cl. 296—28.)

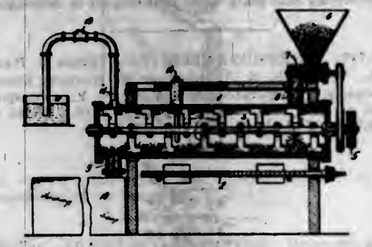


1. A body for motor and other vehicles made in sections, each section having tubes, lugs by which the adjacent ends of the tubes are connected, stay rods in tension by which the lugs are held in position with respect to the tubes, metal panels attached to the sections by bending them around the tubes and pins by which the panels are fixed to the tubes, substantially as set forth.

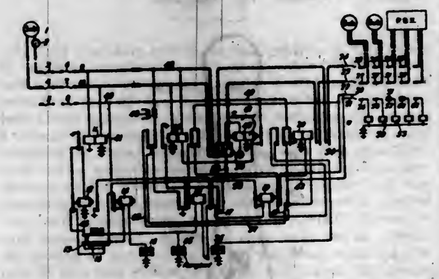
1,396,738. DUMP-TRUCK. ROBERT A. FONTAINE, Martinsville, Va. Filed Jan. 17, 1920. Serial No. 352,025. 3 Claims. (Cl. 298—14.)

1. An attachment for motor trucks having the usual chassis and run-way rails thereon extending throughout the length thereof and horizontally disposed parallel to the sides of the chassis, comprising a truck body having bottom slotted tracks, rollers at the rear ends of the run-way rails engaged in said slotted tracks, drums rotatably mounted on the chassis adjacent to the seat end thereof, means for operating the drums, a pair of booms pivoted at the axis of the drums and operable outwardly of the sides of the body, and connections between the forward end of the body and the drums whereby the body may be moved on its pivots to a dumping or carrying position and held at any desired inclination.

1,396,739. TELEPHONE-EXCHANGE SYSTEM. CLARENCE B. FOWLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1920. Serial No. 413,834. 5 Claims. (Cl. 179—72.)



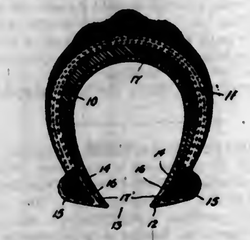
1. In a telephone exchange system, telephone lines of various characteristics, a link circuit for interconnecting the lines, an answering supervisory signaling device controlled over one character of called line, a calling supervisory signaling device controlled over each character of called line and means to cause said answering and calling supervisory signaling devices to indicate by their joint action the character of a called line signaling for a disconnection.



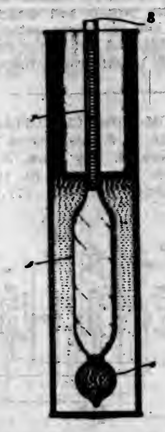
1,396,740. PROCESS OF TREATING COMPLEX ZINC-LEAD ORES. SOLOMON GANELIN, Brooklyn, N. Y. Filed May 6, 1919. Serial No. 295,165. 17 Claims. (Cl. 75—18.)

1. A process of treatment lead-zinc sulfid ores and metallurgical products consisting of adding to the said ores an equivalent amount of metal chlorid corresponding to the sulfid of lead (as well as of any arsenic and antimony which may also be present in the ore) feeding the

said admixture into a closed and continuously operating furnace heating mixing and progressing the said admixture therethrough and leaching out the formed chlorid of lead from the resultant pulverulent product taking precautions to prevent the reaction between the metal sulfids contained in the said product and the said dissolved lead chlorid and recovering the lead in a pure metallic state from the said lead chlorid substantially as described.

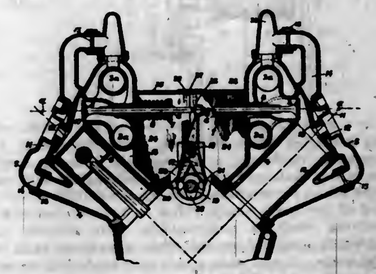


1,396,741. MACHINE-SWITCHING TELEPHONE SYSTEM. CHARLES L. GOODRUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 31, 1919. Serial No. 334,701. 8 Claims. (Cl. 179—18.)



8. In a machine switching telephone system wherein individual trunk lines appear as terminals in the same automatic switch, a number of individual lines, test terminals therefor, a number of trunk lines, test terminals therefor, sleeves mounted on certain of said trunk test terminals, and a controlling switch for said automatic switch adapted to be closed by the sleeves on said test terminals to move said automatic switch over busy trunk lines.

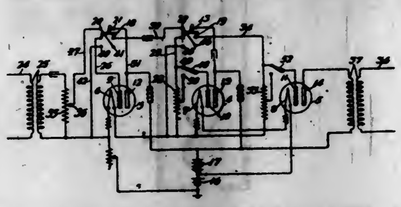
1,396,742. PNEUMATIC TIRE. CLARENCE FREDERICK ARTHUR GRAY, Montreal, Canada. Filed May 12, 1919. Serial No. 296,430. 3 Claims. (Cl. 152—13.)



1. A pneumatic tire, comprising an outer casing, an inner casing formed of a plurality of plies of varying lengths, whereby to form tapering ends, and a resilient cushion interposed between the casings and having reduced and tapering ends, the innermost ply of the inner casing and the tapering ends of the cushion terminating at substantially the same point.

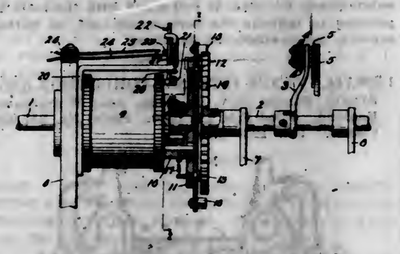
1,396,743. MILK AND CREAM TESTING APPARATUS. EUGENE GRAY and JAMES C. BICKLEY, Stoughton, Wis.; said Bickley assignor to said Gray. Filed Nov. 29, 1920. Serial No. 426,894. 1 Claim. (Cl. 265—46.)

An instrument for the testing of the butter fat contents of sweet milk and cream, comprising a hydrometer having a float, a weight at the bottom end thereof, an upstanding hollow neck, and a scale member within said neck, said scale member having marking visible through the neck and including graduations commencing with 1 at the lower end and increasing in value toward the upper end, there being a mark at the position of the indication 31 showing that this is the position assumed by the instrument in pure water of a temperature of 64° Fah. and the instrument being so proportioned that when immersed in milk of no butter fat content and having a temperature of substantially 64° Fah. it will stand with the scale at the zero position, and being so proportioned that when immesed in milk having any proportion of butter fat content and having a temperature of substantially 64° Fah. it will stand with the scale at the position to indicate the correct per cent. of butter fat content, substantially as described.



1,396,744. V-TYPE INTERNAL-COMBUSTION ENGINE. SYDNEY SLATER GUY, Compton, near Wolverhampton, England. Filed Feb. 11, 1920. Serial No. 357,952. 3 Claims. (Cl. 123—55.)

1. In an internal combustion engine, a crank case, valve rockers pivoted centrally thereon, a cam shaft for

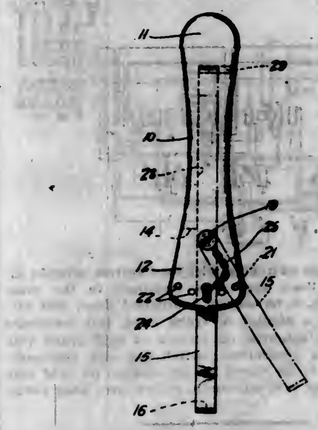


operating said rockers, two oppositely and outwardly inclined series of water jacketed cylinders mounted on said crank case and having integrally formed inlet and exhaust manifolds, valves in said cylinders arranged at an angle to the axes thereof and having their stems passing inwardly between said inlet and exhaust manifolds and adapted for operation by said rockers, hollow water cooled detachable cylinder heads mounted obliquely at the outside of said cylinders, a water outlet pipe at the top of each series of said cylinders, outside water connections between the cylinder jackets and detachable heads and between the latter and the water outlet pipes, said connections being divided, and means for elastically connecting the divided ends of said connections.

1,396,745. VACUUM-TUBE CIRCUITS. ARTHUR HADDOCK, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 19, 1919. Serial No. 298,069. 11 Claims. (Cl. 179—171.)

1. A vacuum tube system comprising an incoming line, an outgoing line, a plurality of vacuum tubes therebetween, each having an input circuit and an output circuit, switching means for varying the number of effective tubes between said lines, and switching means for varying the connection of the input circuit of one tube with the output circuit of the preceding tube.

1,396,746. TELEGRAPH SYSTEM. CARL HALTER, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1917. Serial No. 208,472. 5 Claims. (Cl. 178—53.)

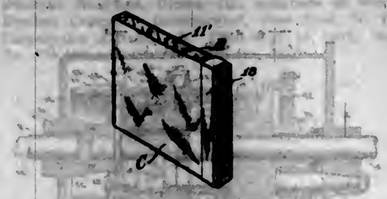


1. In a telegraph system, a correcting mechanism comprising a driving shaft, a driven shaft adjacent to and in alinement therewith, a commutator, a brush carried by the driven shaft and adapted to bear against said commutator with a predetermined pressure, a ratchet wheel on the end of the driven shaft, a disk on the adjacent end of the driving shaft, a reciprocating plate slidably and diametrically mounted on said disk, a pawl at each end of said plate, one of said pawls being adapted to normally engage said ratchet wheel, an armature carried by said plate, a tubular magnet surrounding said driving shaft and adapted to attract said armature to momentarily disconnect the pawls from the ratchet wheel and permit an angular retardation of the driven shaft with respect to the driving shaft, means for energizing said magnet, means for deenergizing said magnet, and means for retracting said plate when said magnet is deenergized.

1,396,747. TELEPHONE-RECEIVER. HENRY C. HARRISON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 10, 1918. Serial No. 253,356. 7 Claims. (Cl. 179—119.)

1. In a telephone receiver, a magnetic diaphragm, a set of three pole pieces oppositely disposed on either side of the diaphragm, means for giving opposing pole pieces constant opposite polarities, and additional means for giving opposing pole pieces variable like polarities.

1,396,748. SCREWDRIVER. EDWARD A. HEINTEMAN, Hoboken, N. J. Filed Aug. 30, 1920. Serial No. 406,848. 2 Claims. (Cl. 145—50.)

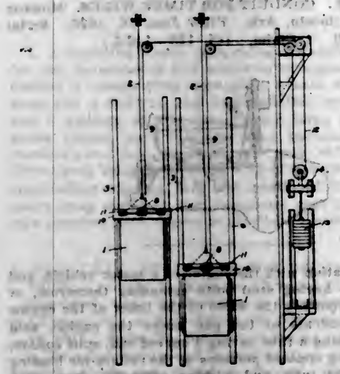


2. A screw-driver comprising a solid handle having a broadened bifurcated end containing a pivot screw and a plurality of spaced openings arranged concentric with said screw, a blade pivoted in said handle on said screw, said blade having an opening registerable with any of the openings in said handle, means passing through said openings for holding said blade in adjustment, means preventing loss of said holding means, and means in said handle permitting folding the blade therein.

1,396,749. CIGARETTE-PACKAGE. GEORGE W. HILL, New York, N. Y., assignor to American Tobacco Company, a Corporation of New Jersey. Filed Aug. 4, 1916. Serial No. 113,091. 4 Claims. (Cl. 206—41.)

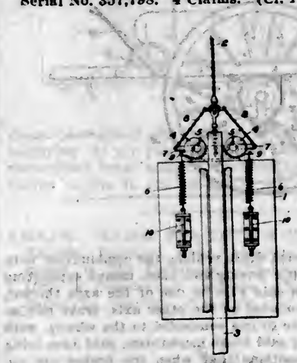
1. A cigarette package comprising an inner casing of relatively stiff material having a permanently open end and in which the cigarettes are initially packed, an intermediate wrapper sheet of relatively flexible material completely enveloping the inner cigarette-containing casing,

and an outer flexible pouch-like cover receiving the wrapper casing, said pouch-like cover also having a permanently



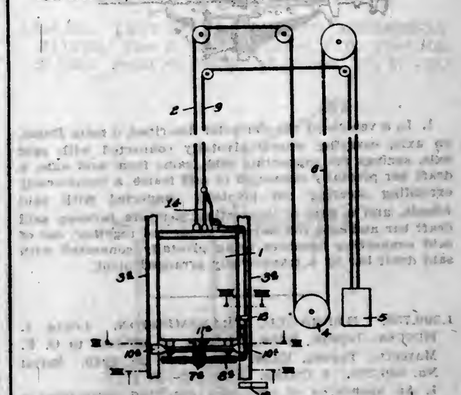
open end through which the adjacent portion of the wrapper casing is exposed.

1,396,750. SIGNALING-GENERATOR. OWEN E. HILL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1916. Serial No. 134,914. 3 Claims. (Cl. 179—81.)



1. In a signaling system, in combination, a line, means to impress signaling current from other stations upon said line and a station set associated with said line comprising a transformer having a plurality of windings inductively associated, a line circuit including one of said windings, a second circuit including another of said windings, a signal associated with said line circuit responsive to signaling currents from other stations irrespective of the condition of said second circuit and also independently responsive to signaling current derived from said transformer, a source of electric current in said second circuit, means to close said second circuit, the closing of said second circuit inducing signaling current in said first circuit to operate said signal, and means controlled by operation of said signal to interrupt said second circuit.

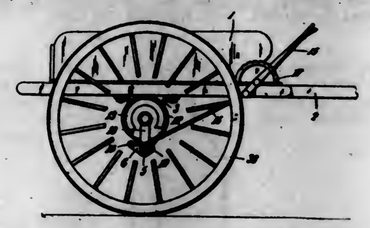
1,396,751. SAFETY MECHANISM FOR ELEVATORS. JOHN HOFFER, Marianna, Pa. Filed Jan. 10, 1920. Serial No. 350,558. 1 Claim. (Cl. 187—71.)



In a safety device for elevator cars and cages the combination of two cars hung in counterbalance, a safety cable extending from car to car and hanging intermediate its length in a loop susceptible to elongation and shortening, a tension-operated safety mechanism borne by one of said cars, to which safety mechanism said safety cable is connected, means rendered ineffective under major stress, relieving said safety mechanism under normal conditions of the weight of said looped safety cable, and a stop limiting the extent to which the loop in said safety cable may shorten, substantially as described.

1,396,752. SAFETY DEVICE FOR ELEVATOR-CAGES. JOHN HOFFER, Marianna, Pa. Filed Feb. 11, 1920. Serial No. 357,798. 4 Claims. (Cl. 187—87.)

1. In a safety device for elevator cages, the combination, with a car mounted in a runway and a post arranged adjacent the runway, of a post-engaging member borne by the car and movable to and from post-engaging position, the said member including two post-engaging cams turning in unison upon a common axis, the said cams being of unequal radii and the cam of larger radius being tined substantially as described.



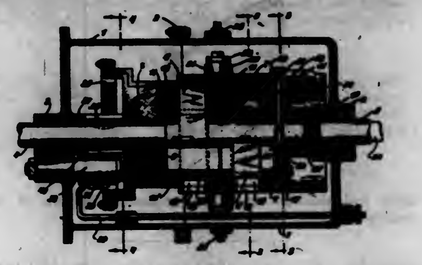
1,396,753. SAFETY DEVICE FOR ELEVATOR-CARS. JOHN HOFFER, Marianna, Pa. Filed Mar. 8, 1920. Serial No. 364,055. 4 Claims. (Cl. 187—86.)

1. In an elevator installation the combination of a car, a car-operating drum, a car-sustaining cable connecting car and drum, a counterweight exerting upon said drum a torque opposite in direction to that exerted thereon by said car, a second drum borne by said car, a normally slack

cable connecting said counterweight and said second drum, a safety device borne by said car, and operative connection between the aforesaid second drum and said safety device, substantially as described.

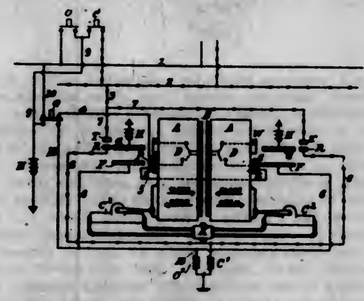
1,396,754. TWO-WHEELED DRAFT-VEHICLE. CHARLES HOSKING, Belgravia, Johannesburg, South Africa. Filed Jan. 26, 1920. Serial No. 354,236. 5 Claims. (Cl. 188—1.)

1. In a two-wheeled draft vehicle, the combination with the vehicle of an axle having two axes, means supporting the vehicle body on said axle by one of the axes thereof, wheels revolubly mounted on the other axis, brake mechanism including brake drums connected to the wheels, with means for operating said brake mechanism, said axes being in such relative positions that when the brakes are applied the axle tends to turn and to lift the vehicle body with it.



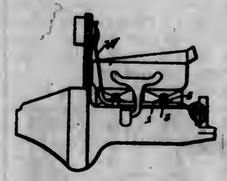
1,396,755. STEERING DEVICE. WARREN R. HUDSON, Troy, Ohio, assignor to The Troy Wagon Works Company, Troy, Ohio, a Corporation of Ohio. Filed Jan. 26, 1917. Serial No. 144,674. 9 Claims. (Cl. 280—93.5.)

1. In a vehicle of the character described, a main frame, an axle, carrying wheels pivotally connected with said axle, springs for supporting said frame from said axle, a draft bar pivotally connected to said frame, a transversely extending steering rod pivotally connected with said wheels, and a pair of connecting members between said draft bar and said rod swivelly connected together, one of said connecting members being pivotally connected with said draft bar by a transversely arranged pivot.



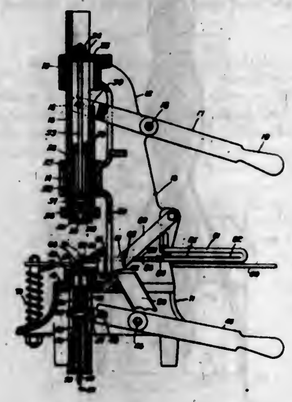
1,396,756. HYDRAULIC TRANSMISSION. LOUIS J. HUGUNS, Topeka, Kans., assignor of one-half to O. F. Marcotte, Topeka, Kans. Filed Dec. 20, 1919. Serial No. 346,255. 8 Claims. (Cl. 192—57.)

1. An apparatus of the class described comprising a driving shaft, an abutment thereon, a driven shaft, a cylinder thereon receiving said abutment, a casing surrounding said parts and adapted to contain fluid, inlet and outlet ports in the cylinder for permitting the fluid to pass thereinto, means for controlling said outlet ports and an eccentrically arranged hollow member within the cylinder and surrounding a part of the driving shaft and movable with the abutment and acting with the abutment to divide



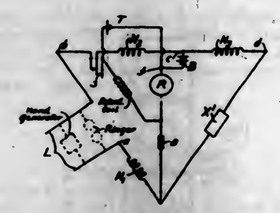
the cylinder into two parts during a part of the rotation of the abutment.

1,396,757. DOOR-CONTROL SYSTEM. LEE P. HYNES, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Apr. 16, 1920. Serial No. 374,322. 10 Claims. (Cl. 268—7.)



1. The combination with a pair of doors having a common control magnet, of a yielding shoe for each door, separate branch circuits from said magnet, and switches connected to the two door shoes and independently controlling said circuits.

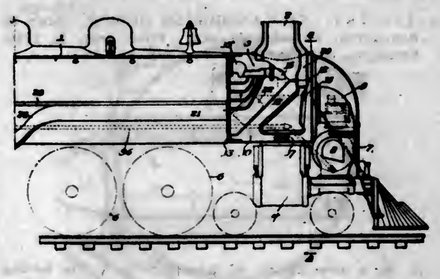
1,396,758. CONDUIT FOR TIMER-WIRES. MONROE JACKSON, Lincoln, Ark. Filed June 16, 1920. Serial No. 389,410. 1 Claim. (Cl. 123—146.5.)



The combination with the engine of a motor vehicle, and a valve plate having stud bolts extending therefrom, of means for supporting the wires of the timer of the engine out of the contents of the pan under the engine, said means comprising a tube having a curved end, split collars, means engaging opposed portions of the collars for binding them upon the tube, and a wing extending from each collar and having an aperture for the reception of one of the stud bolts.

1,396,759. MANUFACTURE OF INSULATING SUPPORTING-BLOCKS. ANNIE G. JILLARD, Berwyn, and STANLEY BRACKEN, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1919. Serial No. 324,489. 13 Claims. (Cl. 49—35.)

1. The method of forming supporting blocks of the class described, which consists in preparing the ends of the wires with anchorage portions and molding a glass block around the ends of the wires so prepared.

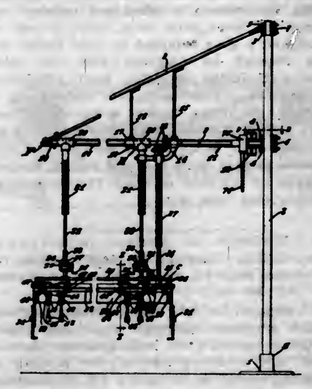


1,396,760. SIGNALING-CIRCUIT. KENNETH S. JOHNSON, Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1918. Serial No. 210,265. 29 Claims. (Cl. 179—81.)

1. A signaling circuit comprising a transformer, a path for the transmission and reception of signals, a path including a transmitting apparatus, a path of high resistance, and a receiver, said first and last mentioned paths and a winding of said transformer being included in a series circuit, said receiver being included in a path shunted about said high resistance path, said second mentioned path being included in a circuit shunted about said transformer winding, said last mentioned circuit, said receiver path and said high resistance path having a common terminal with respect to alternating signaling current.

1,396,761. APPARATUS FOR USING POWDERED FUEL. ALONZO G. KINYON, Chicago, Ill., assignor to Powdered Coal Engineering & Equipment Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 11, 1917. Serial No. 206,639. 7 Claims. (Cl. 110—57.)

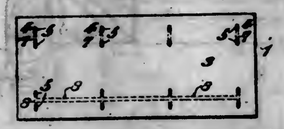
1. In a locomotive and in combination with the boiler, fire-box, stack and cylinders thereof, means for preheating the air for combustion in the firebox, comprising an air-heating chamber, a radiator therein having steam and air passages, connections between the cylinders and the steam passages of the radiator for supplying the latter with steam, a steam nozzle so related to the stack as to increase the draft therein, a connection from the



steam passages of the radiator to the nozzle, means for supplying the air passages of the radiator with air, and connections from said air chamber for utilizing the air heated therein in the fire-box.

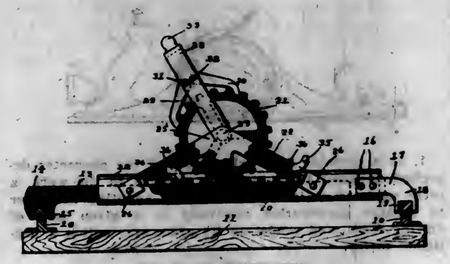
1,396,762. ROTOR FOR CUTTER-HEADS. GEORGE L. KRABBE, Portland, Oreg., assignor, by mesne assignments, to The Turbine Air Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 27, 1918. Serial No. 264,385. 3 Claims. (Cl. 253—2.)

1. In a portable fluid driven tool of the character described designed to be manually applied to the work, a rotor made of a light metal thereby adapting the rotor to greater acceleration relatively to a given unit of driving force, and rendering its gyroscopic action a negligible factor.



1,396,763. DEVICE FOR GRINDING AUTOMOBILE-VALVES. FRED B. KRALING, Lisbon, N. D. Filed Mar. 8, 1921. Serial No. 450,587. 5 Claims. (Cl. 51—29.)

1. In a valve grinding device, a carrier; a rotatable tool holder shiftable on the carrier; means for rotating



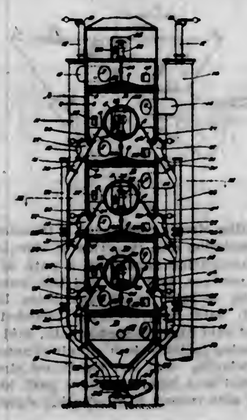
the holder; means for raising and lowering the carrier; and means for mounting the carrier for movement in an orbit about an approximately vertical axis.

1,396,764. TILE-ANCHORING DEVICE. JOHN B. LANCASTER, Philadelphia, Pa. Filed Sept. 3, 1919. Serial No. 321,300. 3 Claims. (Cl. 72—20.)

1. As a new article of manufacture, a tile having cast in the body thereof a plurality of projecting anchoring devices, each comprising a single longitudinal member embedded in said body, two limbs angularly disposed with reference to said longitudinal member and having their outer portions projecting from said body, and two terminals outwardly deflected from said limbs.

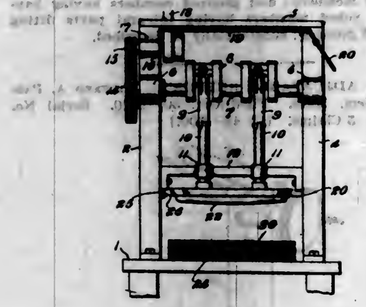
1,396,765. TRACK-LAYER. JOHN LOPITSKY, Livingston, W. Va. Filed Mar. 13, 1920. Serial No. 365,584. 1 Claim. (Cl. 254—43.)

A track rail setting device comprising a horizontally disposed hollow bar, a second bar slidable therein, said bars having transversely notched end members adapted to grip over the track rails, rack teeth formed on said second bar, and a gear mounted on said hollow bar and projecting through an aperture with the said rack teeth, and a U-shaped operating lever straddling said gear and pivoted concentric thereto and having a pair of oppositely projecting pawls mounted thereon and adapted to engage the said gear whereby the lever may rotate the said gear in opposite directions, and a pair of locking pawls pivoted upon the said hollow bar adjacent opposite ends of the said aperture therein and adapted to engage the said rack teeth.



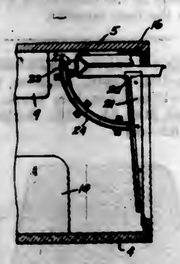
1,396,766. DOLL. BERTHA M. MCCLELLAND, Walton, N. Y. Filed July 11, 1919. Serial No. 310,145. 1 Claim. (Cl. 46—40.)

A doll composed of two body members arranged in longitudinal alinement integral with each other, said members being composed of a stuffed casing, the connected portion of said members having the stuffing omitted and the casing connected to form a flexible bending waist line, a head at the free end of each body member, each body member having a dress waist with a skirt portion forming a continuation thereof, said skirt portions being arranged one within the other and secured together at



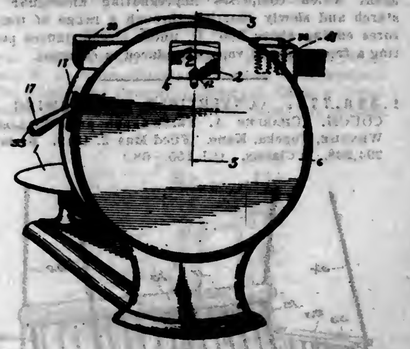
their upper and lower ends forming a double facing reversible skirt, one face of which is exposed when one body member is in view and the other exposed when the other body member is in view.

1,396,767. DRY GAS-CLEANER. FRANK R. MCGEE and GEORGE W. VERELAND, Steubenville, Ohio. Filed June 22, 1921. Serial No. 479,514. 8 Claims. (Cl. 183—34.)



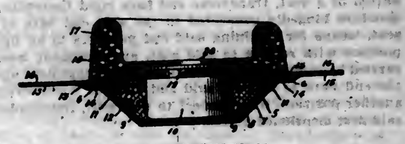
1. A dry gas cleaner arranged in tower formation comprising cylindrical side walls, top and bottom walls, a plurality of transversely arranged walls within said cylindrical side walls forming a plurality of individual cleaning chambers, said last named walls forming the top of one chamber and the bottom of the next chamber, a cylindrical housing supported by and forming a part of said walls, said housings having their ends abutting and opening through the side walls of said cleaner, a cleaning mat arranged to transversely divide each of said cleaning chambers, said mat being adapted to filter the dust from gases passing therethrough, an inlet port in each chamber below said mat, an outlet port in each chamber above said mat, and vibrating mechanism in said cylindrical housings adapted to vibrate and clean said mats.

1,396,768. METAL-SHEET-PACK-OPENING DEVICE. DANIEL L. MAINERI, Canton, Ohio, assignor, by mesne assignments, to United Alloy Steel Corporation, Canton, Ohio, a Corporation of New York. Filed Dec. 16, 1920. Serial No. 431,226. 6 Claims. (Cl. 271—18.)



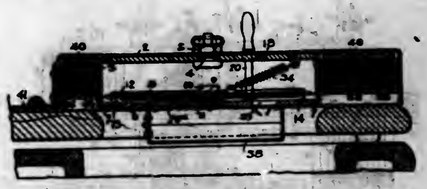
1. In a device of the character described, an upper die flattened upon its forward corners and a lower die flattened upon its forward corners and arranged in vertical alinement with said upper die.

1,396,769. FOLDING-DOOR STRUCTURE. GEORGE E. MATHER, Morsemere, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 6, 1919. Serial No. 322,131. 3 Claims. (Cl. 20—20.)



1. A folding door structure comprising a hingedly supported inner door section, an outer door section, an intermediate door section, hinge mechanisms connecting the intermediate door section with the inner and outer door sections, all three of said door sections being beveled toward the hinged pintles, guiding means for directing the folding movement of the outer door section, and guiding means for holding the intermediate door section substantially parallel to the doorway during the movement of the door sections.

1,396,770. METHOD AND APPARATUS FOR MAKING PHOTOGRAPHIC RECORDS. CHARLES E. K. MEES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 14, 1919. Serial No. 304,300. 16 Claims. (Cl. 95—5.)

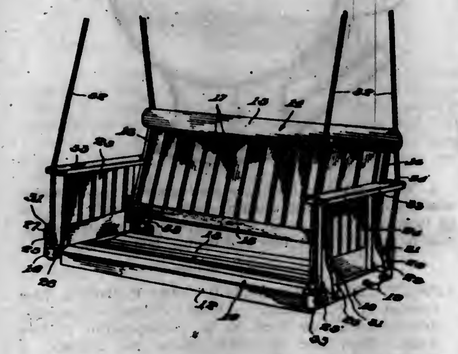


1. The method of making a photographic record which consists in moistening a surface which is visibly affected by light only when damp, submitting such moistened surface to the action of light and drying said surface.

1,396,771. RECEIVER-SHIELD. JOHN P. MINTON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 27, 1918. Serial No. 224,968. 5 Claims. (Cl. 179—182.)

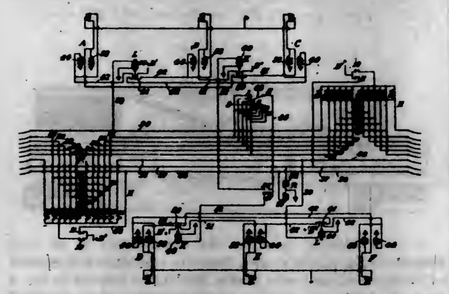
1. In combination with a telephone receiver, means for preventing external vibrations from reaching the receiver casing, said means including a shield of metal foil.

1,396,772. VENDING-MACHINE. DANIEL A. MOSITZ and WILLIAM J. PETERSON, McKeesport, Pa. Filed Apr. 15, 1921. Serial No. 461,494. 6 Claims. (Cl. 211—8.)



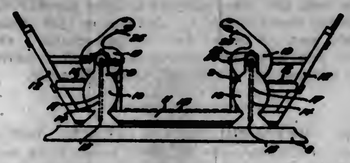
1. In a vending machine, the combination of an oval shaped casing, a like shaped frame in said casing, the walls of said casing and said frame forming a receptacle for a pack of sheets of paper, a rotary circular plate mounted on said frame overlapping said sheets in said receptacle at opposite points, sheets separating members carried by said plate, and coin controlled mechanism for releasing said rotary plate, whereby when said plate is rotated a sheet is separated from the pack and discharged from said receptacle.

1,396,773. PROCESS OF MAKING A PURIFYING AGENT. RUSSELL WILLIAM MUMFORD, New York, N. Y., assignor, by mesne assignments, to Darco Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 9, 1918. Serial No. 227,544. 6 Claims. (Cl. 127—2.)



1. The process of making a clarifying and decolorizing agent which comprises impregnating kieselguhr with starch and slowly charring through a range of temperatures ending above 600° C. under circumstances permitting a free escape of vapors produced in charring.

1,396,774. CONVERTIBLE PORCH-SWING AND COUCH. CHARLES A. NEISWENDER and WILLIAM C. WENTHE, Topeka, Kans. Filed May 2, 1919. Serial No. 294,208. 9 Claims. (Cl. 155—68.)

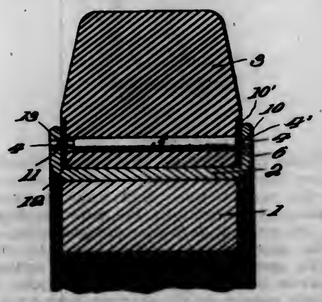


1. In a convertible porch swing and couch, the combination of a seat, transverse end bars rigid therewith, end members hingedly connected to the said end bars of said seat, means for retaining said end members in an upright position with respect to said seat, and abutment members carried by said hinged end members for engagement against the end bars to support said end member when swung to another position, with respect to said seat, independent of said first mentioned means.

1,396,775. TRAIN-LINE SYSTEM FOR CAR-DOORS. GEORGE E. OAKLEY, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Mar. 19, 1920. Serial No. 367,281. 11 Claims. (Cl. 268—7.)

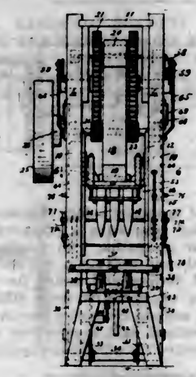
1. A train door-operating system comprising a plurality of train-wires, door-operating circuits on each car controlled by one of the respective train-wires, and switches for the several train-wires grouped at a common station, whereby the doors on individual cars of the train may be separately operated from said station through the respective train-wires.

1,396,776. SWING. HERMAN OELBE, Philadelphia, Pa. Filed Nov. 10, 1920. Serial No. 425,239. 3 Claims. (Cl. 155—68.)



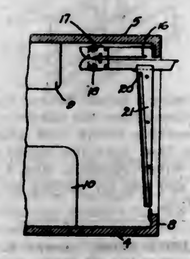
1. A swing including a base having laterally disposed pairs of standards; yoked suspension members having angularly extending trunnions rotatably mounted adjacent the tops of said standards; a swinging frame supported by said yoked members; and grooved members having handles, said yoked members having integral parts fitting within said grooves; substantially as described.

1,396,777. ADJUSTABLE SUPPORT. WILFRED A. PARENT, Salem, Mass. Filed Oct. 30, 1920. Serial No. 420,797. 5 Claims. (Cl. 45—100.)



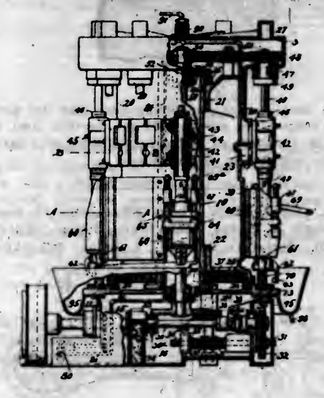
3. An adjustable support comprising a tubular base member having an elongated opening formed therein, a spacer block received within the base member, a flat supporting arm engaging with the spacer block, and a threaded clamping stud extending through the opening in the base member transversely of the supporting arm and adapted to clamp the arm to the base member.

1,396,778. VEHICLE-TIRE FASTENER. WILLIAM H. PARHAM, Knoxville, Tenn., assignor to Parham Auto Patents Corporation, Knoxville, Tenn., a Corporation of Delaware. Filed May 21, 1920. Serial No. 383,122. 8 Claims. (Cl. 152—6.)



5. In a tire fastener, the combination with a channel rim having annular grooves formed in the walls of the channel, of a resilient tire arranged within said rim, a plurality of sectional cross bars embodied within said tire, each of said sectional cross bars comprising a tubular section and an inner section slidably mounted together having means for limiting the movement of the sections with respect to one another, a coil spring for holding said sections extended, said inner section having a flange adapted to receive an instrument for moving said sections in respect to one another.

1,396,779. CONCRETE-BLOCK-MOLDING MACHINE. ALVAN L. POST and HARRY E. POST, Kent, Ohio. Filed May 17, 1920. Serial No. 382,042. 15 Claims. (Cl. 25—102.)



1. In a block molding machine, a frame, a flask adapted to receive material to be molded into block form, means for compressing material in the flask comprising a plunger, a plurality of tapered cores which are actuated by the plunger and on the compressing stroke thereof enter one side of the flask and pass through the material and through the opposite side of the flask so as to form openings in the block being molded and to compress the material internally thereof, and a stripper plate which during the compression stroke of the plunger enters one side of the flask and compresses the material externally.

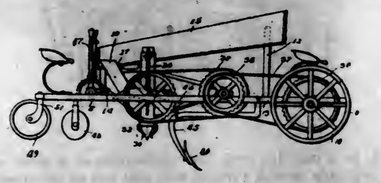
1,396,780. FOLDING-DOOR STRUCTURE. HARRY W. PUGH, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 6, 1919. Serial No. 322,153. 1 Claim. (Cl. 20—20.)

A folding door structure comprising a hingedly supported inner door section, an outer door section, an intermediate door section, hinge mechanisms connecting the intermediate door section with the inner and outer door sections, guiding means for directing the folding movement of the outer door section, and intermeshing gears carried by the inner and outer door sections whereby the intermediate door section is maintained substantially parallel to the doorway during the movement of the door.

1,396,781. MULTIPLE-SPINDLE MACHINE-TOOL. GEORGE E. RANDLES, Cleveland Heights, Ohio, assignor to The Foote-Burt Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 2, 1918. Serial No. 232,009. 3 Claims. (Cl. 77—22.)

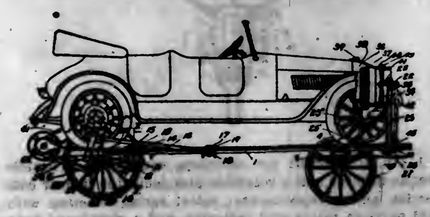
1. In a machine tool, the combination of a drum which is rotatable upon a vertical axis and has at its upper end a hollow overhanging oil chamber, a central hollow column around which said drum rotates, a vertical shaft which extends through said column and into said oil chamber,, a plurality of vertical spindles rotatably mounted on said drum and projecting into said oil chamber, trains of gears in said oil chamber intermediate of said shaft and the several spindles, and means to supply oil to said oil chamber.

1,396,782. THERMOSTAT FOR RADIATORS. ALBERT D. RAY, Cleveland, Ohio, assignor to William O. Jackson, New Castle, Ky. Filed Mar. 10, 1920. Serial No. 364,860. 3 Claims. (Cl. 73—118.)



1. An attachment for radiators, comprising a flexible thermo-member and a rotatable disk indicator in gear connection and a supplemental spiral spring coacting with said parts to rotate said indicator, and a chambered body for said parts adapted to be connected with an automobile radiator.

1,396,783. SHOE AND METHOD OF MAKING THE SAME. Edward R. Ruthrauff, St. Louis, Mo. Filed Nov. 17, 1917. Serial No. 202,634. 11 Claims. (Cl. 36—34.)



1. In a shoe, a heel comprising base and top sections, fasteners adapted to secure said top section, and means arranged in the path of and penetrable by said fasteners adapted to deflect the points thereof.

1,396,784. SEED-BEET PLANTER. John D. Samuels and Harry E. Bates, Idaho Falls, Idaho. Filed Feb. 24, 1920. Serial No. 360,589. 1 Claim. (Cl. 111—89.)

In a seed beet planting machine, an inclined beet trough supported by the frame, a delivering tube in communication with the beet trough at the lower extremity thereof, a plunger tube in communication with the delivering tube, a plunger operating in the plunger tube, guide rods having connections with the plunger at the upper end thereof, guideways on the plunger tube adjacent to the upper end thereof, guideways on the plunger tube at a point intermediate its ends, lugs carried by the rods, said lugs supporting rollers, coiled-springs positioned on the rods between the lugs and guideways at the upper end of the tube, and relatively small coiled spring members disposed between the lugs and guideways supported intermediate the ends of the plunger tube, and means for moving the plunger in one direction.

1,396,785. COOLING MEANS FOR MOTOR-VEHICLE ENGINES. George L. Schofield, Kansas City, Mo. Original application filed July 1, 1918, Serial No. 242,911. Divided and this application filed May 17, 1920. Serial No. 382,127. 12 Claims. (Cl. 180—1.)

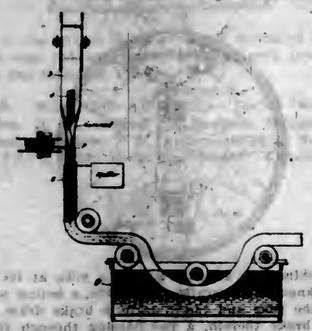
1. The combination with a tractor frame having a bull wheel and a motor vehicle supported on said frame and in driving connection with the bull wheel, of a longitudinal shaft extending from the rear of the vehicle to the front portion thereof, driving means between the shaft and the bull wheel, an air impeller frame carried by the front portion of the tractor frame, air impeller operating mechanism supported by said frame and in driving connection with the longitudinal shaft, and means for longitudinally adjusting the air impeller frame with respect to said shaft.

1,396,786. SYSTEM FOR TRANSMISSION OF INTELLIGENCE. Edward O. Scriven, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 6, 1916. Serial No. 129,728. 21 Claims. (Cl. 179—171.)

21. The method of operating a high frequency alternating current generator comprising a plurality of electric discharge devices for generating high frequency current, each having an anode and a cathode, a work circuit connected to both said devices, and means for supplying a modulating signaling electromotive force differentially to said devices, which method comprises preventing flow of high frequency currents in said work circuit except when modulating electromotive force is being supplied.

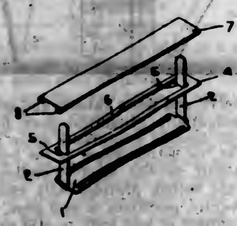
1,396,787. FLAGMAN'S OUTFIT. Charles C. Shepard, Byer, Ohio. Filed Apr. 18, 1921. Serial No. 462,472. 3 Claims. (Cl. 116—173.)

1. A flag comprising a handle having a spiral groove, a sleeve slidably mounted upon the handle, a pin carried by the sleeve and movable within said groove, means for holding the sleeve fixed upon the handle at the limit of its movement in either direction, and a connection between the sleeve and flag for holding the latter taut in its extended position.



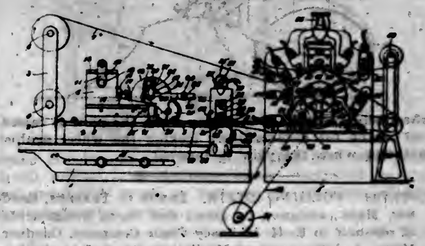
1,396,788. ARCHER'S BOW. Abner E. Shepherdson, Melrose, Mass. Filed May 9, 1918. Serial No. 233,428. 4 Claims. (Cl. 124—7.)

3. In an archer's bow, the combination with a rigid, tubular handle portion, of two wooden limbs, each having at its inner end a metal ferrule which fits tightly into the tubular handle, each ferrule having a length slightly greater than one-half the length of the handle whereby the two ferrules project slightly beyond the ends of the



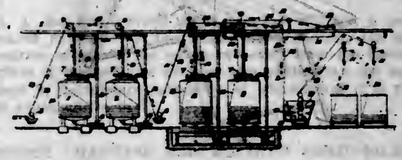
handle, and a band encircling the projecting end of each ferrule and the portion of the limb immediately adjacent said end, said band forming between itself and the end of the handle an arrow-guiding groove.

1,396,789. ELECTRIC CONDUIT AND PROCESS OF MAKING THE SAME. Henry M. Shorr, Penn Yan, N. Y., assignor to Shorr Electrical Mfg. Corp., Penn Yan, N. Y., a Corporation of New York. Filed Feb. 24, 1920. Serial No. 360,565. 9 Claims. (Cl. 154—8.)



6. The process of forming a flexible non-metallic conduit which comprises forming an inner smooth fabric lining, winding thereon a cord and simultaneously therewith causing said cord to adhere to the outer surface of said lining and then forming a knitted fabric covering around said cord and then immersing said tube in a suitable impregnating compound.

1,396,790. PAPER-FASTENER. Frederick W. Shute, Amesbury, Mass. Filed Mar. 24, 1920. Serial No. 368,342. 1 Claim. (Cl. 24—67.)

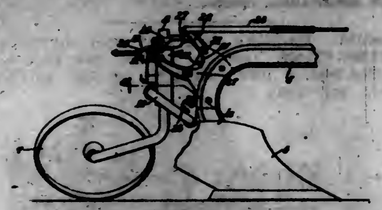


A paper fastening comprising a body having integral therewith two arms extending laterally therefrom and adapted to be inserted through the papers to be fastened together, a retaining member having apertures through which the projecting ends of said arms extend, said arms being constructed to be bent over against the retaining member and the latter having the portion between the apertures offset below the body of the fastener thereby to provide a depression to receive the bent over ends of the arms and also spacing the edges of the retaining member from the papers, and a keeper in the form of a plate having its edges bent over to form lips and adapted to embrace the retaining member.

1,396,791. MACHINE FOR COLORING MOTION-PICTURE FILMS. Gottlieb Tauszig, New York, N. Y. Filed Sept. 4, 1919. Serial No. 321,700. 16 Claims. (Cl. 101—141.)

1. In a machine for coloring motion picture films, a support for the film to be colored, a support for the coloring film, a liquid color supply means, a roll for taking up liquid color, a second roll for receiving the color therefrom and applying it to certain parts of the coloring film, mechanical means for removing surplus color from the printing film, and means for transferring the color from the parts thus colored to corresponding portions of the film to be colored.

1,396,792. METHOD OF BLEACHING AND APPARATUS THEREFOR. Charles Taylor, Kearsley, near Manchester, England. Filed Sept. 20, 1920. Serial No. 411,566. 3 Claims. (Cl. 8—18.)



1. A method of bleaching cloth in rope form in keirs, consisting in passing two ropes of cloth simultaneously through a mangle; mechanically introducing into and automatically piling in a boiling keir one of said ropes; mechanically introducing into and automatically piling in a second boiling keir, the other of said ropes in a simultaneous manner; boiling said ropes of cloth; withdrawing said ropes and passing them simultaneously through a mangle; mechanically introducing into and automatically piling in a wood keir one of said ropes; simultaneously introducing mechanically into and automatically piling in another wood keir the other of said ropes; treating said ropes in said wood keirs; simultaneously withdrawing and expanding said ropes; passing said ropes together through a white mangle; and then simultaneously folding both of said ropes of cloth.

1,396,793. POWER-LIFT PLOW. Harry R. Traphagen, Rockford, Ill., assignor to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed Jan. 19, 1920. Serial No. 352,288. 5 Claims. (Cl. 97—36.)

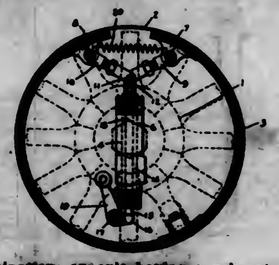
3. In a plow, the combination of a plow-carrying frame, a rear furrow wheel having an upright spindle about which the wheel is adapted to caster, means connecting said spindle with the frame comprising a pair of substantially parallel links, one above the other, upon which the plow frame is adapted to swing vertically in a substantially parallel movement, a segmental gear fixed to one of the links, a segmental gear member pivotally mount-

ed on the frame and meshing with the link segment and adapted to be oscillated for raising the plow frame, the

wheel being capable of castering when the plow is raised, and means for automatically locking the wheel against castering when the plow is lowered.

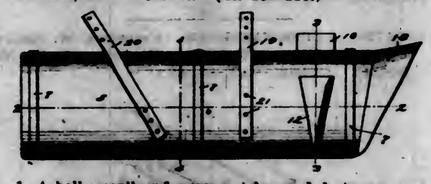
1,396,794. FOLDING CHAIR. LEWIS C. TRAVERS, Gardner, Mass., assignor, by direct and mesne assignments, of one-half to E. H. Mahoney Chair Company, Gardner, Mass., a Corporation of Massachusetts, and one-half to Heywood-Wakefield Company, Wakefield, Mass., a Corporation of Massachusetts. Filed June 14, 1921. Serial No. 477,368. 2 Claims. (Cl. 155—142.)

1. A folding chair comprising rigidly connected side bars forming front legs; rigidly connected rear bars forming rear legs, and adapted to swing between the side bars, said rear bars having upper and lower longitudinal slots in their inner sides; a seat formed to swing between the side bars and provided with rearwardly extending arms; a back formed to swing between the rear bars; hinged connections permitting the seat to swing between the side bars, offset hinge connections between the seat arms and the back, upper pintles on the back slidable in the upper rear bar slots, and lower pintles on the seat arms slidable in the lower rear bar slots, the said hinge connections, pintles and slots firmly maintaining the rear bars, the seat, and the back in their operative positions when the side bars and rear bars are differently inclined and bear on a supporting surface, the arrangement being such that a folding movement of the seat causes the seat arm pintles and the upper back pintles to slide freely downward in the slots of the rear bars, until the seat, the back, and the rear bars are located between the side bars, and the seat is in contact with the back legs and with the back.



1,396,795. GAME. HENRY S. VOGEL, Grant City, Mo. Filed Jan. 23, 1920. Serial No. 353,420. 1 Claim. (Cl. 46—25.)

A card game comprising a deck of cards divided into an unequal number of suits of cards, the odd suit constituting a counter suit in contradistinction to the other suits, any one of which may be designated a trump suit, the cards of every suit rating consecutively in playing value and having suit-distinguishing characteristics whereby the cards of one suit are differentiated from the

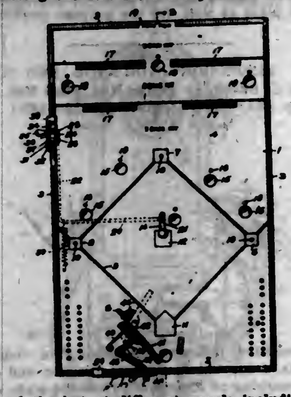


cards of the other suit; and a master card which is a trump of any suit.

1,396,796. BRAKE. WILLIAM G. WALL, Indianapolis, Ind., assignor to National Motor Car & Vehicle Corporation, Indianapolis, Ind., a Corporation of New York. Filed Apr. 24, 1920. Serial No. 376,390. 1 Claim. (Cl. 188—194.)

In combination, an axle having a yoke at its end, a steering knuckle coöperating therewith, a hollow bolt connecting the yoke and the knuckle, a brake drum, an expansible brake therein, a rod passing through the bolt, links connecting the bolt and the ends of the brake, said rod and links lying in the general plane of the brake drum, substantially as set forth.

1,396,797. PINK-BOLL-WEEVIL DESTROYER. JOHN MOLAND WEBB, Flat, Tex. Filed Sept. 27, 1920. Serial No. 412,943. 3 Claims. (Cl. 43—133.)



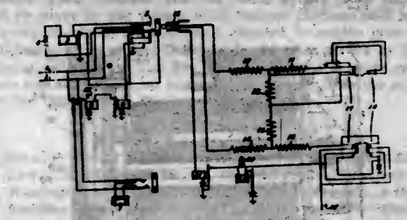
1. A boll weevil and worm catcher and destroyer, comprising a substantially cylindrical body having spaced bottom portions forming a clearance space therethrough, pans located at the bottom edges of the body, said body being substantially circular in cross section and having the pans at the bottom provided with closed ends and projecting inwardly, partitions in said pans, funnels leading from the outside of said body to said pans forwardly of said partitions, and means for supplying sulfur to said funnels to be burnt in said pans last named.

1,396,798. BASEBALL-GAME APPARATUS. ALEXANDER WEINBERG, Pittsburgh, and CHARLES V. LINDERMAN, North Braddock, Pa. Filed Feb. 16, 1920. Serial No. 358,961. 3 Claims. (Cl. 46—61.)

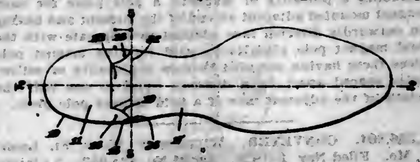
1. In apparatus of the character described, the combination with a field having a pitcher's and a batter's box, of a spring actuated swinging bat mechanism, means coöperating with the bat mechanism for providing a full

or a partial swing of the bat at will, and mechanism for delivering the ball from the pitcher's box in the di-

rection of the bat at different speeds including a spring actuated bent rod, and means co-acting with the rod for limiting the throw of the rod.



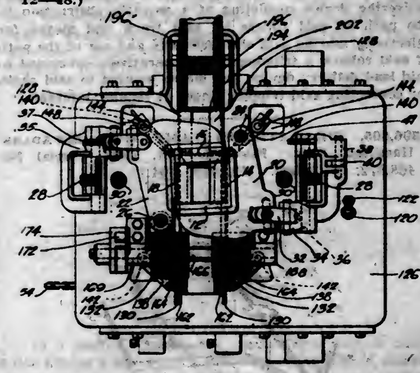
1,396,799. WEARING-APPAREL. FRANK WIBBELEY, Jamaica, N. Y., assignor to Barthels Manufacturing Company, Glendale, N. Y., a Corporation of New York. Filed July 1, 1919. Serial No. 306,038. 4 Claims. (Cl. 2—87.)



1. A button-hole strip for the edge of a garment having buttons at opposite edge thereof, said strip comprising inner and outer plies of fabric sewed together at the outer edge of the strip and initially open at the other edge of the strip to receive the fabric of the garment and be secured thereto, and a series of independent button-hole tapes secured by sewing between said plies and affording loops to be used as a substitute for button-holes, said loops being projected through said inner ply back from the edge of the strip and concealed by the outer face of the strip, and said button-hole tapes each being an integral woven piece of tape folded upon itself and having ends woven flat for attachment to the strip, and an intermediate portion woven circular in cross-section affording the loop to engage the button.

1,396,800. TESTING SYSTEM. RAY S. WILBUR, Lyndhurst, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1918. Serial No. 268,744. 4 Claims. (Cl. 179—175.)

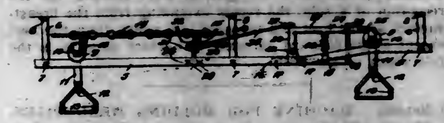
1. A testing system, comprising electroresponsive means to be tested, a circuit controlled thereby, means for simulating the normal operating condition of such electroresponsive means, switching means for subjecting the electroresponsive means thereto, additional switching means for substituting another circuit for the first mentioned circuit and for maintaining the first mentioned circuit normal, and signaling means controlled by the last mentioned circuit to indicate the operation of the electroresponsive means.



1,396,801. SHOE-BOTTOM. ERASTUS E. WINKLEY, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 16, 1916, Serial No. 125,976. Renewed July 1, 1920. Serial No. 393,456. 13 Claims. (Cl. 36—25.)

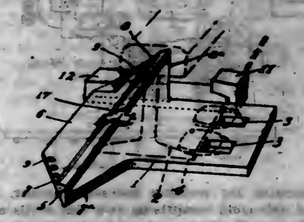
1. A shoe-heel having in its heel-seat surface, a pronounced recess below the general level thereof, for the reception of a sole, the recess extending from the breast-surface of the heel and being of less width than the heel except at its forward extremity, at which point it is the full width of the heel.

1,396,802. MACHINE FOR MOLDING HEEL-PILES. ERASTUS E. WINKLEY, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 19, 1917. Serial No. 155,902. 22 Claims. (Cl. 12—48.)



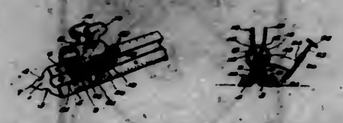
1. A machine for molding heel-piles having, in combination, a side-mold comprising two side walls arranged at an angle to each other; and mechanism for closing said mold against the work by movement substantially in the direction of the bisector of said angle.

1,396,803. ELECTRIC INDICATOR. Frank W. Wood, Montclair, N. J., assignor to Charles Cory & Son, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1920. Serial No. 402,602. 6 Claims. (Cl. 172—239.)



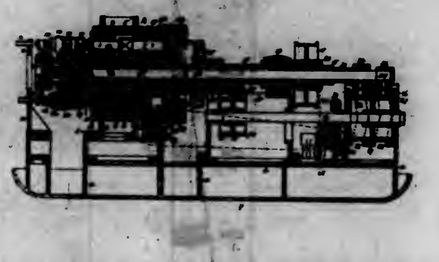
4. In an apparatus for locating a rotating element in a plurality of positions by selective operation of magnetic means, a plurality of field magnets circumferentially mounted, a radially arranged pole piece on one end of each field magnet, said pole pieces being located in the same plane and each having an inwardly directed arcuate face, said faces being of equal length; and a rotating element mounted centrally between said field magnets and including a plurality of magnets, a pole piece for each magnet mounted adjacent an end of the element and having an outwardly directed face adapted to cooperate with the field magnet pole piece faces, said rotating magnet pole piece faces having mounted thereon a plurality of salient poles spaced apart by a distance equal to one half the width of the adjacent face of a field magnet pole piece.

1,396,804. CONVEYER. William T. Wood, St. Louis, Mo. Filed Nov. 1, 1920. Serial No. 421,033. 2 Claims. (Cl. 104—253.)



1. In combination with a track, rollers mounted on said track in rolling engagement, straps secured to said rollers in rotative engagement, hooks secured to said straps, an endless driving chain having projections thereon, a load delivering device consisting of a movable obstruction in the path of said rollers on said track and means for selectively moving said obstruction in and out of the path of said rollers, a tripping finger, operatively connected to said load delivery device, said means secured to said chain for contacting said tripping finger at regular intervals.

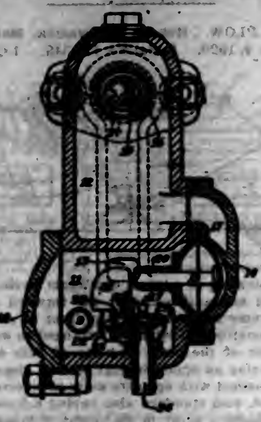
1,396,805. TIE-PLATE AND CLAMP. Granville Adams, Hamilton, Ohio. Filed May 11, 1921. Serial No. 468,872. 6 Claims. (Cl. 238—304.)



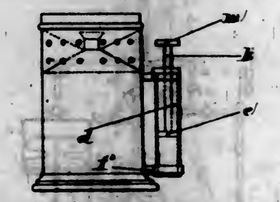
6. In a tie plate and clamp, the combination of a tie plate having a rail abutment on the outer side thereof, and a clamp adapted to lock around the inner side of the base of a rail resting on the plate and around the outer side of the plate as well, for the purpose described.

1,396,806. DIMENSION INDICATOR AND MARKER. Charles C. Beale, St. Louis, Mo. Filed Mar. 2, 1920. Serial No. 362,982. 4 Claims. (Cl. 33—189.)

1. A dimension indicator comprising in combination with a scale, a clip member slidable thereon and carrying means for marking off dimensions from the scale, said clip member including a pair of shoes engaging the scale and conforming to the configuration of the scale in transverse section, and a spring member compressing said shoes into engagement with the scale.



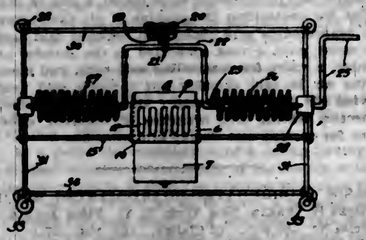
1,396,807. AUTOMATIC MULTIPLE-SPINDLE LATHE. William George Berry, London, England. Filed Dec. 6, 1918. Serial No. 265,493. 7 Claims. (Cl. 29—37.)



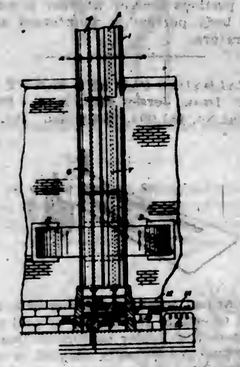
1. In a multiple spindle lathe, the combination of a head stock, a plurality of work-carrying spindles mounted for rotation in said head stock, means for rotating said spindles and including a central shaft mounted for rotation in the head stock, a gear secured to said shaft within the head stock, and pinions carried by the spindles in mesh with said gear, a tool slide for each spindle mounted in radial guides in the front face of said head stock, a ring-like sectional cam mounted for rotation on said head stock in a plane parallel with the front face thereof, means for rotating said cam, and means carried by said tool slides for engaging said cam thereby to cause the slides to simultaneously move radially of the work spindles during the rotation of the cam.

1,396,808. VALVE-CONTROLLING DEVICE. John Howard Brombaugh, Chicago, Ill., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of New York. Filed June 28, 1920. Serial No. 392,861. 5 Claims. (Cl. 169—21.)

1. The combination, with a valve body, of a control lever separate therefrom, and means whereby it can engage the valve body in direction to close and in direction to open the valve; and a weight on said control lever; the whole being arranged to be set with the weight supported near the crest of its swing by said engagement with the valve body, thereby holding the valve body closed, and adapted to be moved over the crest by lateral pressure and to fall on the other side, thereby engaging the valve body to open the valve.

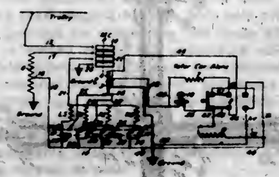


1,396,809. APPARATUS FOR HEATING BY CATALYSIS. Ramon Camell, Rhône, Laurent Cochet and Joseph Gritte, Lyon, France, assignors to Societe Lyonnaise Des Rechauds Catalytiques, Camell, Cochet, Gritte & Cie. (Societe en Commandite), Caluire, Rhône, France. Original application filed May 26, 1919, Serial No. 299,784. Divided and this application filed July 9, 1920. Serial No. 395,174. 2 Claims. (Cl. 158—96.)



1. In a catalytic heating apparatus the combination of a catalytic pad, a reservoir, absorbent material in the latter, and a wick extending from said reservoir into proximity with the pad, with a hand operatable pump connected to said reservoir and an air pipe from said reservoir directed toward the catalytic pad.

1,396,810. ANIMAL-TRAP. Thomas S. Catlin, Wavelund, Ind. Filed Jan. 24, 1920. Serial No. 353,751. 2 Claims. (Cl. 43—76.)



1. An animal trap comprising a frame, a rotary shaft journaled therein, a spring-pressed beater carried by the shaft, a keeper pivoted to the frame and extending in the path of the beater for preventing movement thereof, a bait box pivoted to the frame adjacent the path of travel of the beater when released, the box being poised to be tilted on its pivot by the weight of an animal thereon, said box having the front inclined wall adapted to enable ease of discharge of an animal from the frame when struck by the beater while on the bait box, and connections between said bait box and keeper for removing the keeper from the path of the beater when the box is tilted.

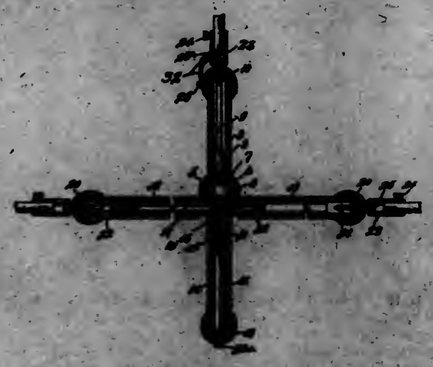
1,396,811. ELECTRICAL PRECIPITATING SYSTEM. Lewis Warrington Chubb, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 14, 1918. Serial No. 222,491. 26 Claims. (Cl. 183—7.)

1. In an electrical precipitating system, the combination with a treating chamber, of dimorphous electrodes positioned therein, a source of current supply therefor, and means whereby each electrode is constrained to alternately perform the functions of either a discharge electrode or of a collecting electrode only.

1,396,812. SYSTEM OF CONTROL. John A. Clarke, Jr., Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 4, 1918. Serial No. 261,022. 4 Claims. (Cl. 172—179.)

1. In a control system, the combination with a limit switch having a series and a shunt actuating coil, of means comprising one switching device having only two active positions and another having only one active position for providing four settings of said relay device, both of said switching devices being associated with only one of said coils.

1,396,812. [illegible]. [illegible], Pa., [illegible] Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 4, 1919. Serial No. 287,576. 4 Claims. (Cl. 219—75.)



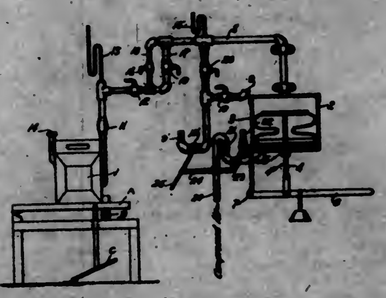
1. A resistance unit composed of solid conducting material having an initially negative temperature-resistance coefficient and comprising a bare body portion and integral end portions, the body portion having a higher resistance and a smaller radiating surface per unit of length than the integral end portions thereof whereby a constant resistance of said body portion is maintained at a predetermined temperature.

1,396,814. CALENDAR-PAD AND MOUNT THEREFOR. WILLIAM Y. DEAR, Jersey City, N. J. Filed June 28, 1921. Serial No. 481,094. 3 Claims. (Cl. 40—120.)

3. A calendar-pad mount consisting of a metallic reinforce adapted to engage three sides of said pad, and constituting a protective holder conformed thereto, the said mount comprising two elements adapted to be bent downwardly from the third element and to afford with the third element a triped support for said pad when in use, the two downwardly bent elements being adapted to be bent again at right angles to themselves to form feet for said elements, the metal being weakened to facilitate and guide the several bendings, said mount further comprising two prongs projected upwardly from the plane of the third element and adapted to fix the pad thereon.

1,396,815. SWITCH MECHANISM FOR X-RAY MACHINES. WILLIAM C. DEE, Cleveland, Ohio. Filed Oct. 4, 1919. Serial No. 328,434. 8 Claims. (Cl. 200—153.)

3. An electric switch, comprising a frame supporting a rotatable shaft, arms radiating from said frame, and slid-

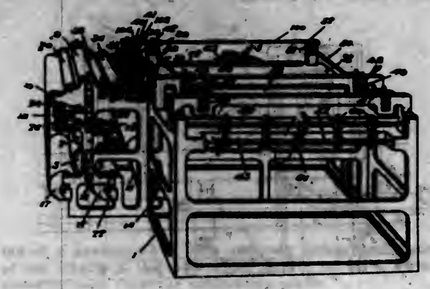


[illegible] and [illegible] thereon, said arms [illegible] said shaft.

1,396,816. FLOW. ERNEST M. DUNCAN, Madison, Ore. Filed Dec. 4, 1920. Serial No. 428,248. 1 Claim. (Cl. 97—27.)

The combination in a plow, of a beam having a reduced rear portion and a shoulder at the forward side thereof and also having a vertical bore in front of said shoulder, handles, a longitudinal latch rod arranged to work through said shoulder of the beam and extend into said bore, a standard having an upper journal portion disposed in said bore and provided with opposite seats to receive the end of the latch rod, said standard also having a journal portion at an intermediate point in its height, a brace having an intermediate collar receiving said journal portion of the shank and also having end portions fixed to the beam and the handles, respectively, reversely arranged plow bodies disposed with their moldboards at the same side of the beam, and braces fixed to said plow bodies and arranged at opposite sides of and fixed to the standard.

1,396,817. MEANS FOR AND METHOD OF TESTING GAS-METERS. RICHARD L. DRESSDORF, Richmond Hill, N. Y. Filed Aug. 14, 1919. Serial No. 317,475. 5 Claims. (Cl. 73—51.)



1. In a means for testing a gas meter, the combination of a chamber, a connection leading from said chamber to the outlet port of the meter to be tested, a cock in said connection for controlling the passage of air therethrough, a gage connected to said connection between said cock and said outlet port, a vent connected to the interior of said chamber, a valve for controlling said vent, and means for forcing air in said chamber out through said vent and drawing air into said chamber through said meter, said connection having two branches of different sizes, and means for opening and closing said branches.

1,396,818. CORRUGATED-BOARD-MAKING MACHINE. MORRIS B. DUSKIN, New York, N. Y. Filed June 4, 1920. Serial No. 386,655. 12 Claims. (Cl. 154—37.)

2. A machine of the character described, comprising means for making board from sheets and feeding such

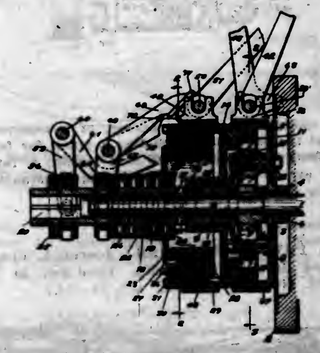
board, cutting means to sever said board into pieces, pressing means for such pieces located out of the line of move-

ment of said board, and means for shifting said pieces into said pressing means.

1,396,819. SAW-CLAMP. JOSEPH DORY, St. Maurice, La. Filed Aug. 13, 1920. Serial No. 403,294. 3 Claims. (Cl. 76—78.)

1. A saw set comprising supporting members, end blocks carried thereby, a body member pivotally secured between the end blocks and capable of horizontal swinging movement, clamping jaws carried by the body member, said jaws extending through the end blocks and stops formed on the end blocks and located in the path of the jaws for limiting the pivotal movement of the latter.

1,396,820. TURBINE-PUMP. ANDREW C. DOUGLASS, Sonoma, Calif. Filed Apr. 19, 1920. Serial No. 375,069. 3 Claims. (Cl. 253—179.)



1. In a pump the combination of a casing having a toy top shaped chamber intermediate of its length, a housing having an umbrella shaped top adapted to inclose the upper part of the casing so as to leave a passage between said casing and said housing, a discharge from said passage, a vertical shaft extending centrally through said casing and said housing, means for positioning and driving

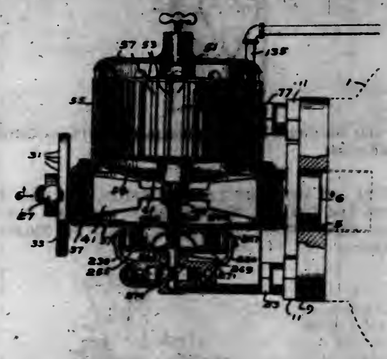
the same, a water lifting means within the toy top shaped chamber and a means in the umbrella shaped top for forc-

ing water downward into the passage, adapted to be driven by said shaft.

1,396,821. PLANETARY TRANSMISSION. WILLIAM F. DREW and BORIS V. KORVIN-KROUKOVSKY, San Francisco, Calif. Filed Nov. 7, 1919. Serial No. 336,305. 5 Claims. (Cl. 74—34.)

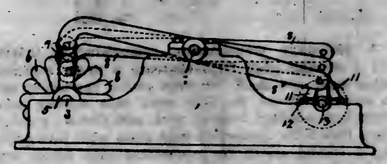
1. A planetary transmission comprising a driving shaft; a driving gear fixed thereon, a drum rotatably mounted upon said shaft; an idler pinion carried by said drum and positioned to mesh with said driving gear; a driven gear adapted to mesh with said pinion; a driven shaft; a clutch for connecting said drum with said driven shaft; a second clutch for connecting said driven gear with said driven shaft; means for independently holding said drum and said driven gear stationary; and controlling devices for simultaneously engaging both of said clutches, for simultaneously engaging said drum-clutch and said driven gear-holding means, and for simultaneously engaging said driven gear-clutch and said drum-holding means, at will.

1,396,822. HAMMER. MICHELANGELO FERRARO, Paterson, N. J. Filed Dec. 31, 1920. Serial No. 434,293. 2 Claims. (Cl. 306—32.)



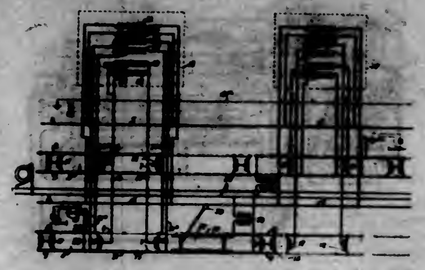
1. In combination, with the members to be interlocked and one of which penetrates and protrudes from the other and has on its protruding portion a shoulder facing toward the other member, a sheet-metal clip capping the

protruding end of the first member and forming an abutment limiting the displacement of said other member



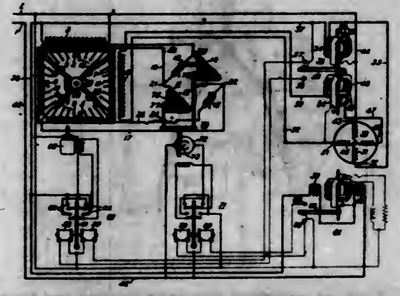
toward said end and having an inward rebent fold bearing against said shoulder.

1,396,823. OIL-BURNER SYSTEM. MILTON A. FEELER, Oakland, Calif., assignor, by mesne assignments, to Petroleum Heat and Power Company, a Corporation of Delaware. Filed Apr. 11, 1918. Serial No. 227,910. 21 Claims. (Cl. 158—77.)



8. The combination with a burner, of a reservoir to supply fuel thereto, means including a pump for feeding the fuel from said reservoir to said burner, a fan for supplying air to said burner, and means actuated by said fan for driving said pump.

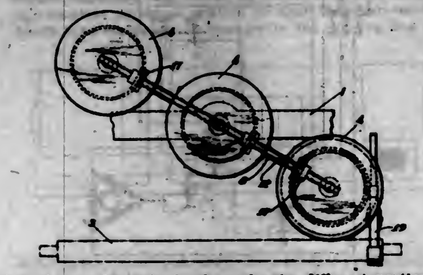
1,396,824. POWER MECHANISM. JOSEPH L. FORSYTH and AMOS BOFF, Baltimore, Md. Filed Feb. 19, 1921. Serial No. 446,445. 1 Claim. (Cl. 74—14.)



In a power mechanism, a frame, a shaft mounted on one end of said frame, a series of cam-wheels mounted upon said shaft and each having a number of cams thereon, a shaft mounted in the top of the frame in the center thereof, a number of rock arms mounted on the shaft at the top of said frame and each being bifurcated on both ends and each having one end projecting downwardly, a roller mounted in the downwardly projecting end of each of said rock arms and each impinging against one of said cam-wheels, a crank shaft mounted in the opposite end of said frame and having a number of cranks thereon, and a number of links each being pivoted between the bifurcated end of one of said rock arms and connected at its opposite end to one of said cranks.

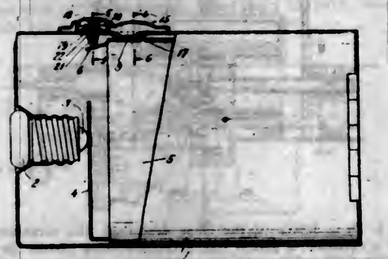
1,396,825. RAILWAY SIGNALING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 28, 1915, Serial No. 47,564. Renewed Nov. 5, 1920. Serial No. 422,078. 34 Claims. (Cl. 246—37.)

1. In a railway system, the combination with a source of propulsion current supply, a trolley conductor connected thereto, a source of signaling current, a track comprising a plurality of insulated sections, said track forming a portion of a signaling circuit, and additional insulating joints inserted in the rails comprising each of said sections, of means for inductively interlinking the track and the trolley conductor in order to confine the return flow of the propulsion current to the track and to permit unimpeded flow of a signaling current in each insulated section.



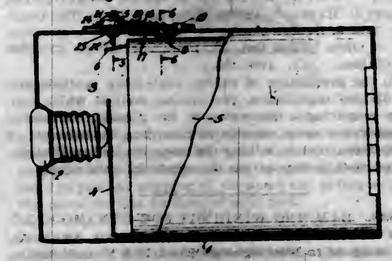
1,396,826. ELECTRICAL DISTRIBUTING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 2, 1917. Serial No. 165,863. 25 Claims. (Cl. 172—238.)

3. The combination with a single-phase circuit and a polyphase circuit, of a phase-splitting device comprising a condensive aggregate and an inductive aggregate for interconnecting said single-phase circuit and said polyphase circuit, means for varying the voltage impressed upon said phase-splitting device, means for varying the derived voltage which is supplied to said polyphase circuit, and means responsive to load conditions in said polyphase circuit for simultaneously controlling said voltage-varying means.



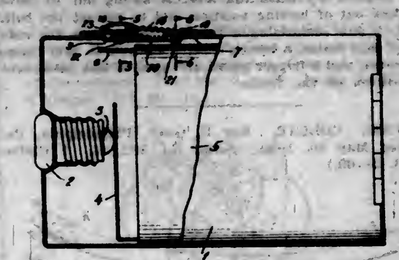
1,396,827. MULTICOLOR-PRESS. LOUIS FRIEDMAN, New York, N. Y. Filed Sept. 16, 1920. Serial No. 410,060. 9 Claims. (Cl. 101—208.)

1. A multi-color printing press embodying a form roller, a plurality of ink plates mounted on fixed axes in the path of the form roller and positioned at spaced distances apart in oblique relation to the direction of travel of the form roller so as to form a support for the form roller during its entire travel over the ink plates in succession, each of said plates being adapted to contain



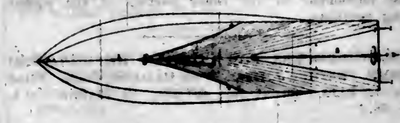
ink of a predetermined color, whereby different portions of the length of the form roller receive ink of a corresponding color from the coöperating plates.

1,396,828. HANDLAMP. GEORGE D. GALLAGHER, Washington, D. C., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed June 8, 1920. Serial No. 387,277. 8 Claims. (Cl. 200—60.)



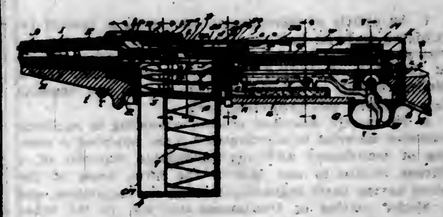
1. In a battery hand lamp, the combination of a battery case, a housing mounted to slide longitudinally thereof, a spring, and a spring pressed push-button contact mounted on said housing and slidably movable therewith, substantially as described.

1,396,829. HANDLAMP-SWITCH. GEORGE D. GALLAGHER, Washington, D. C., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed June 8, 1920. Serial No. 387,278. 9 Claims. (Cl. 200—60.)



8. In a battery hand lamp, the combination of a battery case, a housing mounted to slide longitudinally thereof, a leaf-spring having one end riveted to said housing and a push button engaging the other end of said spring, said push button being movable along said case with said spring and housing.

1,396,830. HANDLAMP-SWITCH. GEORGE D. GALLAGHER, Washington, D. C., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed June 8, 1920. Serial No. 387,279. 7 Claims. (Cl. 200—60.)



1. In a battery hand lamp, the combination of a battery case, a housing mounted to slide thereon, a leaf spring carried by said housing and having a battery-positioning shoulder, and a push-button contact carried by said spring and slidingly movable with said spring and housing, substantially as described.

1,396,831. SPEED-BOAT. ELLIOTT GARDNER, Colonie, N. Y., assignor to Albany Boat Corporation, Watervliet, N. Y., a Corporation of New York. Filed Dec. 16, 1920. Serial No. 431,130. 6 Claims. (Cl. 114—66.5.)

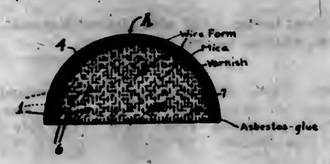
1. A boat having a hull with aftward divergent, water-engaging, planing, bottom surfaces.

1,396,832. GUN. OLIVER B. GRAHAM, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed July 2, 1919. Serial No. 308,223. 24 Claims. (Cl. 42—3.)

1. A gun comprising a frame, a breech block and a lock for locking said block in closed position, said lock being longitudinally movable in said frame, and having opposite faces abutting faces of said frame and block respectively, and said block and frame faces being substantially symmetrically disposed relatively to a plane extending transversely of the path of movement of the lock and making equal angles with said faces.

16. A gun comprising a breech closure, firing mechanism associated therewith, and means for automatically recocking the firing mechanism during the periods the breech closure is opened and closed, said means including an ejector for ejecting cartridge cases from the gun.

19. A gun comprising a frame, a breech bolt movable in the frame, a lock movable on said bolt, and a lever pivotally mounted on the bolt so as normally to lie along the bolt and so as to be swung out from the bolt, said lever having cams adapted to engage said frame and lock respectively when the lever is swung out to move the lock out of locking position and to retract the bolt.

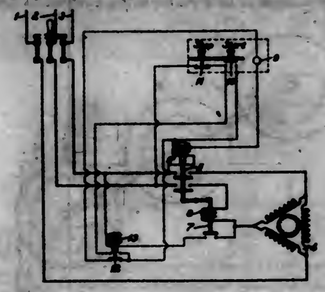


23. A gun comprising a frame, a cover over the rear end of said frame, a breech closure movable in said frame and cover, and a trigger guard arranged to lock said cover in position on the frame.

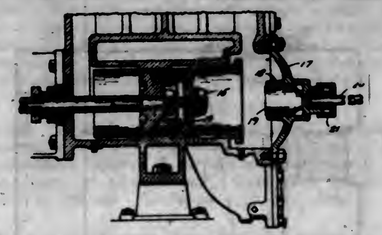
1,396,833. COLLAR. Roy E. Gray, Philadelphia, Pa. Filed May 20, 1920. Serial No. 382,744. 1 Claim. (Cl. 2—69.)

A collar having a band portion the ends of which are adapted to overlap, said band having a button-hole therethrough intermediate its ends and a button-hole adjacent one of its ends, there being a pocket formed near the other end of the band open at its bottom only, there being a button-hole formed in the inner portion of the pocket forming portions and covered by the outer pocket forming portion thereof, the arrangement being such that the head of the collar button will be within said pocket and covered when the collar is secured to the shirt of the wearer, and the cover forming portion will be restrained against movement by the inner portion of the pocket forming portions.

1,396,834. PROCESS FOR COATING RETICULATED FORMS. Arthur J. Hall, West Hartford, Conn. Filed Dec. 1, 1920. Serial No. 427,535. 8 Claims. (Cl. 91—68.)



1. An article of manufacture comprising a base of reticulated material having a coating of translucent material of a fibrous nature on one face thereof, with some of the fibers projecting through the interstices, and a binder coating of translucent material on the opposite face engaging said projecting parts.

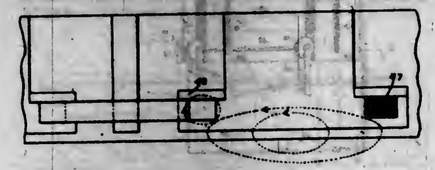


4. The herein-described process consisting in applying adhesive material to a reticulated form, applying a coating of translucent and non-inflammable material of a fibrous nature to one face of the form, some of the fibers having parts projecting through the interstices, and a binder coating of translucent material to the other face and engaging said projecting parts.

1,396,835. ELECTRICAL SYSTEM. Edward A. Hanff, Irwin, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 14, 1916. Serial No. 125,607. 14 Claims. (Cl. 172—288.)

9. In an electrical system, the combination with an electric motor, a controlling switch therefor having an actuating coil, and a switch for controlling the connection of said coil to a source of current, said second-named switch being adapted to normally assume an inoperative position, of a signaling device connected across a portion of the turns of said coil, and means for controlling a holding circuit for said coil and for controlling the circuit of said device to permit releasing said second-named switch under predetermined conditions without stopping the operation of said motor.

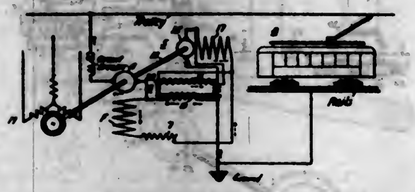
1,396,836. EXPANDING-PACKING CONSTRUCTION. Joseph W. Harasta, Los Angeles, Calif. Filed Sept. 8, 1920. Serial No. 408,826. 2 Claims. (Cl. 74—109.)



1. In a device of the class described, the combination of a cylinder, a piston rod, a reciprocating piston therein normally fixed on said rod and having expansible packing, a follower movable longitudinally of the piston body for expanding said packing and disposed so that said rod extends beyond said follower, a nut and screw device mounted on said rod for moving said follower and holding it fixed in adjusted position, a cylinder head having a pocket, a socket wrench disposed in said pocket and having its stem slidably and rotatably extended through said head for expanding said packing whereby said packing may be expanded from the outside of said cylinder.

1,396,837. COMPOUNDING OF RUBBER COMPOUNDS. Robert C. Hartong, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 25, 1918. Serial No. 259,690. 12 Claims. (Cl. 106—23.)

1. In the production of rubber containing proteids and finely divided ingredients, the mixing method which consists in preparing a dispersion of the proteid, containing an emulsifying agent capable of retarding the removal of the dispersion vehicle, mixing the finely divided solid therewith and then incorporating the whole into the rubber.



1,396,838. DAMPING WINDINGS FOR DYNAMO-ELECTRIC MACHINES. Rudolf E. Hellmund, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 6, 1917. Serial No. 178,951. 4 Claims. (Cl. 171—228.)

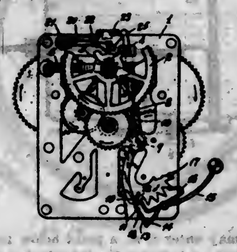
1. The combination with a dynamo-electric machine of the commutator type provided with means for producing exciting poles, of a conducting member surrounding a pole horn which tends to become saturated as the load current on said dynamo-electric machine increases, a conducting member surrounding a pole horn which tends to have its exciting flux reduced because of distortion as the load current increases, and means for connecting said conducting members in series relation so that the electromotive forces induced therein by changes in the exciting flux are

differentially combined while electromotive forces induced therein by changes in the cross flux are additively combined, the conducting member surrounding the horn whose flux tends to increase with an increase in load current interlinking with the exciting flux more times than the remaining conducting member.

1,396,839. HIGH-VOLTAGE DIRECT-CURRENT SYSTEM. Rudolf E. Hellmund, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 10, 1917. Serial No. 190,503. 8 Claims. (Cl. 171—225.)

1. In a system of distribution, the combination with a direct-current generator, of an auxiliary exciting system therefor, an inductive means in said system for inherently counteracting overload generator currents of large amplitude to a greater extent than upon smaller load increments.

1,396,840. RUPTURE APPLIANCE. Samuel H. Higginbotham, Alhambra, Calif. Filed May 4, 1921. Serial No. 466,677. 7 Claims. (Cl. 128—117.)



1. An appliance of the character described comprising in combination a resilient pressure pad having a way therethrough, a supporting band disposed in said way, and projections of resilient material in said way engaging said band to prevent slipping of the same and acting as supporting posts for the surface of said pad.

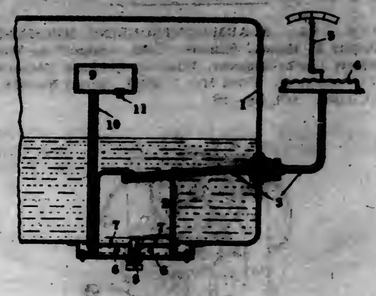
1,396,841. PREPARATION OF SODIUM SESQUICARBONATE. Wilhelm Hirschkind, Cartago, Calif., assignor to California Alkali Company, San Francisco, Calif., a Corporation of California. Filed Mar. 19, 1920. Serial No. 367,233. 9 Claims. (Cl. 23—22.)

1. The process of preparing sodium sesquicarbonate, which consists in dissolving crude sodium sesquicarbonate or trona in a hot solution containing sodium bicarbonate and also sodium carbonate, the latter considerably in excess of the sodium bicarbonate, and allowing the solution to cool to cause sodium sesquicarbonate to crystallise from the solution.

1,396,842. ALARM-CONTROLLING MECHANISM. Albert P. Hodge, Winsted, Conn., assignor to Wm. L. Gilbert Clock Company, Winsted, Conn., a Corporation of Connecticut. Filed May 3, 1920. Serial No. 378,588. 4 Claims. (Cl. 58—16.)

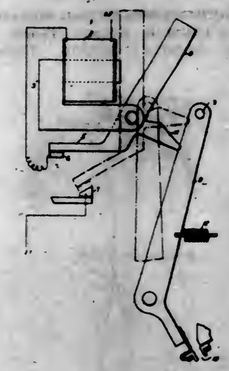
3. In an alarm clock, the combination of a time movement, an alarm movement, two levers in series with one another constituting a compound lever between said two movements, one lever normally tending to engage the alarm movement to stop the same and the other lever being controlled by the time movement so as to permit said stop lever to act to stop said alarm movement during a given period and retract it from alarm-stopping position at the end of that period.

1,396,843. ATTACHING MEANS FOR BROADCAST DISTRIBUTERS. David R. Holden, Peoria, Ill. Filed Nov. 7, 1919. Serial No. 336,377. 7 Claims. (Cl. 296—53.)



1. In a machine of the character described, in combination, a pair of spaced vertically disposed supporting bars, two pairs of vertically arranged attachment bars, one pair for each supporting bar, and means for adjustably securing each pair of attachment bars together and with a supporting bar.

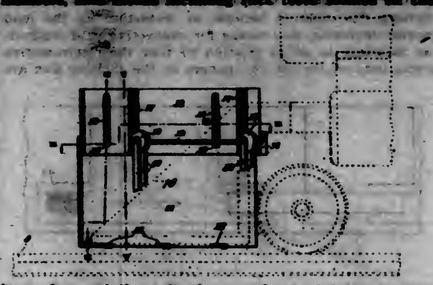
1,396,844. DEPTH-INDICATING DEVICE. Edwin E. Huffman, St. Louis, Mo. Filed June 29, 1920. Serial No. 392,744. 7 Claims. (Cl. 73—54.)



1. In an apparatus of the class described, the combination of a liquid container, pressure responsive means

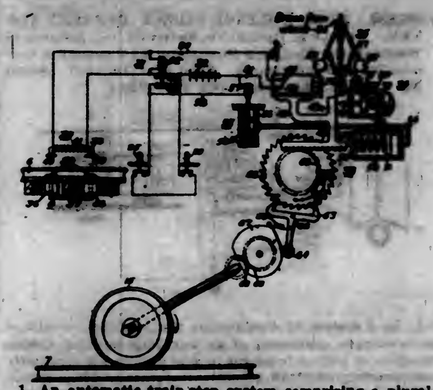
for indicating the depth of liquid therein, a pressure-transmitting conduit extending from said gage to the container and provided with an opening whereby liquid from

the container may enter it at a point below level of liquid in said container, and means for introducing air into said conduit.



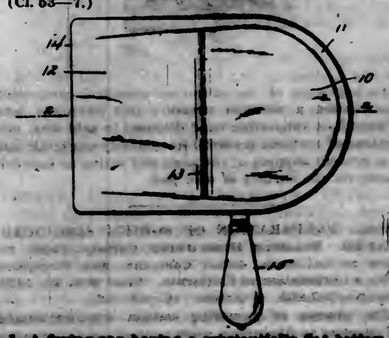
1,396,845. ELECTRICAL SWITCH. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 1, 1917. Serial No. 189,889. 7 Claims. (Cl. 200—166.)

1. The combination with a magnetizable member and a coil for energizing said member, of an armature member mounted upon said magnetizable member and adapted to occupy a position in which it completes the magnetic circuit of said magnetizable member and effects the completion of the circuit of said coil, and means for actuating said armature member into said position and operatively engaging said armature member while it occupies said position.



1,396,846. SNOWPLOW. MARY JESOVA, Waltz, Tex. Filed Apr. 5, 1920. Serial No. 371,360. 3 Claims. (Cl. 37—5.)

1. A snow plow comprising forwardly converging side walls, a vertical extension member carried by each side wall with the adjacent faces flatly engaging each other, means for independently vertically sliding said extension members, said means including rack teeth formed on the



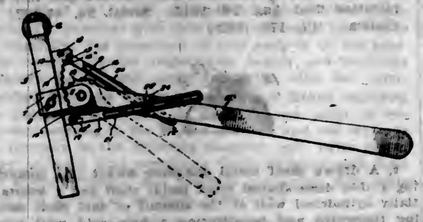
inner faces of the extension members, pinions engaging said rack teeth, and means for rotating said pinions.

1,396,847. AUTOMATIC TRAIN-STOP SYSTEM. MAURICE F. JONES, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 9, 1919. Serial No. 288,749. 12 Claims. (Cl. 246—63.)

1. An automatic train-stop system comprising a plurality of spaced and normally deenergized track magnets, means dependent upon the proximity of the train for energizing said magnets, and means having "normal danger" characteristics for stopping the train comprising time-element mechanism carried by the train and influenced toward its initial condition by said magnets.

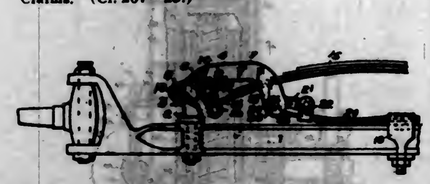
1,396,848. FRYING-PAN. JOHN G. KING, Morristown, N. J. Filed Mar. 26, 1920. Serial No. 368,805. 3 Claims. (Cl. 53—7.)

1. A frying pan having a substantially flat bottom with a flange at the back and sides and having its front part



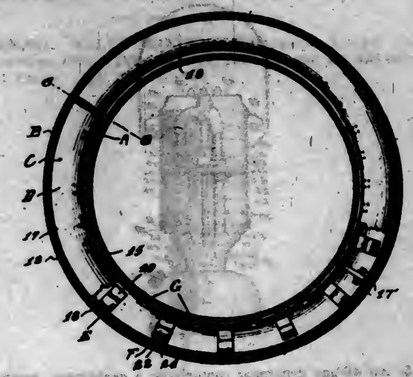
upwardly inclined to form a smooth and substantially flat portion which merges without abruptness into the bottom and is of substantially the same width for its entire length.

1,396,849. EMBROIDERY-NEEDLE. PHILLIP SHERIDAN KIRBY, Denver, Colo. Filed Apr. 13, 1920. Serial No. 373,584. 1 Claim. (Cl. 112—80.)



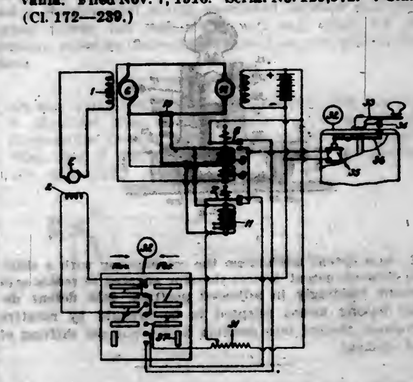
An embroidery needle comprising in combination a tubular body and a pointed lower end, a tension bridge formed in said body member over which the embroidery thread must pass, a combined adjustable depth gage and tension spring arranged and adapted to cross said bridge transversely and to engage with its angular end either of a series of transverse holes in said body member.

1,396,850. ADJUSTABLE EXTENSION-HANDLE. GOTTLIEB L. E. KLINGSELL, Omaha, Nebr. Filed Feb. 16, 1921. Serial No. 445,588. 7 Claims. (Cl. 74—39.)



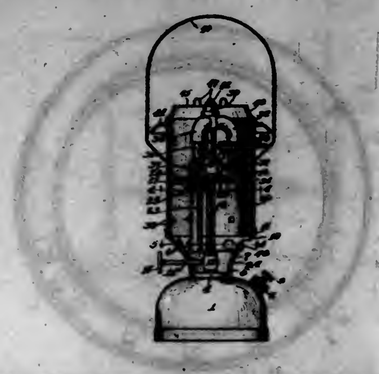
1. A handle comprising two parts adapted to be adjusted to positions of angularity with respect to each other, a double wedge between said parts and interengaging means between said wedge and the end of one of said parts to move said wedge to position to bind the parts against movement with respect to each other.

1,396,851. SHOCK-ABSORBER. ABANT J. KRABER, Pittsburgh, Pa. Filed Dec. 16, 1920. Serial No. 431,240. 6 Claims. (Cl. 267—20.)



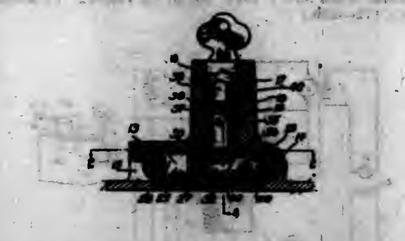
1. A shock absorber comprising an anchored resilient sustaining element having a yoke-shaped outer end, a sustaining lever having its outer end pivoted and further having a depending lower end, a link pivotally connected at one end to the sustaining lever end adapted to have its other end attached to a vehicle spring, said link carried by the lever intermediate the ends of the latter, and means to provide a slidable connection between the depending lower end of the lever and the yoke-shaped outer end of the sustaining element.

1,396,852. AIRLESS TUBE FOR VEHICLE-TIRES. JOSEPH J. KNAUT, Cleveland, Ohio. Filed Feb. 10, 1921. Serial No. 443,869. 5 Claims. (Cl. 152—8.)



2. A resilient inner tube for vehicle tires comprising an annular band formed from spring steel curved transversely to form a substantially circular body in cross section, resilient flexible means connecting the inner edges of the band together, shock absorbing leaf springs arranged to engage the inner surface of the tread portion of the band, and shock absorbing springs arranged intermediate the springs engaging the tread portion of the band for engaging the side walls of the band.

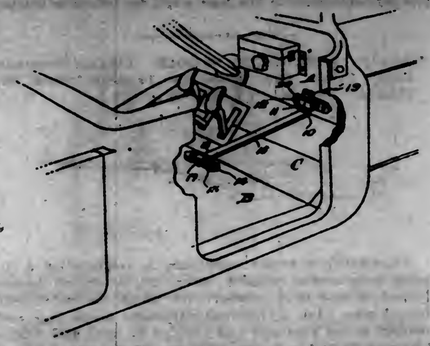
1,396,853. ELECTRICAL SYSTEM. EDWIN S. LAMMERS, Jr., Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 7, 1916. Serial No. 129,972. 7 Claims. (Cl. 172—239.)



1. The combination with an electric motor and a source of current therefor, of a resistor, for controlling the voltage of said source, a pair of switches for controlling said resistor, each having a normal position and an abnormal position, said switches being adapted to short-circuit said resistor only when they both occupy their normal positions or their abnormal positions, and means for actuating one of said switches only during the deceleration of said motor and said other switch during the acceleration or the deceleration of said motor when the current traversing said motor exceeds a predetermined value.

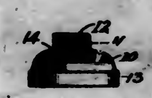
1,396,854. HYDROCARBON-BURNER. JAY F. LAWRENCE, Chicago, Ill. Filed Oct. 28, 1918. Serial No. 259,776. 10 Claims. (Cl. 158—53.)

5. An oil-gas generator comprising a carbureter, means supporting the same adapted to supply oil thereto under pressure, an air supply tube connected with said carbureter to supply air thereto for mixing with the oil therein to form an oil-gas fuel, inverted burners supported by said carbureter to receive the oil-gas therefrom, a baffle plate below said burners and carbureter, and means adjustably engaged on said air supply tube for holding said baffle plate in an adjusted position.



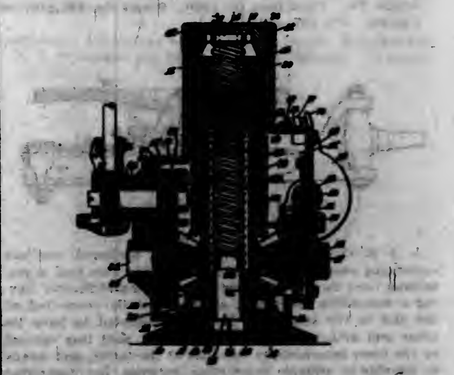
1,396,855. TRANSMISSION-LOCK. JOHN M. LEA, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 30, 1920. Serial No. 413,838. 9 Claims. (Cl. 70—126.)

1. In a detent mechanism the combination with a shiftable element, detent devices therefor adapted to retain said element yieldingly in adjusted position, said detent devices having means adapted to be brought by rotative movement thereof into position to prevent the shifting of said element.



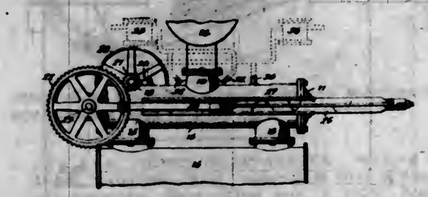
1,396,856. FOOTBOARD-HOLDER FOR AUTOMOBILES. JOHN P. LEONARD, Hawley, Pa. Filed Dec. 19, 1919. Serial No. 345,962. 1 Claim. (Cl. 296—1.)

In a motor vehicle, the combination with a stationary horizontal floor board, the dash, and a plurality of removable inclined foot-boards between the floor board and the dash; of means for securing the removable foot boards comprising a loop-like bracket member secured upon the horizontal floorboard, a bar having a dodected end engaged within said bracket and formed with a rib limiting its insertion through the bracket, an open ended bracket on the dash in which the other end of said bar is engageable, said second named end being angularly dodected, and said second named bracket being formed with a hole for the



passage of a securing member whereby to prevent removal of the bar.

1,396,857. CAP FOR ELECTRIC-LIGHT SOCKETS. ALEXANDER W. LIMONT, Bridgeport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn., a Corporation of Connecticut. Original application filed Feb. 10, 1915, Serial No. 7,291. Divided and this application filed Aug. 26, 1915. Serial No. 47,522. 4 Claims. (Cl. 173—362.)

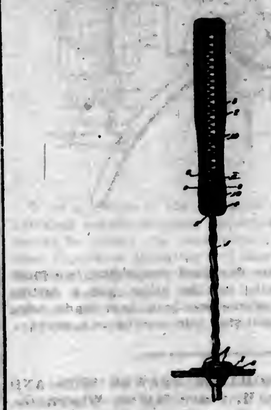


4. A drawn sheet metal one-piece socket cap, comprising a thin dome-shaped sheet metal shell and a substantially cylindrical wall at the summit of said shell merging therewith and constituting a hub, said wall being of considerably greater thickness than the shell and merging with the latter by a zone of intermediate thickness, said shell gradually decreasing in thickness from the hub to the periphery of the shell; substantially as described.

1,396,858. LIFTING-JACK. WALTER E. LOMBARD, Arlington, Mass. Filed Apr. 1, 1921. Serial No. 457,758. 25 Claims. (Cl. 254—103.)

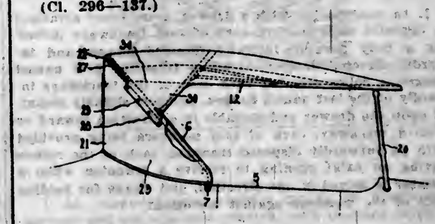
1. In a lifting jack, a base; a post secured thereto and extending upwardly therefrom; a member revolubly thereon; a nut in the upper end of said revoluble member; a screw in said nut; a weight-supporting head secured to the upper end of said screw; means for guiding said supporting head in its vertical movement; and means for rotating said revoluble member.

1,396,859. CONVEYING-VALVE. ABRAM F. LONG, Buffalo, N. Y. Filed Apr. 4, 1921. Serial No. 458,621. 8 Claims. (Cl. 34—7.)



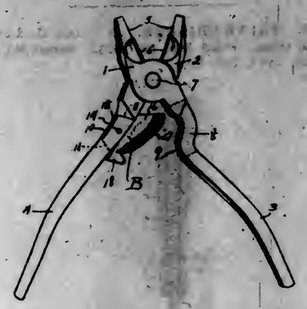
6. A balanced conveying valve, comprising a valve casing having a centrally disposed inlet passage and two oppositely disposed outlet passages arranged at opposite ends of said casing, said inlet passage being adapted for connection with a receiving chamber, said chambers being at different pressures, a slide valve movable lengthwise in said casing, and having a pocket near either end thereof for receiving material to be conveyed, said pockets being arranged to register successively with said inlet passage and alternately with said outlet passages, and means for equalizing the pressures in said pockets to the pressures existing in the respectively supply and receiving chambers before said pockets register with the corresponding inlet and supply passages, said means including two independent sources of pressure, one equal to the pressure existing in the supply chamber and the other to the pressure in the receiving chamber, said valve casing being provided with equalizing ports adjacent said inlet and outlet passages, and conduits connecting said ports with said sources of pressure, respectively.

1,396,860. METHOD AND APPARATUS FOR SEPARATING OIL AND GAS. DAVID G. LORRAINE, Los Angeles, Calif. Filed Feb. 14, 1921. Serial No. 444,696. 22 Claims. (Cl. 183—30.)



1. The method of separating the constituents of the flow from a well which consists of discharging said flow into a settling chamber, collecting the rising constituents of the flow in a second settling chamber, increasingly discharging the oil from said second settling chamber and decreasingly discharging the gas rising therefrom as the flow increases, and decreasingly discharging the oil from the second settling chamber and increasingly discharging the gas rising from the same as the flow decreases.

1,396,861. VALVE-GRINDER. WILLIAM J. LUCKS, Columbus, Ohio. Filed Jan. 12, 1921. Serial No. 436,651. 1 Claim. (Cl. 51—29.)



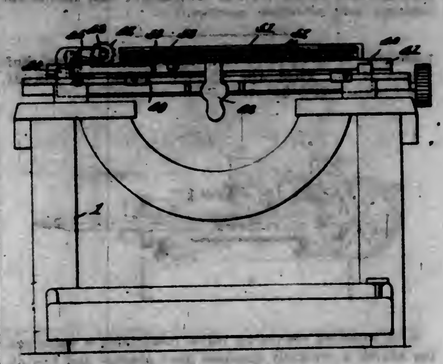
In a valve grinder, a spiral shaft, a handle structure having a bore formed therein arranged to slidably receive said shaft, means formed with the lower portion of said handle structure in coöperation with said shaft to effect the rotation of the latter, when said handle structure is vertically reciprocated, a main spring positioned between the upper end of said shaft and said bore and normally serving to maintain the shaft in an extended position, and a supplemental spring positioned between said first named means and coöperative with said shaft for resiliently arresting outward movement on the part of the shaft.

1,396,862. FOLDING TOP FOR AUTOMOBILES. GEORGE E. MADISON, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 2, 1920. Serial No. 348,757. 13 Claims. (Cl. 296—137.)

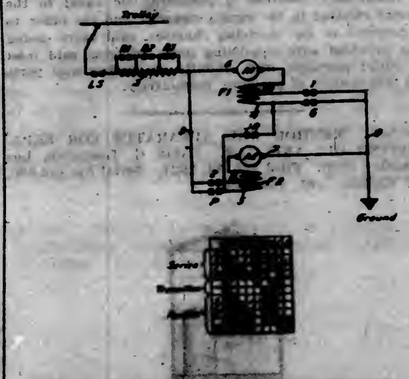
8. In a motor vehicle top and in combination with a plurality of supporting bows, and a back curtain secured along its upper and side edges to the rearmost of said bows; a fabric cover supported by said bows; a side quarter portion permanently secured along its upper edge to the fabric cover of the top and having a flap located adjacent its rear edge and depending below its lower edge; and means for detachably securing the rear edge of said flap portion relative to a side edge of said back curtain.

1,396,863. PLIERS. Joseph L. Maynard, Williamstown, Mass., assignor to Mayhew Steel Products, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 28, 1920. Serial No. 377,881. 7 Claims. (Cl. 7—4.)

6. A tool of the class described comprising two members movable one relative to the other, and a cutting blade carried by one of the members, said blade being provided with a stop, said stop also serving as a guard.



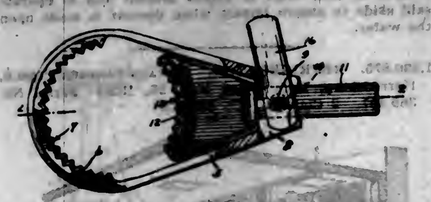
1,396,864. DETACHABLE DRAWER SETS AND ROLLERS. Samuel H. Claud Mayne, Winder, Ga. Filed July 18, 1921. Serial No. 485,286. 2 Claims. (Cl. 45—77.)



1. In combination with a drawer, a trackway arranged at opposite sides thereof, each of said trackways including a body portion, laterally directed flanges and inwardly directed flanges extending from the first named flanges, a roller coacting with each of the trackways inwardly of the last named flanges, members slidably mounted upon the drawer and movable in a direction toward or from a trackway, each of said members being provided with an outwardly disposed trunnion, each of the rollers having an axial opening to receive a trunnion when a member is moved in one direction, and means for holding each of the members against movement.

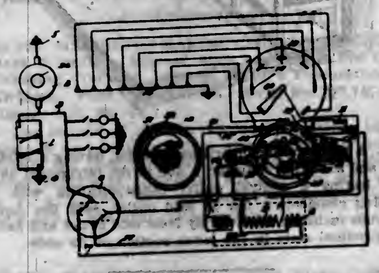
1,396,865. CARRIAGE-RETURN MECHANISM FOR TYPEWRITERS. William L. Mesecher, Lincoln, Mo. Filed Aug. 28, 1920. Serial No. 406,000. 2 Claims. (Cl. 197—63.)

1. The combination with a typewriter having a carriage and operating means, of power storing means including a spring and a gear rotated thereby, an operative connection between said spring and operating means for winding up the spring, a rock connected to the carriage and engageable with said gear, means for normally disengaging said rock and gear and to normally lock said gear, the last-mentioned means being operable in part to permit engagement of the rack and gear and release the latter.



1,396,866. SYSTEM OF CONTROL. Harry R. Meyer, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 4, 1918. Serial No. 262,944. 4 Claims. (Cl. 172—179.)

2. In a system of control, the combination with a plurality of electric motors normally having armatures and having series-type field windings, each provided with a tap-point, of means for joining the outer ends of the field windings to connect the motors in series relation, means for connecting said outer ends to the outer terminals of the non-corresponding armatures to connect the motors in parallel relation and means for connecting said tap-points to said outer terminals to effect reduced-field excitation.

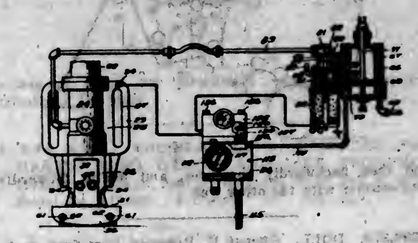


1,396,867. FRUIT-JAR-COVER REMOVER. Andrew B. Miller, Baldwin, Wis., assignor of one-third to Edward Christensen, Baldwin, Wis. Filed July 2, 1920. Serial No. 395,666. 6 Claims. (Cl. 81—3.1.)

1. A cover-remover comprising a rigid yoke-like body, having an internally-toothed segment and an extended cavity, a clamping head working in the crotch of said yoke with its stem projecting through the same and having at its inner edge a toothed segment, and a lever pivotally

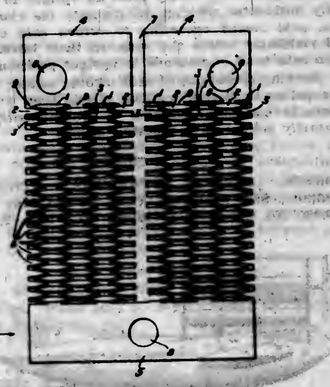
connected to the crotch of said yoke and operating on said clamping head to force the same inward.

1,396,868. IGNITION APPARATUS. William B. Mozes, Watertown, Mass., assignor to Gray & Davis Inc., Cambridge, Mass. Filed Sept. 3, 1918. Serial No. 252,345. 4 Claims. (Cl. 123—148.)



1. In an ignition device for use with an internal combustion engine, in combination, a primary circuit including a circuit opening and closing device and a resistance, and means operating at certain engine speeds for excluding the resistance from the primary circuit, said means comprising a brush susceptible to the influence of centrifugal force and contact rings adapted to be engaged by said brush to short circuit said resistance.

1,396,869. MOTOR-VEHICLE AXLE. Arthur Muenk, Oakland, Calif. Filed Jan. 20, 1921. Serial No. 438,739. 1 Claim. (Cl. 64—36.)

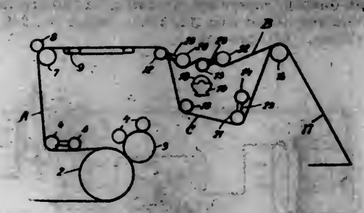


In combination, a driving axle for motor vehicles, and a housing for the axle including a confining mounting for an anti-friction device, the anti-friction device being mounted and confined within the outer end of the housing with the axle passing therethrough and with its extremity projecting beyond the end of the housing, and a detachable plate closing the end of the housing and adapted to confine the anti-friction device in the housing, said plate having an annular tongue member, said anti-friction device comprising ball bearings confined between inner and outer rings, the outer ring being of a less diameter than the end of the housing which receives it and the said annular tongue member presented between the said outer ring and the inner circumference of the housing to hold the outer ring against rotation.

1,396,870. RAILWAY CONTROL SYSTEM. William Bodine Murray, Danville, Ill., assignor to The Miller Train Control Corporation, Staunton, Va., a Corporation of Virginia. Filed Aug. 12, 1918. Serial No. 249,473. 13 Claims. (Cl. 246—181.)

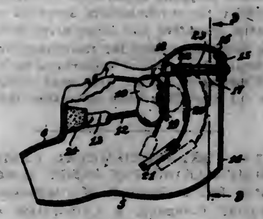
2. In a system of the character described, mechanically actuated vehicle stopping apparatus, electrically operated means to render the mechanically actuated vehicle stopping apparatus operative and inoperative with respect to fulfilling its function, means for recording each operation of the mechanically actuated apparatus in stopping the vehicle, and means in circuit with said electrically operated means for recording each operation thereof.

1,396,871. EXPANDED-METAL RESISTOR AND METHOD OF MAKING THE SAME. Harry C. Nagel, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 7, 1919. Serial No. 281,154. 6 Claims. (Cl. 219—78.)



1. An expanded-metal resistor having an unexpanded portion and an expanded portion, said portions being of equal width.

1,396,872. PRINTING-PRESS. John L. Orrell, Brooklyn, N. Y. Filed Jan. 3, 1920. Serial No. 349,156. 1 Claim. (Cl. 270—5.)

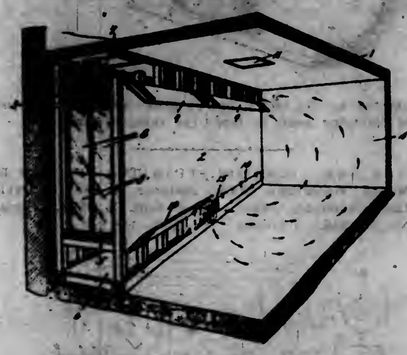


In a machine of the class described, a paste applying device, leading means for a pair of webs, said leading means being adapted to permit of either face of one web being first carried into contact with said paste applying device and then into contact with the other web, said means including a series of rollers whereby the web

to receive the paste may be carried forwardly over the pasting device, or first forwardly under the pasting device

and then backwardly thereover, and finally forwardly into contact with the other web.

1,396,873. DOLL. George H. Parsons, New York, N. Y. Filed Jan. 31, 1920, Serial No. 355,484. Renewed Sept. 30, 1921. Serial No. 504,495. 7 Claims. (Cl. 46—40.)



1. In a doll's head, the combination, with means for automatically turning the eye-balls thereof when said head is tipped rearwardly from an upright to a substantially horizontal position, to simulate the closing of the eyes, said means operating to return said eye-balls to and yieldingly retain the same in their initial positions when said head is returned to upright position, of means for checking operations of said turning means, and means operated by the lateral rocking of said head while in substantially horizontal position to intermittently and momentarily release said checking means.

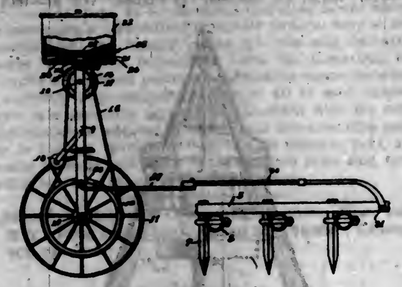
1,396,874. AERIAL APPARATUS. Vittorio Pastrengo, San Francisco, Calif. Filed May 21, 1921. Serial No. 471,425. 5 Claims. (Cl. 244—2.)

1. The combination with an aerial apparatus having wings and a propelling means, of a pair of buoyant hulls secured to said apparatus and arranged to float the same upon the surface of a body of water; a landing skid slidably mounted within each hull and extending outwardly from the bottom thereof; air cylinders mounted within said hulls; a plunger mounted within each cylinder and secured to said skids whereby upward movement of said skids when alighting upon land is resiliently retarded by the air within said cylinder; a skid pivotally and resiliently secured between the hulls at the rearward end thereof, to absorb impact and to support said rearward end when descent is made upon the land; and means secured to said skids to retard descent and to operate said skids to absorb impact when descent is made upon the water.

1,396,875. REFRIGERATOR. Howard Castner Pierce, Harrodsburg, Ky. Filed Mar. 27, 1920. Serial No. 369,497. 2 Claims. (Cl. 62—72.)

1. A refrigerator comprising a casing, having a refrigerant and a cooling chamber, a flue in the refrigerant chamber having a central outlet communicating with the cooling chamber, a fan in said outlet, said flue having its ends inclining downwardly from said outlet and having longitudinal slots in the lower portion of its ends.

1,396,876. ELECTRIC-CUT-OUT BOX. Clarence D. Platt, Bridgeport, Conn. Filed May 22, 1920. Serial No. 383,886. 2 Claims. (Cl. 220—31.)

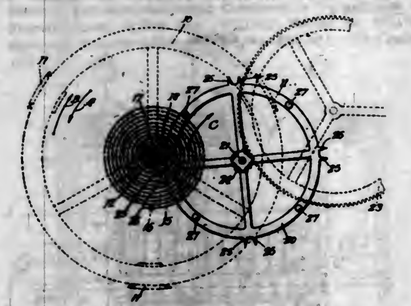


1. In an electric cut out box, a metal box body member, and a metal cover member for said box body member, one of said members having a pintle thereon, the other of said members having slits therein, and the metal between said slits displaced to form a hinge tongue loop for receiving said pintle and hinging the cover to the box body, the metal on a part adjacent one of said slits being displaced and forced over the metal on the part opposite the other part and adjacent the slit, whereby the hinge tongue will be rigidly secured and the disengagement of the box body and cover prevented.

1,396,877. HARROW-TRAILING SEEDER. Julius Floss, Green Island, Iowa. Filed May 6, 1920. Serial No. 379,336. 1 Claim. (Cl. 275—9.)

In combination with a support, a seeder including a pair of supporting arms, a wheel supported between the arms, a hopper supported by the arms, a relatively large yoke including a pair of diverging arms, said arms having

curved extremities connected to the support, a second yoke including diverging arms having their free ends con-



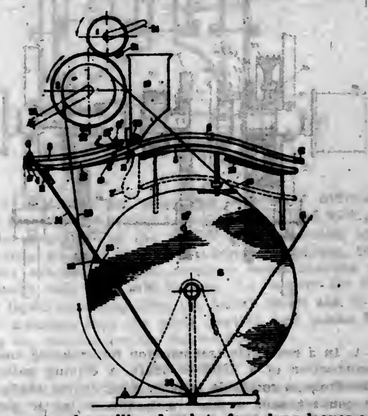
nected to the seeder, and means for adjustably connecting the yokes.

1,396,878. METHOD OF MAKING CELLULOSE ESTERS. Mark E. Putnam, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Oct. 11, 1918. Serial No. 257,747. 5 Claims. (Cl. 23—24.)

1. The method of making cellulose derivatives which consists in acetylating cellulose with an excess of acetic anhydrid, and then hydrolyzing the resulting anhydrous cellulose acetate by adding the mixture from such first step to a mixture of previously hydrolyzed cellulose acetate and excess hydrolyzing solution.

1,396,879. WATCH-MOVEMENT. John Rizek, Cudahy, Wis. Filed Apr. 12, 1920. Serial No. 373,276. 2 Claims. (Cl. 58—119.)

1. In a watch movement, the combination of a rotatable anchor wheel, a balance wheel having a verge in which a slot is provided, a plurality of pairs of teeth for the anchor wheel, each tooth being adapted to move in and out of the slot, a lever carried by the verge, and a pin spaced between adjacent pairs of teeth and adapted to coöperate with the lever.



1,396,880. THRUST-BEARING. Charles G. Robertson, Barrow-in-Furness, England. Filed Mar. 5, 1921. Serial No. 450,050. 9 Claims. (Cl. 64—25.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

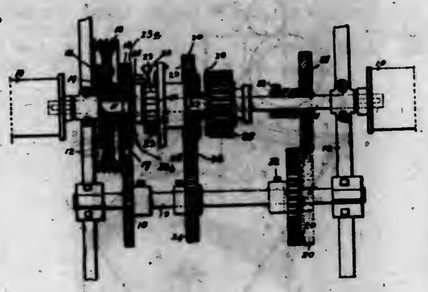
1. In a thrust bearing of the kind set forth, a plurality of bearing blocks each having a flat bearing surface and a part spherical rear surface, and a three point support for the spherical surfaces of the said blocks, the three

points of which are distributed substantially concentrically of the block.

1,396,881. DOUGH-ROLLING APPARATUS FOR MAKING LONG LOAVES AND LIKE PRODUCTS. Hyacinthe Rolin, Namur, Belgium. Filed Feb. 9, 1921. Serial No. 443,633. 7 Claims. (Cl. 107—9.)

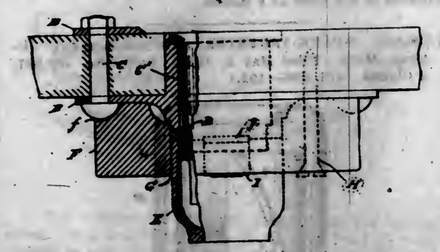
1. Apparatus for rolling dough to form long loaves and other flour products comprising a pair of substantially parallel surfaces, a sheet of flexible material, means for charging said sheet with dough, means for bending said sheet to form a pocket, and means for rolling said pocket along and between said surfaces.

7. Apparatus for rolling dough to form long loaves, and other flour products comprising a pair of substantially parallel surfaces, a fabric having two ends connected at one end to one of said surfaces and extending between said surfaces, means for charging said fabric with dough, and means for rolling said fabric along and between said surfaces in the form of a pocket.



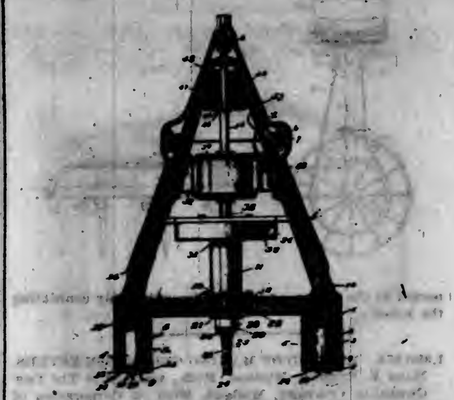
1,396,882. SPARK-ARRESTER. Tony Rudzinski, Virginia, Minn. Filed May 5, 1921. Serial No. 466,997. 2 Claims. (Cl. 183—102.)

1. In a device of the class described, a chimney, a spark arrester associated with the chimney and secured to the



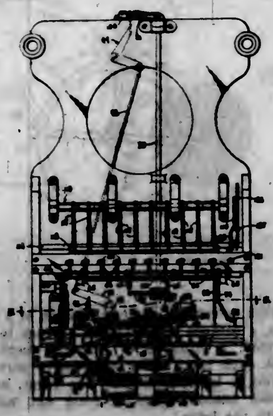
former face thereof, the arrester being constructed to provide an unobstructed vertical axis and vertical radial passages in the chimney, said spark arrester including a plurality of vanes, each embodying a curved base flange secured to the inner face of the chimney and arranged at an angle to the vertical axis of the chimney, each vane confined within an arc of less than ninety degrees, and all of the vanes equidistantly spaced, a vane wall extending at right angles from the base flange with the free edge lying in a plane parallel with the vertical axis of the chimney and the lower end of the vane wall merging into the base flange.

1,396,883. REVERSIBLE TRANSMISSION FOR SPINNING-MULES. John H. Etalls, Charlottesville, Va. Filed Aug. 18, 1920. Serial No. 403,198. 5 Claims. (Cl. 118—28.)



1. In a reversible transmission for spinning mules, the combination of a cylinder shaft, a driving pulley loose therefrom, a rotatable member fixed to the shaft, means to connect said member with the pulley to drive the shaft in one direction, and means to drive the shaft in the opposite direction comprising a jack shaft, a driving connection between the pulley and the jack shaft, and a separable driving connection between the two shafts.

1,396,884. LOCK FOR HUB-CAPS. Albert W. Sarcasaan, Granite City, Ill., assignor to Liberty Auto Lock Co., St. Louis, Mo., a Corporation of Missouri. Filed Oct. 2, 1919. Serial No. 327,989. 3 Claims. (Cl. 70—90.)



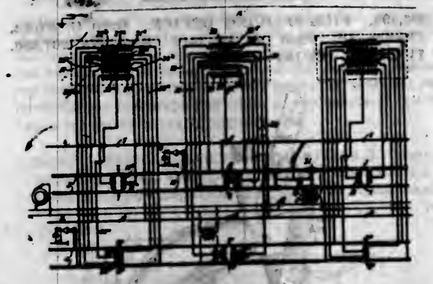
1. The combination with a wheel axle, a wheel hub turning with and fixed on said axle, an axle nut mounted on said axle and having outer threads also, and a cap screwed on the outside of said nut and having a recess formed in its outer portion near its junction with said nut, of a key-operated lock having a bolt adapted to be thrown into and out of said recess, and a support for said lock and carried by said hub adjacent to said cap.

1,396,885. DEVICE FOR RAISING SUNKEN VESSELS. Lucumano Sanchez, Habana, Cuba, assignor of one-half to Alexander Angulo, Habana, Cuba. Filed Nov. 18, 1919. Serial No. 338,906. 11 Claims. (Cl. 61—69.)

1. A device of the class described including a casing provided with spaced depending legs adapted to support the device in an upright position and having chambers or compartments, magnets located within the chambers or compartments of the legs and drilling and tapping mechanism for securing the device to a sunken vessel or other object, said drilling or tapping mechanism having gravity means for feeding the same.

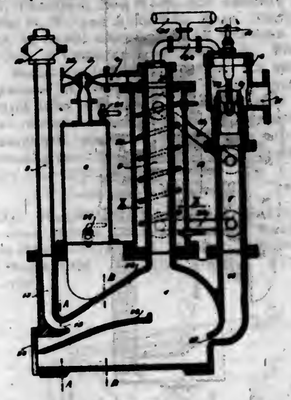
1,396,886. CALCULATING-MACHINE. Edward C. Schinner and Norman A. Sutherland, St. Louis, Mo., assignors to Typewriter Calculating Attachment Company, St. Louis, Mo., a Corporation of Missouri. Filed May 1, 1919. Serial No. 293,970. 48 Claims. (Cl. 235—59.)

2. The combination of a typewriter having a platen carriage, and calculating mechanism comprising a plurality of accumulators each provided with an actuator and a traveling denominational carriage movable step by step to change the denominational relation of the actuator to the accumulator, operating means whereby motion is transmitted from said platen carriage to one of said denominational carriages, said operating means being provided with a selector on said platen carriage whereby the last mentioned denominational carriage is selected, and a driving connection whereby movement is transmitted from the last mentioned denominational carriage to the other denominational carriage.



47. The combination of a typewriter having a tabulating key, numeral keys, an accumulator, operating means whereby movement is transmitted from said numeral keys to said accumulator, and locking means whereby said operating means is rendered inoperative when the tabulating key occupies a depressed position, said locking means including a universal stop member common to all of said numeral keys, said operating means being provided with key actuated abutments adapted to engage said universal stop member to prevent operation of all of said numeral keys, and means whereby movement is transmitted from said tabulating key to said universal stop member.

1,396,887. CLASP. Arnold Schoutens, New York, N. Y. Filed Jan. 8, 1921. Serial No. 435,906. 7 Claims. (Cl. 24—230.)

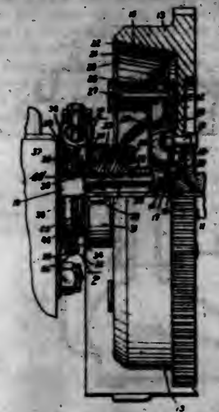


5. A clasp comprising a socket member, a resilient catch member arranged to be inserted into said socket member, said catch member comprising connected legs having an inherent elasticity tending to spread them apart to an operative position, a projection and a notch on said members, coöperating, in the operative position of said catch member, to detachably connect said members, grooved bearing members carried by said legs, a ring rotatably mounted upon said bearing members and a cam member carried by said ring whereby said legs are pressed toward each other to an inoperative position to disengage said notch and projection and permit separation of said clasp members, said ring protecting said legs, when spread apart, against unintentional adjustment toward each other to said inoperative position.

1,396,888. RAILWAY SIGNALING SYSTEM. Charles P. Stoller, New Haven, Conn., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 29, 1915, Serial No. 69,175. Renewed June 9, 1920. Serial No. 387,891. 22 Claims. (Cl. 246—37.)

1. In an electric railway system, the combination with two tracks each having an associated trolley conductor, said tracks comprising insulated block-sections which are arranged in staggered relationship in the tracks, and insulating joints inserted at corresponding points in both tracks, of means for inductively interlinking each trolley conductor to its associated track, mutually inductively related windings for bridging the insulating joints positioned at intermediate points in the block-sections, and equalizing means for equalizing the return flow of the propulsion currents in the two tracks, said equalizing means comprising inductively related coils connected between said tracks and, in turn, inductively interlinked with said means which serve to interlink said trolley conductor and said track.

1,396,889. APPARATUS FOR EXTRACTING AND REFINING GREASY SUBSTANCES CONTAINED IN WATER. Edouard Sepulchre, Woluwe-St. Pierre, Belgium. Filed Sept. 14, 1917. Serial No. 191,493. 5 Claims. (Cl. 210—51.)



1. An apparatus for separating liquids of different specific gravities comprising a receptacle provided with an inlet, for a mixture of the liquids to be separated, and two outlets situated in different horizontal planes, two vertically extending tubular receivers communicating at their lower ends with said outlets, the receiver for the lighter liquid extending from the higher outlet and to a greater elevation than the other receiver, and means for heating the receiver for the lighter liquid.

1,396,890. HYDROCARBON-MOTOR. Charles R. Snook, Detroit, Mich., assignor to General Motors Company, Detroit, Mich., a Corporation of New Jersey. Filed Mar. 24, 1917. Serial No. 157,108. 13 Claims. (Cl. 123—178.)

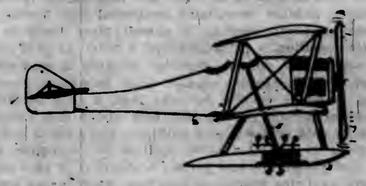
2. An internal combustion engine including a casing, a one-piece liner block detachably supported thereby and mounted in the casing and forming a plurality of cylindrical arranged in a row, the cylinders having firing ends, the casing being unobstructed throughout the length of the row and forming one peripheral joint with the liner block near the firing ends of said cylinders and also forming another peripheral joint therewith, spaced from the first mentioned joint toward the opposite ends of said cylinders, the liner block and casing together forming a chamber for cooling fluid for the engine.

1,396,691. HYDROCARBON-MOTOR. CHARLES E. SNOOK, Detroit, Mich., assignor to General Motors Company, Detroit, Mich., a Corporation of New Jersey. Filed May 28, 1917. Serial No. 171,494. 12 Claims. (Cl. 192—18.)

1. In combination, a rotatable driving clutch member; a driven clutch member rotatable about an axis coincident with the axis of said driving clutch member and movable along said axis to thereby cause said members to engage with and move apart from one another; means for moving said driven clutch member along its axis of rotation; a braking member secured to said driven clutch member and rotatable therewith; a second braking member stationary relative to said first mentioned braking member and to said driven clutch member, and with which second braking member said first mentioned braking member may be made to engage; and cam means arranged concentric with the axis of rotation of said clutch members and angularly adjustable about said axis for adjusting said second mentioned braking member along said axis and relative to said first mentioned braking member.

1,396,892. SHOW-CARD HOLDER. OTTO RICHARD SIELAFF, Livingston, Mont. Filed June 6, 1921. Serial No. 475,882. 1 Claim. (Cl. 40—11.)

A sheet metal show card holder comprising a base adapted to rest within a merchandise tray, a back bent up from said base and disposed at substantially right angles thereto, a ledge bent out from said back above and parallel to said base for supporting a show card in a visible position above the walls of said tray, the side edges of said back being bent inwardly to form a pair of spaced guides for engagement with said show card, and a lug struck out from said back, said lug and back being relatively arranged to form a clip adapted to straddle one of the side walls of said tray.

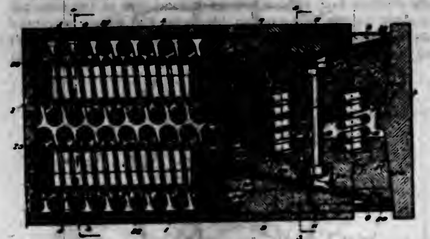


1,396,893. FOLDING UMBRELLA. PETER S. SIMMONS and WILLIAM J. FRICK, Paterson, N. J. Filed Feb. 21, 1920. Serial No. 360,296. 2 Claims. (Cl. 135—26.)

2. A folding umbrella rib including an outer and an inner section, the outer section being pivotally movable in a plane beside the inner section and one section being channeled, a sheet-metal piece bent around the convex side, and having opposite edge portions thereof bent into the channel, of the channeled section and also having a

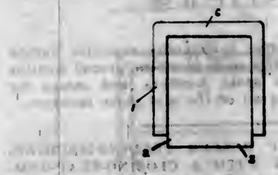
lateral elongated edge portion thereof rebent into a channeled portion, said channel-portion snugly receiving and its opposite walls laterally supporting the other section, and a pivot penetrating both said walls of the channel-portion and also penetrating the other section.

1,396,894. AEROPLANE ATTACHMENT. GEORGE C. STEVENS, Seattle, Wash. Filed Oct. 13, 1920. Serial No. 416,608. 1 Claim. (Cl. 244—2.)



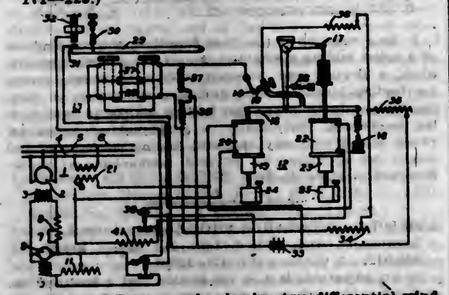
A sea plane having a pontoon formed with an opening in the bottom thereof, a lever pivoted in the top portion and having an end portion extending into the pontoon adjacent the bottom opening, the other end portion extending to a point adjacent the operator's seat, a valve member pivoted to the end of said lever within the pontoon and adapted to close the opening in the bottom thereof.

1,396,895. FILM-SPLICING DEVICE. OTTO G. STOLL, Chicago, Ill. Filed Dec. 17, 1917. Serial No. 207,396. 11 Claims. (Cl. 154—42.)



1. A film splicing device comprising a pair of laterally aiming and laterally adjustable positioning pins arranged to engage opposite perforations in a film section; and means for trimming the end of a film section held by said pins, substantially as described.

1,396,896. SHOCK-ABSORBING MECHANISM. WILSON E. STRONG, New York, N. Y. Filed June 12, 1920. Serial No. 388,496. 12 Claims. (Cl. 213—64.)

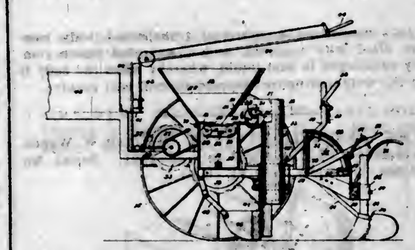


1. In a device of the character indicated, the combination with yielding means, of a casing, a plurality of simultaneously movable wedges which are slidable in contact with said casing and are adapted to approach and separate from each other, spring means interposed between said wedges and compressible thereby, and a follower movable with respect to said casing and interposed between said yielding means and said wedges and adapted to be actuated by said wedges, said follower and said wedges having engaging faces extending obliquely to the direction of travel of said follower and converging toward said spring means.

1,396,897. CONDENSER. PHILLIPS THOMAS, Edgewood Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 8, 1917. Serial No. 195,224. 8 Claims. (Cl. 250—41.)

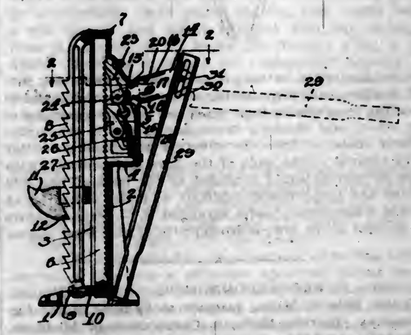
7. An electric condenser comprising superimposed alternating sheets of insulating material and of foil, the sheets of foil being of smaller size than the sheets of insulating material and being disposed so that alternate sheets of foil project beyond opposite sides of the sheets of insulating material and additional sheet insulating material surrounding the non-projecting edges of the sheets of foil between the sheets of insulating material.

1,396,898. REGULATING SYSTEM. ALLEN A. TIRRILL, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 19, 1918. Serial No. 254,760. 6 Claims. (Cl. 171—229.)



1. In a regulator, a relay having two differential windings, resistors severally connected in series with, and in shunt to, said windings, and means for opening and closing the circuit of one of said windings.

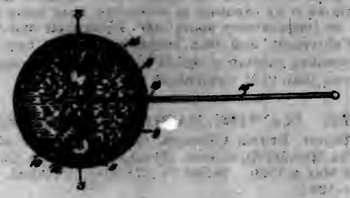
1,396,899. PROCESS OF TREATING WOOD. ALEXANDER H. TWOMBLY, New York, and ANDREAS P. LUNDIN, Bayside, N. Y., and ROBERT A. MARR, Norfolk, Va., assignors, by mesne assignments, to American Balsa Company, Inc., a Corporation of New York. Filed Jan. 10, 1917. Serial No. 141,531. 1 Claim. (Cl. 99—12.)



The process of treating wood which consists in first humidifying it by exposure to steam the wood being maintained at temperatures above 100° Fahrenheit and below 212° Fahrenheit, and then subjecting it to a bath of a water-proofing substance heated to a temperature equal to or greater than 212° Fahrenheit.

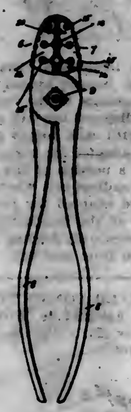
1,396,900. PLANTING-MACHINE. MARTIN TWORSKI, Vancouver, British Columbia, Canada, assignor of one-half to Michael Szymanski, Winnipeg, Manitoba, Canada. Filed May 4, 1920. Serial No. 378,734. 2 Claims. (Cl. 221—128.)

1. An agricultural implement comprising a frame, a multiple compartment hopper hinged to the top of the frame and having openings in the bottom and rear wall thereof, a receptacle disposed beneath said hopper, an endless belt associated with each hopper opening and located in the receptacle and adapted for horizontal travel beneath the hopper openings, a portion of the bottom wall of the hopper overlying the endless belt whereby the contents of the compartments are adapted for rearward travel upon said belts outwardly of the compartments, and dropping means adapted for rearwardly feeding the contents of the compartments received from said belt.



1,396,901. JACK-LEVER CONNECTION. ELON J. VAN FLEET, Joliet, Ill., assignor to William E. Pratt, Chicago, Ill. Filed Nov. 25, 1918. Serial No. 263,981. 1 Claim. (Cl. 254—109.)

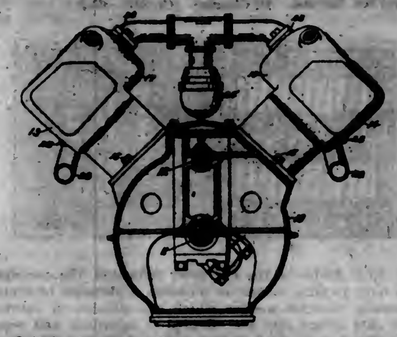
A jack lever connection embracing a pivoted lever comprising side walls, means integrally connecting said side walls forming a chamber, a pin rigidly disposed transversely between said side walls to the outside of said means, stops formed on said means, and a slotted handle



engaged on said pin between said side walls adapted to be longitudinally inserted into said chamber and against said stops, or be pulled out of said chamber and swung at an angle to said lever without requiring detachment from said pin.

1,396,902. TOY. MATTI WAISOLA, Los Angeles, Calif. Filed Apr. 7, 1920. Serial No. 372,062. 1 Claim. (Cl. 46—45.)

A toy, comprising a spherical transparent body completely filled with a liquid, and a weighted figure completely submerged in said liquid, whereby when the body is rolled the weighted figure disposed therein will revolve.

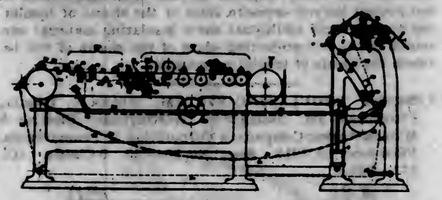


1,396,903. INSULATION-CUTTER. WILLIAM W. WEBER, Sacramento, Calif. Filed July 8, 1921. Serial No. 483,206. 2 Claims. (Cl. 81—9.5.)

1. An insulation cutter provided with jaws having pivoted handles, said jaws having series of opposed channels extending crosswise in their faces and arranged parallel to each other, said channels decreasing in size in proportion to their distance from the pivot of the handles, cutter plates secured to the ends of the jaws and provided with series of cutting edges arranged at the ends of the said grooves and proportioned similarly to them, and series of opposed longitudinal blades arranged in the said channels and secured to the jaws independently of the cutter plates.

1,396,904. HYDROCARBON-MOTOR. D'ORSAY MCCALL WHITE, Detroit, Mich., assignor to Cadillac Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 24, 1916. Serial No. 133,186. 7 Claims. (Cl. 123—52.)

1. In an internal combustion engine, a multicylinder block having a cooling liquid jacket, and a combined intake and exhaust conduit inclosed within said jacket and having a common dividing wall between its passages; said

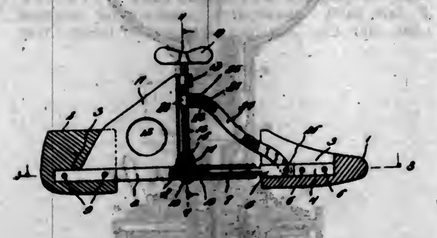


conduit having centrally arranged inlet and outlet openings upon opposite sides of said block.

1,396,905. REVOLVING HARROW. HIRAM J. WILCOX, Placerville, Calif. Filed Dec. 21, 1918. Serial No. 267,799. 4 Claims. (Cl. 55—13.)

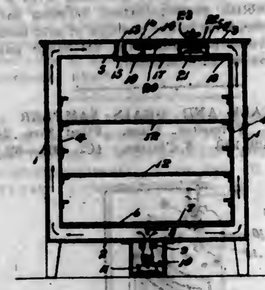
1. A harrow including horizontally revoluble harrow members having rockable spoke members, ground treating teeth carried by the spoke members, and means for simultaneously rocking all of the said spoke members.

1,396,906. ENVELOP ROLLER FOLDING-MACHINE, IN COMBINATION WITH A CLOSING-FLAP-GUMMING MACHINE. ALFRED WINKLER and MAX DÜNNEBIER, Neuwied, Germany. Filed Nov. 20, 1919. Serial No. 339,529. 7 Claims. (Cl. 93—68.)



1. In a machine of the class described, the combination of a roller folding mechanism, a crosscut gumming mechanism, a drying way between said mechanisms, means for feeding blanks to said gumming mechanism in step-by-step sequence, means for feeding blanks to said folding mechanism individually, a gum-breaking device between said drying way and said folding mechanism, and means for operating all of said mechanisms at predetermined relative speeds.

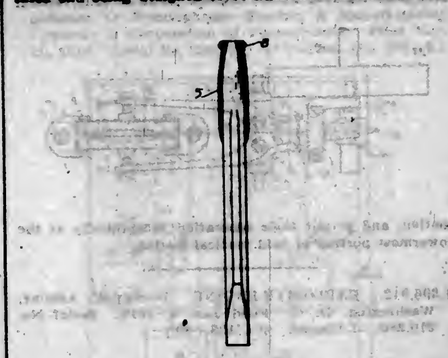
1,396,907. ADJUSTABLE SHOE-LAST. JOHN L. WOLF, Logansport, Ind. Filed Jan. 21, 1921. Serial No. 438,912. 1 Claim. (Cl. 12—128.6.)



In an adjustable last, a toe section and a heel section, each of said sections having pockets entering from the

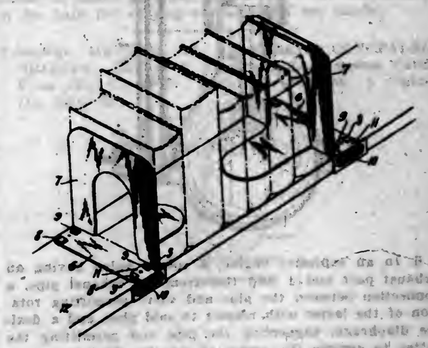
confronting ends thereof, a bar having a widened end secured in the pocket of one of the sections and having a rod projecting from the opposite end thereof, a second bar secured in the pocket of the second last section and having a socket to receive the rod, an upstanding plate on the last mentioned bar having lugs on the inner end thereof, an upwardly inclined link pivoted to the bar

of the first mentioned last section, a follower having a threaded opening therethrough and to which the upper end of the link is pivoted, a screw passing through the openings in the lugs of the mentioned plate and through a threaded bore in the follower, means holding the screw against longitudinal movement, and an operating handle at the outer end of the screw.



1,396,908. DOUGH-RAISING APPLIANCE. BENJAMIN W. WOLTMAN, Holland, Mich. Filed May 3, 1920. Serial No. 378,580. 2 Claims. (Cl. 126—282.)

1. In a device of the character described, an outer cabinet, an inner oven spaced from the cabinet, a sleeve passing through the tops of the oven and cabinet, said top of the cabinet having an opening therein a short distance from the sleeve, a lever lying closely adjacent to and below the top of the oven and pivotally connected at one end, a valve on the opposite end of the lever directly at the lower end of the sleeve, a second valve connected to the lever and located directly under said opening in the top of the cabinet, a thermostatic expansible and contractible device attached to the lever between its ends, the top of the oven being pressed upwardly to form a cup to receive the device, and means for attaching said device to the cabinet.

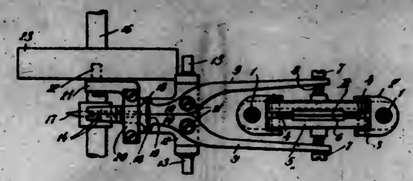


1,396,909. CHIP-CATCHER FOR TOOLS. EDWIN B. ALMATAUM, Grand Island, Nebr. Filed Feb. 12, 1921. Serial No. 444,484. 2 Claims. (Cl. 145—1.)

1. A chip catching device for tools comprising a sleeve of pliable rubber adapted to be engaged upon and to conform to the contour of the sides of a blow receiving or delivering end of a tool, said sleeve having a bore of uniform diameter and being externally tapered whereby its wall will be wedge shaped in longitudinal section, the thick end being designed to be flush with the end of the

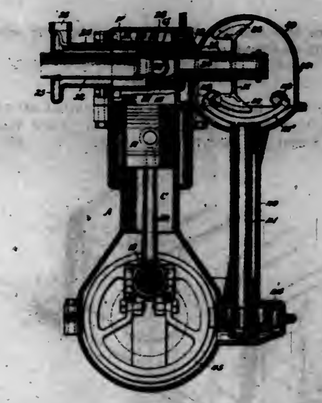
tool and the thin end possessing greater pliability whereby to automatically conform to the tool.

1,396,910. BOOK-FRAME AND LABEL-HOLDER. GEORGE A. ANNABLE, New York, N. Y. Filed Feb. 12, 1920. Serial No. 358,180. 4 Claims. (Cl. 40—10.)



1. In a device of the character described, a metal book frame comprising a base plate and an upstanding portion at substantially right angles thereto, said frame having a slit therein and metal adjacent said slit struck up from the surface of the frame and forming a lug, a label holder including a tongue for engagement beneath said lug, said label holder and a part of said frame having interlocking means for preventing the accidental disengagement of said tongue from beneath said lug.

1,396,911. MEANS FOR INTERMITTENTLY FEEDING THE FILMS IN CINEMATOGRAPHIC APPARATUS. CARLOS ANSELMI and MARCELINO VITURRO, Buenos Aires, Argentina. Filed June 17, 1920. Serial No. 389,751. 3 Claims. (Cl. 88—18.4.)



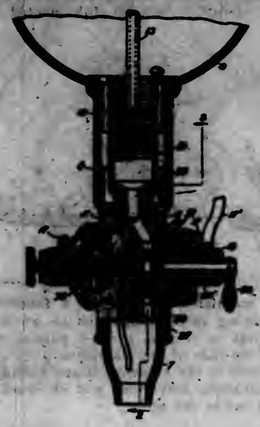
1. In an apparatus for the projection of motion pictures having a film and a projector aperture, means for intermittently feeding the film past said aperture, comprising vertical guides formed integrally with the frame of the projector, a clamping member adapted to slide upon said guides and having a pair of gripping jaws normally maintained apart, a cam coöperating with said clamping member, connections between the cam and clamping member for imparting vertical motion to the clamping

member, and a knife edged eccentric adapted to bring said jaws together at the highest point of said vertical

motion, and permit their separation substantially at the lowermost portion of said vertical motion.

1,396,912. EXPLOSIVE-ENGINE. DORSEY F. ASBURY, Washington, D. C. Filed Jan. 4, 1918. Serial No. 210,280. 7 Claims. (Cl. 123—80.)

6. In an explosive engine, a rotary valve having an exhaust port and a lead therefrom, an exhaust pipe, a connection between the pipe and valve permitting rotation of the latter with respect to said pipe, and a flexible diaphragm supporting the pipe and permitting the latter to assume the center of rotation freely.



1,396,913. PRODUCTION OF AMINOALKYLESTERS AND OF ALKYLAMINOALKYLESTERS OF PARA AMINOBENZOIC ACID. WALTER BADER, Manchester, England, assignor to Levinstein Limited, Blackley, Manchester, England. Filed Oct. 11, 1917. Serial No. 195,958. 3 Claims. (Cl. 23—24.)

1. The improvement in the production of aminoalkyl and alkylaminoalkyl esters of para aminobenzoic acid, which improvement consists in heating the para aminobenzoic alkylesters with an amino-alcohol in the presence of a small quantity of an aluminium compound of the alcohol acting as catalyzer, substantially as described.

1,396,914. MANUFACTURE OF A WHITE PIGMENT. AUGUSTE LOUIS BARBE, Asnieres, France. Filed Aug. 5, 1921. Serial No. 490,107. 2 Claims. (Cl. 134—58.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In the production of a white pigment from antimony oxid by treating with alkaline solution, the elimination of any sulfates by blowing a current of air or oxygen through the mixture after the alkaline solution has been added.

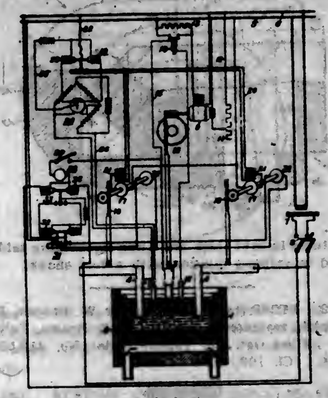
1,396,915. COMBINATION DRAFT-ARM. CHARLES L. RAMPLAY and HJALMAR MATHISEN, Chicago, Ill., assignors to The Ramlan Blueing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 2, 1920. Serial No. 427,697. 3 Claims. (Cl. 235—36.)

1. A dispensing device for liquids comprising a casing, a valve chamber in said casing, a fluid supply reservoir communicating with said chamber, a measuring receptacle communicating with said chamber, a discharge passage leading from said chamber, and a rotary cylindrical valve member in said chamber provided with a passage therein to establish communication between said reservoir and said receptacle in one position of said member and between said receptacle and said discharge passage in another position of said member.

1,396,916. SCALE AND GRAIN-SAMPLER. CONRAD R. BENNETT, Worcester, Mass. Filed Nov. 24, 1920. Serial No. 426,190. 6 Claims. (Cl. 265—62.)

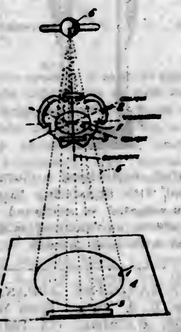
1. In a scale, the combination of a casing of a general triangular shape having means at the top for sustaining it from above so that it will hang in a definite position by the force of gravity, a pivot stud near the top of said casing, a weighted arm pivoted on said stud, and having a circular recess in its hub, a ball bearing cage in said recess centered on said stud, a flexible connection depending from said arm and extending down through the casing to a point below it, said arm having an external groove over its top in which said flexible connection rests, said groove passing about the stud from the side on which said arm is located to the other side and gradually increasing in radial distance from the center of the stud, being farther from the center on the side on which the flexible connection depends from it, a scale pan below the casing supported by said flexible connection, said casing being provided with a scale and the arm being provided with a pointer adapted to move over the scale.

1,396,917. PROPELLER FOR AIRCRAFT. ARNO BOERNER, Scheveningen, Netherlands. Filed Mar. 5, 1921. Serial No. 450,113. 2 Claims. (Cl. 170—163.)



1. In a propeller for aircraft, blades adapted under the influence of centrifugal force to slide radially to the shaft of the propeller and simultaneously to move angularly about an axis transverse to said shaft, springs adapted to act on said blades in opposition to the centrifugal force, and telescoping members on the blades adapted to guide the movements thereof, said members and the springs being located close to and transversed medially by the axis of the propeller shaft.

1,396,918. PROCESS OF MAKING SEAMLESS TUBING. PERRIN H. BRAGG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 16, 1919. Serial No. 271,548. 2 Claims. (Cl. 29—188.)

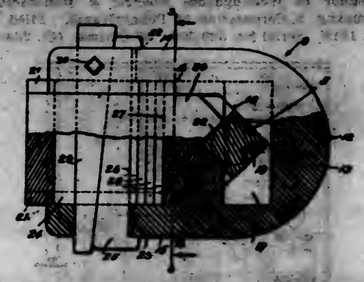


1. The method of forming a lined seamless tube which comprises providing a metallic ingot with a longitudinal bore, filling the bore with a core comprising a sleeve of the metal to constitute the lining of the tube and an inclosed body of a metal having a relatively low melting point, forging the ingot and inclosed core to elongate them and reduce their diameter and melting and removing the relatively low-melting-point metal.

1,396,919. AUTOMATIC OPERATION OF ELECTROLYTIC CELLS. PERRIN H. BRAGG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1919. Serial No. 339,509. 17 Claims. (Cl. 204—5.)

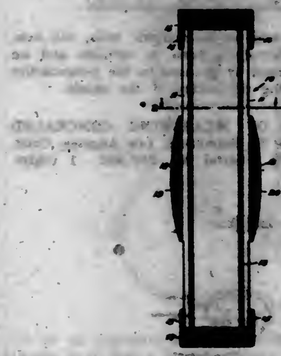
1. In a control system for electrolytic cells, the combination with an electrolytic bath, a cathode and an anode, of means governed by changes in the temperature of the bath for varying the action of the anode.

1,396,920. METHOD OF MEASURING CONCEALED OBJECTS. EDWARD E. BROSTROM, Los Angeles, Calif. Filed Jan. 17, 1920. Serial No. 353,360. 1 Claim. (Cl. 250—84.)



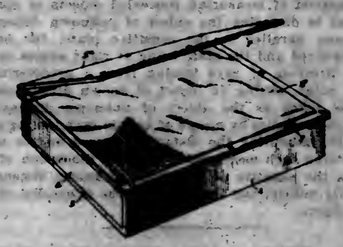
The method of measuring concealed objects or spaces, consisting in disposing the object of unknown dimension in a plane parallel to the sensitive plate, the object to be measured and the plate being at right angles to the general direction of rays issuing from a predetermined common point, setting an object of known dimensions in the same plane as the object of unknown dimensions, making the exposure by means of actinic rays issuing from said point, measuring the distances desired on the negative, dividing such measurements by the dimension of the image on the negative of the object of known dimension, and finally multiplying the result by the dimension of the known object.

1,396,921. DRIVE-CLAMP. ALBERT WALDO BROWN, Fullerton, Calif., assignor to Caroline H. R. Brown, Fullerton, Calif. Filed Oct. 25, 1920. Serial No. 419,558. 4 Claims. (Cl. 61—77.)



1. A drive clamp, comprising a driving member provided with a head having a pair of oppositely disposed

apertured arms extending therefrom, an apertured block slidably mounted between said arms, and means engaging



the apertures in said block and arms for holding said block and head in gripped relation with a tool shank.

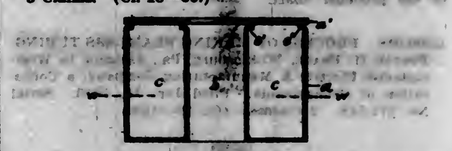
1,396,922. PUMP-BARREL. ALBERT W. BROWN, Fullerton, Calif., assignor to Caroline M. E. Brown, Fullerton, Calif. Filed Oct. 28, 1920. Serial No. 419,559. 2 Claims. (Cl. 103—59.)

1. A pump barrel, comprising a plurality of segmental members provided with registering threads on their peripheral surfaces adapted to surround a lining bushing, and a threaded sleeve surrounding said segmental members and engaged with said threads.

1,396,923. COIN-HANDLING APPARATUS. STEPHEN JOSEPH BAUNS, U. S. Navy. Filed Mar. 9, 1920. Serial No. 364,503. 6 Claims. (Cl. 133—11.)

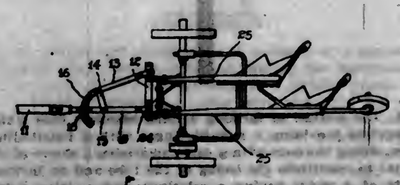
1. A coin container, comprising a box into which stacks of coin are packed, and stack separating means arranged to be crushed down on the various stacks to provide keepers preventing coins from high stacks sliding over on lower stacks.

1,396,924. PROCESS FOR PRODUCING COMPOSITE TITANIUM PIGMENTS. ALVAH H. BRUNEAU, Jacksonville, Fla. Filed Oct. 6, 1920. Serial No. 415,556. 7 Claims. (Cl. 134—58.)



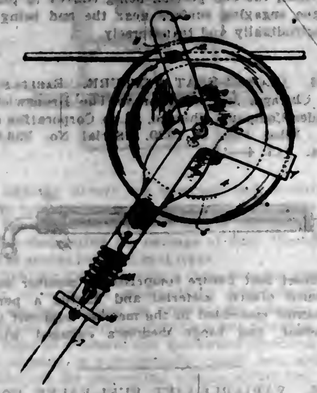
1. The process of obtaining composite titanium pigments which comprises heating together with carbon and sulfur a titanium-bearing material and a solid, inorganic compound of the metal which is to accompany titanium in the pigment, subjecting the resulting salid melt to the action of an acid solvent, precipitating from the resulting solution both titanium and the accompanying metal and subsequently roasting the precipitate.

1,396,925. POWER-TRANSMISSION BELT. ERNEST L. BURRELL, Chicago, Ill. Filed May 9, 1917. Serial No. 167,411. 5 Claims. (Cl. 74—63.)



1. A power transmission belt, comprising two superimposed plies of fabric firmly secured together by cement, one ply consisting of coarse woven strands, and the other consisting of fine woven strands, said plies being of substantially equal thickness so as to locate the juncture between them in a neutral position between the compressional and tensional strains to which said belt is subjected when in use.

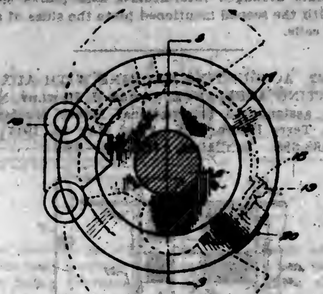
1,396,926. FLOAT OR VALVE REGULATOR AND METHOD OF MAKING THE SAME. CHARLES F. BURGESS, East Orange, N. J., assignor to Composition Machinery Corporation, Newark, N. J., a Corporation of New Jersey. Filed Jan. 26, 1920. Serial No. 353,096. 3 Claims. (Cl. 18—59.)



1. A hollow carbureter float molded of plastic composition with an annular chamber, and an annular cover of such plastic composition pressed into integral union with the upper edges of the chamber, the finished float having an open central channel upon the axis of the annular chamber, as and for the purpose set forth.

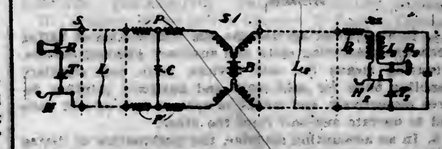
1,396,927. TRACTOR-HITCH. WILLIAM L. CANNIFF, Janesville, Wis., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 3, 1919. Serial No. 294,472. 6 Claims. (Cl. 213—67.)

1. In a draft device of the class described, a cross bar; a draft bar the rear end of which is pivotally connected with said cross bar adjacent one end thereof; an adjusting bar the rear end of which is pivotally connected with said cross bar adjacent the other end thereof; a link pivotally connected with said draft bar and with which link the forward end of said adjusting bar is pivotally connected; a curved adjusting segment, formed integrally with said link and having a series of spaced holes each of which may be made to register with a hole in said draft bar; and two series of holes in said cross bar and located one series adjacent each side thereof.



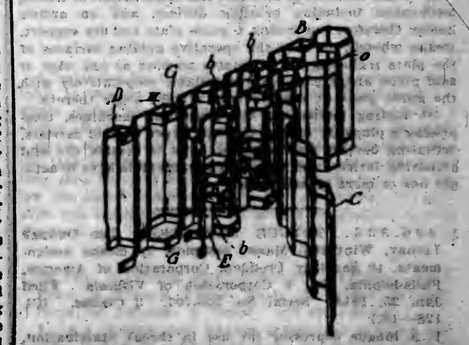
1,396,928. TROLLEY-POLE. ARTHUR W. CARROLL and GEORGE P. STONEARD, Seattle, Wash. Filed Mar. 9, 1921. Serial No. 450,900. 1 Claim. (Cl. 191—78.)

A trolley wire replacer, comprising a member pivotally supported upon a trolley wheel axle beyond the harp and having pairs of arms extending radially from the pivot and substantially equi-distant from each other, one pair of arms in normal position extending upwardly and forwardly and beyond the periphery of the trolley wheel to form guides, a second pair of arms projecting downwardly and forwardly adjacent the trolley pole, a bar secured to the trolley pole below the arms, and springs connecting the second pair of arms with the bar, and a third pair of arms extending rearwardly and downwardly and connected beyond the periphery of the trolley wheel to form a balance and stop to hold the member in normal operative position when the springs become disconnected, and also to cause the simultaneous operation of all the pairs of arms.



1,396,929. PNEUMATIC GUN. ALEXANDER CHRISTIE, Seattle, Wash. Filed May 1, 1919. Serial No. 293,933. 1 Claim. (Cl. 121—32.)

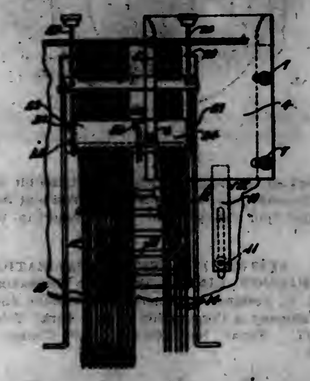
In a pneumatic tool the combination of a gun body provided with a central bore and a port communicating at opposite ends with said bore, a hammer mounted in the bore and being of such length as to be between the open ends of the port when in one position, a bit retaining member, the end wall of which is spaced from the end of the body to form a chamber, the end wall of the member having an opening, a bit operatively mounted in the gun body and extending through said opening in the member and having an annular shoulder confined in the chamber and its inner end disposed in the bore to be operated by the hammer and oppositely disposed resilient members secured to the bit retaining member, each member extending inwardly toward the bit and inclining away from the end wall of the body and terminating in a reboat end portion, the inner terminals of the rebent portions being in the path of movement of the flange, whereby when the pressure is exerted on the tool to operate same the fluid will be admitted to reciprocate the hammer, movement of the latter in one direction positioning the flange to one side of and out of contact with the resilient members, and whereby if normal pressure on the tool be removed the hammer will be drawn beyond one open end of the



port and cut off the fluid and will project the bit to force its flange beyond the rebent ends of the resilient members and thereby hold the bit and the hammer in inactive position.

1,396,930. SYSTEM FOR THE EQUALIZATION OF TRANSMISSION-LINES. RASCHEST OBERARDI, Bayhead, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 27, 1917. Serial No. 209,116. 20 Claims. (Cl. 178—44.)

12. In a telephone system, a central station, a plurality of outlying stations, telephones at said outlying stations, lines of differing lengths extending from said central station to each of said outlying stations, a common source of battery supply current at said central station for energizing said telephones, and means to prevent a greater transmission of voice currents over short lines than over long lines.



1,396,931. RADIATOR. OTTO J. GROEHN and FREDERICK L. ALLEN, Detroit, Mich., assignors to Briscoe Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 5, 1915. Serial No. 19,255. 9 Claims. (Cl. 257—130.)

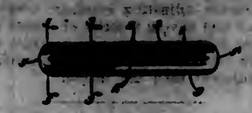
1. In a radiator, a section composed of a plate stamped to form some of the sides of a row of cells, said plate having

struck-out portions adjacent its forward edge shaped to complete the sides of said row of cells, a second plate also shaped to form some of the sides of a row of cells, and a third plate arranged intermediate said plates shaped to form with the second mentioned plate the sides of a second row of cells.

1,396,982. ACCOUNTING-MACHINE WITH AUXILIARY PRINTING APPLIANCE. Amos H. Hawley, Norwood, Ohio, assignor to International Money Machine Company, Terre Haute, Ind. Filed May 15, 1917. Serial No. 168,688. 14 Claims. (Cl. 235—58.)

1. In an accounting machine, the combination of listing mechanism including main and auxiliary printing devices, actuating means for said devices, main and auxiliary disabling bails for said main and auxiliary printing devices respectively, and means to operate each of said bails and to operate one bail from the other.

6. In an accounting machine, the combination of listing mechanism including printing devices, said devices comprising type-carriers and types thereon, type hammers, hammer drivers for said hammers, catches to set and fire said drivers, engaging means between the catches and drivers, a disabling bail to engage the catches and prevent action thereof on the drivers, and a key to actuate and hold the bail operative.



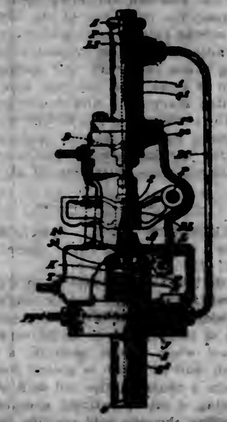
7. In an accounting machine, the combination of listing mechanism including printing devices, and an article holder therefor comprising a guide plate and its support, means to adjust the plate on the support, and means whereby to vary the operative guiding surface of the plate, both transversely and longitudinally.

9. In an accounting machine, the combination of listing mechanism including printing devices, and an article holder therefor, comprising a guide plate and its support, means whereby to vary the operative guiding surfaces of the plate including an adjustable member at one edge of said plate, and a gage plate adjustable coöperatively with the guide plate at substantially a right angle thereto.

10. Listing mechanism for accounting machines, comprising a plurality of type carriers, types on said carriers, actuating devices for the types, bails to disable the said actuating devices, and independently operable keys to actuate one or more of said bails.

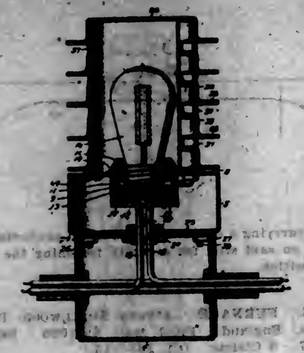
1,396,932. TONGUE-DEPRESSOR. Leo Dunbar Jacoby, Winthrop, Mass., assignor, by mesne assignments, to Sanitary Products Corporation of America, Philadelphia, Pa., a Corporation of Virginia. Filed Jan. 25, 1918. Serial No. 213,707. 3 Claims. (Cl. 128—16.)

1. A tongue depressor for use in throat examination, composed of an integral sheet having a central longitudinal flat base portion which extends for the greater part of the length of the article, upwardly inclined side portions merging from said base portion, inwardly extending outwardly curved side flanges extending in continuation of said upwardly inclined sides, said base portion terminating at each end in an upwardly curved portion of less



height than the side portions and which merges on a curve into said upwardly inclined and outwardly curved flange side portions, the end portion being convex in plan view, the tongue engaging surface near the end being convex both longitudinally and transversely.

1,396,934. CLOSET-SEAT FIXTURE. Earldley C. B. Juno, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 6, 1920. Serial No. 356,609. 3 Claims. (Cl. 4—13.)



1. A closet seat fixture comprising a member composed of hardened plastic material and having a perforated metal channel embedded in the member adjacent the rear edge thereof, and hinge members engaged with said channel.

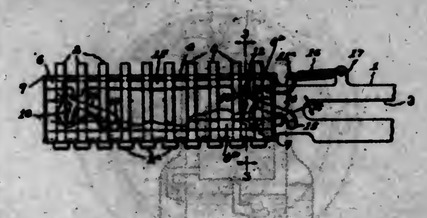
1,396,935. VARIABLE-LIFT FUEL-VALVE FOR OIL-ENGINES. Karl Otto Kellen, Durham, England, assignor of one-half to Robert Pile Dunford, Pallion Yard, Sunderland, England. Filed Jan. 24, 1920. Serial No. 353,874. 9 Claims. (Cl. 123—32.)

1. In an oil engine, a fuel valve having a maximum opening movement, means capable of causing said valve to open to said maximum extent, said means being initially and finally effective at unchanging points in the crank-pin path in successive revolutions of the engine for producing intervals lasting through an unchanging angular extent of said path between the opening and closing of the valve, and means for variably limiting the extent of opening movement thereof, said means comprising twin levers coöperating with said valve, and an eccentric for changing the position of said levers, substantially as described.

1,396,936. LIGHTING-FIXTURE. Albert R. Locke, Chicago, Ill. Filed Oct. 18, 1919. Serial No. 331,623. 12 Claims. (Cl. 240—11.)

1. A lighting fixture for securing and directing light having in combination a plurality of spaced rings forming a lamp housing, a lamp socket within the housing, and a screen for obstructing the passage of light through a portion of the spaces between said rings.

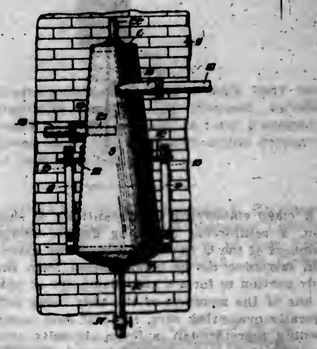
4. A lighting fixture having a lamp housing formed of a plurality of separate substantially non-reflecting rings held in spaced relation to prevent the passage of light therebetween in a vertical direction but allowing the passage of light in a lateral and downward direction, a cover for the housing, a substantially closed box, and means within the box for supporting a lamp within the housing.



1,396,937. SUNDIAL. Clyde D. Love, Coshocton, Ohio. Filed Oct. 27, 1920. Serial No. 420,025. 7 Claims. (Cl. 33—62.)

1. A sun dial including a gnomon, a substantially flat dial associated therewith, and a pivot bolt upon which the dial is adjustably mounted, the axis of the pivot bolt being parallel to the shadow casting edge of the gnomon.

1,396,938. TYPE-CARRIER. Elton L. Lutz, Reading, Pa., assignor to International Money Machine Company, Reading, Pa., a Corporation. Filed Sept. 23, 1920. Serial No. 412,905. 12 Claims. (Cl. 235—58.)

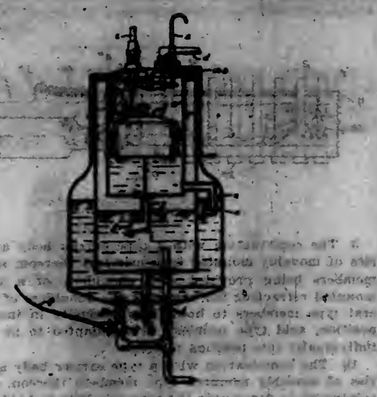


1. The combination with a type carrier body and a series of movably mounted type members carried thereby, of means including a single spring element for normally holding the type members yieldably in inoperative position, said type members being adapted to be brought individually into position to print.

3. The combination with a type carrier body and a series of movably mounted type members thereon, said type members being provided with shoulders, of a yieldably mounted retracting bar engaging the shoulders of the several type members to hold them normally in inoperative position, said type members being adapted to be brought individually into position to print.

10. The combination with a type carrier body and a series of movably mounted type members thereon, of a retaining plate fitted over the type members to hold them in position, and coöperating interlocking tongues and cut away portions at each end of the retaining plate and adjacent portions of the type carrier for detachably holding the retaining plate in position upon the type carrier body.

1,396,939. SEPARATOR. Frank W. Miller, Chicago, Ill., assignor of one-half to Clarence D. Bauers, Chicago, Ill. Filed Oct. 7, 1918. Serial No. 257,120. 1 Claim. (Cl. 183—83.)



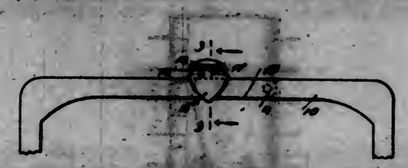
A separator for blow-off steam and water, comprising a tank having its upright walls diverged downwardly, a steam outlet pipe leading from the top of the tank, a sludge off-take pipe leading from the bottom of the tank, a steam and water inlet pipe discharging tangentially into the tank adjacent the top thereof, and a clean water off-take pipe disposed above the middle of the tank and below the steam and water inlet pipe and having its open inlet end located substantially at the longitudinal axis of the tank.

1,396,940. VACUUM FUEL-FEEDING SYSTEM. Frederick D. Nelson, Detroit, Mich. Filed Feb. 18, 1921. Serial No. 445,964. 5 Claims. (Cl. 158—46.5.)

1. In a vacuum feel feeding system for internal combustion engines in combination with the vacuum chamber, a gravity feed chamber discharging into the carburetor,

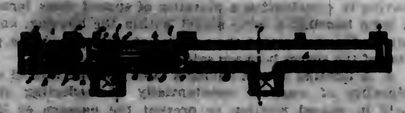
and gravity feed chamber provided with a nozzle with adapted to receive fuel, a discharge conduit leading from

said located wall chamber to the discharge means leading from the gravity feed chamber to the carburetor.



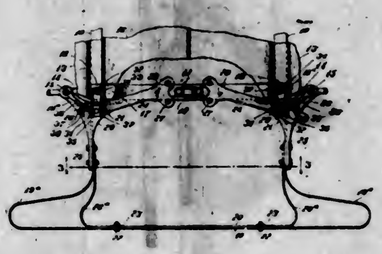
1,396,941. CLASP. ADOLPH PFEIFFER, Chicago, Ill. Filed Aug. 28, 1920. Serial No. 405,369. 1 Claim. (Cl. 24—248.)

A clasp embodying a substantially U shaped body portion, a reinforcing fastening device connected with the members of the U to extend across the space therebetween, said fastening device being spaced from the bend of the body portion to form a suspension eye or opening, portions of one of the members of the body being deflected to form laterally projecting ears, the last said member having an opening therethrough, a lever pivotally mounted between the said ears, a plurality of spaced toothed members carried by and projecting from the lever and extending transversely across the lever, said toothed members being adapted to project through the said opening to cooperate with the other member of the body portion, corrugations extending transversely of the last recited member and with which corrugations the toothed members cooperate, and a catch carried by the said lever and adapted to cooperate with an edge of one of the members of the body portion for yieldingly locking the lever against movement with respect to the said body.



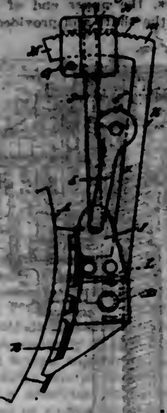
1,396,942. CLASP-FASTENER FOR HANDBAGS AND THE LIKE. EARNER C. SCHMOZEMA, New York, N. Y., assignor to Kearney Comb & Novelty Co., Kearney, N. J., a Corporation of New Jersey. Filed June 22, 1920. Serial No. 390,800. 4 Claims. (Cl. 292—262.)

1. In a clasp fastener for hand bags and the like, a pair of supporting members, one member of which carries a pivotally mounted clasp having depending sides and a rounded head with a locket therein, the other of said



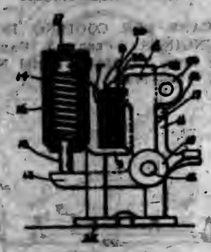
members carrying a cooperating stud, and projecting spring elements on said stud for securely fastening the clasp in closed position.

1,396,943. FURNACE. ALFRED SMALLWOOD, Highgate, London, England. Filed Mar. 8, 1920. Serial No. 364,267. 8 Claims. (Cl. 263—15.)



1. A furnace, including an elongated working chamber, a sectionalized recuperator system arranged below said working chamber and means for admitting waste gas from different portions of said working chamber to said recuperator system at a plurality of points in the length of the furnace, the waste gas in the recuperator system flowing in opposed directions.

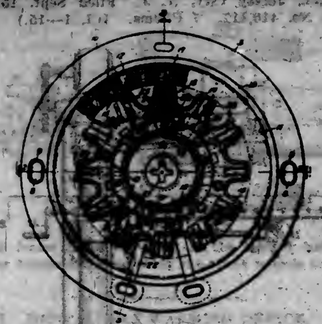
1,396,944. AUTOMOBILE-BUMPER. FRANK TOMASEK, Chicago, Ill. Filed July 5, 1921. Serial No. 482,423. 7 Claims. (Cl. 293—55.)



1. An automobile bumper comprising two bumper bars secured together intermediate their extremities with capacity for relative movement and having their ends bent rearwardly to provide attaching arms, and means for securing said bumper bars to the automobile comprising two bumper bar supports, each of which is formed with an arm adapted to be bolted to the framing of an automobile, an arm to which the adjacent extremities of said bumper bars are rigidly attached, and an arm adapted to be attached to the mud guard bracket of the automobile.

1,396,945. [illegible]. [illegible], Trafalgar, Ill. Filed Sept. 23, 1920. Serial No. 411,668. 6 Claims. (Cl. 292—332.)

1. The combination with a trunk head and a hanger therefor, of a gravity-dog, and cooperating means for yieldably holding said head in angular adjustment to said hanger determined by the bearing of the head on the wheel.

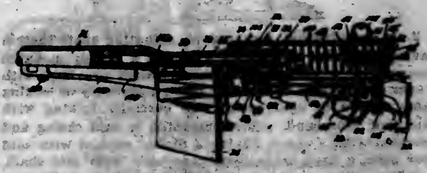


1,396,946. DOUBLE AUTOMATIC LATCH FOR SWITCH-STANDS. FRANK C. ANDERSON, Cincinnati, Ohio, assignor to The American Valve & Meter Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 15, 1919. Serial No. 338,338. 2 Claims. (Cl. 70—128.)

1. A double automatic latch comprising a stand having a slot therein adapted to receive a switch stand lever and also a slot adapted to receive a keeper for said switch stand lever, a spring pressed plunger mounted in elevated position on one side of the switch stand lever slot and a keeper for said switch stand lever on the opposite side of the switch stand lever slot from said plunger and having a finger thereon extending through a slot therefor and adapted to engage the lower end of said spring pressed plunger whereby said keeper is adapted to be automatically opened and closed when said switch stand lever is moved past said keeper in either direction.

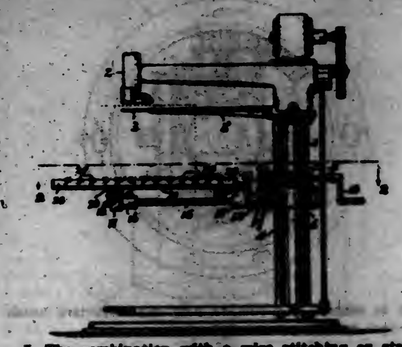
1,396,947. DYNAMO-ELECTRIC MACHINE. VINCENT G. APPLE, Dayton, Ohio. Original application filed Apr. 28, 1917, Serial No. 163,803. Divided and this application filed Feb. 14, 1918. Serial No. 217,150. 14 Claims. (Cl. 171—231.)

4. An end plate, for a dynamo electric machine, of insulating moldable material having a plurality of circumferentially disposed grooves for the commutator brushes shield thereto and having a spring holding cavity within



which to contain a spring to hold the respective brush in contact with a commutator.

1,396,948. COMMUTATOR-BRUSH. FRANK L. COOLEY, Brooklyn, N. Y. Filed Jan. 6, 1921. Serial No. 435,240. 12 Claims. (Cl. 171—328.)



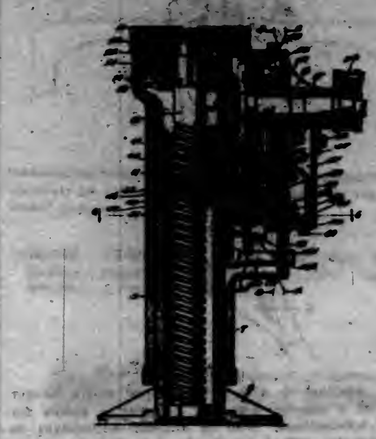
1. A commutator brush comprising a main body composed of substantially longitudinally disposed metallic strands compressed together laterally to form a comparatively homogeneous mass, and a metallic casing surrounding the sides of said main body.

1,396,949. AUTOMATIC GUN. THEODORE H. EICKHOFF, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1920. Serial No. 408,912. 38 Claims. (Cl. 42—3.)

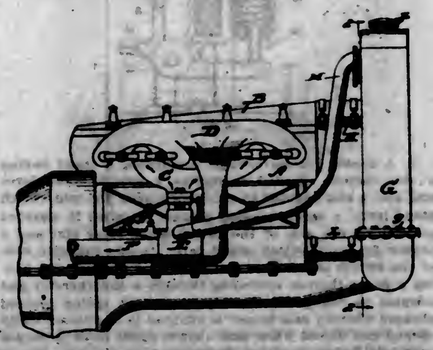
1. A gun comprising a receiver, breech closing mechanism adapted to reciprocate in the receiver, the breech closure comprising a non-rotating bolt and a rotating sleeve thereon having lugs adapted to engage with lugs in the receiver, the engaging angle between the sleeve lugs and the lugs in the receiver being inclined to the line of breech pressure at such angles as to hold the breech closing mechanism in closed position at high breech pressure and to slide relatively to each other when the pressure drops to a low value whereby the breech closure is automatically unlocked.

1,396,860. WORK-SUPPORTING MEANS FOR WIRE STITCHING OR STAPLING MACHINES. Edwin A. Flavell, Jersey City, N. J. Filed Sept. 18, 1920. Serial No. 410,417. 7 Claims. (Cl. 1—15.)

7. The combination with a wire stitching or stapling machine and its anvil arm of a work supporting means, comprising a rectangular frame having a plurality of longitudinally spaced transverse idler rollers, means for carrying said frame, means for pivoting the inner end of said frame relative to said carrying means so that its free end is laterally movable in horizontal plane, means rendering the pivoted end of said frame yieldingly depressible, and means for vertically adjusting said carrying means toward or away from said anvil arm.



1,396,861. LIFTING-JACK. William Herbert Fowkes, Chicago, Ill., assignor to Buda Company, a Corporation of Illinois. Filed Mar. 8, 1919. Serial No. 281,288. 5 Claims. (Cl. 188—196.)

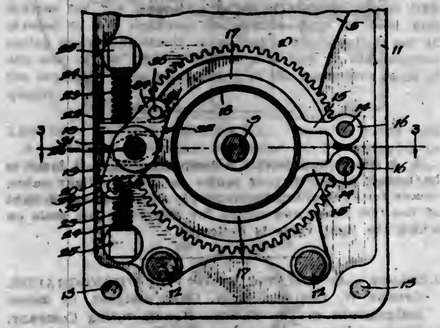


2. In combination, a casing, an actuating shaft therein having a ratchet mechanism including a loosely mounted gear wheel, a pinion in mesh therewith provided with a spur gear having an annular band, a plurality of locking cams carried by said casing and normally locking with said spur gear band, a shaft mounted in said casing and provided with a sleeve having a pinion meshed with said spur gear, a fixed brake band concentric with said shaft, a rotary disk carried by said sleeve and pivotally provided near its margin with a plurality of lever brake shoes designed to flexibly engage said fixed brake band as the disk rotates, said locking cams being provided with a manually operated lever extending through said casing.

1,396,862. LIFTING-JACK. William Herbert Fowkes, Chicago, and Merl J. Harkless, Harvey, Ill., assignors to The Buda Company, a Corporation of Illinois. Filed Oct. 27, 1919. Serial No. 333,486. 11 Claims. (Cl. 254—113.)

1. In a lifting jack, the combination with a standard, a sleeve movable thereon, and lifting mechanism for said sleeve including an actuating shaft rotatable in one direction during the lifting movement of the sleeve and in the reverse direction during the lowering of the sleeve, of mechanism for automatically controlling the lowering of the sleeve comprising a pair of fixed inner and outer vertically disposed plates, the upper end of the inner plate positioned adjacent the shaft and provided with an annular braking surface, a train of speed multiplying gearing carried by said plates and said shaft and operable during reverse rotation of the shaft, and a revolvable disk driven by the high speed member of said gearing and provided with a plurality of pivoted arms having weights at their free ends adapted to frictionally engage said braking surface during disk revolution.

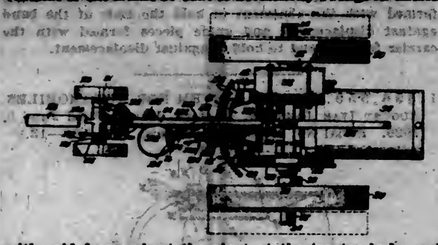
1,396,863. MEANS FOR COOLING INTERNAL-COMBUSTION ENGINES. Perry J. Garrison, Oxford, Mich. Filed Sept. 22, 1919. Serial No. 325,321. 4 Claims. (Cl. 123—174.)



1. The combination with an internal combustion engine, of a water chamber, suitable pipe connections between the water chamber and the water jacket of the engine to provide for a circulation of water therethrough, and a pipe having an open end sleeved within the water return connection between the water tank and the water jacket of the engine, the other end of the pipe being open to the outer air to admit the air therethrough into said water pipe connection and thence to the water jacket of the engine.

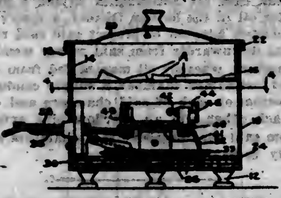
1,396,864. MEANS FOR OPERATING POWER-TRANSMITTING. Dawn S. Gibson, Minneapolis, Minn., assignor of one-third to Arthur D. Cole, Minneapolis, Minn. Filed Nov. 20, 1916, Serial No. 132,262. Renewed Mar. 26, 1921. Serial No. 456,965. 5 Claims. (Cl. 74—26.)

1. Apparatus of the class set forth, comprising, in combination, a revolvable driving element, a revolvable driven element, transmission mechanism interposed between said parts comprising a friction gear couple having one member attached to said driving element and the other slidable and revolvable independently of said first member and connected with said driven member to revolve the latter in one direction, a clutch interposed between said driving and driven members, a revolvable pinion slidably disposed between and adapted by sliding movement to disconnect said clutch, spread said gear members and transmit reverse motion from one gear member to the other after said clutch has been disconnected, and means for sliding said pinion.



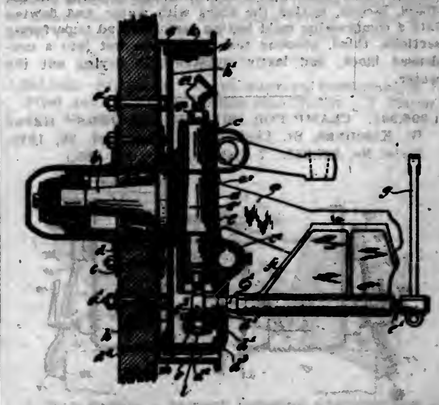
1,396,865. BRAKE MECHANISM FOR LIFTING-JACKS. Merl J. Harkless, Harvey, Ill., assignor to The Buda Company, a Corporation of Illinois. Filed Oct. 27, 1919. Serial No. 333,484. 7 Claims. (Cl. 188—166.)

4. In a brake mechanism for jacks, the combination of a support, a rotatable member mounted therein and provided with an annular braking surface, a pair of brake members mounted on said support in position to embrace said annular braking surface, means for yieldably urging said braking members into engagement with said braking surface, means for moving said members into inoperative position against the force of said yielding means, and means for positively holding said brake members in braking relation with said surface.



1,396,956. TRACTOR. Primm R. Hawthorne, Milwaukee, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1919. Serial No. 321,903. 9 Claims. (Cl. 180—12.)

1. In mechanism of the class described, the combination of a tractor body including power plant and wheels, a frame pivoted on the tractor body extending therefrom, truck wheels normally supporting the free end of said frame, means for selectively varying the angularity of the frame with the tractor body, vertically adjustable means rigidly attaching the relatively long rigid tongue (or the like) of a vehicle in raised angular position in a plane vertical to the frame so that it necessarily swings in unison



with said frame about the pivot at the tractor body, and means for temporarily elevating the truck wheels from the ground.

1,396,957. DENTAL WAX-WARMING DEVICE. Jay A. Heidbrink, Minneapolis, Minn. Filed Nov. 19, 1919. Serial No. 339,162. 6 Claims. (Cl. 219—44.)

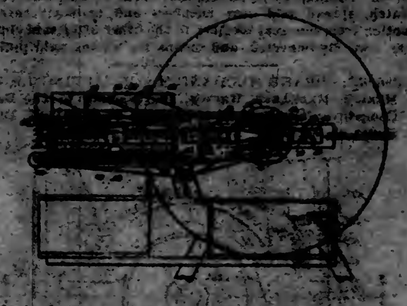
1. A dental wax warming device comprising a cup-shaped member forming an inclosed chamber, a reticulate member in said chamber for supporting the wax, a heating element associated with the bottom of said chamber, and a thermostat between the heating element and the support having connection with the heating element for controlling the action of the element and the temperature in the chamber.

1,396,958. WHEEL-BRAKE. Alexander Griswold Herrshoff and Alexander Lucand, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 24, 1920. Serial No. 368,209. 6 Claims. (Cl. 188—194.)

5. In combination with a steering vehicle wheel and steering knuckle, a brake drum carried on the wheel, an open ended internally expanding brake band therefor, a carrier for the band secured to the knuckle, an abutment carried with the knuckle and resting between the ends of the band, an arm pivoted to one end of the band, a cam piece mounted at the other end of the band and engaged

1. A mould over the mouthpiece having a plurality of chambers for oil in the bottom thereof, a receptacle for oil, a rotary member adapted to register with said receptacle, a pipe leading from said receptacle to each of said chambers, a valve in each of said chambers, a rod connected with said valve, a cam on said rotary member adapted to engage said rod to open said valve and permit oil to flow from said receptacle through said pipe into the bottom of each of said chambers and separating them to each other, and means for withdrawing the moulds vertically from said chambers and for moving said chambers downwardly to [illegible]

1,396,960. MACHINE FOR SEPARATING CRUSHED CRYSTALS AND FRAGMENTS. Thomas C. Sharpe, Memphis, Tenn. Filed Dec. 17, 1919. Serial No. 345,555. 4 Claims. (Cl. 85—61.)

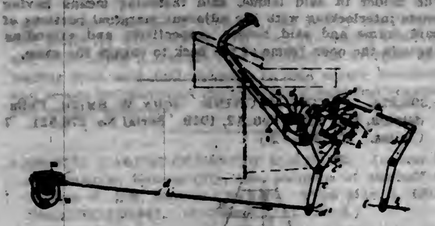


2. The end of forming elements having their inner bodies, which combine to form tapering and frustoconical tips, second, mixing the fibers with water, and forcing into a continuously moving mould having parallel and imperforate sections, third, pressing the semi-solid wet body into a condensed block, and lastly, substantially drying out the water.

1,396,961. CLAMP FOR FREIGHT-CARRIERS. Henry W. Kirchner, St. Louis, Mo. Filed Sept. 29, 1919. Serial No. 327,252. 7 Claims. (Cl. 105—368.)

1. The combination of a carrier having a supporting floor which has perpendicular side edges extending thereupwardly substantially, a combination sash bar, and a reinforcing member mounted on the side of said sash bar and extending over the edge of said floor and engaging therewith, having means on its lower end for engaging the perpendicular side edges of the floor at any place.

1. A photometer having a comparison light, a lamp to be tested, a plurality of resistances for different light values, means for controlling the intensity of the standard light of the test lamp, and means for indicating the scale on which the light value is indicated.



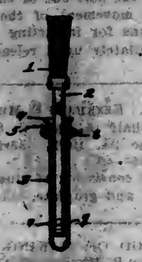
1,396,962. AUTOMATIC STOP FOR PHOTOGRAPHER. Gordon W. Kershaw, Troy, Ohio, assignor, by mesne assignments, to The Thomas Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 5, 1915. Serial No. 59,944. 8 Claims. (Cl. 128—2.1.)

2. An automatic stop for photographic cameras, a pivotally mount, a movable plate, a variable arc shaped portion of said movable plate and projecting through there where said stationary plate, a plurality of stops, a pro-

jection, carried by said set lever and extending between said stops whereby said lever is limited in its movements in both directions, an substantially horizontal trip lever pivoted to said movable plate below said set lever, a shoulder on said trip lever adapted to engage the end of said set lever, a stop lever loosely engaging said trip lever, a spring attached to said trip lever at one end and to said set lever at its other end, and means whereby when said projection engages one of said stops by virtue of the movement of said set lever in one direction said shoulder disengages the lower end of the stop lever thereby permitting said spring to rock said trip lever and cause said stop lever to be actuated.

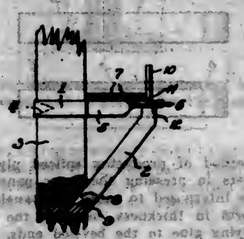
1,396,965. FOUR-WHEEL BRAKE EQUALIZER. Alexander Lucard, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 11, 1920. Serial No. 364,807. 3 Claims. (Cl. 188—46.)

1. In combination with brake operating devices for the front and rear wheels of a vehicle, means to equalize the braking efforts therebetween including an equalizer bar and connections between said bar and said brake operating devices for the respective pairs of wheels, a pull link pivoted to said equalizer bar intermediate its ends, and spring means adjustably connected to the equalizer bar at one side of the line of pull of said link to differentiate the braking efforts transmitted to the respective pairs of wheels.



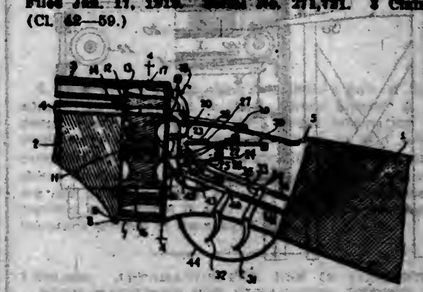
1,396,966. MOTOR-MOUNTING. Edmund Lyon and Anthony F. Williams, Rochester, N. Y., assignors to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 25, 1919. Serial No. 273,956. 4 Claims. (Cl. 64—63.)

1. A motor-mounting comprising: a wedge-like cradle shaped to receive a motor and provided with a bearing-surface circularly curved about an axis eccentric to but parallel with the axis of the motor-shaft; a support for said cradle, having a bearing-surface cooperating with the bearing-surface on the cradle; and means for retaining the cradle against the longitudinal movement on said support.



1,396,967. DRIP-CUP ATTACHMENT FOR BRUSHES. Christian A. Hellmann, Glendale City, Mo. Filed Apr. 25, 1921. Serial No. 464,873. 4 Claims. (Cl. 15—98.)

1. The combination with a brush having a handle, of a sleeve sheath removably receiving said handle and having a tapered pointed sheath near its lower end, and means for rigidly securing the upper end

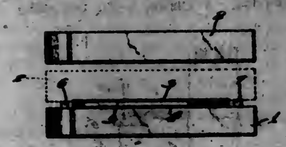


of the sheath to, but spaced from the upper end of said handle.

1,396,968. SCAFFOLD-SUPPORT. David B. Mendes and James Kelly, Detroit, Mich. Filed Feb. 13, 1920. Serial No. 358,554. 1 Claim. (Cl. 304—33.)

A scaffold bracket comprising arms having hook shaped ends adapted to engage in the rear wall of an upright, said arms converging and terminating at their other ends in flat apertured heads one extending on the other, a leg adapted to have its lower end engage in the front wall of said upright, a post on said leg extending through the heads of said arms and permitting said heads to rest on the upper end of said leg, said post adapted to cooperate with the upright in preventing lateral displacement of planks on said arms, and means carried by said post above the arm heads to hold the arm heads thereon.

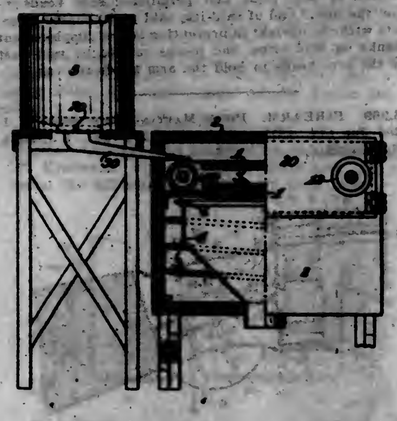
1,396,969. FIREARM. Peter Martino, Providence, R. I. Filed Jan. 17, 1919. Serial No. 271,731. 8 Claims. (Cl. 42—50.)



2. In a firearm, a hammer embodying a pivoted arm, a trigger, a bolt connected with the trigger for horizontal sliding movement, a coiled spring arranged in axial alignment with said bolt, said spring having one end fixed and its opposite end connected with the bolt for normally holding the latter retracted, the said arm being pivoted between its ends and arranged substantially at right angles to said bolt, the lower end of said arm being disposed in

the path of movement of said bolt, whereby the latches is cocked upon the bolt be moved in a forward direction, means for moving the bolt out of engagement from said arm, upon further movement of the bolt in a forward direction, and means for imparting the firing stroke to the hammer immediately upon release of the arm from said bolt.

1,396,970. PAINT. Bernhard F. Muns, Milwaukee, Wis., assignor of one-half to Emil C. Schoene, Milwaukee, Wis. Filed June 24, 1921. Serial No. 480,199. 4 Claims. (Cl. 134—45.)

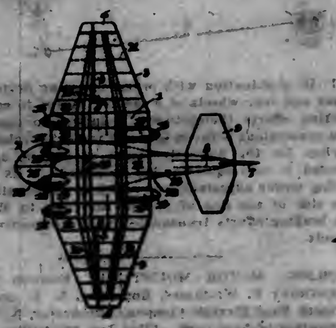


4. A metal paint consisting of glucose, sodium silicate, oxid of manganese and graphite.

1,396,971. METHOD OF MAKING LONG PLY-WOOD PANELS. George R. Metzgood, Chicago, Ill., assignor to Hasbelite Manufacturing Corporation, a Corporation of New York. Filed Nov. 12, 1920, Serial No. 423,824. Renewed Sept. 23, 1921. Serial No. 502,627. 5 Claims. (Cl. 144—309.)

1. The method of producing spliced ply-wood panels which consists in pressing sheets or panels in presses with spacers interposed to cause the panels to be accurately uniform in thickness, bevelling the ends of two panels, applying glue to the beveled ends, and pressing the beveled ends together to set the glue.

1,396,972. CONTINUOUS FREEZER. John F. Fenton, Seattle, Wash. Filed June 2, 1920. Serial No. 386,116. 2 Claims. (Cl. 62—114.)

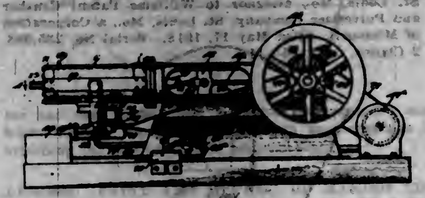


1. A continuous freezing apparatus for liquids comprising a casing, a section at one side of the casing being hinged to swing outward, an endless belt supported from said swinging section, refrigerating pipes within the casing and adapted to extend between the outside of the runs of the belt, a tank, a delivery spout extending from the tank to discharge upon the belt, and a scraper at the under side of the belt.

1,396,973. BRUSH. Thomas A. Pendergrass, Chicago, Ill., and Stanley T. D. Slamecka, Brooklyn, New York, N. Y., assignors to Stanley Brush Company, Chicago, Ill., a Corporation of Illinois. Filed June 20, 1921. Serial No. 479,082. 5 Claims. (Cl. 15—90.)

1. A brush, comprising a back in the form of an open frame, a separate bristle holder fitting in said frame, and means independent of said back and holder for fastening the holder in said frame, said fastening means having parts interlocking with the adjacent marginal portions of said frame and said holder, respectively and extending through the open frame of the back to engage the same.

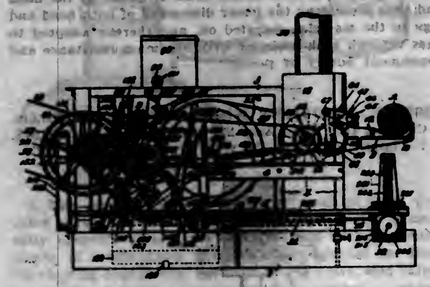
1,396,974. FLYING-MACHINE. John W. Smith, Philadelphia, Pa. Filed Feb. 12, 1919. Serial No. 276,521. 7 Claims. (Cl. 244—2.)



1. In a flying machine, the combination of an internally trussed supporting airfoil with its truss structure entirely inclosed by upper and lower airfoil surfaces; and a fore and aft vessel of inclosed type immediately subjacent to and roofed by said airfoil, and having its sides united with the airfoil frame structure to serve as fore and aft girders therefore.

1,396,975. TREATMENT OF PHOSPHATES. Ellis C. Soper, Chattanooga, Tenn. Filed Jan. 12, 1918. Serial No. 211,477. 10 Claims. (Cl. 71—7.)

1. The process of treating phosphatic material to render the contained phosphoric acid citrate soluble, which consists in forming a fluid mixture of the said material and a reagent, treating the fluid mixture to reduce it to a substantially plastic state, and then subjecting the substantially plastic mixture to a high temperature sufficient to render the phosphoric acid citrate soluble.



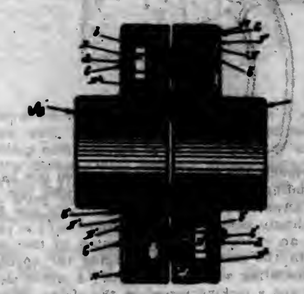
1,396,976. INTERNAL-COMBUSTION ENGINE. George A. Spence, Jr., Ulysses, Nebr., assignor to Ulysses Engine Company, Ulysses, Nebr., a Corporation of Nebraska. Filed Dec. 22, 1917. Serial No. 208,256. 4 Claims. (Cl. 123—119.)

1. In an internal combustion engine, the combination with a working chamber, of means for supplying a mixture of air and fuel to the working chamber comprising a closed carburetor having a mixing chamber, a fuel port opening into the mixing chamber, means for supplying compressed air to said mixing chamber, whereby a constant pressure above atmospheric is maintained therein, a closed fuel chamber, means for equalizing the pressure in the mixing and fuel chambers, means for supplying fuel to the fuel chamber and maintaining a substantially constant level of

fuel therein comprising a closed fuel supply reservoir, a fuel pump for withdrawing fuel from the supply reservoir and introducing it into the fuel chamber, an overflow duct leading from said fuel chamber to said supply reservoir, and means for equalizing the pressure in said fuel chamber and supply reservoir.

1,396,977. CARPET-CLEANING MACHINE. Joseph F. Smallsmith, Kansas City, Mo., assignor of one-half to Harvey P. Uts, Kansas City, Mo. Filed Mar. 5, 1918. Serial No. 220,447. 18 Claims. (Cl. 15—6.)

1. In a cleaning machine of the character described, a conveyer, means for attaching a carpet to said conveyer, a drum around which the carpet is drawn by the conveyer, a receptacle arranged above said drum to hold a washing fluid, valves to admit the washing fluid from the receptacle to the carpet, two sets of brushes for acting on the carpet, mechanism for moving one set of brushes to and fro, a rack actuated by the last-mentioned set of brushes, a pinion actuated by said rack, and a rack actuated by said pinion and connected to the other set of brushes to actuate the same.

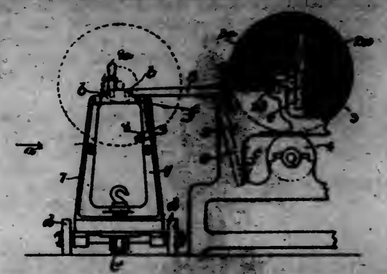


1,396,978. ENGINE INJECTION-VALVE. Adolf Tacchella, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 5, 1917. Serial No. 194,912. 12 Claims. (Cl. 123—32.)

1. The combination in an internal combustion engine of an injection valve casing secured in and to the engine wall and having a valve seat located close to a combustion space, a valve member extending into said casing and engaging said seat, a gland for the valve adapted to be secured in fixed relation to the casing and operating means for said valve member normally engaging the same at a point which is separated from the bore of the valve casing by a distance less than the length of that portion of the valve member that is within said casing, said means being

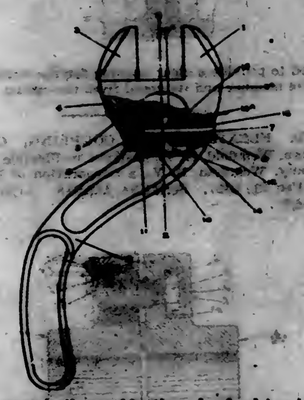
organized to provide a clear opening for the withdrawal of said valve member and its gland from the casing.

1,396,979. FLEXIBLE SHAFT-COUPLING. George H. Thomas, Westfield, N. Y., assignor to Flexible Couplings Company, Westfield, N. Y., a Corporation of New York. Filed Feb. 21, 1921. Serial No. 446,588. 4 Claims. (Cl. 64—96.)



4. In a device of the class described, a pair of flanges adapted to be secured to shafts, studs secured in each flange, bearing recesses in each flange alternating with studs secured therein, bearings secured in said recesses comprising substantially a lubricating sleeve, a resilient sleeve surrounding the lubricating sleeve, a shell surrounding said resilient sleeve, all of said sleeves being secured together and secured in said recesses to form bearings for the studs secured in the other flange.

1,396,980. APPARATUS FOR USE IN CONNECTION WITH MACHINES FOR BLEACHING, DYEING, FINISHING, AND OTHERWISE TREATING FABRICS. John Thornber, Bradford, England, assignor to Bradford Dyers Association Limited, Bradford, England. Filed Jan. 20, 1919. Serial No. 272,148. 1 Claim. (Cl. 214—85.)



A vehicle, bearings carried thereby to receive a rotary shaft, coupling devices for securing said vehicle to a machine, detachable means carried by said machine to allow

release of a roll of fabric therein, means for adjusting said blade to roll from the machine in the widely contracting

of detachable arms and detachable pins for retaining the roll in position on the vehicle.

1,396,981. WRENCH. CLARENCE S. VANDENBURG, Cherrygrove, Pa. Filed Apr. 7, 1920. Serial No. 371,660. 2 Claims. (Cl. 81—165.)

1. In a wrench, the combination of a fixed jaw having a handle extending therefrom with a removable jaw guideway and a screw-opening therein; a movable jaw having a shank slidingly mounted in said guide-way; a rack on the shank; an operating screw mounted in the opening meshing with the rack; a pin bridging the opening on which the operating screw is mounted; a sleeve mounted on the pin; and a locking screw on the sleeve adapted to force the sleeve into engagement with the operating screw.

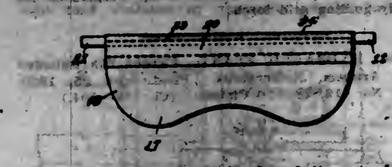
1,396,982. WRENCH. OTIS A. WARD, Evanston, Ill. Filed Apr. 3, 1920. Serial No. 371,064. 3 Claims. (Cl. 81—160.)

1. A wrench comprising a shank having a jaw member at one end thereof and terminating in a handle at its other end, a movable jaw member slidingly mounted on the shank, a rack-bar engaging the movable jaw member and slidable along the shank, a journal comprising a slotted body having end flanges mounted on the shank, a wrench nut mounted on said journal between said flanges and adapted to engage with the end-bars for holding the movable jaw member in any desired position, and means for preventing said journal on the shank for holding the wrench operating.

1,396,983. STIRRUP-HAMMER. MILTON F. WILLIAMS, St. Louis, Mo., assignor to Williams Patent Crusher and Pulverizer Company, St. Louis, Mo., a Corporation of Missouri. Filed May 17, 1918. Serial No. 235,062. 2 Claims. (Cl. 29—31.)

1. In a machine of the character described, a stirrup hammer constituting a flattened bar of a width greater than its thickness, and stretching of a coarse bar formed having its larger dimension initially disposed in order to present only said lesser dimension to the material being operated upon, and legs formed at each end of said head and having their width in the same direction as the head and thus presenting the lesser dimension of both head and legs to the material operated on, and thereby adapted to pass through such material with minimum resistance and consequent outlay of power.

1,396,984. RESILIENT WHEEL. GEORGE H. WILLIS, Chicago, Ill. Filed Aug. 27, 1919. Serial No. 320,078. 1 Claim. (Cl. 152—28.)

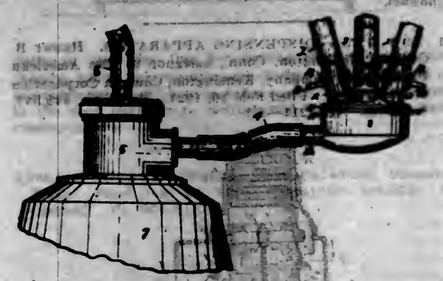


In combination, a wheel comprising a combined felly and rim structure having a permanent flange on one side and having a removable flange for the other side, a ring of resilient rubber embracing said felly and being confined laterally between and engaging said flanges, said ring of rubber being recessed about its periphery to permit of radial compression and lateral expansion, a channeled ring of metal embracing the outer periphery of said ring of rubber said channeled ring having flanges extending inwardly, said flanges engaging and embracing the outer edges of the ring between them, and a standard tire comprising a metal rim and resilient rubber tread, said metal rim firmly embracing said channeled ring.

1,396,985. CAP. Jacob Yarow, St. Louis, Mo., assignor to Gram Headwear Mfg. Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 18, 1921. Serial No. 438,139. 2 Claims. (Cl. 2—197.)

1. A cap comprising a body-portion and a band fixed at a side-margin to, and extending around within, the body-portion, the band being provided with openings disposed at opposite sides of the body-portion, in combination with an elongated button adapted to depend below the margin of said body-portion and provided centrally

on its upper margin with a pliable stalk whose opposite ends extend beyond the opposite side margins of the section, the stalk being adapted to removably fit between



the cap body-portion and band and its extended ends being adapted for projection through said openings in attaching the section to said body-portion.

1,396,986. PAINT AND METHOD OF MAKING THE SAME. CHARLES BINO, Brooklyn, N. Y. Filed June 23, 1920. Serial No. 390,532. 9 Claims. (Cl. 134—51.)

1. A paint containing white lead, finely divided mica, and a volatile.

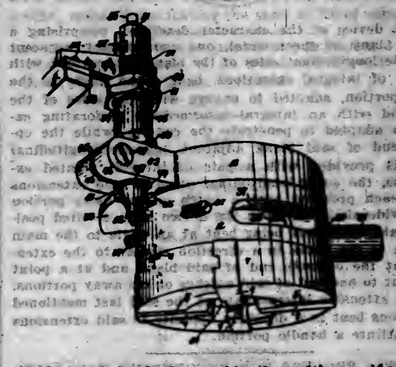
1,396,987. MILKING-MACHINE. HENRY F. BOUSKE, Milwaukee, Wis., assignor to D. V. Milking Machine Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 4, 1919. Serial No. 315,847. 6 Claims. (Cl. 31—26.)

1. The combination with a milking machine claw, provided with a series of inlet nipples, each having a manually operable valve, and also provided with an outlet nipple, of a detachable weight member adapted for loose interlocking engagement with the claw nipples, said valves being adapted to allow the suction to be applied in one cup to support the weighted claw, while the other cups are being adjusted in position for use.

3. The combination with a milking machine claw, provided with valved inlet nipples, and an outlet nipple, of means for increasing or decreasing the weight of the claw to suit the requirements of the cow to be milked, said means comprising a series of weights, each adapted to be detachably connected with the claw.

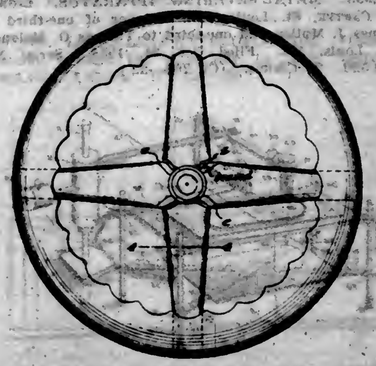
4. A milking machine claw including the combination of a lower portion provided with an outlet nipple, an upper portion provided with inlet nipples and adapted for detachable connection with the lower portion, a washer adapted to be engaged between said upper and lower portions, a screen supported from the washer, and a manually operable valve mounted upon said upper portion whereby the vacuum therein may be relieved to any desired amount.

5. A milking machine claw including the combination of a casing made in two separable portions, means for securing said portions together, a screen adapted to be supported between said portions, an outlet nipple and a set of inlet nipples in communication with the interior of the casing, and a manually operable valve whereby the vacuum within the casing may be relieved to any desired amount.



6. In a milking machine, a claw chamber having an air inlet port, and a screw threaded regulating valve adapted to progressively open or close said port.

1,396,988. FUSE. JOHN H. BRADBACK, New Haven, Conn. Filed Feb. 10, 1919. Serial No. 276,842. 6 Claims. (Cl. 200—131.)



1. A fuse comprising a tube, collars permanently secured to opposite ends of the tube, bars extending transversely to said collars and caps closing the ends of the tubes and formed with inwardly projecting clips adapted to straddle the said bars.

1,396,989. DIE-HEAD FOR CUTTING TAPER AND STRAIGHT THREADS. ALBERT F. BREITENSTEIN, New Haven, Conn., assignor to The Geometric Tool Co., New Haven, Conn., a Corporation. Filed July 2, 1920. Serial No. 393,587. 11 Claims. (Cl. 10—96.)

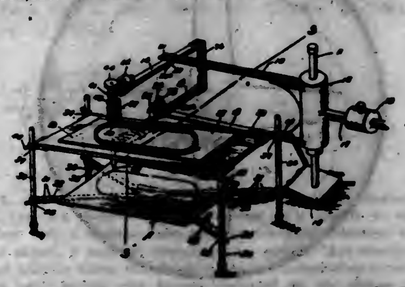
1. In a die-head, the combination with a self-opening die-head unit, of an independently organized, thread-controlling unit adapted to be inserted into and removed from the die-head unit without disassembling the same, and having a yielding plunger retiring during the progress of the work and returning to its initial position after the completion of the work.

1,396,990. STEERING-WHEEL. HARRY W. BUNDY, Detroit, Mich. Filed Dec. 26, 1919. Serial No. 347,264. 1 Claim. (Cl. 74—33.)

A steering wheel comprising a rim and a spider, the latter made up of a plurality of channeled arms extending

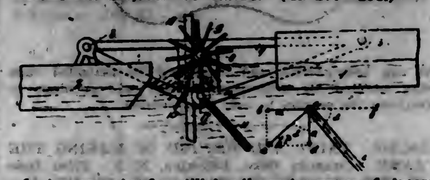
from side to side of the ring overlapped and bound at the center with each provided with side extending flanges at the center which are overlapped and secured together, and a hub secured in the bosses of the overlapping arms.

1,396,991. CAN-OPENER. James M. Boyceau, Chicago, Ill., assignor to Kakichi Nakamura, Chicago, Ill. Filed Nov. 6, 1920. Serial No. 422,119. 2 Claims. (Cl. 220—51.)



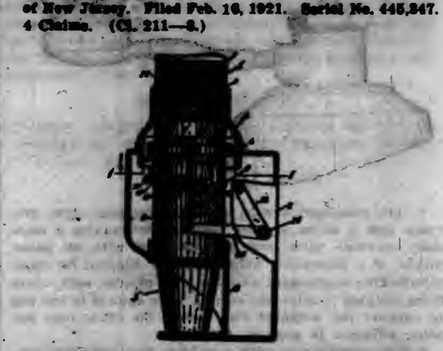
1. A device of the character described, comprising a single blank of sheet metal, one end whereof, adjacent opposite longitudinal sides of the blank, is provided with a pair of integral extensions, bent at an angle to the main portion, adapted to engage with the sides of the can and with an integral intermediate perforating extension adapted to penetrate the can-top, while the opposite end of said blank adjacent opposite longitudinal sides is provided with a pair of integral pointed extensions, the outer longitudinal edges of said extensions being each provided with a notch or cut away portion to provide air-inlets when the device is in a tilted position, said extensions being bent at an angle to the main portion of the blank in a direction similar to the extensions at the opposite end of said blank and at a point adjacent to one end of said notches or cut-away portions, and an extension intermediate of the said last mentioned extensions bent in a direction opposite to said extensions to constitute a handle portion.

1,396,992. PROCESS FOR RECOVERING VANADIUM. Arthur Howe Carpenter, Sawpit, Colo., assignor to The Colorado Vanadium Corporation, Sawpit, Colo., a Corporation of Colorado. Filed Nov. 29, 1919. Serial No. 341,484. 4 Claims. (Cl. 23—13.)



1. A process of recovering vanadium from its ores and compounds, comprising mixing the ore or compound with sodium chlorid, a relatively stable alkali metal salt, and a sulfur-containing material and roasting to transpose the vanadium compound to a compound soluble in water.

1,396,993. METAL-SEVERING APPARATUS. Lloyd A. Carter, St. Louis, Mo., assignor of one-third to James J. Mullen and one-third to Thomas O. Moloney, St. Louis, Mo. Filed Oct. 24, 1918. Serial No. 259,520. 24 Claims. (Cl. 266—23.)

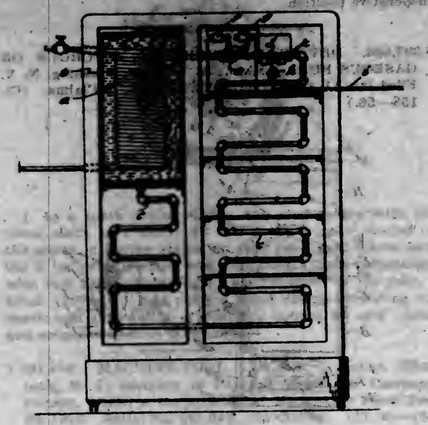


1. An apparatus of the class described comprising a movable frame, one portion of which carries a torch, a motor-driven tracer wheel on the frame, and a guiding member constituting a track upon which said wheel operates and with which it automatically cooperates for positively guiding said torch.

1,396,994. HYDRAULIC PLANT. Petrus van Rooyen Cats, Arnhem, Netherlands. Filed Sept. 25, 1920. Serial No. 412,628. 10 Claims. (Cl. 170—104.)

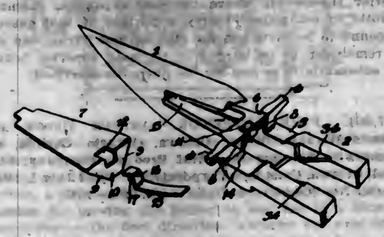
1. An apparatus for utilizing the water power of streaming water having a small drop, comprising an undershot water wheel, a pivoted gate arranged underneath the water wheel, a water float arranged in a supply channel; a tail water float; a frame carrying the wheel and pivoted to said floats; the upper edge of the gate being arranged in close proximity to the lowest point of the periphery of the water wheel; and means to guide the lower edge of the gate along the bottom of the supply channel.

1,396,995. DISPENSING APPARATUS. Henry B. Cooley, Kensington, Conn., assignor to The American Paper Goods Company, Kensington, Conn., a Corporation of New Jersey. Filed Feb. 16, 1921. Serial No. 445,247. 4 Claims. (Cl. 211—8.)



1. A machine of the class described, comprising a barrel to receive a stack of nested drinking cups, primary stack supporting means, secondary stack supporting means, the primary and the secondary stack supporting means simultaneously engaging the stack at superposed points when respectively in operative positions, a band around the barrel, means operable at will for causing a movement in one direction of said band, automatic means for causing an opposite movement of the band, means actuated by the band on its forward movement for moving the primary stack supporting means into inoperative position and on said forward movement for moving the secondary stack supporting means into operative position, and ejecting means for the lowermost part of the stack, actuated by the band on the last part of the advancing movement thereof, and after the primary stack supporting means is in stack-releasing position for reversing said actions on the retractive movement of the band.

1,396,996. REFRIGERATING APPARATUS. Lloyd Geary Corneau, Flint, Mich. Filed Feb. 16, 1920. Serial No. 358,910. 3 Claims. (Cl. 62—6.)

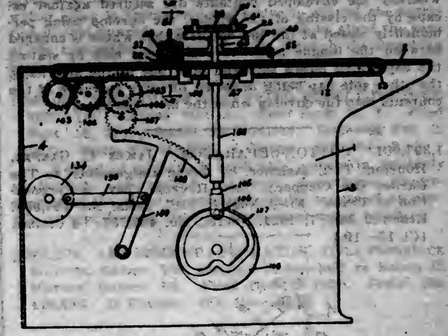


3. In a refrigerating system, the combination of a chamber containing a fluid calculated to withstand a relatively low temperature, an expanding chamber for

alternating heat therefrom to reduce the temperature of said fluid to a relatively low point, a food chamber in proximity, a pipe line circulating said fluid through said food chamber by thermally-induced currents, a

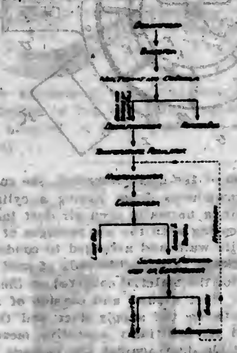
valve in said pipe line for cutting off the circulation therein, means for opening and closing said valve, and a thermostat in position to be influenced by the temperature in the food chamber to control said valve opening and closing means.

1,396,997. GUARD-FINGER. Fred Crawford, Prosser, Wash. Filed Jan. 29, 1920. Serial No. 354,813. 3 Claims. (Cl. 56—311.)



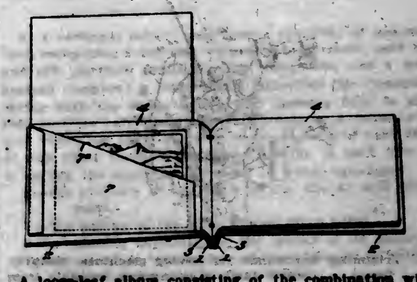
1. The combination with a guard finger having a longitudinally extending channel and provided with a locking leg above the channel, of a stationary knife having an opening to engage said locking leg, and a locking tongue fitting in the channel and arranged to prevent upward movement of the stationary knife relative to the guard finger.

1,396,998. PARTING DEVICE. Thomas Dean, Indianapolis, Ind. Original application filed June 28, 1918, Serial No. 242,469. Now Patent No. 1,336,944. Divided and this application filed Dec. 16, 1919. Serial No. 344,957. 7 Claims. (Cl. 91—47.)



2. In a machine for making book covers, a frame for applying an adhesive to parts of the covering material, said frame having corrugations in its lower face.

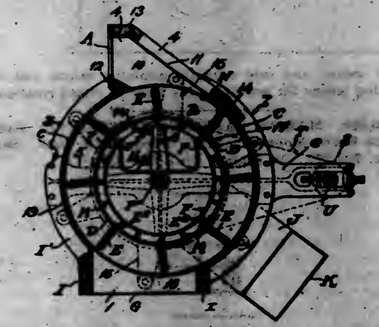
3. In an adhesive applying machine, the combination of adhesive applying means, holding means for holding stationarily a sheet to be pasted during the adhesive applying operation, a single common means for actuating said adhesive applying means and said holding means, comprising pivotally supported lever means, means for tilting said lever means, and other means associated with said



lever means and said adhesive applying means and said holding means for actuating the same in timed relation.

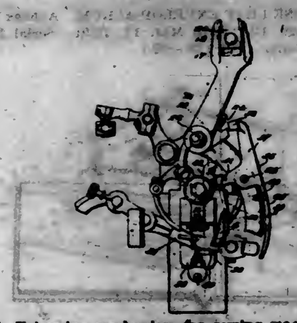
1,396,999. MAKING GASOLENE SUBSTITUTE. Carleton Ellis, Montclair, N. J. Filed Oct. 4, 1913. Serial No. 793,377. 14 Claims. (Cl. 196—25.)

8. The process of producing gasolene-like material from heavier oil which consists in heating it to the decomposition temperature of the principal constituents thereof, digesting the resulting decomposition products by holding such products without the substantial loss of heat so that they react upon themselves, and hydrogenating the gasolene-like material produced.



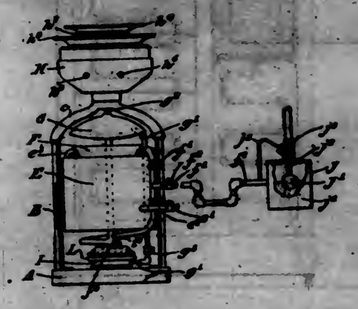
1,397,000. LOOSE-LEAF ENVELOP-ALBUM. Albert W. Engel, Chicago, Ill. Filed Mar. 13, 1920. Serial No. 365,442. 1 Claim. (Cl. 129—20.)

A loose-leaf album consisting of the combination with separable cover members, of envelops having one end with-



out a flap and the lock or main panel at that end extending for engagement between the cover members of the binder, and having flaps for closing all the other edges; whereby the enveloped contents are secured against escape by the closing of the binder, the envelop being permanently closed at the end opposite that which is engaged between the tongue members and at one side by sealing the flap which closes said side one of the side flaps, the other side flap being unsealed for easy entrance of the contents into the envelop when the binder is open.

1,397,001. COTTON-SEPARATOR. James C. Garner, Houston, Tex., assignor, by mesne assignments, to The Garner Gin Company, Inc., Houston, Tex., a Corporation of Texas. Filed Aug. 7, 1917, Serial No. 184,988. Renewed Jan. 7, 1921. Serial No. 435,757. 6 Claims. (Cl. 13—19.)

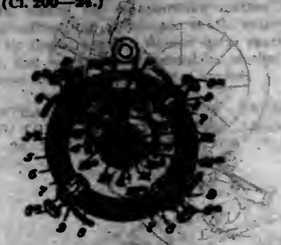


1. In a mechanism of the class described, the combination of a rotary foraminous drum having a cylindrical wall permeable to air, a normally open air duct inside of said drum communicating with the air passages of a predetermined area of its wall, and arranged to conduct the air continuously outward through the ends of said drum, a discharge passage for the material collected on the drum, a normally open air duct around and outside of a part of the drum and between the supply duct and the discharge passage, and intermittingly operative means for closing the said outside duct against the passage of air through the drum.

1,397,002. TRIMMING MECHANISM FOR SEWING-MACHINES. George S. Gatchell, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Nov. 21, 1918. Serial No. 263,454. 10 Claims. (Cl. 112—125.)

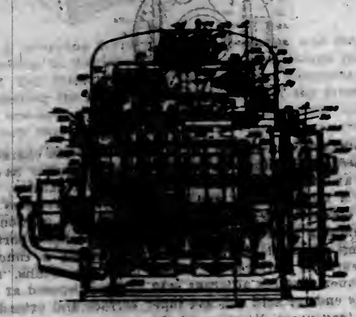
1. Trimming mechanism for sewing machines, comprising a frame, a trimmer blade carrying arm movable from operative to inoperative position, an actuator, a retaining element coöperating with trimmer blade carrying arm for operatively connecting it with said actuator, and means carried by the frame and coöperating with said retaining element for retaining said trimmer blade carrying arm in inoperative position.

1,397,003. DEVICE FOR BURNING VAPOROUS OR GASEOUS FUEL. Manly M. Grimes, Flushing, N. Y. Filed Jan. 11, 1921. Serial No. 436,616. 9 Claims. (Cl. 158—56.)



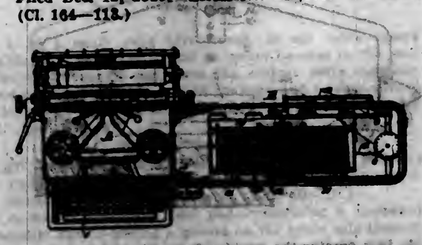
1. In a device for vaporizing and heating liquid fuel a steam boiler, a generator and inferior burner cup below the boiler, a steam superheater connected with the boiler, a conduit for carrying the superheated steam downwardly, means for controllably admitting liquid fuel into the descending superheated steam in the conduit, a continuation of the conduit to a point below the boiler then upwardly through destined openings in the boiler and in the superheater to an expansion chamber into which the gaseous compound resulting from a union of the superheated steam and the liquid fuel vapor is discharged, a superior burner cap above the said expansion chamber, conduits to controllably carry a portion of said gaseous compound to be burned in the said inferior burner cap and the remainder to be burned in the said superior burner cap, substantially as and for the purposes described.

1,397,004. FIRE-DETECTOR. Arthur Hudon and Percy William Wade, Ottawa, Ontario, Canada, assignors to Spanton Electrical Products Company, Limited, Ottawa, Canada, a Corporation. Filed July 1, 1919. Serial No. 308,009. 1 Claim. (Cl. 200—138.)



A detector of the character described, comprising a base, a plate on the base, an insulated block fixed to the base, a coiled thermostatic element mounted on the plate, having an end fastened to the block, and a movable end, a lever centrally pivoted on the plate and having a free end connected to the movable end of the thermostatic element, the lever being electrically connected to the plate, the plate being provided with a plurality of orifices, a contact pin designed to engage with any of the orifices and insulated from the plate so as to vary the temperature under which the lever will contact, a pair of posts, one of the posts being electrically connected to the contact pin and the other post being electrically connected to the plate, as and for the purpose specified.

1,397,005. SPEEDOMETER. Thomas Hutchison, Ames, Iowa. Filed Mar. 30, 1920. Serial No. 369,995. 4 Claims. (Cl. 200—24.)



1. In a spark timing device, the combination with the timer shaft, of a sleeve on said shaft, a yoke pivoted on the sleeve, a spring acting on said yoke, said sleeve having a lug or projection and said yoke a part coöperating with said projection to limit the movement of the yoke, a brush carried by said yoke, a timer casing encircling the shaft, and a plurality of contacts carried by said casing and coöperating with said brush.

1,397,006. MACHINE-TOOL. Le Roy E. Jolls, Elizabeth, N. J., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 20, 1918. Serial No. 241,042. 31 Claims. (Cl. 90—15.)

1. A metal working machine including in combination, a work support, a tool holder, means for rotating the holder, means for moving the support to and fro in one direction, a driving member, and means operated from said member for moving the holder to and fro in a direction transverse to the first direction, whereby the axis of the holder traces a closed figure on the support.

1,397,007. CARD-PUNCHING DEVICE. August Knistrom, Binghamton, N. Y., assignor to The Tabulating Machine Company, a Corporation of New Jersey. Filed Dec. 12, 1919. Serial No. 344,375. 19 Claims. (Cl. 164—113.)

1. The combination with a typewriting machine of a tabulator card-punching attachment, punches therein, electromagnets in the attachment for selectively controlling the operation of the punches, circuits controlled by the numerical keys and special keys in the typewriter for operating said magnets, the letter character keys in said typewriter being in themselves ineffective to control the operation of said punches, and means operated by all of the keys of the typewriter for moving cards through the punching attachment in unison with the typewriter carriage.

1,397,008. METHOD OF PREPARING FINELY-DIVIDED METALS. Albert McGall, New York, N. Y. Filed Sept. 16, 1918, Serial No. 254,246. Renewed Feb. 2, 1921. Serial No. 440,262. 4 Claims. (Cl. 204—3.)

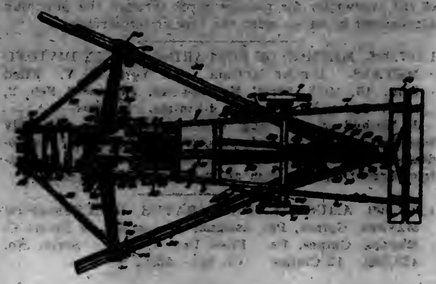
1. Method of preparing continuous metals in coherently subdivided, non-oxidized condition, comprising electrodepositing the metal in sponge form by means of an electric current flowing from an insoluble metal anode.

1,397,009. AMUSEMENT APPARATUS. Hyla Frederick Maynes, Gaines, Pa., assignor of one-half to Emma C. Maynes, Gaines, Pa. Filed Dec. 7, 1920. Serial No. 428,883. 12 Claims. (Cl. 104—53.)

1. An amusement apparatus comprising a trackway, cars adapted to run upon said trackway, and a movable tunnel adapted to inclose the cars and run along the trackway.

1,397,010. BOILER. Ansel M. Messenger, Buffalo, N. Y. Filed Mar. 6, 1917. Serial No. 152,974. 3 Claims. (Cl. 122—235.)

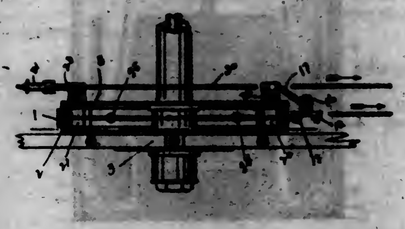
2. A sectional boiler comprising a plurality of members each embodying a top and vertical side portions, said top and side portions forming a fuel receptacle, and a combustion chamber; a longitudinal collecting flue communicating with the smoke outlet, and tapering flues in said side portions extending from said combustion chamber to said collecting flue, the cross sectional area of said flues at any point through their length being of such size as to satisfy the equation—PV=RT in which equation—



P—the pressure of the gases in the flue at said given point,

V—the volume of the gases at said given point,

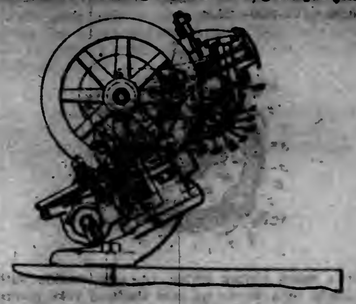
R—a constant depending on the nature of the gases,



T—the absolute temperature of the gases at said given point, substantially as specified.

1,397,011. ROAD-WORKING MACHINE. Nahum M. Monroe and Amasey J. Monroe, Arthur, Ill. Filed July 19, 1919. Serial No. 311,698. 6 Claims. (Cl. 37—8.)

1. In a road working machine, in combination with a main frame and carrying means therefor, a scraper bar, a spreader bar pivotally connected to the main frame and the front portion of the scraper bar, hoisting means for the rear end of the scraper bar, a draft element connected to the rear portion of the scraper bar, means to releasably connect the draft element to the main frame, a crane mounted on the main frame for swinging movement and having an inclined pivot axis so that the free end of said crane moves upwardly as the crane swings rearwardly, and connecting means between the crane and the front portion of the scraper bar, said crane being swung rearwardly by the forward movement of the machine and hence caused to automatically raise the front end of the scraper bar, when the rear end of the latter is released by the draft element and then permitted to remain on the ground.

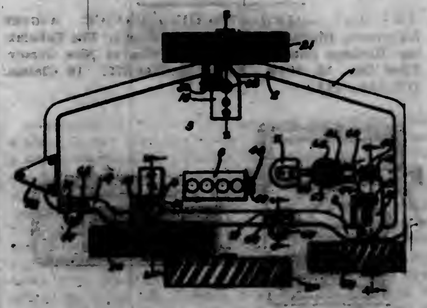


1,397,012. POWER-BRAKE. Porter S. Morgan, Norwalk, Conn., assignor to Rotary Brake Company, Inc., New York, N. Y., a Corporation. Filed Dec. 8, 1918. Serial No. 265,117. 10 Claims. (Cl. 188—185.)

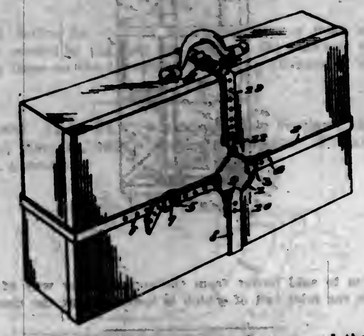
1. A vehicle brake comprising a rotary drum and primary and secondary brake members adapted to engage the same, a momentum operated lever for actuating the secondary brake member, and means mounted upon the said lever for actuating the primary brake member, and, furthermore, to effect the momentum operation of the aforesaid lever.

1,397,013. SEWING-MACHINE. Alfred R. Morrill, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 18, 1918. Serial No. 267,378. 11 Claims. (Cl. 112—47.)

1. A sewing machine, having, in combination, stitch forming and work guiding mechanism including a needle, a looper, and a channel guide roll having its periphery arranged to engage the between substance at the base of the channel.



1,397,014. ROTATABLE TOOL-CARRIER FOR PLANING-MACHINES, &c. Joseph W. Oliver, Grand Rapids, Mich. Filed Sept. 20, 1919. Serial No. 327,020. 1 Claim. (Cl. 144—235.)



A rotatable tool-carrier for a machine of the character described, comprising: an elongated body member having means at its ends for mounting the same rotatably, and having a table portion, and first and second recesses adjacent opposite sides respectively of the table portion; a tool-clamping member cooperating with the table portion to clamp the tool therebetween, and having a concave inner surface, orifices to admit clamping means, and plane inner surfaces adjacent said orifices disposed at the opposite ends of said concave inner surface and extending in the transverse direction of the tool-carrier; clamping means extending through said orifices for clamping said members together with the tool between them.

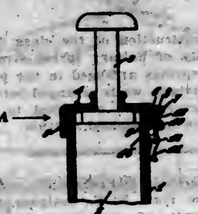
1,397,015. TRACTOR. William L. Pope, Huntersville, N. C. Filed Sept. 7, 1920. Serial No. 408,566. 2 Claims. (Cl. 180—25.)

1. In a tractor the combination with supporting wheels and means under the control of the driver for bodily shifting one of the wheels to steer the tractor, of a longitudinal shaft, a transverse shaft driven thereby, a motor for actuating the longitudinal shaft, a plurality of vertical shafts, means for transmitting motion thereto from the longitudinal and transverse shafts respectively, gears carried by the supporting wheels, drive gears meshing therewith, and means for transmitting motion to the drive gears from the respective vertical shafts.

1,397,016. STRAPPING DEVICE FOR DRESS-SUIT CASES AND THE LIKE. Paul W. Post, Algoma, Wis. Filed Feb. 26, 1921. Serial No. 447,929. 2 Claims. (Cl. 24—17.)

1. A strapping device for dress suit cases and the like, comprising in combination with a pair of straps passing about the dress suit case in opposite directions, one intersecting the other adjacent one face of the dress suit case, one end of each strap having a closed loop, an endless loop chain passing through the closed loops, one end of one of the straps being folded to form a loop engaging said endless chain, a buckle adjustably and detachably connecting said folded end with the body of the strap, one end of the other strap having an opening loop, whereby the opening loop may be adjusted, and a hook carried by the opening loop to engage the endless chain, whereby upon adjusting either strap, both straps may be tightened simultaneously.

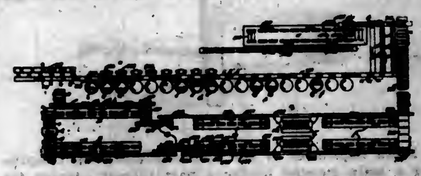
1,397,017. ATTACHMENT FOR SPARK-PLUGS. Abner Randolph Price, Toronto, Ontario, Canada. Filed Apr. 10, 1920. Serial No. 372,892. 3 Claims. (Cl. 123—169.)



1. In a spark plug attachment, an air valve casing having an inlet passage and an outlet passage in the wall thereof leading to and from the central valve chamber, and a valve operating in said chamber and being provided with an intermediate annular groove registering with said air inlet passage.

1,397,018. POCKET-KNIFE AND TOOL-PAD. Edmund Pritchman, Sheffield, England. Filed Mar. 19, 1920. Serial No. 367,150. 1 Claim. (Cl. 30—10.)

A pocket knife and tool pad, comprising a U-shaped metallic handle having a groove on the inner side thereof, said handle being provided in each prong near its end with a round opening, a tool adapted to lie within the handle in its closed position, a tang at one end of the tool and provided with square shoulders, said tang being of uniform thickness and having rectangular pegs projecting from the edges and adapted to pivot in the openings in the handle, said tang tapering from the shoulders to the pegs.



1,397,019. MUSICAL INSTRUMENT. Walton C. Roberts, Summit, Ga. Filed Oct. 16, 1920. Serial No. 417,657. 5 Claims. (Cl. 84—392.)

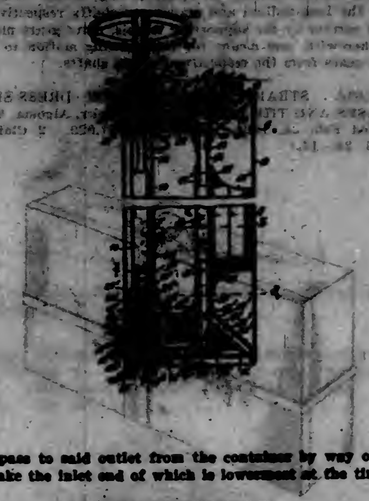
1. In a musical instrument of the trumpet type, a casing; a cap on the casing and free from screw connection therewith, the cap being removable bodily from the casing; interengaging parts on the casing and the cap coacting to hold the cap on the casing; a valve mounted to reciprocate in the casing; and a stem cooperating with the valve and slidable in the cap.

1,397,020. METHOD OF AND APPARATUS FOR FORMING AND ASSEMBLING METAL ELEMENTS. Reuben Stanley Smith, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Jan. 21, 1918. Serial No. 212,934. 135 Claims. (Cl. 29—33.)

97. A method of fabricating automobile frames, which consists in assembling frame elements in sets, temporarily securing in assembled relation the elements of each set, advancing the assembled sets of elements in a regular succession of sets while thus secured, and subjecting the sets of assembled elements in the advancing succession of sets to progressive connecting operations performed at different points upon the set of elements and at different points in the line of advance, to permanently unite the elements of each set into a rigid and unitary structure.

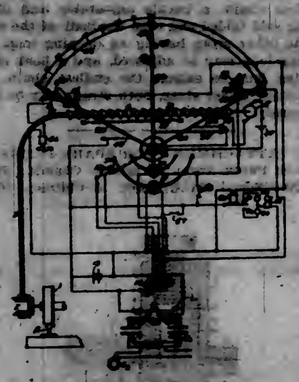
110. Apparatus for preparing a set of elements for assembly into a fixed structural unit, such apparatus comprising separate lines of intermittingly operating mechanisms, each line of such mechanisms being composed of machines adapted for progressive treatment of element material to prepare it for assembly, and means for operating all of the said machines cyclically for a brief period for the production of a set of elements through a succession of such periods of cyclic operation and the delivery of a set of elements in assembled relation during each said cyclic period.

1. A spring construction of the class described, comprising a plurality of unitary spring structures having pockets therein, springs arranged in the pockets of said structures, and division walls arranged between said unitary spring structures and connected to the latter to hold the structures in suspended relation.



1,397,022. WINDING IMPLEMENT. FREDERICK B. TOWNSEND, New York, N. Y., assignor, by direct and mesne assignments, of one-half to Douglas Sprague, Mount Vernon, N. Y., and one-half to Henry C. Kavieze, Hasbrouck Heights, N. J. Filed Dec. 31, 1917. Serial No. 209,744. Renewed Feb. 16, 1921. Serial No. 445,447. 6 Claims. (Cl. 242—17.)

2. An implement of the character described, comprising a main member having a part thereof adapted for grasping by one hand when using the implement and being further provided with a transverse seat, and an auxiliary member removably engaging the seat in said main member, the intersecting portions of said members being designed to receive the yarn wound alternately therearound by the other hand, said auxiliary member being completely separable from the main member by a single movement in the direction of its own axis while the yarn is in place on both members, whereafter the completed ball of yarn may be removed by sliding it off either end of the member first above named.

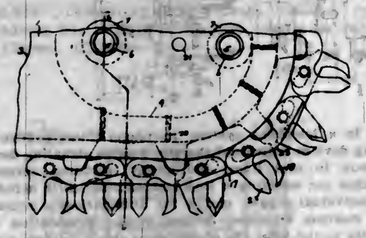


1,397,023. LIQUID-PROJECTING DEVICE. HENRY B. TURNELL, New York, N. Y. Filed Apr. 7, 1920. Serial No. 372,183. 17 Claims. (Cl. 299—93.)

1. A container provided with a plurality of shiftaway intakes having their inlets in different planes passing through the longitudinal axis of the container, whereby the inlets of different intakes will be brought to a lowermost position when the container is turned while the lon-

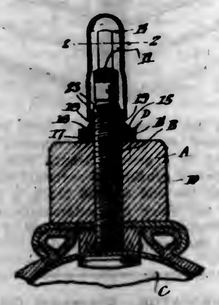
to pass to said outlet from the container by way of the intake the inlet end of which is lowermost at the time.

1,397,024. AUTOMATIC TRAIN CONTROL. THOMAS W. VAUCLAIN AND WILLIAM C. NIMS, New York, N. Y. Filed Jan. 27, 1917. Serial No. 144,294. 7 Claims. (Cl. 246—63.)



2. In an automatic train control, a vehicle, a speed indicating hand, a stop hand, an air brake control, means for moving the speed indicating hand and the stop hand substantially in the movement of the vehicle, a speed limit hand in the path of movement of the speed indicating hand and the stop hand capable of being moved toward the speed indicating hand by the stop hand, manual independent of the speed indicating hand and the stop hand for moving the speed limit hand [illegible] by the stop hand, [illegible] the stop hand to the more restrictive [illegible] overpassing the speed limit hand to the instantaneous speed position determined by the train condition and actual [illegible] of the speed limit hand for operating the air brake control.

1,397,025. PORTABLE FLOATING BREAKWATER OR BULKHEAD. MANLEY ARSON WHITE, Beverly, Mass. Filed Sept. 24, 1920. Serial No. 412,556. 6 Claims. (Cl. 61—6.)

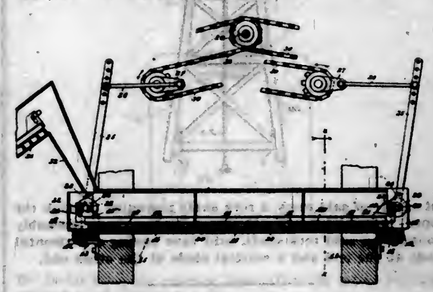


1. A device for calming seas comprising a float, and means carried by the float for receiving the seas and conveying them to the trough of the sea in advance of said float.

1,397,026. LINK SAW. CHARLES WOLF, Portland, Oreg. Filed Mar. 10, 1920. Serial No. 364,694. 7 Claims. (Cl. 143—32.)

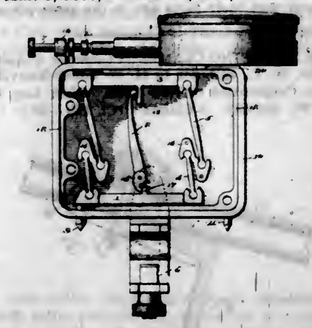
1. A block chain saw having a drag tooth on each end of each block link and having one cutter tooth positioned at each end of each pair of connecting links between pairs of drag teeth and connecting pins passing through said block and connecting links between the drag and cutting teeth in a manner that the points of both the cutting and the drag teeth come between the adjacent pivot of the link to the block and the end of the link and the block respectively.

1,397,027. VALVE-CAP. HENRY ALFRED WOOD, Kingston, Ontario, Canada. Filed Nov. 1, 1919. Serial No. 335,074. 1 Claim. (Cl. 152—12.)



A cap for valve stand comprising a flange sleeve adapted to engage the stem of the valve and provided with a continuous cam groove having a central inner portion and having outer portions opening at the outer edge of the sleeve, the central portion of the cam groove having a recess therein and a cap having an inwardly disposed projection designed to co-act with the groove and adapted to engage in the recess, the said cap being capable of being tightened on the sleeve and released by continuous turning motion in one direction, being adapted to be held at central position in the cam groove by engagement between the projection and recess.

1,397,028. FIREPROOF PAINT. GUSTAV A. WORTELMANN, New York, N. Y. Filed Dec. 6, 1920. Serial No. 428,453. 6 Claims. (Cl. 134—45.)



6. A fireproof paint comprising sodium silicate, water, powdered asbestos, sodium phosphate and magnesium sulfate.

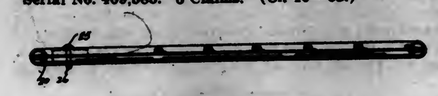
1,397,029. CARBONIZING APPARATUS. FRANK W. YOUNG, Verona, N. J. Filed Dec. 27, 1919. Serial No. 347,794. 17 Claims. (Cl. 269—23.)

1. An apparatus of the class described comprising a surface along which material is to be moved, a conveyer associated therewith, and means for mounting said conveyer with relation to said surface so as to intermittently move the material in a forward direction along said surface and to divide the material into piles, sub-divide the said piles, and join the adjacent sub-divisions of the piles of material.

1,397,030. EXTENSOMETER. GEORGE H. BENEDICT, Schenectady, N. Y. Filed Oct. 8, 1919. Serial No. 329,351. 5 Claims. (Cl. 33—147.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

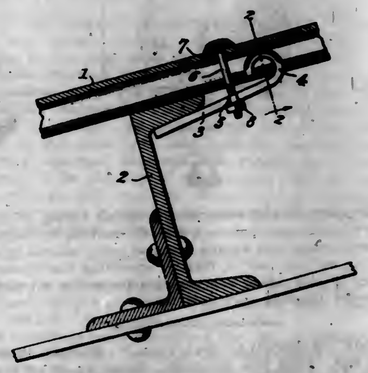
1. An extensometer comprising a casing having a point fixed with reference thereto, a movable working bar mounted in said casing and having a second point secured thereto, a lug on said bar, a register operating bar movably mounted in said casing and having a projecting lug and a pivot lever coacting with said lugs.

1,397,031. WINDMILL. BENJAMIN W. BOSTON, Pendleton, Ind. Filed Feb. 10, 1920. Serial No. 357,603. 1 Claim. (Cl. 170—12.)



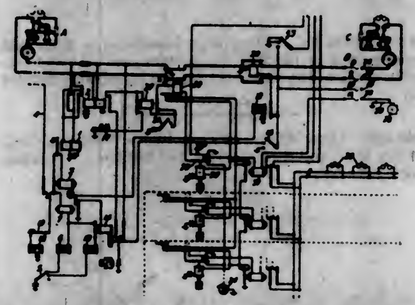
A windmill comprising a supporting derrick, a support secured thereon, a head rotatable on said support, a shaft

journaled through said head, spaced upstanding parallel arms on said head, a transverse shaft journaled through said arms, meshing bevel gears carried by said first and second named shafts, wind wheels and said horizontal shaft



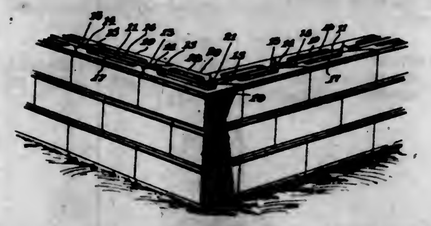
outwardly of said arms, a rock shaft journaled through the upper extremities of said arms, and a vane rockably mounted on said rock shaft, said vane having a horizontal blade at one end and a vertical blade at the other end.

1,397,032. LICENSE-PLATE. GEORGE WARNER CAMPION, Owen Sound, Ontario, Canada. Filed Sept. 11, 1920. Serial No. 409,585. 6 Claims. (Cl. 40—68.)



1. In a license plate the combination of a plurality of plates defining a serial number, a State and date of issuance, said plates having male and female couplings formed rigid therewith, the plates when assembled being so arranged that their faces are in the same plane.

1,397,033. ROOFING-CLAMP. CLARENCE CARSON, New Rochelle, N. Y., assignor to H. W. Johns-Manville Company, a Corporation of New York. Filed Aug. 6, 1920. Serial No. 401,691. 2 Claims. (Cl. 189—35.)

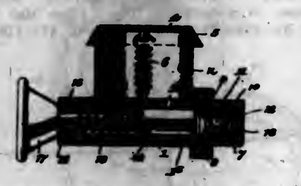


2. In an apparatus for holding a sheet of material having curved surfaces, to a supporting beam, the combination of a strip of stiff material having a flat bearing surface at one end and a bearing surface at the other end curved in a plane extending longitudinally of the strip and perpendicular to said bearing surface, with fastening means engaging the strip intermediate of its ends.

1,397,034. TELEPHONE-EXCHANGE SYSTEM. HENRY P. CLAUSEN, Mount Vernon, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 19, 1919. Serial No. 312,007. 14 Claims. (Cl. 179—18.)

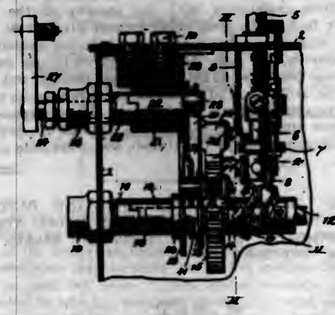
1. In a telephone system, telephone lines, audible signaling devices individual thereto, audible signaling devices common to said lines, and means including automatic switches for selecting a line and automatically actuating its individual signal, means for automatically actuating said common signaling devices at the termination of a definite period after the operation of the individual signaling device of the selected line, and means whereby a third one of said lines may be connected to the calling line.

1,397,035. BUILDING-BLOCK. THOMAS COLOSIMO, Gary, Ind. Filed May 12, 1921. Serial No. 468,982. 2 Claims. (Cl. 72—41.)



1. A building block comprising a body portion having vertically disposed air spaces on opposite sides of its median line, and of a greater length than one-half the length of the block, a continuous centrally disposed groove in two sides and one end of said block, a recess formed in one end of the block and communicating with said groove, and a projection at the other end of said block of less length than the depth of said recess.

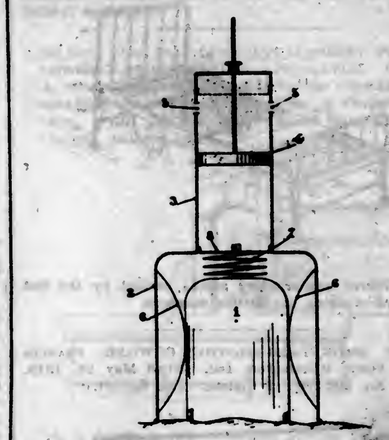
1,396,086. LUBRICATOR. WILFRED G. COLBS, Madison, Wis., assignor to Madison Kipp Corporation, Madison, Wis., a Corporation of Wisconsin. Filed Dec. 22, 1919. Serial No. 346,585. 2 Claims. (Cl. 184—28.)



2. In a lubricator, the combination of a body having a cylinder formed therein; a piston mounted in the cylinder; means for actuating the piston; a reservoir located to one side of the cylinder and communicating therewith through a port, the upper edge of the reservoir being downwardly

and outwardly beveled; a cover therefor, said cover being provided with a seat upon its under face adapted to contact the beveled edge of the reservoir and likewise having a

portion extending outwardly beyond the side wall of the reservoir; and a spring secured to the cover and the body portion acting to draw the cover to place.



1,397,037. LUBRICATOR. WILFRED GEORGE COLBS, Madison, Wis. Filed Dec. 27, 1920. Serial No. 433,358. 4 Claims. (Cl. 284—27.)

4. In a lubricator, the combination of a casing or reservoir; a cover therefor; a block secured to the under face of the cover; a shaft having its bearing in the block; a wrist pin extending outwardly from the shaft; a hanger secured to the cover adjacent the block and extending downwardly within the reservoir, said hanger having an opening formed therein into which the side of the block projects; a ratchet wheel; a shaft extending through the hub of the ratchet wheel; a sleeve mounted upon the shaft and passing through a bearing formed in the lower portion of the hanger; a lever fulcrumed upon said sleeve; a pitman connected at one end to the lever and at its upper end to the wrist pin; a pawl carried by the lever and coacting with the ratchet wheel; a second pawl mounted upon the hanger and likewise coöperating with the ratchet wheel; a pump; and suitable connections between the pump and the ratchet wheel whereby the pump is operated upon the actuation of the ratchet wheel.

1,397,038. APPARATUS FOR THE RAPID APPLICATION OF CUPPING-GLASSES, SUCTION-CUPS, &c. FERNAND DEVIENNE, Paris, France. Filed May 18, 1920. Serial No. 382,801. 4 Claims. (Cl. 128—300.)

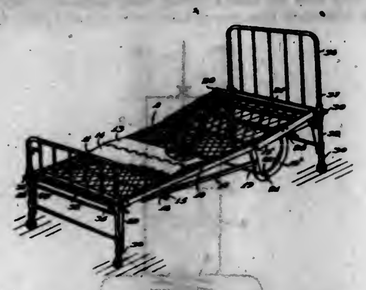
1. Apparatus for the application of cupping glasses comprising a casing adapted to inclose the cupping glass, means connected to the casing for producing a degree of vacuum therein, and means for removably supporting the cupping glass in the casing to permit of withdrawal of

the latter from the cupping glass after the latter has been applied to the desired part.

1,397,039. METHOD OF TREATING WASTE SULFITE LIQUORS AND PRODUCT OBTAINED THEREFROM. WALTER H. DICKERSON, Muskegon, Mich., assignor, by mesne assignments, to Edward J. Koehler, New York, N. Y. Filed Nov. 16, 1918. Serial No. 262,763. 44 Claims. (Cl. 252.)

22. As a new article of manufacture, the solid constituents of waste sulfite liquors in the form of a sphere glazed on the surface.

1,397,040. CABLE-SPLICE. JAMES FRANCIS DILLON, Crown City, Ohio, assignor to The American Mine Door Company. Filed Feb. 24, 1919. Serial No. 278,683. 3 Claims. (Cl. 173—263.)

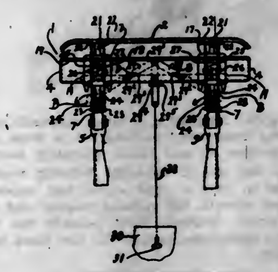


3. A cable splice comprising a blank, opposite ends of said blank being transversely corrugated to form mating jaw faces, a portion of said blank gradually decreasing in thickness to one end of the blank whereby when said blank is curled to form a split sleeve and constricting pressure applied thereto the reduced weaker end of the blank automatically disposes itself beneath the thicker end to close the sleeve and engage the jaw faces in overlapping relation.

1,397,041. INVALID-BED. THOMAS DODDS, Thessalon, Ontario, Canada. Filed Feb. 19, 1921. Serial No. 446,280. 4 Claims. (Cl. 5—12.)

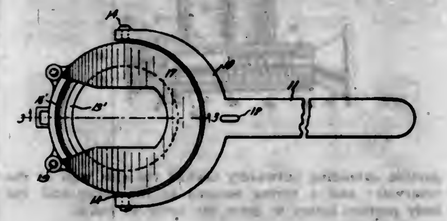
1. An invalid bed having tubular posts at the head and foot thereof apertured at the lower extremity, hollow

posts telescoping within the tubular posts, flexible members connected to the hollow posts extending through the



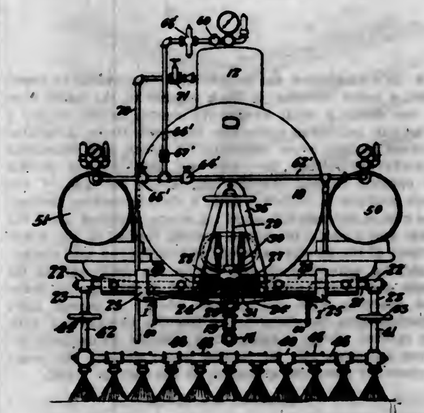
said apertures and winding means carried by the bed frame and engaging the flexible members.

1,397,042. SMOKELESS SHOTGUN-POWDER. FRANCIS I. DU PONT, Wilmington, Del. Filed May 28, 1919. Serial No. 300,266. 2 Claims. (Cl. 52—21.)



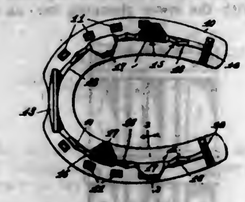
1. The process of making smokeless shot gun nitrocellulose powder which comprises incorporating the ingredients, forming them into grains, treating them uniformly with a mixture of substances having different boiling points, one of which is a substance which, in liquid condition at normal pressure and at a temperature below the ignition point of the nitrocellulose, is itself an active solvent of nitrocellulose but will not combine therewith to form a chemical compound, and the other of which is a liquid that is miscible with said solvent and not a solvent of the nitrocellulose, and then driving off the nonsolvent, whereupon the nitrocellulose is colloided and the grains are fixed.

1,397,043. SAFETY DEVICE FOR AUTOMOBILES. WILLIAM PATRICK DWYER, West Flamboro, Ontario, Canada. Filed June 24, 1921. Serial No. 480,069. 11 Claims. (Cl. 293—41.)



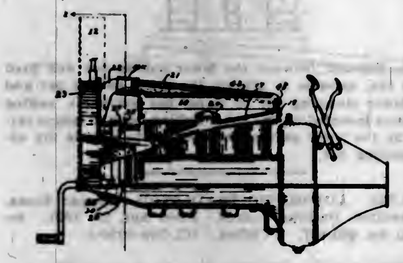
1. In a safety device for automobiles, the combination with the bumper of the automobile normally disposed transversely of and in front of the automobile, of an independent collapsible fender adapted to be held in an inoperative position behind the bumper, means for swinging the bumper backwardly into an inoperative position and independent means for projecting the fender forwardly into an extended position in front of the automobile simultaneously with the backward movement of the bumper.

1,397,044. WELL-DRILL WRENCH. WILLIAM H. ELLINGER, Wichita Falls, Tex. Filed May 4, 1920. Serial No. 378,832. 1 Claim. (Cl. 81—119.)



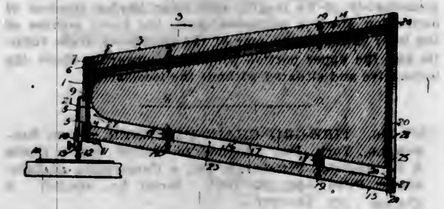
In a well drill wrench, the combination with a yoke and an open ring swiveled in the yoke, of an open ring of substantially L-shaped cross section slidably supporting the first ring on the horizontal leg thereof, a removable notched plate carried by the vertical leg of the L-shaped ring and overlying the horizontal leg thereof, the notch of the plate registering with the opening of the ring, the lower face of the plate being formed with a ball race, an open ring substantially U-shaped in cross section disposed between the plate and the swiveled ring having antifriction bearings rotatably secured therein and running in the said race, and a gate having a race in its upper face for movement of the bearings and movably connected to the first ring at one side of the opening thereof and detachably connected to the ring at the other side of the opening.

1,397,045. APPARATUS FOR SPRAYING BINDING MEDIA ON ROADS. SAM EVERETT FINLEY, Atlanta, Ga. Filed Oct. 29, 1919. Serial No. 334,315. 15 Claims. (Cl. 299—35.)



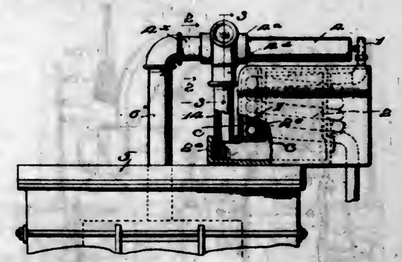
3. A distributer for bituminous road binders in heated form comprising a vehicle, a liquid tank thereon, a source of compressed air, and connections between said source and the liquid tank, said connections including an automatic pressure regulator and a check valve between the latter and the tank, whereby uniform air pressure is maintained in said tank and back flow therefrom prevented.

1,397,046. HORSESHOE. JOHN HALLER, Brooklyn, N. Y. Filed Aug. 7, 1920. Serial No. 401,869. 4 Claims. (Cl. 168—24.)



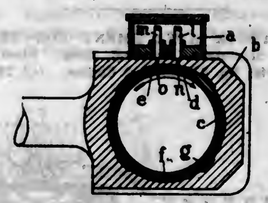
1. A horseshoe comprising a body portion and calks projecting downwardly therefrom and provided with transverse ribs and corrugations.

1,397,047. AIR-COOLING SYSTEM FOR GAS-ENGINES. DANIEL L. HARRIS, Wichita, Kans. Filed July 12, 1920. Serial No. 395,693. 2 Claims. (Cl. 123—171.)



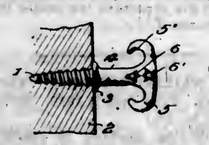
1. An air cooling system for internal combustion motors, including an air inlet device coupled to the jacket system of the motor, an inclosed fan case coupled to the outlet conductor leading from the jacket system and an air exit in said fan case; a fan, motor operable, rotatably mounted in said fan case and arranged to suck cooling air through the air inlet and jacket system; a valve arranged in said outlet conductor and normally open to permit passage of the air from the jacket into the fan case for expulsion; and members, operatively connected with said valve, arranged within said air passage and adapted to contract when cooled to an undesirable degree, which contraction operates to effect a closing valvular movement to limit the air circulation; all for the purposes as specified.

1,397,048. DEVICE FOR IMPRESSING SOUND-WAVES ON DIAPHRAGMS. CHARLES G. HENSLEY, Brooklyn, N. Y. Filed Jan. 31, 1918, Serial No. 214,629. Renewed Apr. 6, 1921. Serial No. 459,016. 10 Claims. (Cl. 181—27.)



1. A device of the class described comprising a smaller diaphragm, a larger diaphragm, and spaced members forming a tapering fluid space of annular cross section and with which members said diaphragms are so associated that the vibrations of one of said diaphragms are transmitted to the other of said diaphragms through the fluid in said space.

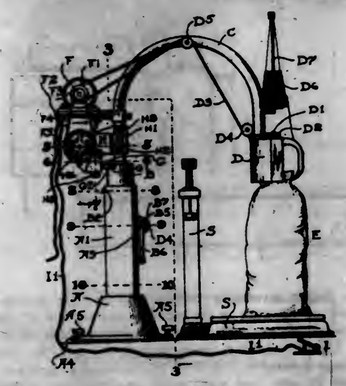
1,397,049. NON-FLOODING ATTACHMENT FOR KEROSENE-GAS-GENERATING APPARATUS. CLARENCE A. HILL, Lima, Ohio, assignor to The Champion Kerosene-Burner Company, Lima, Ohio, a Corporation of Ohio. Filed Aug. 24, 1920. Serial No. 405,570. 16 Claims. (Cl. 158—53.)



16. A fitting having a tubular portion for passage of liquid and an opening in its side for the escape of gas located above the bottom of the tubular portion so as to prevent liquid escaping therethrough by gravity, and a gas passage formed in the wall of the tubular portion and connected at one end with said opening and extending around the tubular portion to the opposite side thereof and opening thereat; and means for regulating the size of the said opening, substantially as described.

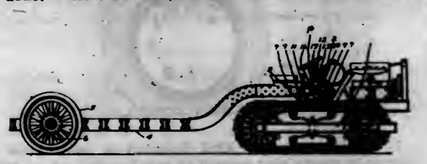
1,397,050. CIRCULATING LUBRICATION. WILHELM HOLTORF, Hamburg, Germany. Filed July 2, 1920. Serial No. 393,747. 5 Claims. (Cl. 64—24.)

1. In a device of the kind described in combination, a bearing, a rotary part located in said bearing, an oil tank on said bearing, means for causing the oil to circulate between said tank and said bearing and two separate oil collecting grooves in the non-loaded portion of said bearing, each one adapted to collect the oil at a certain direction of rotation.



1,397,051. CLOTHESLINE-HOLDER. GORDON ALBERT HOPKINS, Bradford, Pa. Filed Mar. 26, 1921. Serial No. 455,941. 2 Claims. (Cl. 24—129.)

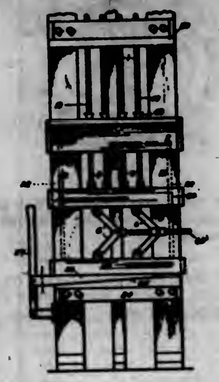
1. A clothes line holder comprising a screw threaded shank having a shoulder integral therewith, a body part



extending from said shoulder in a T shaped formation whose outer extremities terminate in horizontally curved line retaining hooks, and a pair of vertically projecting prongs extending from said body part adapted to apply a gripping contact to a line placed intermediate thereof, substantially as described.

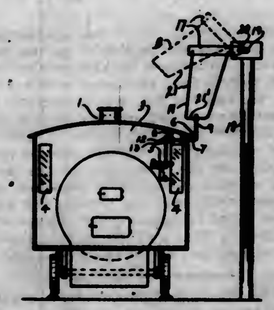
1,397,052. SEWING-MACHINE. JESSE B. MILLER, Knoxville, Tenn. Filed Mar. 9, 1920. Serial No. 364,403. 16 Claims. (Cl. 112—11.)

1. In a machine of the nature described, the combination of a supporting member turnable on an upright axis and reaching laterally from said axis and having its outer end high enough to admit a bag under said end, a sewing head on said end, and automatic mechanism for actuating the sewing mechanism of said head and simultaneously turning said supporting member on said axis, substantially as described.



1,397,053. TRUCK ATTACHMENT FOR TRACTORS. FLOYD A. MITCHELL, Portland, Oreg. Filed Apr. 22, 1920. Serial No. 375,865. 2 Claims. (Cl. 280—33.1.)

1. In combination, a tractor of the endless track or other type, a longitudinally disposed frame supported by wheels in the rear and by said tractor at the front through a universal joint, said joint comprising a vertical king pin rigidly secured to the tractor frame, a T member disposed about said king pin having the center line thereof in the same vertical plane as the center line of said trailer or longitudinally disposed frame, ends of the T forming bearings for the draft pin structure the center line of which is at right angles to the T.



1,397,054. BOX-NAILING MACHINE. ARTHUR N. RIGGS, Centralia, Wash. Filed June 2, 1919. Serial No. 301,160. 2 Claims. (Cl. 1—10.)

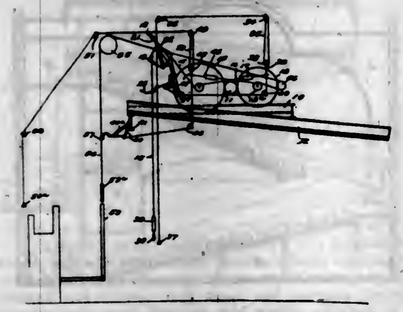
2. In a nail driving machine, in combination with a frame structure, an upper clamping member fixed to said frame, and a lower clamping member slidable thereon, between which the parts of a box may be held for nailing, a cross bar fixed to the frame at some distance below the movable clamping member, upper and lower nailing bars slidable on the frame between the latter fixed bar and lower clamping bar; the lower one having fixed relation to and movable with the lower clamping bar, an adjustable

wedge disposed between the lower nailing bar and fixed cross bar, movable to actuate the lower nailing bar and the lower clamping bar to clamp the box parts, nailing members mounted on the upper nailing bar and means carried by the lower nailing bar operable to actuate the upper nailing bar.

1,397,055. AUTOMATIC TRAIN-STOP. ERFERD SAGER, Hamilton, Ontario, Canada. Filed Apr. 29, 1921. Serial No. 465,487. 6 Claims. (Cl. 246—190.)

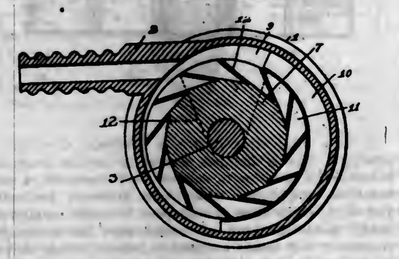
1. In a locomotive, the combination with the locomotive and the emergency brake throttle thereof, of an operating lever carried by the locomotive and pivotally mounted intermediately of its length, said lever having freedom of oscillation about a horizontal axis, the lower portion of the lever engaging the rear of the emergency brake throttle and the upper portion projecting upwardly above the locomotive and situated without the locomotive.

1,397,056. TIRE-GRIP-CHAIN FASTENER. IRVIN SAUERWALD, York, Pa., assignor to United States Chain & Forging Co., Pittsburgh, Pa., a Corporation of Delaware. Filed Apr. 26, 1921. Serial No. 464,547. 6 Claims. (Cl. 24—241.)



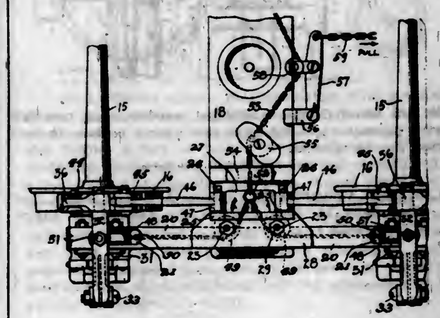
5. In a chain fastener, a connector having a link receiving slot, and a saddle-shaped keeper pivoted to said connector and having a recess therein adapted to receive said

link initially and to direct same into said link receiving slot when said keeper is turned about its pivot, and a pair of tongues integral with said keeper and lying in the



path of said link after movement of said keeper about its pivot, and locking means operable by pivotal movement of said keeper in the same direction.

1,397,057. HOISTING APPARATUS. FRED SEBASTIAN SCHAEFER, South St. Paul, Minn. Filed July 26, 1919. Serial No. 313,525. Renewed Apr. 15, 1921. Serial No. 461,653. 5 Claims. (Cl. 187—36.)



1. In a device of the type described, a driven element, a winding reel operated thereby, a brake arm adapted to stop the movement of the winding reel, a sheave, a flexible element secured to said winding reel and passing about said sheave, a support secured to the frame of said sheave, an arm pivotally secured to said support to swing vertically, a stop secured to said support adapted to limit the downward movement of said arm, a skeleton arm having a central opening, an eye-bolt securing said skeleton arm to said pivoted arm, a cable having one end secured to said eye-bolt and the other end secured to the free end of said brake arm, said flexible element extending through the opening in said skeleton arm and being provided there below with an enlargement of greater size than said opening.

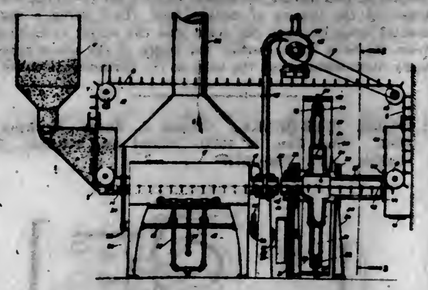
1,397,058. VIBRATOR. HARRY J. SCHAUMLEFFEL, Marion, Ind. Filed June 18, 1920. Serial No. 390,004. 3 Claims. (Cl. 22—56.)

1. A vibrator including a stator having a tangential inlet and an arcuate series of lateral outlets of gradually diminished area, means for connecting the stator to an object to be vibrated, a rotor eccentrically mounted within the stator and having peripheral pockets for receiving successively the impact of motive fluid, there being a segmental space between the rotor and the stator extending from the inlet to the outlet, the width of the space gradually diminishing from the inlet to the farthermost outlet.

1,397,059. CAR-BRAKE. GEORGE L. SCOTT, Shawnee, Okla. Filed Jan. 2, 1920. Serial No. 349,182. 7 Claims. (Cl. 188—57.)

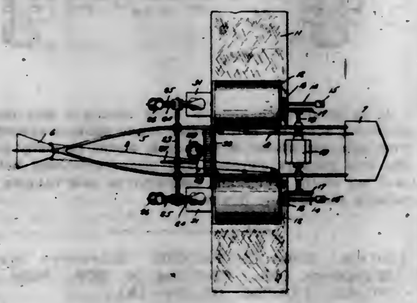
1. In brake mechanism, a truck having a side frame including a hollow bar, pivoted brake hangers extending over adjacent wheels of the truck, means normally holding said hangers elevated, and means extending within said bar of the frame and connected to said hangers for rocking the hangers downwardly.

1,397,060. TOBACCO-PACKER. ELLSWORTH SLACK, Miamisburg, Ohio. Filed Aug. 30, 1920. Serial No. 407,002. 7 Claims. (Cl. 226—18.)



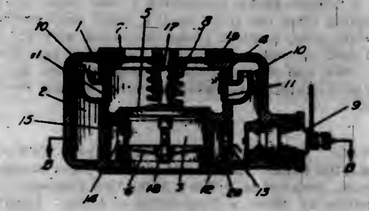
1. A tobacco packer comprising a cross head, side arms extending from the cross head, a cross strip carried by the side arms, resilient blades connected with the cross head and extending rearwardly therefrom adjacent the side arms, and blades pivotally connected with the cross head and extending rearwardly thereof beneath the cross strip.

1,397,061. APPARATUS FOR FILLING RECEPTACLES OR THE LIKE. HERBERT M. SMITH, Great Barrington, Mass., assignor to Stanley Insulating Company, Great Barrington, Mass., a Corporation of Maine. Filed Sept. 30, 1918. Serial No. 256,281. 7 Claims. (Cl. 226—19.)



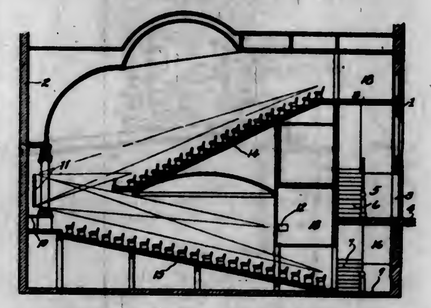
1. In a device of the kind described, a centrifugal member for supporting a receptacle to be loaded including a central portion open at both ends for the passage of a

conveyer, an endless conveyer passing through the central portion of the centrifugal member for supplying finely



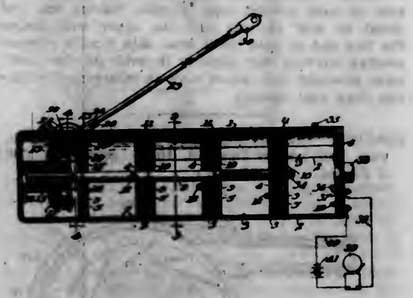
divided material, the centrifugal member being provided with passages opening from the central portion thereof into the receptacles.

1,397,062. AEROPLANE. JOSEPH A. SMITH, Edom, Tex. Filed June 17, 1921. Serial No. 478,365. 1 Claim. (Cl. 244—25.)



An aeroplane including a frame, air tubes supported on the frame, an air motor including a shaft, arms supported on the shaft, each of said arms having a groove formed therein, the grooves of the arms providing air pockets, and cups supported by the arms and adapted to receive air from the air tubes.

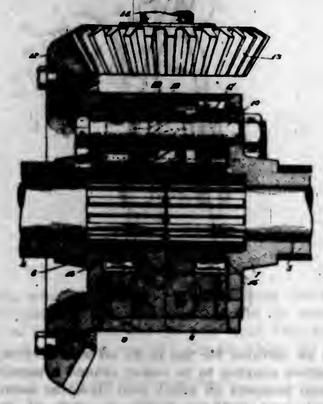
1,397,063. GASIFIER. WILLIAM M. SUBLETTE, Los Angeles, Calif., assignor of one-half to Chauncey M. Blair, Los Angeles, Calif. Filed Sept. 2, 1920. Serial No. 407,704. 1 Claim. (Cl. 123—122.)



In a gasifier of the class described, adapted to be connected between the carburetor and the intake manifold of an internal combustion engine, the combination of a combustion chamber with a firing means; an intake tube passing from the carbureter through said combustion chamber; a valve chamber connecting said intake tube with said manifold; a delivery chamber circularly positioned between the said intake tube and the combustion chamber, adapted to admit vapor from the said intake tube to the combustion chamber; an exhaust means leading from the said combustion chamber to the valve chamber, adapted to prevent the passage of fire therethrough; a valve means positioned within the said valve chamber, adapted to automatically open and close with the volume of gas vapor sucked therethrough; a slide operatively positioned within the said intake tube, adapted to alternately close and open the port hole to the said delivery chamber with the action of the said valve means, as set forth.

1,397,064. THEATER. BRENT E. TOGNAZZEN, Seattle, Wash. Filed Feb. 28, 1921. Serial No. 448,408. 3 Claims. (Cl. 20—1.12.)

1. In a theater of the class described having a stage at one end thereof, a lower auditorium floor inclined downwardly from the stage and a balcony floor inclined upwardly from the stage.

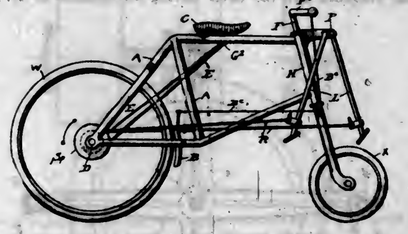


1,397,065. LUBRICATING DEVICE. CORNELIUS L. WELLS, Cumberstone, Md. Filed Nov. 30, 1920. Serial No. 427,283. 10 Claims. (Cl. 184—38.)

2. In a lubricating device, a lubricant container comprising a casing divided internally into a plurality of chambers, a follower in each of said chambers, a slidable rotatable shaft upon which said followers are mounted and with which they are adapted to move axially of the shaft, means defining an outlet port for each of said chambers, and means adapted to impart rotary movement to said shaft for advancing said followers in their respective chambers to express the lubricant therefrom through said outlet ports, said lubricant container adapted

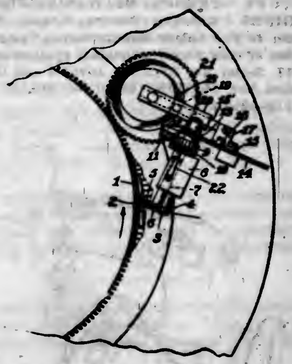
to be mounted upon a relatively stationary member, and said shaft actuating means adapted to be connected with a relatively movable member for imparting movement to said shaft.

1,397,066. DIFFERENTIAL GEARING. ALFRED O. WILLIAMS, South Bend, Ind., assignor to Clark Equipment Company, Buchanan, Mich., a Corporation of Michigan. Filed May 27, 1918. Serial No. 236,789. 2 Claims. (Cl. 74—99.)



1. In a differential, the combination of a housing comprising end and intermediate members, bolts securing said housing members together, two shafts extending into said housing and having their inner end portions journaled therein, two gears fixed on said shafts adjacent to the end portions of said housing respectively, two pinions mounted on said bolts in staggered relation to each other, said pinions being in mesh with said gears respectively, and spiral gears rotating with said pinions respectively on said bolts and meshing with each other, adapted to permti said pinions to rotate in opposite directions.

1,397,067. CROWN-TOOTH. JAMES LEON WILLIAMS, New York, N. Y., assignor to The Dentist's Supply Company, a Corporation of New York. Filed Jan. 29, 1920. Serial No. 354,080. 9 Claims. (Cl. 32—30.)

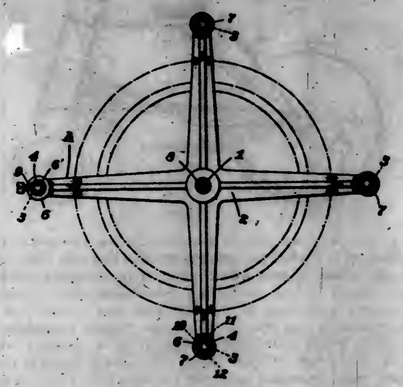


1. A crown tooth having the hole in its body made wider at its inner end in a direction mesio-distally of the tooth than at its outer or open end and at said outer end having the hole wider in a mesio-distally direction than in a bucco-lingual direction, and further having the hole of an oval shape in cross section at its outer end and gradually reduced in bucco-lingual direction and widened in the mesio-distal direction to provide a narrow and elongated cross section at the inner end.

1,397,068. MULTIPLE-GEARED VELOCIPEDE. ARTHUR MOFFAT ALLEN, New Brighton, N. Y. Filed Sept. 30, 1918. Serial No. 256,361. 5 Claims. (Cl. 208—21.)

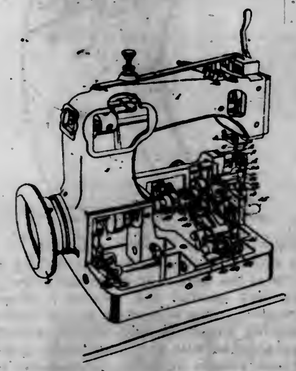
1. In a wheeled vehicle, the combination with a suitable frame, of a stationary spindle mounted in the rear part of the frame, a road wheel fitted to turn loosely thereon and having a hub projecting from each side, a clutch operating upon each of the said hubs and constructed to automatically engage the hub when turned forwardly, a steering wheel with post journaled in a steering head upon the front of the frame, foot-levers having their upper ends journaled upon the forward part of the frame and their lower ends provided with foot-pedals, and a connection extended from each of the levers to one of the said clutches, the levers being operated alternately to impel the road-wheel forwardly.

1,397,069. KNITTING-MACHINE AND FABRIC, (SPOT EFFECT.) HERBERT T. BALLARD, Norristown, Pa. Filed Jan. 15, 1920. Serial No. 351,703. 2 Claims. (Cl. 66—12.)



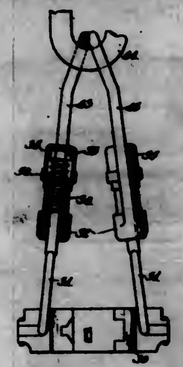
1. In combination with a main yarn guide, a supplemental yarn guide, a feeding element for feeding the supplemental yarn to the main yarn guide, means for periodically moving said element and holding it between its periodic movements to act as a brake on the supplemental yarn, and driving means for said element comprising a toothed wheel meshing with the needle stems and having its teeth of such number as to divide unequally into the number of needles, substantially as described.

1,397,070. KNITTING-MACHINE. HERBERT T. BALLARD, Norristown, Pa. Filed Sept. 28, 1920. Serial No. 413,280. 4 Claims. (Cl. 66—22.)



1. In a circular rib knitting machine a dial post, and a cross frame carrying the same, a plurality of standards for supporting said cross frame, said cross frame having bores to fit over portions of the standards and of larger

diameter in respect thereto and means for compensating for inaccuracies in the positioning of said bores and the dial post consisting of two eccentric sleeves fitted one within the other, the inner one having an inner bore to fit the standard and the outer having an exterior to fit the



enlarged bore of the frame and having respectively outer and inner cylindrical surfaces to fit each other, said sleeves being placed in respect to each other to make a filling piece corresponding in cross sectional shape to the annular space between the exterior of the supporting standard and the wall of the bore in the frame, substantially as described.

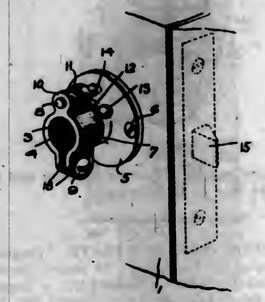
1,397,071. FEEDING MECHANISM FOR SEWING-MACHINES. Rudolph Buckel, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Nov. 5, 1917, Serial No. 200,273. Divided and this application filed Nov. 19, 1918. Serial No. 263,135. 6 Claims. (Cl. 112—215.)

1. In a feeding mechanism for sewing machines, a feed-dog, a main-shaft, means for imparting feeding and lifting movements to said feed-dog including a feed-rocker provided with a slot and pivoted a substantial distance in rear of the main-shaft, a slide-block fitted to the slot in said feed-rocker, an eccentric element on said shaft, a strap connecting said eccentric element and said slide-block, and a lever pivoted on said shaft for adjusting said slide-block in said slot, a segment-plate having a series of sockets located at the front of the machine, an operating handle on said lever, and one or more yieldingly supported detent-pins on said handle adapted to seat in said sockets and hold said lever in an adjusted position.

1,397,072. OIL-WELL MACHINERY COMPRISING THE SPRING-RAIL ELEVATOR. Walter G. Black, Whittier, Calif. Filed July 6, 1920. Serial No. 394,327. 6 Claims. (Cl. 294—90.)

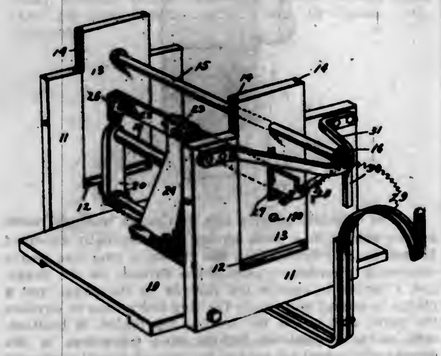
1. In an elevator for use in an oil well derrick, clamping members adapted to be locked around a member to be lifted, bail members on which said clamping members are supported, and resilient means in each of said bail members.

1,397,073. COLLAPSIBLE CORE. John N. Boyce, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 20, 1919. Serial No. 318,715. 12 Claims. (Cl. 18—45.)



1. A tire forming core comprising a plurality of separate sections adapted for end to end engagement and having their engaging end faces each provided with a recess, means for registering engaging faces of said sections, a bolt pivoted in the recess of one section and adapted to swing outward into the recess of the contiguous end of the engaging section for locking engagement with said section in a position oblique with respect to the engaging faces of said sections.

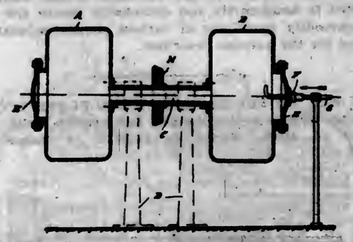
1,397,074. DOOR-LOCK. William S. Brainard, Rochester, N. H., assignor of one-half to John L. Meader, Gonic, N. H. Filed May 8, 1920. Serial No. 379,766. 1 Claim. (Cl. 292—359.)



In a door lock, the combination with a door knob having a shank and a washer or rosette secured to the door

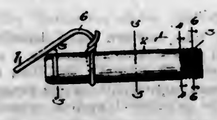
and provided with a bolt-receiving aperture, of a split sleeve encircling the door knob shank and clamped thereto, said sleeve having on its exterior a boss provided with a bolt-receiving aperture extending parallel to said shank but spaced therefrom, and also having a cam slot com-

municating with the aperture, a bolt slidably mounted in said bolt-receiving aperture and adapted to enter the aperture in the washer, and an arm rigid with the bolt extending through the cam slot and by which the bolt is operated.



1,397,075. GIN-SAW FILER. Elsia Bin Bridges, Remmel, Ark. Filed July 7, 1919. Serial No. 308,956. 4 Claims. (Cl. 76—41.)

1. In a saw filer, the combination of a filer-carrying shaft, a pair of slides supporting said shaft, means for reciprocating the slides in a direction cross-wise of the shaft, a saw feed device, and an operative connection between the latter and one of said slides.



1,397,076. PROCESS FOR THE MANUFACTURE OF MERCURIC OXID. Giacomo Brusa, Turin, Italy, assignor to Giacomo Brusa and The Dott. V. Borelli & Co., Turin, Italy. Filed Nov. 19, 1919. Serial No. 339,228. 2 Claims. (Cl. 23—18.)

1. The herein-described process of manufacturing mercuric oxid, which consists in heating mercurous nitrate in a closed vessel to effect its decomposition; and simultaneously renewing the mercurous nitrate by causing the

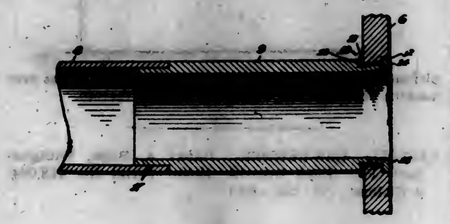
nitrous vapors given off during decomposition to pass over metallic mercury and supplying oxygen thereto.

1,397,077. GAS-BURNER. Harry A. Bubb, Williamsport, Pa. Filed Oct. 19, 1920. Serial No. 418,034. 4 Claims. (Cl. 134—60.)

1. A gas burner comprising a shell open at one end for connection with a source of gas supply, the other end of said shell being provided with a counter space bore and an aperture communicating with said counter bore, a wire screen closing said aperture, refractory material in said shell, a second wire screen closing said open end and holding said refractory material in place and a wire coiled around said shell at one end and having its other end overlying the tip of said burner in line with said aperture.

1,397,078. REDUCING SLUDGE TO POWDER. Harry Williams Charlton, New York, N. Y., assignor to American Potash Corporation, a Virginia Company. Filed Apr. 26, 1920. Serial No. 376,574. 1 Claim. (Cl. 252.)

A process of disintegrating the putty-like mass resulting from the digestion of green-sand and lime which comprises mixing unslaked lime with the same and thereby forming a crumbly material; substantially as described.



1,397,079. DETACHABLE INDICATOR FOR MERCHANDISE. Leo Cohen, Mount Vernon, N. Y. Filed June 2, 1921. Serial No. 474,508. 1 Claim. (Cl. 40—21.)

A detachable temporary indicator for commercial packages of the character designated, comprising a flexible memorandum insert tablet, a pliable holder for said flexible insert tablet formed with a frontal sight aperture,

an elastic resilient band connected and coincidental with the upper edge of said holder, and an elastic resilient band connected medially with the side edges of said holder and adapted to temporarily and detachably secure the device to commodity containers of various shapes, substantially as and for the purpose described.

1,397,080. BOILER-TUBE AND END-PLATE CONNECTION. CHARLES S. COLEMAN, Los Angeles, Calif. Filed Jan. 15, 1918. Serial No. 211,930. 4 Claims. (Cl. 285—45.)

3. In a boiler tube and end plate connection, a boiler end plate formed with a circular opening, a gasket having a cylindrical portion of a length less than the thickness of the end plate and formed with an end flange, said gasket arranged with its cylindrical portion extending into the opening in the end plate and with its flange abutting against the inner face of the end plate, said end plate being formed with a recess around the outer marginal edge of the opening forming a shoulder intermediate the inner and outer faces of the end plate flush with the end of the gasket, and a tube end section having a reduced end portion forming a shoulder; the reduced portion of said tube end section extending through the gasket with its shoulder abutting against the flange of the gasket and the outer end of the tube end section being turned into the recess to cover the end of the gasket in close contact therewith and to seat on the recessed shoulder with the turned portion of the end section terminating against the side wall of the recess and filling the latter to form a broken joint.

1,397,081. CAR-BODY. FRANK M. COWGILL, Columbus, Ohio, assignor to The Ralston Steel Car Company, Columbus, Ohio. Filed May 24, 1920. Serial No. 383,904. 3 Claims. (Cl. 105—364.)

1. A car body having metal wall sheets, the other face of each of said sheets being flat, and each sheet having an integral inwardly projecting vertical stake.

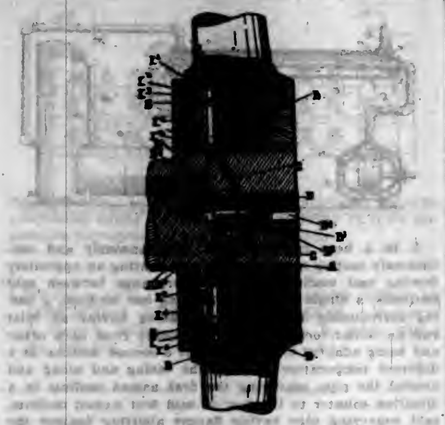
1,397,082. REPLACEABLE FACING AND PINS THEREFOR. GEORGE E. COX, Wilmington, Del. Filed Sept. 8, 1921. Serial No. 499,167. 5 Claims. (Cl. 82—9.)

1. In combination, a facing having two pin receiving holes, and a pair of pointed pins having a common central connecting collar, said pins fitting in the holes in said facing.

3. A pointed dental pin characterized by the provision of a plurality of annular flanges adapted to be received

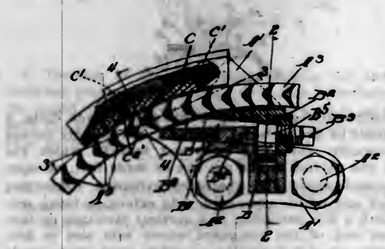
within a facing and a collar of larger diameter and adapted to abut the inner face of said facing.

1,397,083. ADJUSTABLE HUB-PLATE. CHARLES W. DAKE, Chicago, Ill., assignor to Smith Locomotive Adjustable Hub Company, Chicago, Ill., a Corporation of Arizona. Filed July 21, 1919. Serial No. 312,263. 8 Claims. (Cl. 64—25.)



1. The combination of a hub, having an annular recess on one side with a plate having two internally threaded flanges to be received into the recess, a ring like means externally threaded to engage the threads on the flange, and a pinion to engage the threads on the flange and a pinion to engage and rotate the ring like means to advance the plate, and means for locking the pinion in position, said means comprising locking pins transverse to the driving pinion and adapted to be received into the external recesses on the driving pinion.

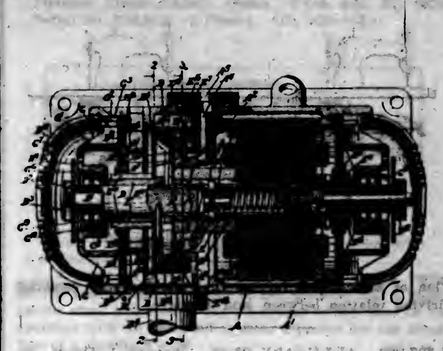
1,397,084. ADJUSTABLE HUB-PLATE. CHARLES W. DAKE, Chicago, Ill., assignor to Smith Locomotive Adjustable Hub Company, Chicago, Ill., a Corporation of Arizona. Filed July 21, 1919. Serial No. 312,266. 20 Claims. (Cl. 64—25.)



1. The combination of a hub, having an annular recess on one side, with a wearing plate having a portion adapted to be received into said recess and shaped so that the part which contacts the inner wall of the recess is capable of deformation to grip such wall, and means for introducing grease under pressure into the chamber formed between the hub and plate, so as to advance and hold the wearing plate to accommodate for wear and to press the

deformation part of the plate against the walls of the hub recess to close the chamber against the escape of grease,

said deformation part comprising two annular flanges about the outer surface of that part of the plate which proects within the hub recess.

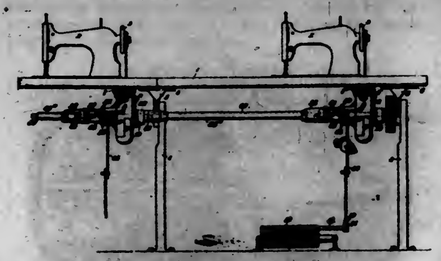


1,397,085. NOZZLE GUIDE-PASSAGE. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 12, 1920. Serial No. 373,171. 18 Claims. (Cl. 253—93.)

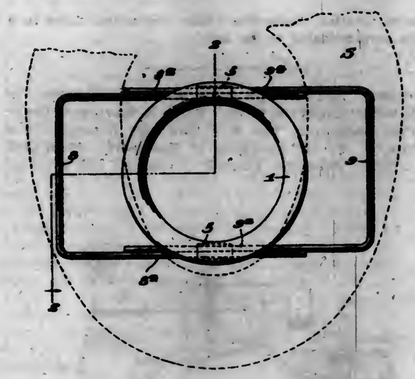
1. A nozzle for a steam turbine comprising a solid cylindrical nozzle member, a socket therefor, means for supplying a motive fluid to the socket, the nozzle being longitudinally slotted along one side, the slot communicating with the steam supply.

1,397,086. STEAM-TURBINE AND GOVERNOR. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Original application filed Aug. 20, 1919, Serial No. 318,051. Divided and this application filed May 21, 1920. Serial No. 383,134. 62 Claims. (Cl. 253—82.)

1. In a governor two members mounted for rotation together and slidable one on the other, governor weights comprising bent bars engaging one member at one end and the other member at the other, and engaging said members in different parallel planes perpendicular to the axis of rotation, the weights tending to move such members with respect to one another laterally as the weights



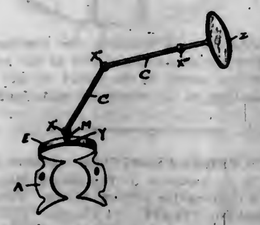
tend to position themselves under centrifugal force in a plane perpendicular to the axis.



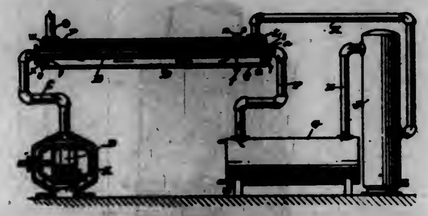
1,397,087. APPARATUS FOR MAKING SHEETS OF PLASTIC COMPOSITION. ELIAS B. DAVIDSON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1920. Serial No. 429,927. 7 Claims. (Cl. 18—12.)

1. In a rubber forcing machine, the combination of a forcing chamber, an expanding nozzle at the outlet thereof, and a delivery nozzle adapted for independent rotation and relative movement axially of said shaft, means for producing relative movement between said clutch-members axially of said shaft to establish and interrupt driv-

ing relation between them, said means including a resiliently mounted cam surface adapted to yield on actuation of said means further than necessary to establish driving relation between said members.



1,397,089. AUXILIARY SEAT. WALTER J. DIEHL, St. Louis, Mo. Filed Sept. 4, 1920. Serial No. 408,221. 4 Claims. (Cl. 4—18.)



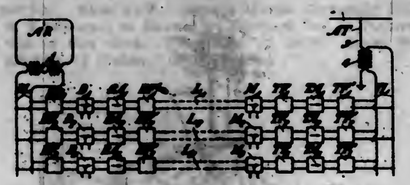
1. An auxiliary seat of the class described, including a seat ring having a rolled edge flange and a depending skirt flange and an intervening curved body, guide straps secured in the valley of the said curved body, and oppositely adjustable supporting frames engaging in said straps.

1,397,090. DEVICE FOR ADJUSTABLE MOUTH-MIRRORS. FREDERICK M. DIMAS, Baltimore, Md. Filed Dec. 16, 1920. Serial No. 431,309. 1 Claim. (Cl. 32—27.)

The combination of the rubber dam clamp, the three universally jointed arms connected thereto and the mirror attached by a screw to the outer arm, all as and for the purpose described.

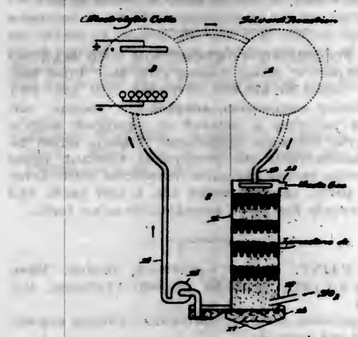
1,397,091. HEAT-EXCHANGER. RICHARD W. DOUGLAS, West New Brighton, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 27, 1920. Serial No. 399,204. 2 Claims. (Cl. 257—9.)

1. In a heat exchanger for simultaneously and continuously cooling a hot medium and heating an oppositely flowing cool medium by heat interchange between said mediums, a single pipe for conveying one medium, a casing surrounding said pipe, said casing having an inlet and an outlet located at points remote from each other and being adapted to cause flow of a second medium at a different temperature through the casing and along and around the pipe conveying the first named medium in a direction counter to the flow of said first named medium, said conveying pipe having flanges abutting against the inner and outer faces of one end of the casing said flanges securing the end of the casing to prevent leakage and also preventing relative longitudinal movement between said pipe and casing, the opposite end of the casing adjacent the outlet having a packed joint around the discharge pipe to prevent leakage from the casing at said end.



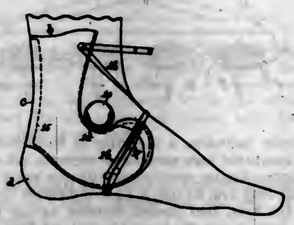
1,397,092. SAFETY-CATCH FOR PINS. FRED J. ENGEL, Newark, N. J., assignor to American Platinum Works, Newark, N. J., a Corporation of New Jersey. Filed May 22, 1918. Serial No. 236,014. 1 Claim. (Cl. 24—157.)

A safety-catch comprising a pin-guard made from a single piece of flat material, having a downwardly curved and outwardly extending hook end beneath which the pointed end portion of the pin can be made fast, an open end channel-shaped and apertured extension connecting said hook end of the pin-guard, said extension being provided with a slot extending in a vertical direction up into the hook end of the pin-guard where said slot is provided with a notched portion, a safety-catch plate made from a single piece of flat material pivotally arranged in said channel-shaped and apertured extension and extending in said slot, one side of said catch-plate being provided with a laterally extending beveled portion adapted to be brought into snapping and holding engagement with the notched portion of said slot, said catch-plate being further provided with a notched portion engaging with the end of said slot for limiting the upward movement of said catch-plate, and a finger piece upon the catch-plate for causing the disengagement of the beveled portion of the catch-plate with the notched portion of said slot.



1,397,093. RADIOREPEATING SYSTEM. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 27, 1919. Serial No. 326,736. 11 Claims. (Cl. 250—15.)

1. A multiplex radio repeating station comprising a receiving antenna for absorbing energy transmitted at a plurality of frequencies from a plurality of signaling channels, a transmitting antenna for radiating amplified received energy to a distance, and a circuit arrangement

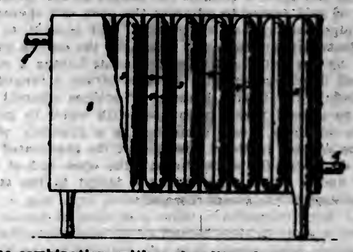


interconnecting said receiving and transmitting antenna, comprising means for amplifying a plurality of radio frequencies corresponding to different channels.

1,397,094. ART OF TREATING LIQUIDS USED IN INDUSTRIAL CHEMICAL PROCESSES. FREDERIC A. EUSTIS, Milton, Mass. Filed Nov. 8, 1919. Serial No. 335,453. 20 Claims. (Cl. 204—1.)

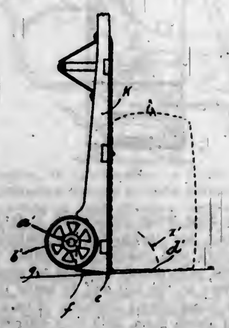
3. The art of treating liquid vehicles for industrial chemical processes comprising as a step introducing into the liquid uncombined sulfur dioxid in a state of fixation with the aid of nascent sulfites of an appropriate metallic base or bases.

1,397,095. ANKLE-SUPPORTER. HARRY B. HAMILTON, Boston, Mass. Filed Feb. 11, 1921. Serial No. 444,126. 5 Claims. (Cl. 128—166.)



1. In an ankle supporter, in combination, a member to engage and support a thick portion of the side of the foot, and a filling member projecting from and beyond the inner surface of said member and arranged to engage and directly support a thinner portion of the foot adjacent to the ankle bone which is not directly supported by said member.

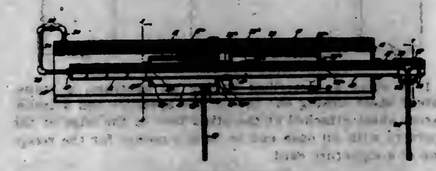
1,397,096. LEDGER-SHEET. CECIL A. HAMMER, Coeur d'Alene, Idaho, assignor of one-fourth to Edward B. Bletsoe, Coeur d'Alene, Idaho. Filed Apr. 27, 1920. Serial No. 376,916. 2 Claims. (Cl. 281—43.)



1. A sheet as described having an aperture, a transparent sheet closing one face of the aperture and a transparent sheet attached at the other face of the edge of the aperture with an open end to form a pocket for the reception of a signature card.

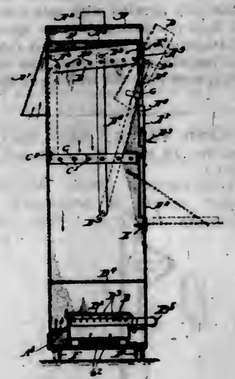
1,397,097. APPARATUS FOR HEAT-INTERCHANGE. JAMES M. HARRISON, Cleveland, Ohio. Filed May 19, 1920. Serial No. 382,525. 1 Claim. (Cl. 257—136.)

The combination, with a plurality of parallel containers for fluid and means for circulating fluid therethrough, of a heat-transferring plate interposed between each of said containers and the container adjacent thereto and arranged substantially parallel with said containers thereby to provide a fluid circulating duct or space on each side thereof, heat-transferring plates spaced from and parallel with the end containers, and front and back heat-transferring plates spaced from the fronts and backs of the said containers.



1,397,098. HAND-TRUCK. NELS HELLEM, Portland, Oreg. Filed Nov. 19, 1920. Serial No. 425,066. 2 Claims. (Cl. 280—61.)

2. In a hand truck, a frame provided at its lower end with a load carrying cross-bar, the plane in which lie the



lower end of the truck frame and the rims of the truck wheels being arranged to make an obtuse angle with the plane in which said cross-bar projects, whereby the truck may be tilted forward and fulcrumed on that portion of its lower end which is coincident with the vertex of said angle, for the purpose described.

1,397,099. METHOD OF AND APPARATUS FOR TREATING AND HANDLING SULFUR. FRANK J. HILL, Sulphur, La. Filed July 6, 1920. Serial No. 394,377. 16 Claims. (Cl. 83—91.)

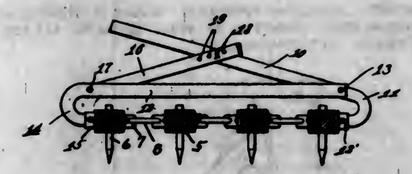
1. In an apparatus of the character described, an elongated steam jacketed casing having one end closed and the other end open, a conduit for molten sulfur extending axially of said casing to adjacent the open end thereof, a steam pipe leading axially through said conduit to the steam jacket of said casing, a nozzle for the molten sulfur carried by the outer end of said conduit having a series of spiral discharge orifices, a water drum arranged on said conduit and having a series of orifices whereby the discharge of said nozzle is sprayed with water to granulate the sulfur, a steam drum having a plurality of jet openings adapted to direct jets against the granulated sulfur to discharge the same through the open end of said casing, and a steam pipe from the jacket to the steam drum to supply the steam thereto.

1,397,100. DRIER. FRANCIS T. JOHNSON, Chicago, Ill. Filed Sept. 8, 1919. Serial No. 322,332. 10 Claims. (Cl. 34—19.)

9. A portable heat drier comprising a drying chamber having a doorway, and means for maintaining a circulation of air through said chamber, including double walls and door closures, said means adapted to cause the air to enter said chamber at the top and to leave it at the bottom, and a rack comprising a plurality of bars and a cover plate across and above them, said rack adapted to be held in position in said drying chamber and to be moved thence into position in the doorway.

1,397,102. METALLIC SEAL. WALTER J. KELLY, St. Louis, Mo. Filed Feb. 14, 1920. Serial No. 359,006. 2 Claims. (Cl. 292—327.)

1. A seal of the character described comprising a shank, a head mounted on one end thereof, a locking head formed on the opposite end of the shank for forming a recess on the periphery of the shank, the free end of the locking head being conical in form, a cap having a recess for the reception of the locking head and a recess of larger diameter formed in the bottom of the cap and a locking spring located in horizontal position in the large recess and arranged to spread and then engage with the under side of the locking head to prevent the head from being detached after once locked in position, substantially as specified.



1,397,102. POLISHING COMPOSITION AND MAKING SAME. HARRY C. KNAB, Kansas City, Mo. Filed May 26, 1921. Serial No. 472,895. 3 Claims. (Cl. 134—24.)

1. A polishing composition, adapted for cleaning, varnishing and polishing a painted or varnished surface comprising the following enumerated elements mixed together in substantially the proportions specified, liquid measure, benzin twenty-five parts, turpentine thirty-seven and a half parts, varnish twelve and a half parts, and paraffin oil twenty five parts, substantially as set forth.

1,397,103. PAINT. EINAR LANGFELDT, Boston, Mass. Filed Aug. 20, 1921. Serial No. 493,880. 15 Claims. (Cl. 134—42.)

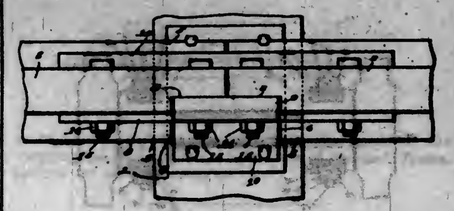
11. A bituminous paint containing tar, cellulose acetate, naphthalene and acetone.

1,397,104. HARROW. ERNST WATSON MCNABB, Watertown, Tenn., assignor to United Harrow Mfg. Co., Inc., Watertown, Tenn. Filed July 13, 1920. Serial No. 395,880. 1 Claim. (Cl. 55—76.)

A harrow including a plurality of teeth bars, each bar having apertured lugs secured to opposite sides thereof, a link member having connection with the apertured lugs, a relatively long arm having a hooked member formed at one end of the arm, said hooked member having pivotal connection with one of the bars, a relatively long arm having one end thereof curved and connected to one of the outer bars and having its opposite end pivotally connected to the first mentioned arm, an adjusting arm having a plurality of openings formed adjacent to one end thereof and having one end pivotally connected to the second mentioned arm, means extending through the first mentioned arm and one of the openings of the adjusting arm for pivotally connecting the adjusting arm and first mentioned arm, and the free end of the last mentioned arm being constructed to act as a lever.

1,397,105. BRACKET. ARTHUR MAYER, Richmond Hill, N. Y., assignor to Edward V. Hartford, Inc., a Corporation of New York. Filed Mar. 11, 1918. Serial No. 221,582. 8 Claims. (Cl. 293—55.)

1. As an article of manufacture, a bracket for attaching a bumper to a vehicle comprising a substantially flat member having an angular portion, said bracket being adapted to lie against the web of a frame member of the vehicle whereby the attaching end of the bumper, the bracket and the web of the frame will occupy parallel planes.

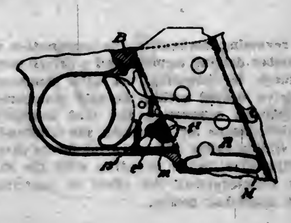


1,397,106. GARTER. ROBERT W. MERRITT, New York, N. Y. Filed July 25, 1919. Serial No. 313,182. 2 Claims. (Cl. 241—6.)

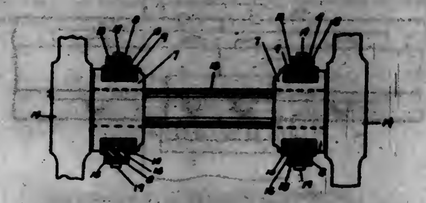
1. In a garter, a flexible flat strap disposed lengthwise upon a flexible strip having its ends adapted to be detachably fastened to the stocking of a person and loops on the ends of the strap through which the strip is disposed so that the strap may be moved back and forth between the ends of the strip.

1,397,107. RAIL-JOINT. ERIK L. NYLUND, Detroit, Mich. Filed Mar. 21, 1921. Serial No. 454,205. 1 Claim. (Cl. 238—231.)

In combination with the abutting ends of two railway rails which have their heads and their base flanges upon their outer faces notched at the abutting ends thereof and the said notches terminating in the plane of the webs of the said rails, of a supporting tie beneath the rails at the meeting ends thereof, said tie comprising a metal member integrally formed upon its upper face with a foot, a laterally extending plate on said foot, a head on said plate opposite the foot, said head and foot designed to be received in the notched portions of the heads and base flanges on the rails when the plate is received in the fishing spaces of the said rails, and transverse means connecting the rails to the plate.

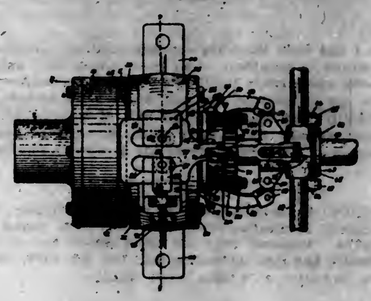


1,397,108. GUN-SIGHT. OSCAR V. PAYNE, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 29, 1919. Serial No. 341,376. 17 Claims. (Cl. 33—56.)



1. A gun sight including a rotary sighting member having means to provide a sight continuously and uninterruptedly operative in the line of sight at various positions in the arc of rotation, the said means being mounted eccentrically with respect to the axis of rotation of said member whereby the sighting means is raised or lowered by virtue of the eccentricity as the member is rotated.

1,397,109. FIREARM. JOHN D. PEDERSEN, Jackson, Wyo. Original application filed July 30, 1915, Serial No. 42,774. Renewed July 17, 1919, Serial No. 311,689. Divided and this application filed Dec. 12, 1919. Serial No. 344,419. 11 Claims. (Cl. 42—7.)



1. In a firearm, in combination, a frame of said firearm, a magazine chamber formed by said frame, a cartridge receptacle insertible in said chamber, and a magazine lock comprising a locking portion and a follower; said magazine lock being adapted to be inserted in said frame and prevented from revolving therein by engagement of the ends of said locking portion and said follower with said frame; said magazine lock when inserted in said frame being engagable with said cartridge receptacle to prevent or permit removal thereof when the same is inserted in said chamber.

1,397,110. LATERAL TAKE-UP FOR DRIVING-BOXES. JOHN JOSEPH PETERS, Colwich, Iowa, assignor of one-half to Norman B. Ahitt, Colwich, Iowa. Filed July 12, 1920. Serial No. 395,772. 11 Claims. (Cl. 64—25.)

11. In combination a driving box mountable in a frame; a shaft projected through said driving box; a wheel mounted on said shaft and spaced from said driving box; means for mounting said box in said frame so as to permit lateral movement with respect thereto; means engaging said mounting means and said frame for changing the relative position of said box to said frame to compensate for wear on said box; and means for retaining said engaging means in operative position, substantially as described.

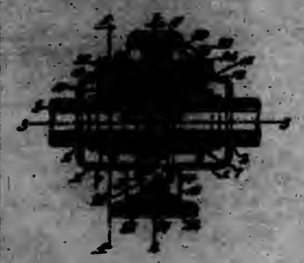
1,397,111. REVERSING MECHANISM. JOSEPH V. PETRELLI, New Haven, Conn., assignor to The Navy Gear Manufacturing Corporation, New Haven, Conn., a Corporation of Delaware. Filed Apr. 21, 1917. Serial No. 163,591. 4 Claims. (Cl. 74—24.)

1. In a reversing mechanism, the combination with a sectional chamber driving member and a driven member, of a friction-clutch for coupling the said members for the forward drive located within the said chambered driving-member, gearing connecting the said members for the reverse drive, means for operating the friction-clutch, including a sliding collar and operating-levers carried thereby and adjustable means co-acting with the said sliding collar for counteracting the effect of centrifugal force upon such operating means.

1,397,112. WINDOW-OPERATING MECHANISM. LEONARD M. PHELPS, Philadelphia, Pa. Filed Jan. 18, 1918. Serial No. 212,491. 5 Claims. (Cl. 268—4.)

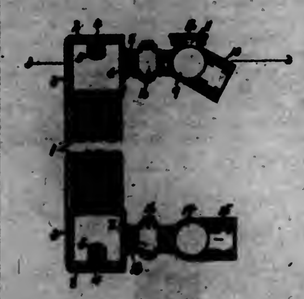
1. The combination of a window sash slidably mounted in a frame, a guiding rod, a weighted rod carried by said sash and engaging said guiding rod, means for limiting the sliding movement of said weighted rod upon said guiding rod, means carried by said sash for connecting said weighted rod thereto, means comprising a sash gripping lever adapted to engage said sash for holding the same in an open position, means for holding said gripping lever in engagement with said sash under certain normal conditions and disengaging said lever with said sash under certain abnormal conditions, such as rain or abnormal moisture.

1,397,113. MATERIAL FOR DECOLORIZING OIL AND METHOD OF PRODUCING THE SAME. PAUL W. PRUTZMAN, Los Angeles, Calif., assignor to General Petroleum Corporation, a Corporation of California. Filed Jan. 17, 1921. Serial No. 438,046. 4 Claims. (Cl. 252.)



1. The method of producing a decolorizing material for oils which consists in reducing the mineral montmorillonite to a plastic condition, treating the plastic material with acid, washing the acid from the mineral, and pulverizing the mineral so washed.

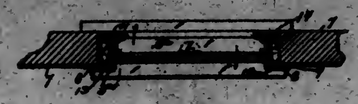
1,397,114. MULTIPLE-BIT UNDERREAMER. AUGUST L. SWANKOST, Whittier, Calif. Filed Mar. 28, 1921. Serial No. 456,864. 5 Claims. (Cl. 255—75.)



1. In an underreamer; a body having a tapered recess extending into the lower end thereof; a circular shoulder in said recess; a center block extending into said recess having a central bore and slots extending radially therefrom; a flange on said center block engaging said shoulder; bolts in said body engaging said center block; a mandrel slidably mounted in said body, radially extending arms on the lower end of said mandrel; a plurality of cutting legs; shanks on said legs extending into said recess and each having an arm receiving opening therein; a spider on the upper end of said center block; bars on said spider extending into the slots in said center block; a cutted spring on said mandrel above said spider; and means on said mandrel for confining said spring.

1,397,115. SELF-OILING BEARING. HARRY J. SMITH, Lakewood, Ohio. Filed Aug. 19, 1918. Serial No. 250,414. 4 Claims. (Cl. 64—24.)

1. A self oiling bearing comprising a tubular outer body, an inner tubular bearing formed integrally with said body, an oil ring mounted in said body, and an oil conducting member engaging said ring and extending to said bearing.

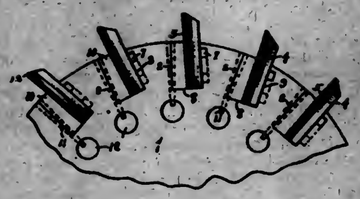


1,397,116. RADIATOR. WILLIAM SPARKS, Jackson, Mich., assignor to The Sparks-Withington Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 4, 1917. Serial No. 184,448. 1 Claim. (Cl. 257—120.)

A radiator comprising a plurality of separate radiator units arranged side by side and each unit comprising an upper water chamber and a lower water chamber connected by a water tube, one of said water chambers provided with an inlet for the fluid and the other of said water chambers provided with an outlet for fluid, a source of fluid connected to the inlet of each of said units and valves for disconnecting any one of said units from said source of fluid, a discharge for fluid connected to the outlet from each of said units, valves for disconnecting any one of said units from the said discharge for fluid, a band extending around the assembled radiator units, and means for securing each unit to the band.

1,397,117. WINDOW. JOHN V. SUGG, Dawson Springs, Ky. Filed Feb. 13, 1920. Serial No. 358,461. 2 Claims. (Cl. 20—51.)

1. A window comprising a main frame carrying central pivots, a swinging frame mounted on said pivots and within the said main frame, sashes hung within the said swinging frame, sash weights for said sashes and means for normally preventing the rotation of said swinging frame, said main and swinging frames having inner and outer facing members adapted, when said swinging frame

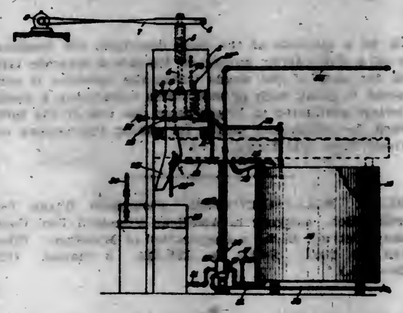


is in normal position, to form with the jambs of the swinging frame and the opposite sides of the main frame, pockets for said sash weights.

1,397,118. CHECK-WRITER. CHARLES G. TEEPLE, Rochester, N. Y., assignor to Todd Protectograph Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 4, 1919. Serial No. 280,647. 13 Claims. (Cl. 101—30.)

12. In a machine of the class described, the combination of a type carrier having on its face a separate type form for each of the words which the machine is constructed to print, each of said forms comprising a group of letters graduated in height from one end of the form toward the other, and means for taking impressions selectively from said forms.

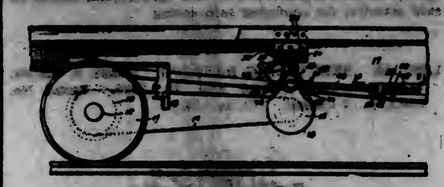
1,397,119. MILLING-CUTTER. FREDERICK WIARD, Detroit, Mich., assignor to American Standard Tool Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 19, 1921. Serial No. 438,311. 3 Claims. (Cl. 29—105.)



3. In a milling cutter, a body having longitudinal slots whose front walls are radial and formed with radial grooves, the rear walls of the slots being parallel to the front walls and having inclined grooves at less than forty-five degrees to the axis of the cutter, teeth mounted in said slots and having projections extending into said grooves, locking blocks in the slots and provided with radial grooves in their front faces, pins to lock the blocks and teeth in position, and spacing strips adapted to lie in said slots beneath the teeth.

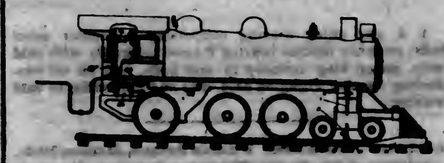
1,397,120. HOSE-HOLDER. John W. Ames, Chicago, Ill. Filed Oct. 22, 1920. Serial No. 418,017. 6 Claims. (Cl. 24—252.)

2. A rope holder comprising a frame, corrugations on the face of said frame curved outwardly between their ends, a lever pivotally mounted on said frame, corrugations on said lever having an inward curvature corresponding substantially to the outward curvature of said first named corrugations, a rounded fork on said lever for engagement by a rope for forcing the corrugations of the lever toward the corrugations of the frame, and a loop on the back of said lever for the attachment of the free end of said rope, substantially as and for the purposes described.



1,397,121. PROCESS FOR THE PURIFICATION OF CRYSTALS CONTAINING FOREIGN MATERIALS OF A DIFFERENT SPECIFIC GRAVITY THEREFROM. Arthur A. Backhaus, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed June 24, 1913. Serial No. 241,653. 2 Claims. (Cl. 23—34.)

1. The method of purifying crystals containing admixed foreign materials of a density less than said crystals but greater than the density of water, comprising agitating the crystals in the presence of a substantially saturated solution of the crystal substance in order to keep suspended said impurities and removing the supernatant liquid containing the suspended impurities which separate from the crystals lying at the bottom of the liquid, allowing said impurities to settle out from the liquid, and reusing the liquid to repeat the treatment on a new batch of crystals.

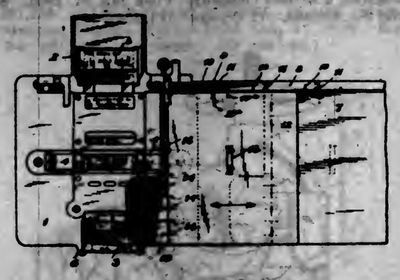


1,397,122. GENERATOR SUSPENSION. David N. Batchelor, Philadelphia, Pa., assignor, by mesne assignments, to Electro Dynamic Company, a Corporation of New Jersey. Filed Sept. 22, 1916. Serial No. 121,388. 16 Claims. (Cl. 105—108.)

15. A bracket for supporting a dynamo from a car body, comprising a plate having a central aperture therein adapted to receive a supporting bolt, and a plurality of ears disposed symmetrically about said aperture and adapted to receive supporting bolts, thereby permitting

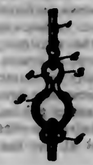
extensive angular adjustment of said plate about its central axis, and members depending from said plate for supporting the dynamo.

1,397,123. AUTOMATIC TRAIN-STOPPING DEVICE. George W. Edwards, Toledo, Ohio, assignor, by direct and mesne assignments, to The Commercial Savings Bank and Trust Company, Toledo, Ohio. Filed Sept. 22, 1919. Serial No. 325,315. 4 Claims. (Cl. 246—186.)



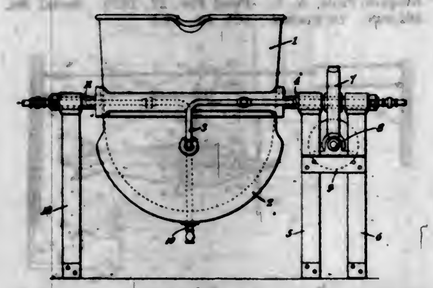
4. In an automatic train controlling mechanism, a piston and cylinder member for moving the throttle toward closed position upon reduction of pressure in the air brake system, a branch pipe connected with said air brake system, a trip operated valve in said branch pipe which when tripped causes reduction of pressure in the air brake system and consequent setting of the brakes and closing of the throttle, said branch pipe passing in such proximity to the steam cylinder that it will always be heated thereby, said branch pipe passing through the steam cylinder casing between the lagging and the cylinder.

1,397,124. STONE-SETTING TOOL. Otto W. Jonas, Chicago, Ill. Filed June 19, 1920. Serial No. 390,061. 3 Claims. (Cl. 51—7.)



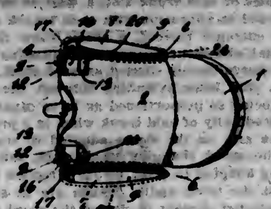
1. A stone setting tool comprising a head having a socket therein; and a plurality of recessed grooved, having their outer ends equally spaced apart, formed in the walls of said socket sliding the prongs of the setting, substantially as described.

1,397,125. SHEEP-CAGE FOR ASSEMBLING-MACHINES. Emanuel Jonas, New York, N. Y. Filed Aug. 9, 1921. Serial No. 490,934. 6 Claims. (Cl. 104—118.)



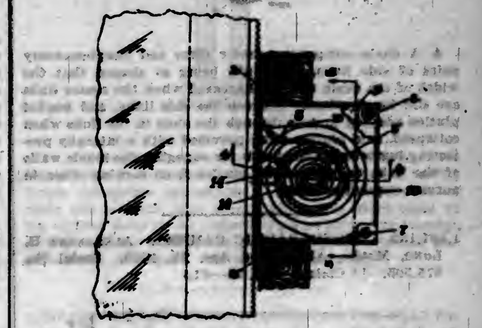
1. A device of the class described comprising a support having a scale, a slidable gage member movable on said support, said gage member having an abutment for a sheet and a scale on said abutment.

1,397,126. NOOSE-FORMING DEVICE. James A. Kennum, Lovington, N. Mex. Filed Apr. 8, 1921. Serial No. 459,558. 3 Claims. (Cl. 24—129.)



3. As a new article of manufacture, a noose forming device comprising a resilient member having two ends curved to form a loop and a pair of curved jaws meeting at their terminals, said terminals being curved over upon themselves so as to form a smooth entrance for a cable for the purpose and in the manner described.

1,397,127. PROCESS OF REFINING OXALIC ACID. Dezső E. Kelen, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Oct. 22, 1917. Serial No. 197,848. 3 Claims. (Cl. 23—24.)



2. The process of refining crude oxalic acid comprising dissolving it in about one-half its weight in water, bringing to near the boiling point, removing the insolubles, crystallizing the acid, agitating the liquid to separate the crystals from suspended matter present, decanting the latter, re-dissolving the crystals and purifying through an absorbent of coloring matter, and re-crystallizing the acid.

1,397,128. SADDLE ATTACHMENT. Terrence W. Kennedy, Eightlum, Mont. Filed Nov. 10, 1920. Serial No. 423,160. 6 Claims. (Cl. 54—46.)

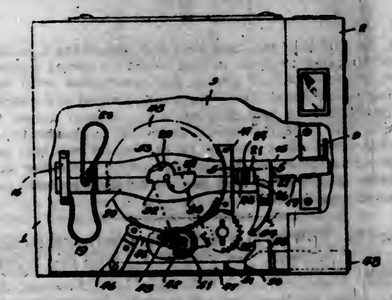
6. A saddle attachment comprising supporting members mounted on opposite sides of the saddle, pads carried by said supporting members for engagement by the thigh portion and knees of the legs of a rider in the saddle, and leg engaging and protecting means hinged to said supporting members for engagement with the outer sides of the rider's legs.

1,397,129. WINDOW-SASH COUNTERBALANCE. Gustaf E. Klein, Chicago, Ill. Filed Aug. 9, 1920. Serial No. 402,206. 7 Claims. (Cl. 16—201.)

6. An article of the class described comprising a casing; a coiled spring mounted in said casing; a spring winding gear mounted in said casing and interlocked with said spring; a locking member adjustably mounted and adapted to interlock with said winding gear; manual means for moving said locking member; means for automatically retaining said locking member in any moved position; and coöperating means in said casing and on a window sash whereby said window sash may be counter-balanced, substantially as described.

1,397,130. POWER CONTROL FOR MOTOR-VEHICLES. John M. Lansden, New York, N. Y. Filed Dec. 2, 1918. Serial No. 264,892. 1 Claim. (Cl. 74—30.)

A motor vehicle comprising elements adapted to change the speed ratio between the engine and driving wheels



thereof, a quadrant carried by the vehicle, said quadrant comprising a plate having an elongated trunk slot therein, there being a plurality of branch slots communicating with opposite sides of said trunk slot, a wall of the trunk slot being disposed in alinement with each branch slot and opposite the entrance thereof, a shaft below the quadrant and in axial alinement with the longitudinal dimension thereof, a sleeve loosely carried on said shaft, a lever on the sleeve, said lever extending through the trunk slot, said lever being so proportioned as to be capable of movement longitudinally of said trunk when in a predetermined position, an arm on the sleeve adapted to engage an element of the speed changing mechanism, said lever and sleeve being adapted to pivot in one direction only on the shaft when the lever and a branch are in alinement to shift the selected element to change the speed ratio.

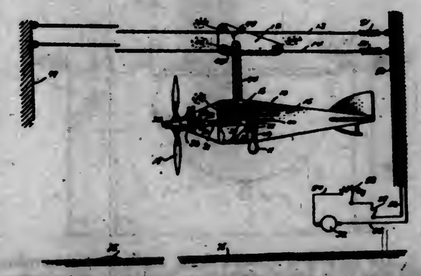
1,397,131. SEPARABLE-LINK CHAIN. James C. Law, Scranton, Pa., assignor to Wilmot Engineering Company, Hazleton, Pa., a Corporation of Pennsylvania. Filed Mar. 9, 1921. Serial No. 451,013. 4 Claims. (Cl. 74—32.)

4. A chain comprising center links and complementary pairs of side links, said links being so shaped that the width of the chain may be decreased when the center links are slid longitudinally between the side links, and headed pintles adapted to pass through the slots in the links when collapsed, said pintles being provided with a laterally projecting lug between the heads for engaging the inside walls of the links to prevent the pintles from turning when in normal coupled position.

1,397,132. PHOTOGRAPHIC CAMERA. Alexander H. Long, Mobile, Ala. Filed Apr. 21, 1920. Serial No. 375,505. 11 Claims. (Cl. 95—31.)

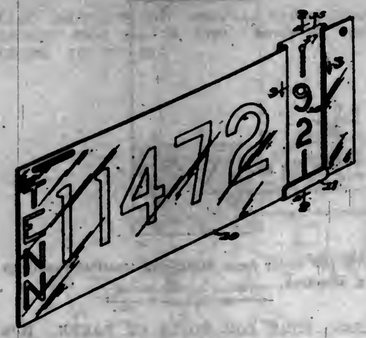
1. In a photographic camera including a shutter mechanism and a film winding mechanism, a member including portions adapted to alternately lock the shutter mechanism and the winding mechanism, a set member for the lock member, a connecting spring between the lock and set members, a projecting spring adapted to be tensioned by the set member, means for holding the lock member clear of the shutter mechanism, and means adapted to be actuated by the shutter mechanism to effect release of the lock member whereby it is automatically projected into operative position to prevent movement of the shutter mechanism until the winding mechanism is operated to bring a new portion of the film in position for receiving the next picture.

1,397,133. MACHINES FOR MAKING PNEUMATIC-TIRE COVERS OR CASINGS. Chas Macnair and Frank Fellows, Birmingham, England, assignors to The Dunlop Rubber Company, Limited, Westminster, London, England, a British Company. Filed Jan. 31, 1921. Serial No. 441,464. 12 Claims. (Cl. 154—10.)



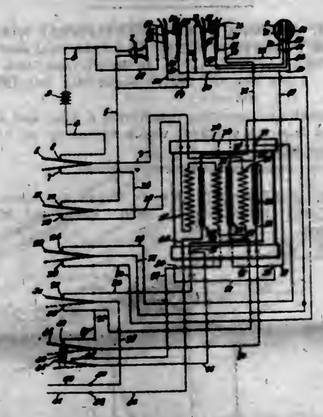
1. A bead trimming device for case making machines comprising pivoted knife arms or levers mounted on an angularly movable support or frame and an actuating lever adapted to be moved in the vertical plane of the core in order to move the knife arms or levers from an inoperative position into a position ready for cutting whereupon a continued movement of the actuating lever in the same direction causes lateral movement of the knife arms or levers on their pivots to bring the knives or cutters into engagement with the surplus material at the beads of the casing on the core.

1,397,134. MAKING TRICHLORETHYLENE. John B. MacMillan, Niagara Falls, N. Y., assignor to Niagara Alkali Company, Niagara Falls, N. Y., a Corporation of New York. Filed Aug. 2, 1920. Serial No. 400,707. 8 Claims. (Cl. 23—24.)



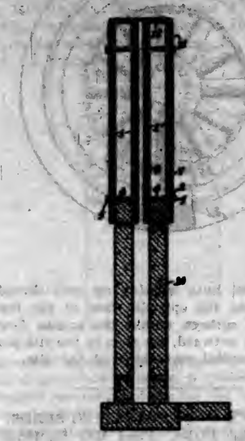
1. The process of partially dechlorinating acetylene tetrachlorid to form trichlorethylene which comprises heating tetrachlorid with lime in the presence of water and of a non-caustic sodium compound.

1,397,135. AMUSEMENT DEVICE. Jubert G. Malouf, Niagara Falls, N. Y. Filed Feb. 27, 1920. Serial No. 361,908. 10 Claims. (Cl. 46—69.)



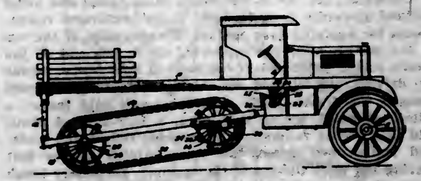
4. An amusement device characterized by having, in combination with a returnable object, an object supporting means, propelling means for the supporting means, an object releasing means comprising a trigger, mechanically operated means for actuating the trigger, and ushable means associated with the trigger and actuated by the movement of the propelling means for releasing the object step by step.

1,397,136. AUTOMOBILE NUMBER-PLATE. Roy R. Melton, Camden, Tenn. Filed Aug. 31, 1920. Serial No. 407,262. 3 Claims. (Cl. 40—63.)



1. In an automobile number plate, a body having a portion throughout the vertical dimensions of the plate proper extending rearwardly, the edges of the rearwardly extending portion being doubled on the plate and spaced from the plate to form guide-ways, an integral ear on the lower edge of the rearwardly extending portion, the said ear being shaped to embrace the lower ends of the guide-ways and extending upwardly to guard the lower ends of the said guide-ways, and a year plate slidable in the said guide-ways having its lower end embraced by the said ear.

1,397,137. PORTABLE TELEPHONE APPARATUS. Alexander McLaurin, Mattoon, Ill. Filed Oct. 5, 1918. Serial No. 256,999. 10 Claims. (Cl. 179—29.)

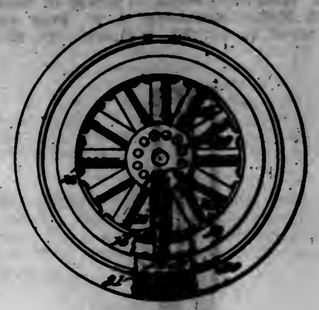


1. In a telephone apparatus, the combination of a transmitter, a receiver having a plurality of magnetic coils, an induction coil, a primary circuit including said transmitter and the primary of said induction coil, a secondary circuit including the secondary of said induction coil, switch means whereby the receiver may be connected in the secondary circuit, and other switch means whereby the magnetic coils of the receiver may be connected either in series or in parallel, said last named means also adapted to connect said transmitter in series with said receiver, substantially as described.

1,397,138. CONCRETE-FORM. Charles G. Mibus and John J. McKay, Salamanca, N. Y. Filed Aug. 29, 1920. Serial No. 404,730. 6 Claims. (Cl. 25—131.)

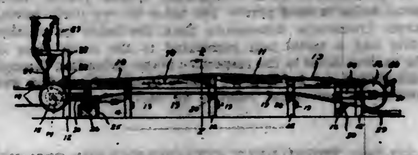
1. A concrete form comprising spaced plates, there being holes in said plates, the holes in one plate having larger transverse dimensions than the holes in another plate and a metal bolt correlated to the exact sizes of the various holes in the respective plates extending through said plates, for holding the plates in spaced relation and preventing movement relative to each other.

1,397,139. TREAD-BELT ATTACHMENT FOR TRUCKS. Ray H. Muscott, Swan Creek, Mich. Filed Sept. 25, 1918. Serial No. 255,724. 9 Claims. (Cl. 180—9.1.)



1. The combination with a motor vehicle; of a tread belt structure comprising a frame, tread belts carried by the frame, a swivel bolt projecting from the forward end of the frame, means for resiliently connecting the swivel bolt with the vehicle frame, and means for resiliently connecting the rear end of the tread belt frame with the vehicle frame.

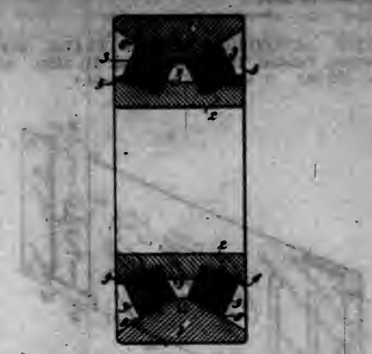
1,397,140. RESILIENT WHEEL. Henry Nichols, Newark, N. J. Filed Apr. 21, 1919. Serial No. 291,690. 1 Claim. (Cl. 152—48.)



A wheel of the character described comprising a hub, a felly provided with side flanges, tubular spokes rigidly connecting the hub and the felly, a rim of approximate

U-rings slidably mounted between said flanges and provided with a fiber, the inner wall of said rim having longitudinal slots formed therein, plungers working in said spokes and bearing against the inner wall of the rim, said plungers having reduced threaded portions extended

through said slots, nuts working on said threaded portions and engaging the opposite face of the inner wall of said rim, and springs within the spokes forcing the plungers normally outward, the slots in the rim permitting limited circumferential movement of the rim.



1,397,141. DEVICE FOR SEPARATING SEEDS. FRANK C. NOURSE, Boise, Idaho. Filed May 13, 1919. Serial No. 296,820. 1 Claim. (Cl. 130—18.)

A device of the character described comprising a supporting frame, a casing of inverted trough shape carried by the frame, the top of the casing being closed and being inclined upwardly from its ends to its transverse center, means for applying heat against the underside of the top of the casing, a hopper supported above one end of the frame, rollers journaled at the ends of said frame, means for driving one of said rollers, a water tank disposed beneath the frame, guide rollers beneath said frame, a roller journaled within said tank, a belt trained about said first named rollers, over the guide rollers and under said last named roller, the upper stretch of the belt bearing flat upon the top of the casing, a stationary brush carried by the frame at the end remote from the hopper and bearing lightly against the belt, and a scraper engaging against the lower side of the lower stretch of the belt at a point subsequent to its engagement by the brush.

1,397,142. ROLLER-BEARING. NILS ARVID PALMGREN, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Oct. 13, 1919. Serial No. 330,402. 15 Claims. (Cl. 64—39.)

1. In a roller bearing, the combination of an inner race, an outer race, conical rollers, at least one pressure flange preventing the rollers from moving in direction toward their large ends, and at least one guide flange against which each roller bears in at least two points which lie either one anterior to the rolling direction so that said guide flange together with said pressure flange

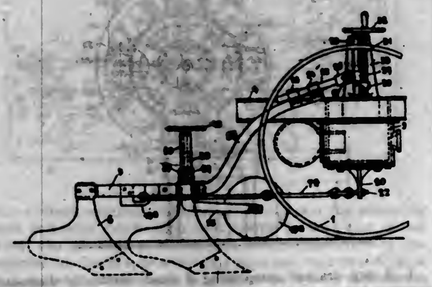
prevents the roller from displacing itself obliquely to the rolling direction.

1,397,143. CORE FOR ROLLS OF PAPER. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of New Hampshire. Filed Dec. 23, 1919. Serial No. 346,946. 9 Claims. (Cl. 242—68.)

1. A bushing for tubular cores having a notch at one end and clenching fingers springing from the sides of the notch, said fingers being in length greater than one-half the width of the notch.

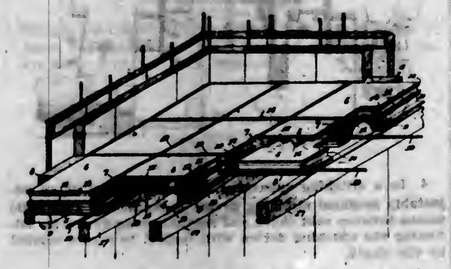
1,397,144. MANUFACTURE OF ARTIFICIAL WOOD OR OTHER PLASTIC BODIES. HERMANN PLAUSON, Hamburg, Germany, assignor to D. R. Rotman, New York, N. Y. Filed Feb. 8, 1921. Serial No. 443,422. 6 Claims. (Cl. 106—22.)

1. A plastic composition comprising a filler and a resin condensed from an aldehyde and a ketone by an alkaline condensing agent.



1,397,145. PIPE-JOINT. HENRY GUION PLUMMER, Oakland, Calif. Filed July 21, 1920. Serial No. 397,900. 6 Claims. (Cl. 285—64.)

3. A pipe joint comprising a ball section having a machined outer surface, a socket section receiving the ball

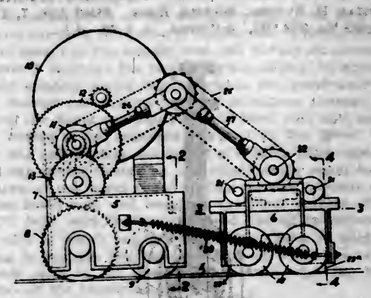


section and of sufficient width to extend past the crown of the ball section in both directions whereby when fitted thereon it will be held irremovable but can be moved freely upon the ball section, the said ring having its inner surface machined to condown to the ball section and shrunk upon the ball section whereby it will be irremovable when fitted thereon as and for the purposes set forth.

1,397,146. MOTOR-PLOW. HERMANN RÜDDY, Jestetten, Germany. Filed Dec. 10, 1920. Serial No. 429,724. 2 Claims. (Cl. 97—30.)

1. In a motor plow of the character set forth, in combination with a truck chassis including a steering column and steering wheels journaled thereon, a plow frame of substantial triangular shape and approximately half the width of said truck chassis, the long side of said plow frame extending substantially in the median line of said truck chassis passing through the center of said steering column, a wheel adjustably supporting the long side of said plow frame, an upwardly curved member adjustably supporting the other side of said plow frame, and an articulated draw-connection between said plow frame and said truck chassis.

1,397,147. FLOOR CONSTRUCTION. FRANK MCMURRAY SAWYER, Los Angeles, Calif. Filed Jan. 12, 1920. Serial No. 350,801. Renewed Apr. 18, 1921. Serial No 461,674. 2 Claims. (Cl. 72—66.)



1. In a floor construction, ceiling slabs having projecting edges below their upper surfaces adapted to contact with each other to form a finished ceiling of the lower sides of the slabs, the edges of said ceiling slabs above the projecting edges being grooved to form recesses between the slabs and undercut upper edges or key-ways for supporting the slabs in position, floor slabs having upper sides to form the finished floor surface mounted upon said ceiling slabs and provided with undercut upper edges which lie spaced from each other to form grooves communicating with the recesses between the ceiling slabs, and concrete beams formed in said grooves and undercut recesses between the slabs.

1,397,148. CABLE-OUTLET OF MAGNETO-ELECTRIC-IGNITION MACHINES FOR INTERNAL-COMBUSTION ENGINES. JACQUES SCHNEIDER, Solothurn, ERNST HÜRLIMANN, Zochwil, and FRÉDÉRIC BILLON, Solothurn, Switzerland, assignors to the Firm Scintilla, Solothurn, Switzerland. Filed Aug. 22, 1919. Serial No. 319,285. 2 Claims. (Cl. 123—149.)

1. A magneto electric ignition machine including a primary and a secondary winding, a casing, two symmetrically arranged insulating pieces for the leading out of two high tension leads from said secondary winding and a third insulating bush arranged symmetrically between said first mentioned insulating pieces for the leading out of a cable for short circuiting the primary circuit.

1,397,149. MACHINE FOR AND METHOD OF MAKING CORRUGATED WIRE-GLASS. ARNO SCHUMAN, Philadelphia, Pa., assignor to Pennsylvania Wire Glass Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Feb. 3, 1920. Serial No. 356,015. 11 Claims. (Cl. 49—32.)

1. The method of making corrugated wire glass which consists in rolling a corrugated sheet of wire glass and repeatedly pressing the same corrugated parts of the rolled sheet while still hot, substantially as described.

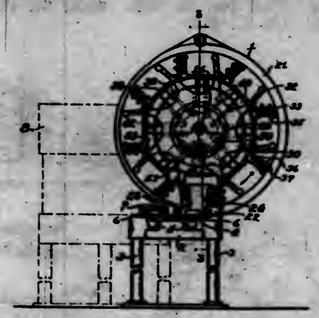
1,397,150. SPRING-BRUSH FOR TIMERS. WALTER J. SPIRO, White Plains, N. Y., assignor to Hudson Motor Specialties Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 17, 1919. Serial No. 297,793. Renewed Sept. 22, 1921. Serial No. 502,666. 8 Claims. (Cl. 200—26.)

1. A device of the character stated comprising a hub, an

arm carrying a brush extended from said hub and means for permitting shifting of at least the outer end of said

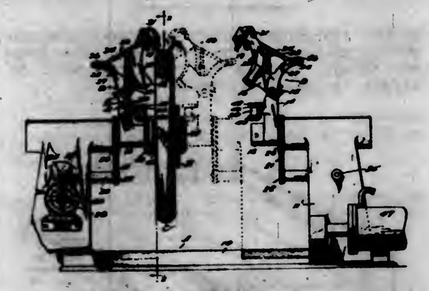
arm in a direction substantially parallel with the longitudinal axis of said hub.

1,397,151. CLIP. HENRY A. STAAB, Milwaukee, Wis. Filed Jan. 24, 1921. Serial No. 439,548. 4 Claims. (Cl. (Cl. 24—66.)



1. A clip comprising a base provided with a sleeve at each side, wire frames journaled at one side in the sleeve, one frame being journaled at each side of the base and extending toward the other side thereof, a spring urging the extending side of each frame toward said base, one of said wire frames extending through the other frame and provided on its outer end with laterally extending lugs to prevent its removal from the outer frame.

1,397,152. CRANK-SHAFT-DRESSING MACHINE. JOSIAH H. SUTTER, Wichita, Kans. Filed Apr. 7, 1920. Serial No. 372,102. 4 Claims. (Cl. 82—4.)

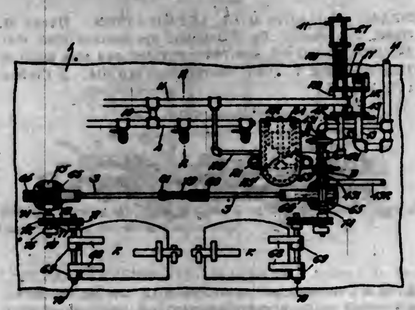


1. In the crank-shaft dressing device, a yoke comprising upper and lower members hinged together, self-centering arms mounted in the lower member, a screw for adjusting said arms, a block mounted in the upper member of said yoke, means for adjusting said block, removable cutting knives and adjustable cutting gages mounted in said block, and means for adjusting said gages, substantially as shown and described.

1,397,153. CAN-DRAINER. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Mar. 17, 1921. Serial No. 453,194. 20 Claims. (Cl. 226—22.)

1. A can drainer comprising a fixed vertically disposed annular housing adapted to receive a can at its base on one side and to discharge it at its base on the other side; means within said housing to press the can against the inner surface of the housing periphery; and means within the housing to move the can therethrough from its reception to its discharge, in a path effecting its complete rotation about its transverse axis.

1,397,154. TIRE-MAKING MACHINE. ROLAND S. THORNER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 20, 1918. Serial No. 245,931. 24 Claims. (Cl. 154—10.)



4. In a stitching apparatus, the combination of an adjustably mounted stitching device, a chuck, and automatic means between said chuck and said stitching device for adjusting the stitching device with respect to a core carried by the chuck.

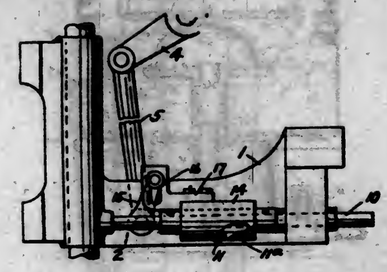
1,397,155. SMOKE-PREVENTER. BRADFORD L. AMES, Boston, Mass., assignor to Thankful H. Ames, Barnstable, Mass. Filed Sept. 11, 1918. Serial No. 253,633. 12 Claims. (Cl. 110—55.)

5. In a smoke preventer for a boiler furnace, having a fire door, a cylinder outside of the furnace a steam pipe leading from the boiler to said cylinder a steam pipe leading from said cylinder having connections for injecting a

blast of steam into the furnace, a valve connected with said cylinder which controls the passage of steam from said cylinder to the pipe which leads to the injector, means for normally retaining said valve closed, a steam pipe which is adapted to supply steam from the boiler to release said detent mechanism on the said valve, a second

valve which controls the admission of steam for actuating said releasing mechanism and which is normally closed when the fire door is closed, and means controlled by the opening of the fire door to open said last mentioned valve and thereby admit steam to release the detent mechanism from the first valve, whereby steam is admitted to the injector.

1,397,156. OPTICAL INSTRUMENT. ALFRED BAUMANN, Cassel, Germany. Filed July 28, 1919. Serial No. 313,961. 3 Claims. (Cl. 88—33.)



1. In an optical instrument of the character set forth, in combination, an apertured supporting plate, an ocular, prisms, an objective, and a separate protective cap for each of said prisms, all directly mounted upon said supporting plate.

1,397,157. RADIUS-ROD CONNECTION. ALEXANDER G. BEST, Vineland, N. C. Filed Sept. 14, 1920. Serial No. 410,066. 1 Claim. (Cl. 267—66.)

The combination with a vehicle including radius rods, of a bifurcated extremity for the front ends of said rods for receiving the front axle of the vehicle, said extremity being formed with a notched brace for engagement with the boss formed on the axle and a flat extension spaced beneath the brace, said space receiving one edge of the lower flange of the axle and the flat extension of the rod being bent over upon the opposite edge of the bottom flange.

1,397,158. SLICING-MACHINE. WILLIAM F. H. BRAUN, Philadelphia, Pa., assignor to The Braun Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 2, 1921. Serial No. 448,981. 6 Claims. (Cl. 17—24.)

2. In feed mechanism for slicing machine meat tables the combination of a traveling carriage, a reciprocatable nut and an oscillatory shaft coöperating with the nut and mounted on the carriage, the combination and construction being such that movement of the carriage reciprocates the nut and the reciprocation of the nut oscillates the shaft, substantially as described.

1,397,159. DETACHABLE FASTENING FOR UMBRELLAS AND THE LIKE. WILLIAM HENRY BERKLEY, Baltimore, Md. Filed Aug. 6, 1914, Serial No. 855,422. Renewed Feb. 16, 1918. Serial No. 217,711. 5 Claims. (Cl. 135—46.)

3. In an umbrella or the like, the combination of a hollow rod having a latch slot, a handle tube, a dowel permanently seated in the handle tube and having an extension removably entering the rod, a spring having an approximately straight shank located within the dowel near one side thereof and having a head extending through the wall of the dowel and engaging said latch slot, said spring also having a lug engaging a socket in the dowel wall near one end of said shank and a holding piece separate from the spring having an end substantially equal to the diameter of the dowel and extending through opposite slots in the dowel wall and engaging the inner surface of the handle tube, said holding piece also having an extension, one edge of which engages the spring shank to hold the spring in position and the other edge of which lies in one of said slots in the dowel and engages with the inner surface of the handle-tube.

1,397,160. COMBINATION GAS STOVE AND BURNER. EDWARD A. CAMPBELL, Kenosha, Wis. Filed Apr. 26, 1921. Serial No. 464,594. 6 Claims. (Cl. 158—60.)

1. A gas burning stove unit comprising a bell-base, having its lower edge offset to form an annular air supply passage, an open ended mixing tube extending into the base having auxiliary air ports therein about its lower open end and within the base, a gas discharge nipple associated with the lower end of the mixing tube, a collar extending from the upper end of the mixing tube, a removable dome fitted to the collar having a corrugated edge forming an ignition mouth in connection with the collar,

a deflected disk mounted upon the dome, and a drum supported by the base bolstering the dome, the drum being provided with an air inlet open at its bottom and a series of vent apertures at its top portion.

1,397,161. PACK-SACK. Tobias Clemetson, Duluth, Minn. Filed Mar. 12, 1920. Serial No. 365,174. 1 Claim. (Cl. 224—8.)

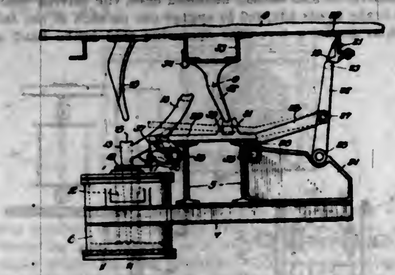
A pack-sack consisting of a flexible receptacle having a closure flap at its upper end adapted to fold down on the rear side of the receptacle, a pair of shoulder-straps fastened to the front side of the receptacle and extending down the front side and around the under side and up the rear side of the receptacle, to which side the shoulder-straps are fastened, each of the upwardly-extending ends of the straps being provided with a buckle, and a pair of load-sustaining and load-shifting straps adjustably connected to said buckles and extending upwardly and forwardly over the top of the receptacle, and means for adjustably attaching these straps to the front sides of the shoulder-straps, for the purpose set forth.

1,397,162. SOAP-BUBBLE DEVICE. Michael G. Dossins, Philadelphia, Pa. Filed Nov. 13, 1920. Serial No. 423,896. 2 Claims. (Cl. 46—31.)

1. The combination, with a bubble-blowing device comprising a fluid-container having a conical outlet forming a seating, of a vertically movable damper including an open ended cylindrical portion and an entirely longitudinal operating member, said damper when raised and lowered being adapted to deposit a film of the fluid over the mouth of the conical outlet.

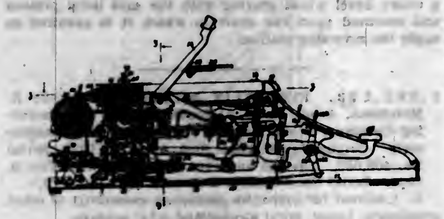
1,397,163. ROLLING-MILL LUBRICATION. Harry R. Gehr, Johnstown, Pa. Original application filed Feb. 14, 1920, Serial No. 358,783. Divided and this application filed Oct. 7, 1920. Serial No. 415,304. 2 Claims. (Cl. 184—5.)

2. In a universal mill, provided with driving shafts for the vertical rolls, a gear mounted on one end of each vertical roll, a sliding gear splined on each driving shaft and adapted to mesh with the gear on the corresponding vertical roll, means for rotating the driving shafts, a longitudinal duct in each driving shaft, a means for supplying lubricant to said longitudinal duct, a plurality of transverse ducts in each driving shaft leading from the longitudinal duct to the surface of the driving shaft, and ball valves mounted in the outer ends of said transverse ducts and adapted to be operated by the sliding gear as it reciprocates on its respective driving shaft.



1,397,164. HOIST MECHANISM. John F. Godfrey, Elkhart, Ind. Filed Aug. 23, 1920. Serial No. 405,450. 9 Claims. (Cl. 254—185.)

1. In hoist mechanism, two side frames, three shafts supported by said side frames and extending therebetween, a hoisting drum and a reverse motion drum independently mounted on one of said shafts, gearing mechanism carried by said other two shafts for operating said hoisting and reverse motion drums, and brake mechanism operating upon said gearing mechanism associated with each drum.



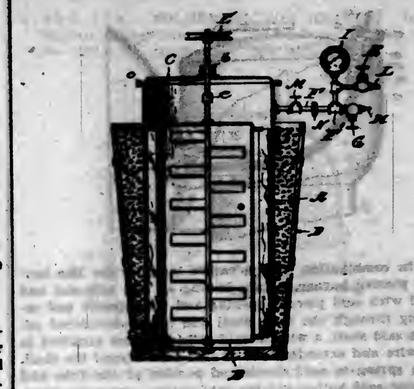
1,397,165. LOCKING MECHANISM FOR DUMP-CARS. Alexander M. Gow, Duluth, Minn. Filed Mar. 14, 1921. Serial No. 451,986. 4 Claims. (Cl. 105—271.)

2. In a dump car, a car body, a body bolster, a locking arm engaging at its lower end the body bolster and at its upper end the car body, the locking arm being adapted to be moved from a locking position to an unlocked position by pressure of the car body thereon, a locking member pivoted to the locking arm and provided with lugs, and a

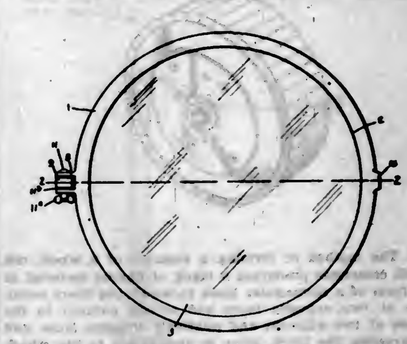
member rigid with the car body and adapted to engage the lugs to move the locking member.

1,397,166. TYPEWRITING-MACHINE. Joseph B. Holden, Utica, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Mar. 2, 1920. Serial No. 363,675. 10 Claims. (Cl. 197—157.)

1. The combination with a ribbon vibrator and a universal bar, of a lever arm connected with said vibrator, a second lever arm connected with said universal bar, a wire connecting said arms, the wire passing through a slot in one of said lever arms, and an ear on the last mentioned lever arm through which ear said connecting wire passes, said ear being adjustable by bending to adjust the wire slightly lengthwise of said slot to regulate the leverage between said lever arms.



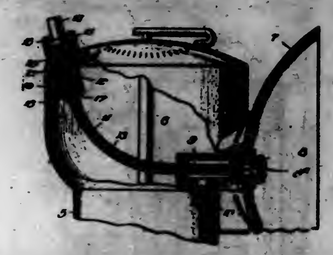
1,397,167. INLAY FOR REPAIR OF SCORED ENGINE-CYLINDERS AND METHOD OF MAKING SAME. Charles Horton, Los Angeles, Calif. Filed Jan. 19, 1920. Serial No. 352,641. 8 Claims. (Cl. 29—156.4.)



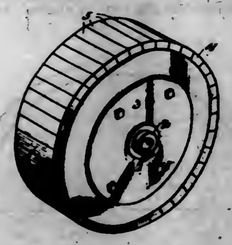
1. The method of building a metallic inlay in a cylinder wall consisting in forming a channel in the cylinder with inclined side walls and a grooved bottom wall, and placing a metallic inlay in the channel thus formed with the inlay filling the grooves in the channel.

1,397,168. CARBONATED ICE-CREAM AND PROCESS OF MAKING THE SAME. Mark J. Ingle, Washington, D. C. Filed Oct. 4, 1919. Serial No. 326,550. 1 Claim. (Cl. 99—8.)

A process for making an aerated dessert ice from an appropriate mixture, said process comprising first, evacuation of air from the mixture; second, passing an inert gas under pressure into the mixture; third, freezing the mixture and maintaining the material and gas under pressure during the freezing operation; and fourth, reducing the pressure to below atmospheric pressure after freezing to increase lightness of the material.



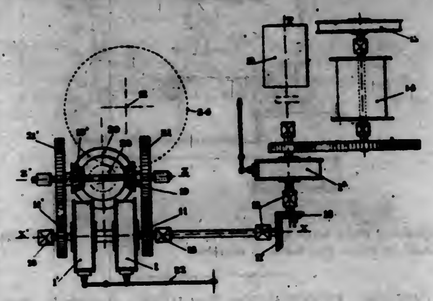
1,397,169. SANITARY COVER. Luther J. Isenhour, Indianapolis, Ind., assignor to Julius Kim, Pittsburgh, Pa., and Samuel R. Sorber, Greensburg, Pa. Filed Mar. 15, 1921. Serial No. 452,407. 1 Claim. (Cl. 217—83.)



A cover for a receptacle comprising a frame having an opening therethrough, a pair of ears on said frame, a projecting lip on the frame diametrically opposite said ears, a transparent covering for the opening in the frame, means for locking the transparent covering over the opening, a clamping member, an ear on the clamping member adapted to coöperate with the ears of the frame for hinging the frame to the clamping member, a bolt extending transversely through said ears forming a pivot for said cover, a wing nut engaging one end of said bolt for clamping the ears together for holding the cover in various elevated positions, friction washers introduced between the pairs of ears and single ear, a rib on the clamping member for gripping parts of the receptacle for holding the clamping member in fixed position thereon, and a clamping bolt for removably locking the clamping member in position on the receptacle.

1,397,170. CLEANER FOR BURNERS OF CARBID-LAMPS AND THE LIKE. Jacob W. Jaggenow and John Emil Tuaja, Hancock, Mich. Filed Sept. 3, 1920. Serial No. 407,963. 5 Claims. (Cl. 158—120.)

1. In combination with a carbid lamp or the like having a pierced burner, a tube having an end adjacent and alined with said pierced opening and its opposite end extending through the lamp shell and being shouldered adjacent said shell, a wire in said tube, a button attached to said wire and extending out of said tube beyond the shell, and a spring in said shouldered portion of the tube and engaging said button to urge said button outwardly, pressure on said button serving to compress the spring and cause the wire to enter the burner.

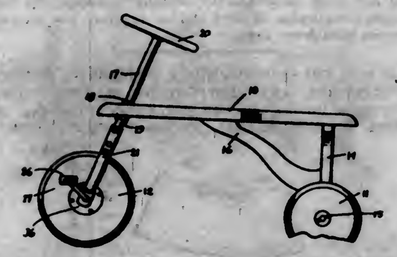


1,397,171. CASTER-WHEEL AND METHOD OF MAKING SAME. Charles W. Millet, Evansville, Ind. Filed Jan. 3, 1920. Serial No. 230,816. 3 Claims. (Cl. 16—75.)

1. The method of forming a segment of a wheel rim which comprises producing a blank of fibrous material in the form of a rectangular block in which the fibers terminate at two opposite faces and extend parallel to the planes of two adjacent and relatively opposite faces, and compressing the block, prior to application to the wheel, to segmental form by exerting pressure against the last mentioned faces and in increasing degree from one of the first mentioned faces to the other.

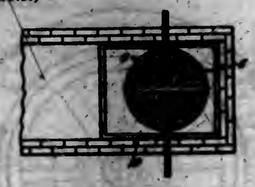
1,397,172. MECHANISM FOR REVERSING THE DIRECTION OF MOTION OF MACHINERY. Hubert Francois Henri Georges Miot, Vanves, France, assignor to Pierre Baruch Bernard and Anatole Louis Moutier, Paris, France. Filed June 2, 1920. Serial No. 385,883. 2 Claims. (Cl. 74—34.)

1. A reversing mechanism comprising the combination of a motor driven by electricity or otherwise with a shaft driven by said motor, two dynamometric brakes mounted upon said shaft, each having a single circular box loosely mounted on the driving shaft in which are placed two satellite systems each consisting of a wheel and pinion rigidly fixed together and mounted on the same spindle, said wheel engaging with a pinion fixed on the driving shaft and said pinion engaging with a wheel fixed on a sleeve concentric to and loosely mounted upon the driving shaft, two brake bands adapted to engage one on each of the said circular boxes, a lever for operating said brake band so



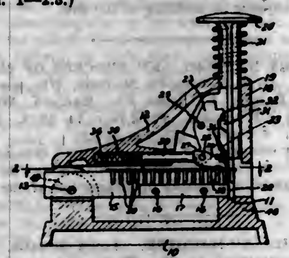
arranged that when one band is applied the other is released, two bevel pinions each being adapted to be driven through suitable gearing by one dynamometric brake, and a crown bevel wheel gearing with the said bevel pinions and mounted upon the shaft to which it is required to apply the reversing motion.

1,397,173. PYROXYLIN SOLVENT. Rowland B. Mitchell, Athol, Mass., assignor to Athol Manufacturing Company, Athol, Mass., a Corporation of Massachusetts. Original application filed Aug. 21, 1920, Serial No. 405,053. Divided and this application filed Feb. 9, 1921. Serial No. 443,639. 2 Claims. (Cl. 134—79.)



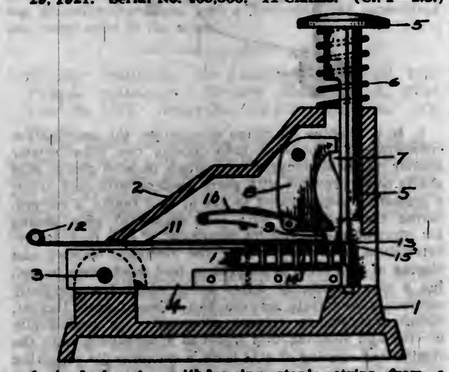
1. A solvent for pyroxylin consisting essentially of ethyl propionate, toluol, ethyl alcohol and ethyl acetate.

1,397,174. VEHICLE. Holton R. Morwood, Welland, Ontario, Canada. Filed Jan. 14, 1921. Serial No. 437,292. 2 Claims. (Cl. 206—35.)



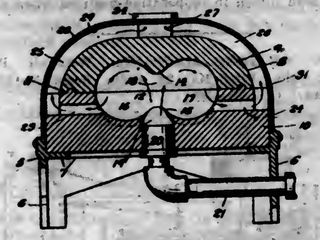
1. In a vehicle, the combination with a pedal actuated front wheel having a transverse passage through the center and a recess in one side into which one end of said passage opens, of a front axle, the portion in said passage being provided with projections and the diameter of the passage being such that the wheel turns freely around the axle with its projections, a ratchet wheel in said recess engaged by certain of said projections to rotate with said axle, a spring pressed pawl in said recess bearing against said ratchet wheel, and plates having openings for said axle fixed to the sides of said wheel to support the axle independent of the passage through the wheel and of the ratchet and pawl mechanism.

1,397,175. ART OF METAL-COATING METALLIC ARTICLES. Edward S. Mowry, Middletown, Conn. Filed Nov. 11, 1918. Serial No. 262,050. 4 Claims. (Cl. 91—69.8.)



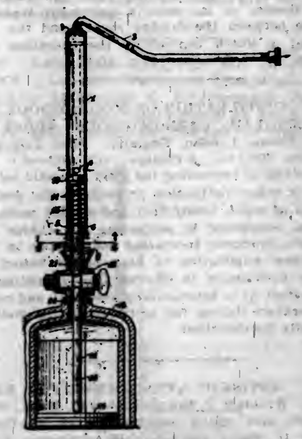
1. The method of coating metallic articles, with metal that consists in placing said articles in a container, then subjecting said articles to a bath of molten metal, and finally subjecting said container with the articles therein to a plurality of shock impulses applied uniformly over the bottom of said container.

1,397,176. STAPLE-DRIVING MACHINE. John Muth, Norwalk, Conn., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a Corporation of Connecticut. Filed Mar. 24, 1921. Serial No. 455,123. 29 Claims. (Cl. 1—2.3.)



3. In a strip staple machine, the combination with means for supporting a staple strip and a plunger for severing and driving the individual staples, of means for feeding said strip comprising an oscillating plate operated by said plunger, a feed pawl pivoted to said plate and having a portion adapted to engage the top of said strip and a beveled lug adapted to engage under the staples thereof for holding said pawl in engagement with said strip during a feeding movement of the pawl, and a spring pressed plunger engaging said pawl.

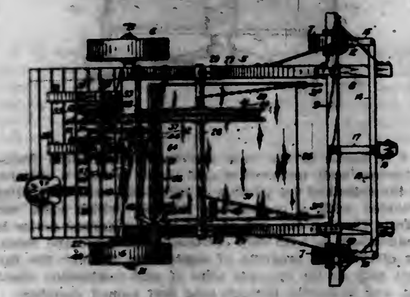
1,397,177. STAPLE-REMOVER. John Muth, Norwalk, Conn., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a Corporation of Connecticut. Filed Apr. 29, 1921. Serial No. 465,366. 11 Claims. (Cl. 1—2.3.)



1. A device for withdrawing staple strips from a stapling machine including a handle adjacent one end, a head adjacent the opposite end and adapted to render the feeding mechanism inoperative, and means adjacent said head for engaging a staple strip to be withdrawn.

1,397,178. SOLDERING-IRON HEATER. Joseph Needham, New York, N. Y. Filed June 9, 1920. Serial No. 387,604. 10 Claims. (Cl. 126—237.)

7. A heater of the class described comprising a frame, a furnace body mounted in said frame to form a chamber at the sides and top portion of said body, said body being provided with a combustion chamber which open outwardly through one end of said body, a burner device in communication with said combustion chamber and means for discharging products of combustion through the furnace body at the opposite sides of said combustion chamber, and upwardly through said first named chamber.

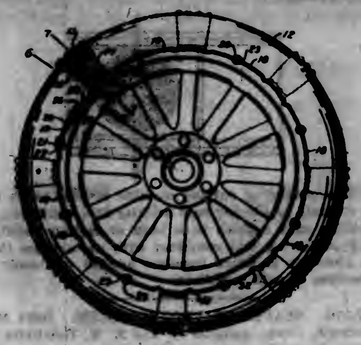


1,397,179. PUMP. Eustace Paolicelli, New York, N. Y. Filed Sept. 9, 1920. Serial No. 409,215. 18 Claims. (Cl. 230—27.)

1. As an attachment for a motor vehicle engine, an air pump comprising in combination a barrel provided with an internally threaded opening at its upper end adapted to receive a tube, an internally threaded opening at its lower end, and a series of orifices peripherally arranged at its lower portion, a hollow cylindrical extension of smaller diameter than said barrel provided with an externally threaded upper portion adapted to engage the threads at the lower end of said barrel, means

adapted to engage attaching means associated with the engine cylinder and a plurality of openings disposed peripherally above said attaching means, said openings being adapted to form outlets from within the engine cylinder to facilitate the escape of gases and oils from the latter, a piston provided with a long piston rod, said rod being adapted to pass through said cylindrical extension and said attaching means thereby entering said cylinder, a tension spring, the ends of which are secured to said cylindrical extension and said piston, and means for keeping said piston in inoperative position when desired.

1,397,180. GRADING-MACHINE. WILLIAM PILGRIM, Center, Colo. Filed May 28, 1920. Serial No. 384,903. 7 Claims. (Cl. 37—33.)



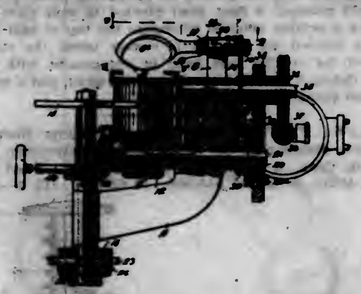
1. In a grading machine, the combination of a carrier frame, a traction wheel for its support, a scoop pivoted on the frame, a winding drum, a flexible connection between the drum and the scoop, a sheave on the drum, a driving sheave, a rope winding upon the sheaves and attached thereto at its ends, a movement transmitting mechanism between the driving sheave and the traction wheel, and a clutch controlling the operation of said mechanism.

1,397,181. DISTILLATION OF WOOD, WOODY FIBER, AND SIMILAR CARBONACEOUS SUBSTANCES. PHILIP POORE, London, England. Filed July 7, 1919. Serial No. 309,121. 5 Claims. (Cl. 203—6.)

1. A method of increasing the yield of acetic acid, wood naphtha, or other distillation products in the destructive distillation of wood, woody fiber and similar carbonaceous substances, consisting in subjecting the charge to distillation at a gradually increasing temperature by the uniform external application of heat to the retort within which the distillation is effected, and admitting steam into the retort at a substantially constant and relatively low temperature during the active period of distillation, substantially as described.

1,397,182. ANTISKID ATTACHMENT FOR ELASTIC TIRES. WILLIAM T. ROLLINS, Boston, Mass., assignor, by direct and mesne assignments, of one-fourth to William H. Davis and one-half to Eugene F. Lally, Boston, Mass. Filed Feb. 10, 1921. Serial No. 443,767. 3 Claims. (Cl. 152—14.)

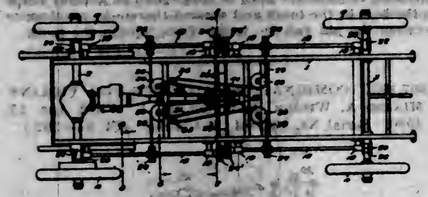
2. An anti-skid attachment for elastic tires, comprising a plurality of flexible spaced apart wire mats, each formed to bear on the tread portion, and on opposite side portions, of the tire, and combining means engaged with opposite ends of the mats, and adapted to combine the same upon the tire, each mat being composed of a plurality of spaced apart sinuous wire units, extending substantially parallel with each other crosswise of the mat, and interengaged at their opposite ends to form flexible salvage edges, each unit having flatter bends bearing on the tire,



and outer bends standing out from the tire and arranged to resist side slipping or skidding of the tire.

1,397,183. DRY BATTERY AND PROCESS OF MANUFACTURE. OTTO M. REMOFF, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Nov. 14, 1918. Serial No. 262,417. 7 Claims. (Cl. 204—38.)

1. A battery comprising a can, a core with depolarizing material thereon, and electrolyte containing initially gelatinous material preventing disintegration of the core.



1,397,184. FILLING-MACHINE. JACOB SCHAUB, Newark, N. J., assignor to The Theros Company, New York, N. Y., a Corporation of Delaware. Filed July 5, 1918. Serial No. 243,267. 3 Claims. (Cl. 226—95.)

1. In a machine for filling receptacles, the combination consisting of a bisected ladle having two substantially similar members mounted on separate parallel shafts, said shafts being provided with gears meshing with each other, a segmental gear secured to one of said shafts, a reciprocating rack co-acting with said segmental gear, means for effecting the to and fro movement of said rack at predetermined intervals whereby the alternate opening and closing of said ladle is effected, a feed mechanism including a star wheel, the latter being adapted to partially embrace a receptacle between two adjacent arms thereof, means including a Geneva movement for periodically moving and stopping said wheel in synchronism with the closing and opening of said ladle, a conveyor for supplying receptacles into a position to be periodically embraced

by said star wheel during the movement of the latter and means, including a friction drive mechanism for effecting the synchronous movement of said ladle members and said feed mechanism.

1,397,185. COMBINED AUTO JACK AND SAFETY DEVICE. WILLIAM SCOTT, St. Louis, Mo. Filed Oct. 5, 1920. Serial No. 414,894. 7 Claims. (Cl. 254—86.)

1. In combination with a motor vehicle, a jack associated with each wheel thereof, means for normally holding said jacks in raised position, a drum for each jack, a cable connecting the drum with the jack, a shaft for each drum, a pair of pulleys on each shaft, ratchet mechanism connecting each pulley with its shaft, a hand lever, means for selectively connecting said hand lever with one of the pulleys on each shaft, such means including a cable, a drum, a cable connecting the same with the other pulley on each shaft, said cables normally holding the ratchet mechanism in inoperative position and manually operated means for connecting the drum with the power plant of the automobile.

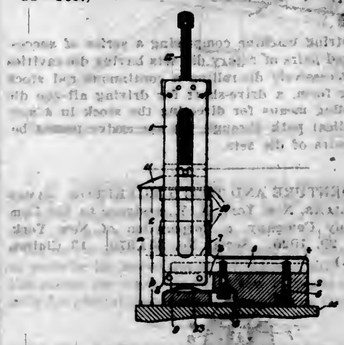
1,397,186. EMERGENCY-SPUR FOR VEHICLE-WHEELS. HERMAN R. STINSON, Norman, Okla. Filed June 15, 1920. Serial No. 389,135. 1 Claim. (Cl. 152—14.)

A mud shoe for vehicle wheels comprising an arched traction member, parallel arms formed integral with and depending from the sides of said member, angularly disposed blades formed integral with said arms and extending laterally therefrom, and a fastening bar connecting the lower ends of the arms.

1,397,187. PROCESS OF SALTING NUTS IN THE SHELL. THADDEUS C. TUCKER, Oakland, Calif. Filed June 23, 1921. Serial No. 479,869. 4 Claims. (Cl. 99—8.)

1. The herein described process for salting unshelled almonds or other nuts having shells pervious to a saline solution comprising immersing said nuts in a saline solution held at normal boiling temperature and for a period sufficient to secure penetration of the shell and agitating same during the period of immersion.

1,397,188. CALCULATING-MACHINE. JOHN C. WAHL, Chicago, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed June 6, 1912. Serial No. 702,653. 28 Claims. (Cl. 235—60.)



1. In a calculating typewriting machine, the combination of a paper holding carriage traveling to determine a printing point, a stationary totaliser, a reciprocatable master group adapted to coöperate with said stationary totaliser, a set of numeral keys, mechanism operated by said numeral keys to determine the member inserted in the stationary totaliser by said master group, a universal member in said master group, mechanism moving said universal member through a constant amount upon the operation of any of said numeral keys, mechanism to attach the reciprocatable master group to the paper holding carriage to thus cause the said group to travel in synchronism with said carriage, and means to detach the reciprocatable master group from the carriage at a predetermined position.

7. In a calculating machine, the combination of a carriage to determine the different columns and the various decimal places of each of said columns, a columnar total calculating mechanism, a reciprocating master group, an auxiliary total calculating mechanism adapted to be actuated by said reciprocating master group and means to determine whether said master group shall be active or non-active in respect to said auxiliary total calculating mechanism, said means including a cam mechanism, an element of which is mounted on said carriage whereby the action or non-action of said master group on said auxiliary total calculating mechanism may be predetermined for any of the columns in the travel of said carriage.

21. In a calculating machine, the combination of a master wheel, two intermeshing gears, one of which is connected to turn said master wheel, a sector for driving said intermeshing gears alternatively, and means for shifting said intermeshing gears axially in opposite directions so that one of them is advanced toward said sector as the other is withdrawn from it.

1,397,189. BASE FOR HOLDERS FOR MEASURING-BLOCKS. CARL AXEL WESTERGREN, Eskilstuna, Sweden, assignor to Aktiebolaget C. E. Johansson, Eskilstuna, Sweden, a Manufacturing Company of Sweden. Filed Mar. 10, 1920. Serial No. 364,709. 1 Claim. (Cl. 33—169.)

1. The combination with a base for holders for measuring blocks, said base having a recess at one end and a groove in its upper side, of an arm having two parallel plane surfaces and secured in said groove in the base in such manner that the parallel plane surfaces on said arm are parallel with the bottom surface of the base and overhang said recess.

1,397,190. FLUID-CONTROLLING APPARATUS. Edward J. Wessing, Chicago, Ill., assignor of one-half to George W. Pearson, Chicago, Ill. Filed Nov. 12, 1920. Serial No. 423,679. 22 Claims. (Cl. 158—36.)

1. In a liquid controlling device, the combination of a tank containing an inlet and an outlet and provided with a valve, a float in said tank controlled by the height of the liquid in said tank, a magnet, and a movable member movable by engagement therewith of said float and controlling said valve and releasably held by said magnet in the position to which it is moved in the movement of said float.

1,397,191. NAIL-STRING MACHINE. George C. F. Williams, Hartford, Conn. Filed Aug. 10, 1916, Serial No. 114,411. Renewed July 18, 1921. Serial No. 485,792. 6 Claims. (Cl. 87—37.)

1. A nail-string machine comprising a series of successively arranged pairs of rotary die sets having die-cavities suited for successively die-rolling a continuous rod stock to nail-string form, a drive-shaft for driving all the die sets and guiding means for directing the stock in a substantially helical path through the successive passes between said pairs of die sets.

1,397,192. DENTURE AND TOOTH THEREFOR. James Leon Williams, New York, N. Y., assignor to The Dentists' Supply Company, a Corporation of New York. Filed Jan. 29, 1920. Serial No. 354,979. 13 Claims. (Cl. 32—9.)

1. A denture comprising a vulcanite plate to fit the jaw, combined with a crown tooth having its neck end alone slotted to the plate, and a metal anchoring pin secured to the crown tooth and projecting above its surface thereof which is in contact with the vulcanite plate and said projecting anchoring pin provided with a transversely arranged head embedded in the vulcanite plate for securing the tooth thereto.

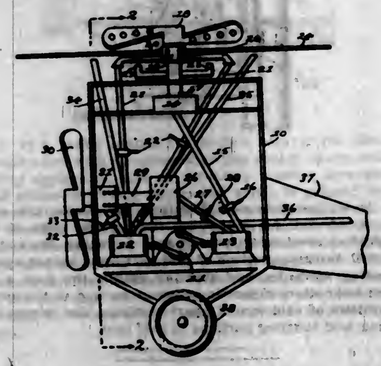
4. The denture according to claim 1, characterized by having the crown tooth formed with a deep hole which is elongated mesio-distally at its lower part and the pin flattened at its lower part to correspond in general shape to the hole in the tooth and secured therein by a vulcanite between the pin and the walls of the hole in the tooth.

1,397,193. COMBINATION-TAILPIECE FOR VIOLINS. Minard A. Wilson, Irvington, N. J. Filed Apr. 15, 1920. Serial No. 374,064. 5 Claims. (Cl. 84—302.)

3. A combination tail piece for violins comprising a main body and two arms projecting laterally at its rear end, one of said arms being short and at right angles to the body, and the other longer and curved forwardly and inwardly at its end, and said arms being provided at their rear under edges with downwardly projecting ribs forming the sole points of contact with the violin.

1,397,194. SPEED-CONTROL DEVICE. Pierre O. Wood, Memphis, Tenn., and Harry L. Workman, Springfield, Mo. Filed July 19, 1920. Serial No. 397,417. 8 Claims. (Cl. 303—21.)

1. A device of the character described, comprising in combination with the brake-operating air-line of a locomotive and a speed-recording device actuated by a truck-axle of the locomotive, a cylinder interposed in said air-line and provided with an inlet port and an exhaust port whereby communication between the air-line and the atmosphere may be established, a double piston slidable in said cylinder and normally disposed on opposite sides of the inlet port and adapted to normally confine the air therebetween, a valve carried by said double piston for normally closing the exhaust port, a passage having communication with said cylinder at a point intermediate of the double piston and at a point in the cylinder above said pistons, a normally seated valve whereby air is prevented from flowing through said passage, regulable means for determining the extent



of movement of the double piston, and means, operable by a speed-recording device when the locomotive reaches a predetermined speed, adapted to actuate the valve for said passage, thereby permitting the air to flow from between the double piston to one end of the cylinder and causing the double piston to move the exhaust valve off its seat and permit air from the air-line to exhaust.

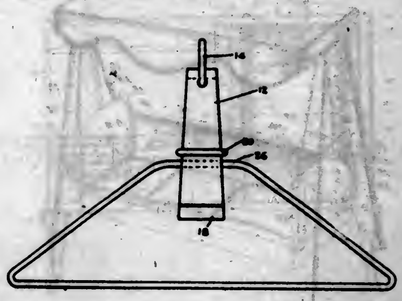
1,397,195. FIGURE TOY. Béla Zsarnay, Belleville, N. J., assignor of one-half to Abraham Lewis, Newark, N. J. Filed Feb. 26, 1921. Serial No. 447,967. 2 Claims. (Cl. 46—40.)

1. In a device of the character described, a combination of a pair of rocker bars grooved at the underside with flat springs within the grooves of said bars, means for securing said springs in approximately their center to said bars, pins at the ends of said springs, rectangularly disposed thereto, links provided with sockets at their lower ends for the reception of said pins, arms integrally made with said links, and wings to which the upper ends of said arms are secured for flopping said wings upon the operation of the rocker.

1,397,196. AEROPLANE. Béla Zsarnay, Belleville, N. J. Filed Mar. 5, 1921. Serial No. 449,983. 2 Claims. (Cl. 244—15.)

1. An aeroplane of the character described, comprising a chassis carrying a motor, compressors and pumps operated by said motor, lifting and driving propellers, turbines for operating said propellers, valve controlled pipe conduits connecting said compressors with said turbines, means for guiding the surplus of compressed air from said turbines to the pumps, lifting wings, and pipe conduits for guiding said surplus of compressed air underneath of said wings to increase the carrying power of the aeroplane.

1,397,197. IMPREGNATING COMPOSITION AND PROCESS FOR THE PRODUCTION THEREOF. Sigurd Arthur Aarnerud, Aalst, near Christiania, and Birger Fyhn Halvorsen, Christiania, Norway, assignors to Norsk Hydro-Elektrisk Kvaelstofaktieselskab, Christiania, Norway. Filed Oct. 18, 1920. Serial No. 416,755. 8 Claims. (Cl. 134—13.)

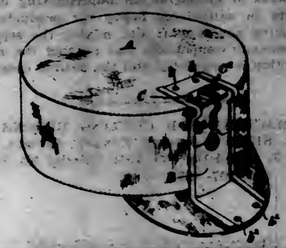


1. The process of producing an impregnating material which consists in sulfurizing heavy tar products, separately sulfurizing non-mineral oils, mixing the separately sulfurized resultant compounds, and heating the mixture until the reaction is completed and the desired consistency obtained.

1,397,198. MACHINE FOR CUTTING BLOCKS INTO SMALLER SIZES. Albert Ernest Alchin, Perth Amboy, N. J. Filed Dec. 30, 1919. Serial No. 348,402. 11 Claims. (Cl. 107—22.)

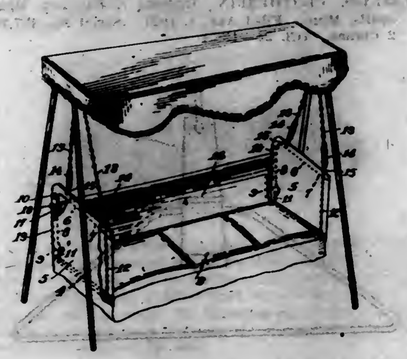
1. A machine for cutting ice cream blocks and other frozen products, including one or more flat freely rotatable disk knives or cutters, each cutter having a circumference equal to or greater than the length of the blocks to be cut, whereby each individual cutter revolves not more than once as it progresses through the block so that no part of a cutter is unduly chilled by coming in contact with the same block twice in making a single cut.

1,397,199. CLOTHESPIN. Russell E. Barneck, Minneapolis, Minn. Filed Apr. 1, 1921. Serial No. 457,769. 2 Claims. (Cl. 24—138.)



1. A clothespin comprising two jaw members which conjointly are of frusto-conical form, a ring slidably surrounding said members and of such size as to be capable of sliding only part way to the lower end of the conical surface, a lug on the lower end of one of said jaw members adapted to underlie the lower end of the other of said jaw members, and means for connecting said jaw members at their upper ends for pivotal movement when said ring is slid upwardly.

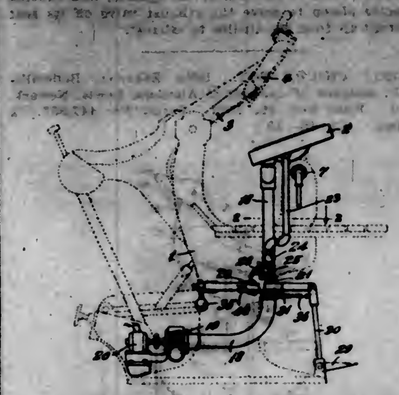
1,397,200. LAMP-HOLDER FOR MINERS' CAPS. Joseph Bareta, Martins Ferry, Ohio. Filed Jan. 18, 1921. Serial No. 438,216. 1 Claim. (Cl. 240—60.)



A device for supporting a miner's lamp upon a cap comprising the usual frame slotted at its upper end, and a plate rigidly attached thereto and formed with a tubular downwardly extending socket passing through one end of the slot in the frame and closely engaging the vertical

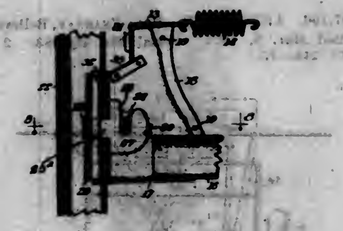
part of the hook of the lamp, said plate having on its upper face a groove extending downwardly from the upper part of the socket and raised flanges at the sides of said groove spaced to engage closely the side of the hook,

whereby lateral and swinging movement of the lamp is prevented, the upper face of said plate at the sides and rear of the groove being beveled to guide the lamp hook while being inserted.



1,397,201. HAMMOCK. PERCIVAL B. BUNNY, Brooklyn, N. Y., assignor to The Englander Spring Bed Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 4, 1920. Serial No. 428,190. 15 Claims. (Cl. 5—61.)

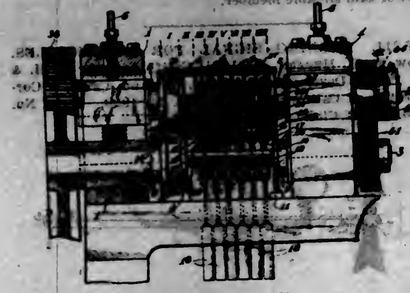
2. A hammock having a seat and fabric ends provided with spreader bars, each having a depending portion having an inwardly curved lower end terminating above the seat, means connecting the spreader bars with the seat, and means connected with the spreader bars for supporting the hammock.



1,397,202. PRESSING-MACHINE. CHARLES L. BRALEY, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 18, 1916. Serial No. 137,609. 10 Claims. (Cl. 68—9.)

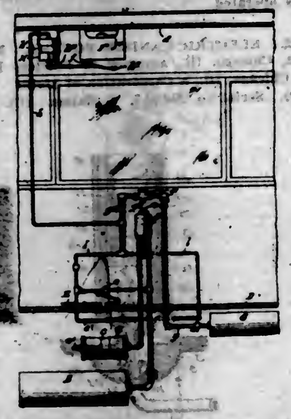
1. A pressing machine, comprising relatively operable pressing members, means for supplying steam to the space between said members, means for producing a flow of air to remove steam and moisture from said members, and the

space therebetween, and a single controlling device for both said means.



1,397,203. METAL BEDSTEAD. CHARLES H. BUNCE, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Feb. 8, 1918. Serial No. 216,967. 9 Claims. (Cl. 5—56.)

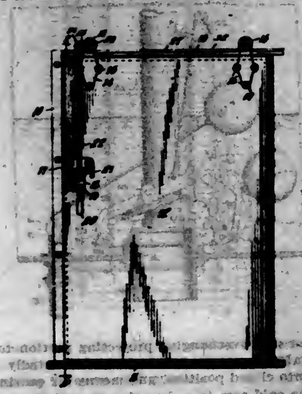
1. In a three-piece metal bedstead, the combination of a post, a side rail for connecting the opposite ends of the bedstead, a sheet metal part shaped to inclose the end of said rail, integral portions of said part being spaced apart, extending upwardly, and abutting against the post, a resilient bed bottom supporting element secured to the upper extremities of said spaced apart portions, and means for locking said abutting portions to said post.



1,397,204. NAIL-STRING MACHINE. SOLOMON M. CUTTS, Hartford, Conn., assignor to Capewell Horse Nail Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 10, 1916. Serial No. 114,110. 28 Claims. (Cl. 59—37.)

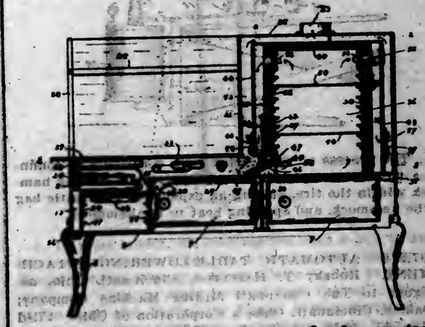
1. A machine for die-rolling nail strips comprising a pair of die-rolls having groups of cooperating dies circumferentially disposed in successive groups thereon and adapted to reduce a continuous rod stock to nail string form,

directing the said continuous stock successively through the series of passes formed by said groups of dies.



1,397,205. SYSTEM OF OPERATING SAFETY APPLIANCES ON ELECTRIC CARS AND OTHER VEHICLES. EDWARD J. FURNESS, Buffalo, N. Y. Filed Sept. 18, 1919. Serial No. 324,260. 5 Claims. (Cl. 303—6.)

1. In a safety system for electric cars or the like, the combination with a brake-controlling device, of one or more safety appliances, and an actuating member arranged on said brake-controlling device and which is gripped by the operator when holding said brake-controlling device and by means of which said safety appliances may be actuated independently of the position of said brake-controlling device, said actuating member being so associated with the brake-controlling device as to be influenced by the inertia of the operator when the speed of the car is suddenly checked to automatically tend to actuate said safety devices.

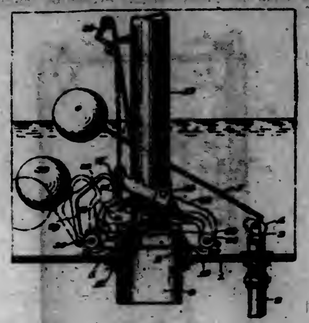


1,397,206. DOOR-CHECK. WILLIAM A. GEIGER, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed June 12, 1919. Serial No. 303,636. 2 Claims. (Cl. 16—158.)

1. In a door checking device, the combination with a track secured to the member having the door opening in a position above the top of the door opening, a door, a bracket secured to the upper part of the door, and a roller carried by said bracket and adapted to roll along said track; of a bracing lever for said roller, said lever being pivoted to the bracket and extending to that side nearest the front edge of the door, said lever having a portion adapted to engage the roller between the latter and the track, said lever being freely movable a limited amount relatively toward and from the roller; means extending lengthwise of

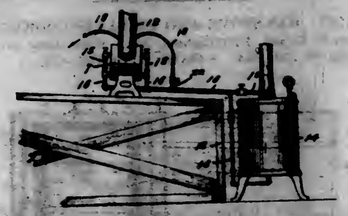
and adjacent to said track arranged to cooperate with said lever to automatically prevent movement of the latter in a direction corresponding to a closing movement of the door; and manually operable means for rendering said lever inoperative with respect to said first named means, said door being always freely movable in an opening direction.

1,397,207. GAS-STOVE AND FIRELESS COOKER. ARNOLD F. GLASS, Birmingham, Ala. Filed June 17, 1919. Serial No. 304,934. 8 Claims. (Cl. 126—39.)



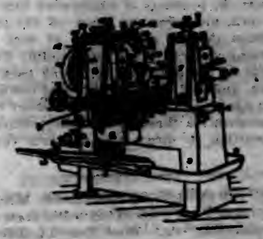
1. In a gas burning cooking stove, a flue for carrying off the products of combustion, an oven, damper controlled means to divert the products of combustion into the lower part of the oven, and means to draw off the products of combustion from the top of the oven at each side, said means comprising vertical return flues leading downwardly along each side of the oven and returning back upwardly above the oven, and said damper controlled means comprising a damper adapted in one position to short circuit the products of combustion through the outer return flue and in another position to direct the products through the oven.

1,397,208. VALVE-CONTROLLING MEANS FOR WATER-CLOSET APPARATUS. WILLIAM U. GRIFFITHS, Philadelphia, Pa. Filed Feb. 14, 1918. Serial No. 217,078. 8 Claims. (Cl. 4—5.)



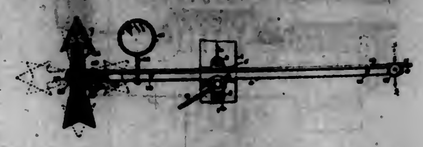
1. The combination of a valve structure having a portion provided with a curved cam like surface, an arm pro-

vided with an overhanging projecting portion to fit over and having a curved surface adapted to contact with the curved cam like surface upon the said valve structure, the said arm being bent or extended inwardly to form a spade



beneath the said overhanging projecting portion to permit the said valve structure to move uninterruptedly and unretarded into closed position, and means for causing movement of the said arm in a direction toward the said valve structure, substantially as described.

1,397,209. PROCESS AND APPARATUS FOR VULCANIZING TIRES. PAUL E. HAWKINSON, Minneapolis, Minn. Filed Jan. 27, 1921. Serial No. 440,427. 16 Claims. (Cl. 18—38.)



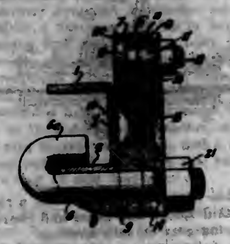
1. The process of vulcanizing tires consisting in confining a tire in an enveloping mold, applying a heating hammock within the tire, placing an expansible pneumatic bag in the hammock, and applying heat to the hammock.

1,397,210. AUTOMATIC TABLE-LOWERING ATTACHMENT. ROBERT T. HAMILTON, Cincinnati, Ohio, assignor to The Cincinnati Milling Machine Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed May 11, 1915. Serial No. 27,223. 8 Claims. (Cl. 90—21.)

1. The combination of a reciprocatory slidable member, work carrying means on said slidable member, and means governing the movement of the slidable member, for effecting the movement of the work relatively to the slidable member at any one of a selection of different points in the travel of said slidable member.

1,397,211. TURNING-SIGNAL FOR AUTOMOBILES. EDWARD H. HINMAN, Oakland, Calif., assignor to H. & H. Patent Developing Company, Oakland, Calif., a Corporation of California. Filed Feb. 21, 1920. Serial No. 360,693. 1 Claim. (Cl. 116—67.)

In an indicating signal for vehicles, the combination of a bearing in a vehicle, a bar longitudinally held adjustably in the bearing, one end of the bar being within the vehicle and the other end being outside the vehicle, a signal carried on the outer end of the bar, means at the inner end of the bar for turning the signal, and an operative connection between said turning means and signal whereby the signal is turned about a horizontal axis when said turning means is operated.



1,397,212. ELECTRIC-CANDLE SOCKET. MAX HERSKOVITZ, Chicago, Ill., assignor to Peerless Light Company, Chicago, Ill., a Corporation of Maine. Filed May 1, 1919. Serial No. 293,957. 9 Claims. (Cl. 173—358.)

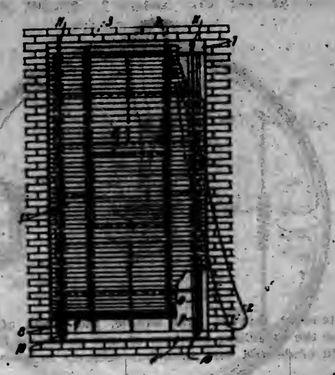
1. In an electric socket structure, the combination of a screw shell and a center contact, a casing of fibrous pierceable insulating material in which said shell is located, a supporting member having one of its ends equipped with means for piercing said shell and provided at its opposite end with an apertured portion for attachment to a support, and electric-current conducting wires extending therethrough, whereby said shell may be supported at a predetermined height.

1,397,213. CLAMP FOR ATTACHING BUFFERS TO VEHICLES. THOMAS A. HOOVER, Fresno, Calif., assignor to American Chain Company, Inc., a Corporation of New York. Filed Sept. 22, 1921. Serial No. 502,469. 12 Claims. (Cl. 266—55.)

2. In a clamp for attaching a buffer to the channel bars of an automobile, a pair of contacting plates of substantial length pivotally connected to each other to adapt them for relative oscillation in adjacent planes the contacting surface of one of said plates being provided with a groove

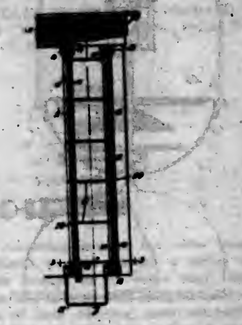
displaced from the point of pivotal connection said groove serving to receive a supporting arm of the buffer, means

for clamping said plates together in a plurality of angular positions with respect to one another and means for attaching one of said plates to a channel bar.



1,397,214. WRENCH. TITUS S. HOSS, Little Falls, N. Y. Filed Apr. 18, 1921. Serial No. 461,749. 6 Claims. (Cl. 81—151.)

1. The combination in a wrench having a head provided with a fixed jaw, said head having a slot therein, of a movable jaw, a shank on said movable jaw and engaging said slot to guide said movable jaw toward and from said fixed jaw, ratchet teeth on said movable jaw and disposed in a plane oblique to the direction of movement of said shank in said slot, and means in said head for releasably engaging said ratchet teeth to hold said movable jaw in one or more positions relatively to said fixed jaw.



1,397,215. SHADE APPLIANCE. ABEL C. HOUGH, Janesville, Wis. Filed Jan. 20, 1921. Serial No. 440,830. 7 Claims. (Cl. 156—10.)

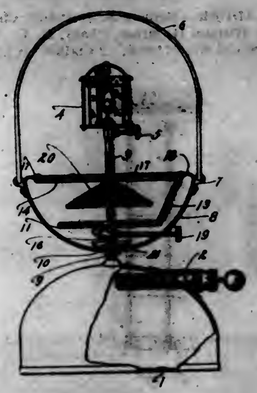
7. In an appliance, of the class described, a sash provided with a movable ventilator, a shade supported in proximity to the top of such sash, a guide having a permanent arcuate shape, arranged with its terminals in proximity to the top and bottom of said sash, and provided with an upwardly- and forwardly-extending arm, a supporting member above said shade, and a guide extending

between said arm and said supporting member, in front of said first-named guide, said shade being receivable and operating between said guides.

1,397,216. LADDER. GEORGE A. JOHNSON, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Jan. 20, 1919. Serial No. 271,959. 2 Claims. (Cl. 228—49.)

1. In a car ladder, the combination with a pair of angle irons constituting stiles, each angle iron having the flanges thereof arranged substantially at 45° to the wall of the car with the angle farthest from the wall, the ends of the angle iron having the flanges thereof flattened into a common plane to thereby adapt the angle iron to be secured to the car, each of said angle irons being provided with a plurality of sets of perforations, each set comprising two perforations, one in each flange, the perforations of each set being in horizontal alinement and the corresponding sets on the two angle irons being also in horizontal alinement, of a series of rod-like rungs extending straight through the corresponding sets of perforations, the ends of said rungs outside of the stiles being curved around adjacent portions of the angle irons to thereby secure the rungs in place.

1,397,217. CAN-OPENER. ELMER H. KEPNER, Springfield, Oreg. Filed Dec. 27, 1919. Serial No. 347,690. 2 Claims. (Cl. 30—3.)



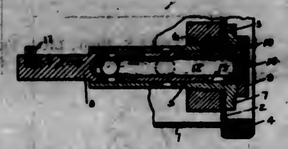
1. A device of the class described including a handle, a pair of laterally projecting shoulders having attaching portions arranged in spaced relation at the forward por-

tion of the handle, a blade having a shank fitly engaged by the attaching portions of said shoulders, and means

extending through said handle, the shank of the blade and the attaching portions of said shoulders for securing said blade and said shoulders securely in position.

1,397,218. INSECT-EXTERMINATOR. WILLIAM F. LACKIE, Opportunity, Wash. Filed Feb. 28, 1921. Serial No. 447,955. 4 Claims. (Cl. 43—113.)

4. The combination with a gasolene supply tank and means for supplying air under pressure thereto, of an upright, central fuel pipe and a lamp thereon, a bowl beneath said lamp having bottom openings and an upper, inturned, annular flange, a perforated coil attached to said pipe and located near the bottom of the bowl, a foraminous shield supported on said pipe above the coil, a radial extension from said coil, and an annular perforated pipe connected with said extension and attached to said flange, for the purpose described.



1,397,219. DRIVE MECHANISM. THOMAS F. LEDBETTER, Columbus, Ga. Filed Feb. 16, 1920. Serial No. 359,098. 2 Claims. (Cl. 74—89.)

2. In a four wheel drive, a double differential mechanism for both front and rear wheels comprising a spider, two sets of bevel pinions arranged on the arms of the spider and at radially different distances from its center, a pair of gears, one on each side of said spider, meshing with one of said sets of pinions, said pair of gears having hollow hubs, a rear axle section fitting into driving relation with each of said hubs, a second pair of gears concentric with said first mentioned gears arranged on each side of the spider and meshing with the other set of pinions, hubs of said last mentioned gears having an elongated hollow hub, a gear on each hub, driving connections

between each hub gear and a driven wheel, a rotatable housing including said spider and gears and connected to said spider, and a ring gear on said housing.

1,397,220. FAUCET. LAWRENCE S. LOSH, Cleveland, Ohio. Filed Dec. 16, 1918. Serial No. 266,802. 3 Claims. (Cl. 251—8.)

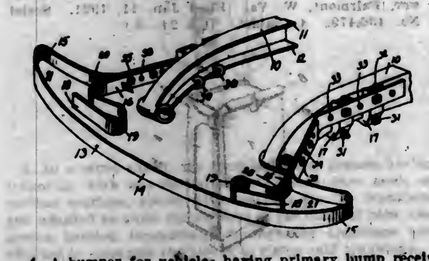
2. A faucet for liquid containers, comprising closely fitting telescoping shell and plug members, the shell member being open at its inner end and adapted at its outer end for securement to the wall of a container and having a plurality of circumferentially spaced openings in its side wall, and the plug member having a longitudinal cavity closed at both ends and provided in its side wall near its outer end with a discharge opening and inwardly therefrom with a series of circumferentially spaced openings adapted when said discharge opening is exposed beyond the end of the shell member to register with the side openings in the shell member and permit the discharge of liquid, and a threaded connection between the outer end portions of said members.

1,397,221. WINDOW FRAME AND SASH STRUCTURE. GEORGE A. MARTIN, Chicago, Ill. Filed Oct. 25, 1920. Serial No. 419,250. 2 Claims. (Cl. 20—12.)

1. The combination with an upright rectangular frame having a vertically disposed passageway or pocket, the outer portion of the inner wall of said pocket having a vertical guideway and being provided in its upper portion

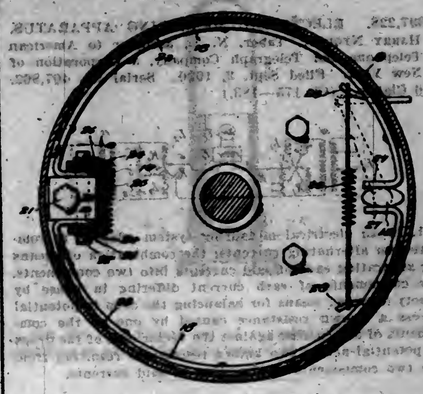
with a removable door and shoe closing said door with an opening, of a sash bracket to guide and sustain said sash having in the upper portion of one of its side rails a downwardly extended opening and in the top of its said rail a transversely extended depression terminating in a vertical opening, a fastener adapted in said downwardly extended opening and [illegible] body portion having a coil and a loop and [illegible] disposed arm terminating in a vertically [illegible] to engage said depression and vertically [illegible] opening respectively, a flexible connection extended [illegible] said fastener body fastened at one of its [illegible], a weight on the other end of said flexible [illegible] and a spring extended in to the upper portion of the side rails of said sash to engage the loop of said fastener.

1,397,222. ELECTROLYTIC REFINING OF TIN. FRANK C. MATHERS, Bloomington, Ind., assignor to American Smelting & Refining Co., a Corporation of New Jersey. Filed Oct. 11, 1918. Serial No. 257,700. Renewed Dec. 9, 1920. Serial No. 429,561. 22 Claims. (Cl. 204—17.)



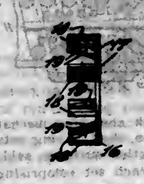
4. In the electrolytic refining of impure tin, the process which consists in passing an electric current of suitable voltage and amperage from the tin anode to a cathode through an electrolytic solution containing a solution of hydrofluosilicic acid, cresylic acid and less than six per cent. by weight of tin.

1,397,223. BUMPER. ERNEST T. MATHEWSON, Buffalo, N. Y. Filed Oct. 29, 1920. Serial No. 418,160. 4 Claims. (Cl. 293—55.)



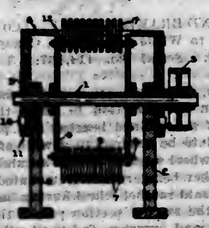
2. Means for attaching a spring plate bumper to a vehicle having longitudinally extending channel members, consisting of a bracket cut away on both sides to form vertical shoulders, the spring plate of the bumper being fastened to the bracket with its end against one shoulder, and the bracket being secured to one of the said channel members with the front end of the member engaging the other shoulder.

1,397,224. BUMPER. ERNEST T. MATHEWSON, Buffalo, N. Y. Filed Jan. 11, 1921. Serial No. 436,539. 13 Claims. (Cl. 293—55.)



4. A bumper for vehicles having primary bump receiving means and secondary bump receiving means, said first named means comprising a spring bar extending transversely of the vehicle and having its ends bent rearwardly and inwardly, and said secondary means comprising two plates mounted on said vehicle and curved at the outer ends to form bump receiving portions substantially parallel to and in the rear of said spring bar, and means joining said first means to said plates at points behind said curved portions.

1,397,225. INTERNAL EXPANDING BRAKE. Jessica [illegible], Mermaid, Fort Kent, Man. Filed May 10, 1920. Serial No. 296,279. 7 Claims. (Cl. 188—78.)



1. An internal expanding brake including companion brake shoes, means supporting the shoes at their inner ends, and a clip engaging opposite end portions of said supporting means and holding the inner ends of the shoes against displacement therefrom.

1,397,226. ROLLER-BEARING. ONESIME E. MICHAUD, St. Louis, Mo. Filed Sept. 22, 1919. Serial No. 325,357. 9 Claims. (Cl. 64—32.)

9. A forged retaining member for roller bearings comprising an annular portion having a series of integral spacing tongues located at its outer edge, said tongues projecting from one face of said annular portion parallel with the axis of said bearing, said retaining member being provided with strengthening ribs at the angle between the tongues and the annular portion of said retaining member, said strengthening rib being integral with said annular portion and said spacing tongues.

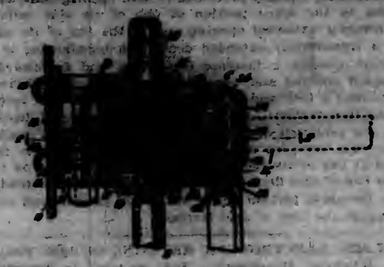
1,397,227. BRICK-CLEANING MACHINE. EDWARD L. MINOR, Birmingham, Ala. Filed Dec. 18, 1920. Serial No. 431,742. 7 Claims. (Cl. 125—26.)

1. A rotatable rack having a concentric series of axial supports with floating metallic disks mounted thereon,

and a bed above which the peripheries of the rotating disks will project to engage an article thereon to be cleaned.

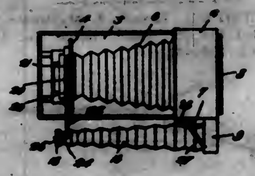
1,397,228. ELECTRICAL MEASURING APPARATUS. HARRY NYQUIST, Tabor, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 2, 1920. Serial No. 407,962. 6 Claims. (Cl. 175—183.)

1. In an electrical measuring system adapted to compare two alternating currents, the combination of means for separating each of said currents into two components, the components of each current differing in phase by ninety degrees; means for balancing the drop in potential across a known resistance caused by one of the components of one current against the vector sum of the drops in potential across two known resistances resulting from the two components of the other of said currents.



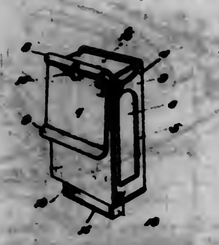
1,397,229. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Mar. 25, 1920. Serial No. 368,668. 4 Claims. (Cl. 213—64.)

1. In a friction shock absorbing mechanism, the combination with a friction shell having interior longitudinally extending flat friction surfaces, said surfaces being arranged in sets and each set comprising two surfaces disposed at an angle to each other; of friction shoes cooperable with the shell, each shoe having two outer flat friction surfaces coöperable with the friction surfaces of one of said sets; spring means to yieldingly resist relative movement between the shell and shoes; a pressure-transmitting spreader; auxiliary shoe blocks detachably associated with each of said shoes on the inner sides of the latter and having shouldered engagement therewith, said shouldered engagement being so arranged as to permit relative movement between the blocks and said shoes, said blocks and spreader having opposed sets of wedging faces; and an antifriction roller interposed between each of said sets of wedging faces.



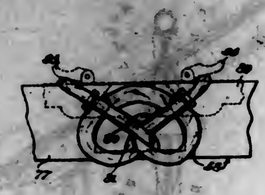
1,397,230. HAND-BRAKE. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Oct. 4, 1920. Serial No. 414,667. 3 Claims. (Cl. 74—115.)

1. In a brake, the combination with a member adapted to be rotated in one direction to effect tightening of a brake chain; of a combined bearing and partial housing bracket adapted to be secured to a wall of a car or the like; a ratchet wheel connected to said member, said ratchet wheel and member being rotatably mounted with respect to said bracket, said ratchet wheel having bearing surfaces at each end of the ratchet section proper thereof; a combined housing and carrier independently oscillatably mounted on said ratchet wheel and having correspondingly spaced bearing surfaces engageable with said bearing surfaces of the ratchet wheel; an operating handle carried by said shaft; a pawl associated with said handle and



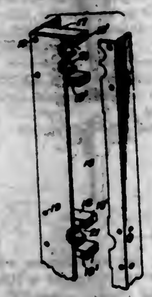
adapted to coöperate with the ratchet wheel; and means for locking said ratchet wheel and member against accidental reverse rotation.

1,397,231. FOCUSING ATTACHMENT. ARTHUR L. PATTERSON, Washington, D. C. Filed Oct. 19, 1920. Serial No. 418,072. 2 Claims. (Cl. 95—44.)



2. In a device of the class described, a camera comprising a body; a lens carrier movable toward and away from the body; a box-like casing open at one side; a focusing screen in the casing; a bellows mounted on the casing and coöperating with the screen; a lens carried by the bellows; means for connecting the forward portion of the bellows detachably to the lens carrier; and means for hinging the casing to the body for folding movement independently of the optical axis of the camera, whereby the open side of the casing may be swung against the body without encumbering the back of the camera.

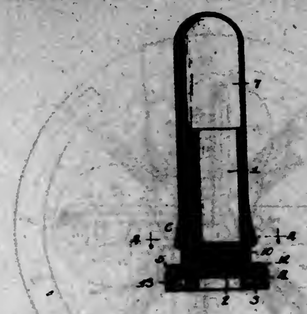
1,397,232. MATCH-BOX HOLDER. CLINTON E. PRICKETT, Fairmont, W. Va. Filed Jan. 11, 1921. Serial No. 436,479. 4 Claims. (Cl. 24—3.)



4. A device for the purpose set forth comprising a holder adapted to receive a match box and provided in its bottom with spaced openings, and a lifter comprising a box-engaging member arranged within the holder, end members extending from said box-engaging member through the openings in the bottom of the holder, and a handle member connecting said end members.

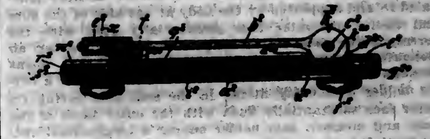
1,397,233. PRETZEL-MAKING MACHINE. JAMES G. ROSSMAN, Lancaster, Pa., assignor to American Pretzel Company, Philadelphia, Pa., a Corporation of West Virginia. Filed July 30, 1919. Serial No. 314,217. 14 Claims. (Cl. 107—8.)

12. In a pretzel making machine, the combination with a stationary frame provided with cam mechanism, of a rotary frame carried by said stationary frame, an oscillatory plate carried by said rotary frame, means on said plate for engaging said cam mechanism whereby said plate is oscillated, a bar journaled on said rotary frame to the rear of said plate on an axis transverse to the axis of rotation of said rotary frame, spring pressed gripping devices fulcrumed on opposite ends of said bar, and cam mechanism for retracting said gripping devices in the rising movement of said bar when approximately parallel to the axis of said rotary frame.



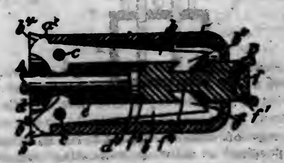
1,397,234. WINDSHIELD FOR VEHICLES. WILLIAM ROSENBLATT and JACOB J. SIMON, Brooklyn, N. Y. Filed Apr. 3, 1920. Serial No. 371,117. 3 Claims. (Cl. 296—96.)

3. In a wind shield, the combination of frames having trunnions with annular grooves, channel bars made of vertical sections, blocks with bearings for the trunnions and adapted to unite the sections of the channel bars, and screws passing tangentially through the trunnions and adapted to compress the blocks to clamp said trunnions.



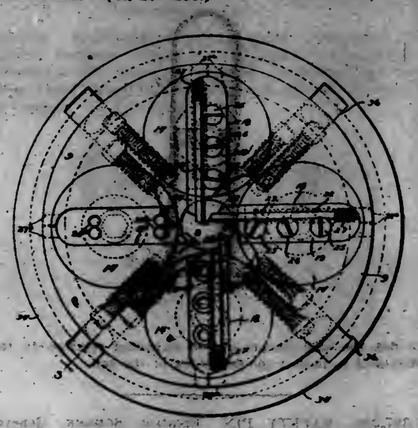
1,397,235. DUST-CAP FOR AUTOMOBILES. SIDNEY RALPH SAMS, Chicago, Ill. Filed July 5, 1921. Serial No. 482,310. 5 Claims. (Cl. 152—12.)

1. A dust cap for tire valves or the like, comprising a stationary tubular member and a detachable cap member sleeved upon the same, one of the said members having spring fingers directed toward the other member and engaging shoulders on the latter, the latter member having cam surfaces adapted upon a partial rotation of the cap



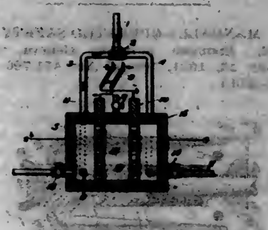
to flex the said fingers out of engaging relation to the shoulders to permit the detaching of the cap.

1,397,236. SAFETY-PIN. EDOUARD SCHENK, Geneva, Switzerland. Filed Sept. 20, 1920. Serial No. 411,423. 5 Claims. (Cl. 24—158.)



2. The combination with a pin and a body to which it is hingedly connected, of a spring actuated socket mounted for sliding movement on said body, and means for holding the socket out of pin-engaging position when the pin is open, said socket being released from said means and automatically moved by its spring into engagement with the point of the pin upon movement of said pin to closed position.

1,397,237. MANUALLY-OPERATED SAFETY COUPLING DEVICE. EDOUARD SCHENK, Geneva, Switzerland. Filed May 28, 1921. Serial No. 471,766. 5 Claims. (Cl. 24—230.)



5. A manually operated extensible safety coupling device for articles of jewelry such as a necklace, comprising a sheath, a member on one end of the article and mounted slidably in the sheath, a plurality of two-armed levers pivoting radially with respect to this sliding part, a coil spring or springs surrounding said slidable member and thrusting its free end toward hook-shaped ends on the longer arms of the levers, whose short arms serve as abutment to the spring, an insertible member on the other end of the article having a reduced portion to receive the hook-shaped ends of the levers, and projections on said levers accessible from outside the sheath to rock said levers.

1,397,239. [illegible]. Clarence F. Spaulding, Waynesboro, Pa. Filed May 20, 1920. Serial No. 382,503. 21 Claims. (Cl. 10—100.)

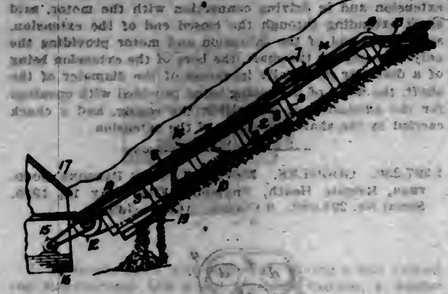
2. In a cutter head, the combination with a body having a central work-receiving bore, of a carrier member journaled in and supported by the body at one side of the bore and having its outer face substantially flush with the corresponding face of the body, said member having an elongated recessed seat in its outer side that opens through the side thereof adjacent to the bore, and a cutter holder detachably fitting in the seat and having its outer face substantially flush with the outer faces of the body and member, said holder having a longitudinal cutter-receiving slot opening through its outer side and through the end adjacent to the work-receiving bore.

1,397,239. ELECTROLYTIC PRODUCTION OF HYPOCHLORITE SOLUTIONS. Henry B. Slater, Riverside, Calif. Filed Nov. 9, 1920. Serial No. 422,826. 6 Claims. (Cl. 204—59.)

1. A process of making hypochlorite solution, which comprises passing a solution consisting essentially of an alkali metal chloride through an electrolytic cell, and causing the liquor to flow from the cathode toward and into contact with the anode.

1,397,240. VEHICLE-WHEEL. Charles A. Simon, Atlanta, Ga. Filed July 14, 1919. Serial No. 310,894. 1 Claim. (Cl. 152—21.)

In a device of the class described, fixed and removable rim sections, webs carried by each of said sections and lying face to face when the sections are assembled, the web of said fixed section having spaced elongated slots therein and also having bolt openings arranged in spaced relation, hooks spaced upon said removable section and adapted to the channels between said slots, the said hooks adapted to enter said slots and be engaged with the edges thereof when the removable section is turned in one direction, the said removable section having its web provided with bolt openings adapted to register with the bolt openings in said fixed section web when the said hooks are engaged with the edges of said slots, and bolts for insertion in the said registered bolt openings.

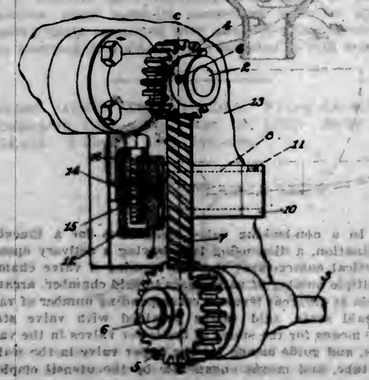


1,397,241. FORM-LIFTER. Lewis M. Cushman, Peoria, Ill. Filed Sept. 11, 1920. Serial No. 409,120. 6 Claims. (Cl. 25—121.)

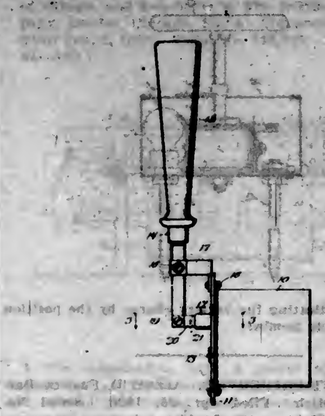
1. In a form lifter, the combination with the form and a supporting pipe for the form, of a lifter comprising a section adapted to be rigidly connected with the form above and below the same and having means above the form for engaging the pipe and controlled to release position by the lifting of the form with respect to the supporting pipe, and a section supported below the form by the first named section and having means for engaging the pipe controlled to release position by the lifting of the said section with respect to the supporting pipe, and means in connection with the last named section and with the supporting means for lengthening and shortening the connection between the sections for the purpose specified, said means comprising a lever pivoted to the last named section intermediate its ends, and links connecting the lever at one end with the first named section.

1,397,242. TRANSPORTATION SYSTEM. Chas. C. Cox, Denver, Colo. Filed Dec. 6, 1920. Serial No. 428,709. 5 Claims. (Cl. 104—178.)

1. In a transportation system, the combination of a conveying trough, a railway supported thereon, and an endless cable adapted for the connection of cars moving on the railway, and passing through the trough for engagement with material therein.



1,397,243. DIESTOCK. Morris Cramer, Cleveland, Ohio. Filed Mar. 18, 1920. Serial No. 365,461. 8 Claims. (Cl. 10—114.)



8. In a die stock, the combination of a frame, comprising end blocks, a plurality of guideways formed on the sides of said bosses, walls connecting said bosses and arching said guideways to form work holding recesses and openings adjacent said guideways.

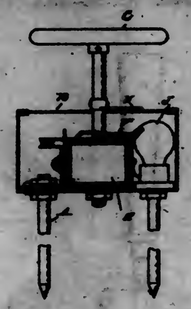
1,397,244. ANGULAR DRIVING MECHANISM. Robert S. Curley, Lowell, Mass., assignor to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 7, 1920. Serial No. 401,993. 7 Claims. (Cl. 74—7.)

1. A driving mechanism of the character described, comprising, in combination, a pair of spur gears, a spiral gear connecting said spur gears, and supporting means for all of said gears.

1,397,245. SWITCH-OPERATING DEVICE. Wallace J. Stevens, Chicago, Ill. Filed Dec. 29, 1917. Serial No. 208,006. 2 Claims. (Cl. 200—69.)

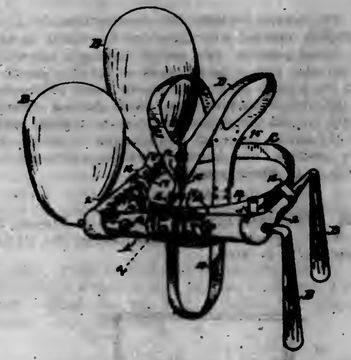
1. In an electric switch, the combination of a push button switch adapted when operated to remain in either open or closed position, said switch having a plurality of switch buttons, and a hand operated lever pivotally secured to the switch frame and to the outer extremity of one of the switch buttons, the handle portion extending sufficiently beyond the switch frame to be readily grasped to move the switch on or off, and adapted to remain in its operative position, said handle extending vertically when the switch is in closed position.

1,397,246. HAT-PROTECTOR. Justine A. Fisher, New York, N. Y. Filed Oct. 22, 1920. Serial No. 418,858. 1 Claim. (Cl. 2—108.)



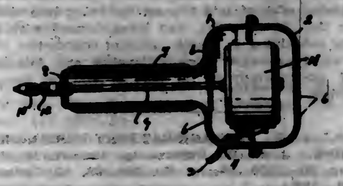
As an article of manufacture, a hat protector of the character designated, comprising a top crown piece of flexible oiled silk formed with a peripherally inturned flange, a side crown band of oiled silk hermetically cemented at its upper edge to the said peripheral crown flange, and a rim section of oiled silk formed with a flange hermetically cemented to the lower edge of said side crown band, the peripheral edge of said rim section being inturned to embrace the rim of a hat, and being formed with an edge piping containing an elastic resilient contractive cord, and the whole protector being collapsible and foldable upon itself, substantially in the manner and for the purpose described.

1,397,247. STORAGE-BATTERY-TESTING INSTRUMENT. John W. Fitzgerald, Detroit, Mich. Filed Mar. 26, 1920. Serial No. 368,998. 5 Claims. (Cl. 175—183.)



1. A storage battery tester, comprising means for closing an electrical circuit between the terminals of the bat-

tery, an adjustable member for varying the resistance of said circuit, and means cooperating with said adjustable

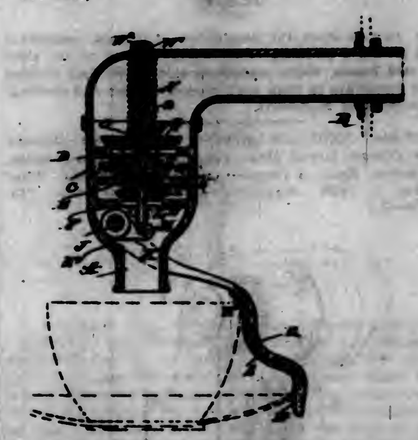


member for indicating the battery charge by the position of the adjustable member.

1,397,248. LIFE-PRESERVER. ALBERT D. FRANTS, Battle Creek, Mich. Filed Apr. 26, 1920. Serial No. 376,684. 4 Claims. (Cl. 9—19.)

1. In a life preserver, the combination of a gas-charging receptacle, gas-forming ingredients both a dry and liquid substance, said liquid substance being hermetically sealed in a glass vial, said vial being detachably fitted in said gas-forming receptacle, a thumb-screw extending from the exterior of said receptacle through the walls thereof and bearing against said vial, whereby said vial may be shattered and liberate said fluid to commingle with said dry substance and generate gas, substantially as and for the purpose set forth.

1,397,249. HOUSEHOLD ARTICLE. PETER F. GLENN, Philadelphia, Pa. Filed Mar. 3, 1920. Serial No. 363,967. 1 Claim. (Cl. 172—36.)

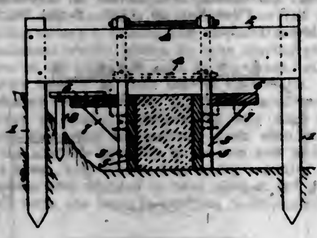


A device of the character described comprising a casing provided with a tubular extension, said extension serving as a hand grasp, the outer end of the extension being closed and the inner end opening into the casing, a motor contained within the casing, a shaft disposed through the extension and in driving connection with the motor, said shaft extending through the closed end of the extension, said closed end of the extension and motor providing the only supports for the shaft, the bore of the extension being of a diameter materially in excess of the diameter of the shaft, the walls of the casing being provided with openings for the admission of air within the casing, and a chuck carried by the shaft exteriorly of the extension.

1,397,250. GOGGLES. EDWARD THOMAS PARSONS GOODYEAR, Reigate Heath, England. Filed May 19, 1919. Serial No. 298,060. 6 Claims. (Cl. 2—140.)

1. Goggles comprising a solid resilient facial pad molded with eye apertures and so formed that its inner surface closely fits the features of the upper portion of the face and nose and its outer surface presents faces which are substantially right-angularly disposed to each other, and flat goggle glasses mounted in said eye apertures parallel to the said right-angularly disposed faces of the pad, substantially as set forth.

1,397,251. DRIPLESS FAUCET. STACEY A. HAINES, Cleveland, Ohio, assignor to The Haines Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 27, 1920. Serial No. 433,167. 8 Claims. (Cl. 277—29.)

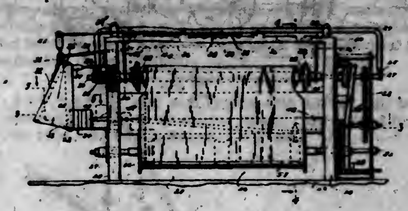


1. In a non-leaking valve mechanism for a faucet, in combination, a dispensing tube having a delivery opening, a vertical enlargement thereon forming a valve chamber, a multiple number of valve seats in said chamber, arranged therein at different levels, a corresponding number of valves for said seats, said valves provided with valve stems, guide means for the stems of the lower valves in the valves above, and guide means for the upper valve in the wall of said tube, and means engageable by the utensil employed in drawing the fluid from said valve, for raising the lower valve, and thereby, in succession the valves above, one after the other, when all of said valves are raised together above their seats, and automatically acting means for returning said valves to their seats.

1,397,252. NUT-LOCK. GUILELYN R. HOLMES and WALTER J. WIECK, Baltimore, Md. Filed Jan. 20, 1921. Serial No. 439,989. 4 Claims. (Cl. 151—25.)

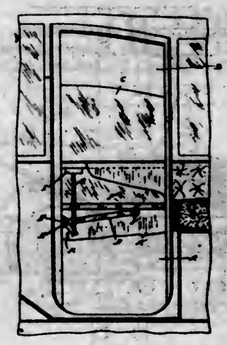
1. In combination with a member having a bolt extending therethrough and a nut threaded thereon, a washer loosely arranged upon the bolt between the member and the nut and having a rigid tongue engageable by the nut to prevent turning of the latter and to cause movement of the washer when the nut is threaded into the bolt, said washer being laterally resilient and flexible and being provided with an inwardly projecting rib arranged to dig into the threads of the bolt when the washer is moved.

1,397,253. CONCRETE-MOLD. JAMES I. JONES, Washington, D. C., assignor of one-half to Rachel R. Browne, Washington, D. C. Filed Aug. 16, 1921. Serial No. 492,683. 3 Claims. (Cl. 25—118.)



1. A concrete mold including a plurality of stakes, transverse brace members connecting pairs of stakes, hangers rigidly connected with and depending from said brace members, and side plates connected to said hangers.

1,397,254. ADJUSTABLE HOLDER. FRANK KARSCHITZ, Bridgeport, Conn. Filed Apr. 25, 1921. Serial No. 464,425. 2 Claims. (Cl. 248—38.)



2. In a holder of the character described, a base plate, a side brace, and means for removably hinging said side brace upon said base plate, said means comprising a hook member projecting longitudinally from an end of said side brace, extending downwardly through an opening in said base plate and upwardly through a different opening in said base plate.

1,397,255. PLAYER-PIANO-ROLL CENTRALISER. JOSEPH F. LAUBA, Racine, Wis., assignor of one-fifth to Scott Player Action Co., Racine, Wis., a Corporation of Illinois, and four-fifths to The Northern Trust Company, trustee, Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1920. Serial No. 349,229. 8 Claims. (Cl. 84—126.)

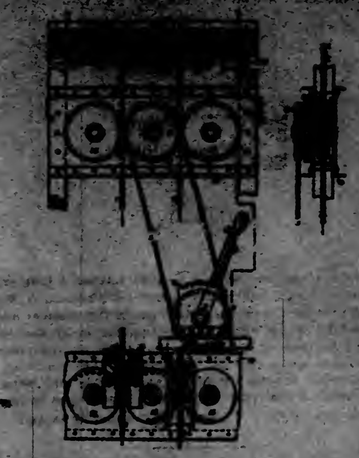
1. The combination with a player piano having a tracker bar and a removable record roll and a winding roll, of a roll centralising means therefor, comprising automatically controlled pneumatic means controlled by the winding roll for moving the record roll longitudinally to alined position with relation to the tracker bar.

1,397,256. COUNTERBALANCE MECHANISM FOR VEHICLE-WINDOWS. JOHN D. LAWRENCE, Toledo, Ohio, assignor to Dura Mechanical Hardware Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 27, 1920. Serial No. 413,014. 2 Claims. (Cl. 16—110.)

1. A counterbalance mechanism for a vertically slidable window member comprising a pivotal main arm adapted to bear upwardly upon said window member, a relatively short arm projecting at an acute angle from the pivotal end of the main arm, and a counterbalance spring secured to said short arm and extending upwardly to a suitable anchorage point.

1,397,257. COTTON-CLEANER AND BOLL-BREAKER. GROVER C. STACY, Dallas, Tex. Filed Feb. 19, 1920. Serial No. 359,761. 17 Claims. (Cl. 13—19.)

16. A screen bed for cotton cleaners, comprising side walls cut away to form parts of concaves, cross boards mortised at the bases of the curved portions forming a



each pocket, and foraminous material covering the bed and following the curvature of its sides.

1,397,258. REVERSING ENGINE CONTROL MEANS. HENRY W. SUMNER, Seattle, Wash. Filed July 3, 1918. Serial No. 243,214. 11 Claims. (Cl. 122—41.)

1. An actuating device for timed parts of internal combustion engines comprising driving and driven parts, one having a gap and the other a projection entering said gap, and means for adjusting one of said parts to thereby vary the relative extent of gap and projection and thereby vary the lag between the driven and the driving parts.

1,397,259. ROPE-GRIP. WARREN TRAVELL, New York, N. Y. Filed May 8, 1919. Serial No. 295,756. 7 Claims. (Cl. 188—65.)

1. A double rope grip comprising friction jaws; toggle-wheels whereon said friction jaws are suitably mounted, ropes when gripping the other rope; and means for applying power to and controlling the motion of said toggle wheels.

1,397,269. GARBAGE-CAN. JOHN H. TROTTER, New York, N. Y. Filed Nov. 26, 1919. Serial No. 341,134. 4 Claims. (Cl. 220—87.)

1. The combination of a garbage receptacle having a cover to permit the opening and closing of the receptacle, and a germicide or disinfectant container detachably connected with said cover and arranged to be supported thereby within the closed receptacle, the disinfectant holding part of said container being formed of wire gauze of a mesh to support a liquid without permitting the liquid to run through the same, substantially as described.

1,397,283. COLLAR. JAMES M. VAN HEUSEN, Jamaica Plain, Mass. Original application filed Aug. 1, 1917, Serial No. 183,889. Divided and this application filed Mar. 15, 1919. Serial No. 282,693. 5 Claims. (Cl. 2—87.)

4. A soft folding or turn down collar made up of a neck band portion and a folding or turn down portion, one of said portions being of multiply fabric, the other of said portions being built up of single ply fabrics, said portion

of multiply fabric having woven integral therewith a thin edge to which the other portion of the collar is secured.

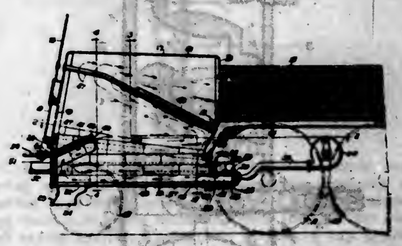
1,397,282. WRENCH. HENRY BUTT, Versailles, Ohio. Filed Apr. 16, 1921. Serial No. 461,899. 1 Claim. (Cl. 81—152.)

A wrench comprising a shank having a stationary jaw, a co-acting jaw movable along the shank, said movable jaw having a rightangular extension parallel with the shank and bearing against one edge of the same, a guide arm connected to the extension in parallel relation to the movable jaw and having a passageway for the shank, a locking dog having a transversely disposed bar mounted in and contained wholly within an open bearing provided in the face of the extension next to the shank, said dog having arms located at each side of the shank, and a shank-engaging bar carried by the free ends of the arms and adapted to impinge against the rear edge of the shank, said dog lying substantially flush with the side faces of the movable jaw and guide arm and having no projecting parts, and a twin leaf spring mounted in the said extension and adapted to bear against the arms of the dog to force the same in position to impinge on the shank.

1,397,263. WHISTLE. HAROLD J. CARMODY, Brooklyn Manor, N. Y., assignor of one-half to Joseph A. Faurot, New York, N. Y. Filed Feb. 16, 1918. Serial No. 217,719. 5 Claims. (Cl. 46—46.)

1. A whistle comprising, in combination, a hollow body portion having a vent opening in its side wall, a valve slidably mounted on the body portion to cover and uncover said vent opening, a mouth piece movable with said valve and having a mouth opening, an air director fixed relative to said vent opening, and a valve adapted to open and close said mouth opening by movement of said mouth piece, said last mentioned valve being fixed to said body portion and disposed outside the whistle when the mouth opening is open.

1,397,264. PROCESS OF PRODUCING AMMONIUM CHLORID. OSCAR LUDVIG CHRISTENSSON and EMIL IVAN MATHIAS CHRISO, Stockholm, Sweden; said Chriso assignor of his entire right to Bror Albert Hedman, Stockholm, Sweden. Filed Jan. 12, 1921. Serial No. 436,819. 4 Claims. (Cl. 23—13.)

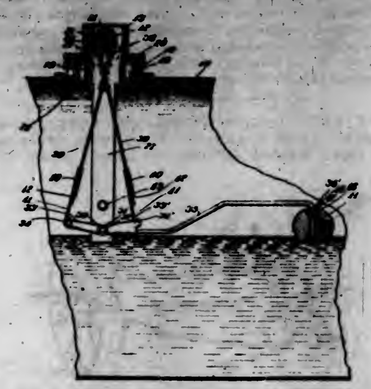


1. Process of producing ammonium chlorid in coking, distilling or combusting coal, lignate, bituminous slates or other organic substances containing nitrogen, comprising adding a chlorid of a metal whose hydroxid is alkaline and free silica to the material to be treated, and collecting the ammonium chlorid formed.

1,397,265. LAND SCRAPING AND LEVELING MACHINE. JAMES T. COMPTON, Pixley, Calif. Filed Sept. 30, 1920. Serial No. 413,681. 6 Claims. (Cl. 37—7.)

1. A land scraper and leveler comprising a mounting, a cutter shaft extending transversely of the frame, a scraper blade, arms extending from said cutter shaft, links pivotally connected with said arms and loosely connected with said blade, draft means having connection with said blade, and means for rotating said rocker shaft to impart vertical movement to said blade, said means having connection with the blade for tilting the blade forwardly and rearwardly as it moves vertically.

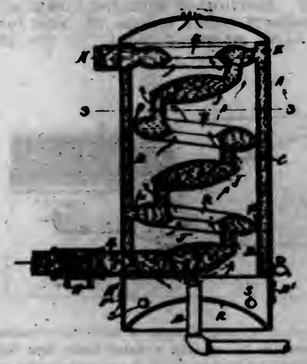
1,397,266. METHOD OF BURNING COMMINUTED FUEL. JOSEPH H. COOPER, Chicago, Ill. Filed July 20, 1918. Serial No. 245,802. 7 Claims. (Cl. 110—28.)



1. The herein described method of burning comminuted fuel, which consists in causing a flame from said fuel to travel the length of a fire-box four times between its introduction and emission.

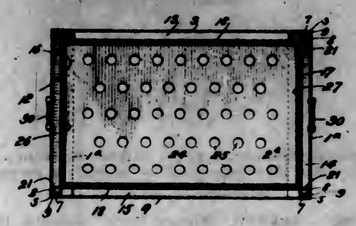
6. The herein described method of burning comminuted fuel, which consists in introducing downwardly into the top of a mixing chamber a rich mixture of fuel and air, projecting oppositely and upwardly into said chamber a current of heated air, projecting horizontally across said first named current a draft of cold air, and igniting the mixture thus produced.

1,397,267. LIQUID-LEVEL INDICATOR. CLAUDE B. COX, Detroit, Mich. Filed Jan. 29, 1920. Serial No. 352,600. 14 Claims. (Cl. 73—32.)



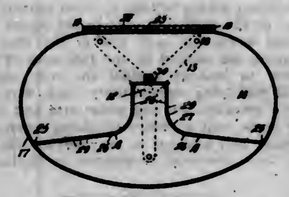
1. In a pressure-system liquid-level indicator of the character described, the combination of a gage casing hav-

ing an opening and a hollow stem, a removable sealing partition, a magnet in rear of said partition, and an armature and hand in front of said partition; a flexible shaft connected with said magnet and having a slip coupling member on its remote end, said shaft being of sufficient length to extend to the gasolene tank, a tank-float assem-



bly having a head, a transmission part carried thereby provided with a complemental coupling member to receive the shaft-carried member, a ductile tube inclosing the flexible shaft, and detachable seal-couplings between opposite ends of said tube and, respectively, the tank assembly head and the gage-stem.

1,397,268. WATER-HEATER. EDWARD T. CURRAN, Detroit, Mich. Filed June 6, 1918. Serial No. 238,428. 3 Claims. (Cl. 122—166.)

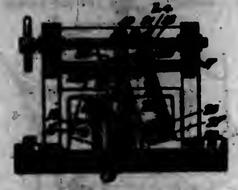


2. In a water heater, the combination with a combustion chamber having an opening in the bottom for the passage of a gas burner and an opening in the top for the escape of the products of combustion, of a heating element arranged in said chamber comprising a series of annular and lenticular shaped water chambers arranged in superposed relation, said lenticular chambers being of smaller diameter than the interior of the combustion chamber and the annular chambers of substantially the same diameter as the interior of the combustion chamber; means to connect said chambers in water circulation; a water inlet to the lowermost of said chambers arranged to be connected to a source of supply; and a water outlet from the uppermost of said chambers.

1,397,269. KNOCKDOWN REFRIGERATING-BOX. HERMAN U. DOREN, New York, N. Y. Filed Feb. 26, 1921. Serial No. 448,546. 7 Claims. (Cl. 45—102.)

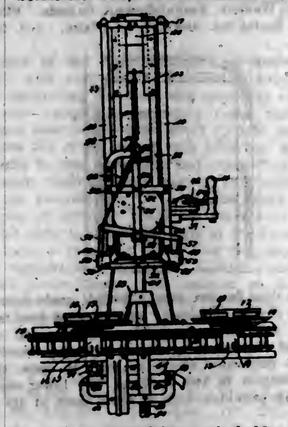
1. A knock-down refrigerating box composed of sheet metal and comprising a rectangular outer box body formed of substantially flat side and end members each provided with coöperating interlocking flanges; a rectangular lining body also comprising substantially flat side and end members adapted to provide an ice-containing chamber; a removable bottom seated in said ice-containing chamber and adapted to form an ice carrier and a cover for said outer box body.

1,397,270. WASHING-MACHINE. EDWARD H. DOLDER, Serena, Ill. Filed Mar. 31, 1920. Serial No. 370,072. 5 Claims. (Cl. 68—21.)



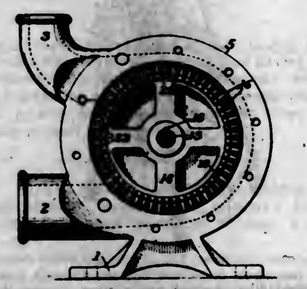
1. In a washing machine having a suitable standard, the combination with a vessel having a smooth interior surface, said vessel being pivotally supported on said standard and adapted to contain the articles to be washed and the washing solution; of partitions within said vessel extending substantially parallel to the pivotal axis thereof, said partitions being provided with openings therein adapting a washing solution to pass therethrough, said partitions being arranged to divide the interior of the vessel into an upper compartment and a relatively smaller lower compartment, said partitions being also upwardly extended in spaced relation on opposite sides of the pivotal axis near the center of the vessel to form a barrier and thereby divide the upper compartment into two portions, whereby the articles in each chamber are alternately subjected to immersion in and withdrawal from the washing solution as the vessel is oscillated.

1,397,271. ROLLING-MILL FOR BENDING ANGLE OR CHANNEL IRON INTO DIFFERENT ANGLES. JOHN P. ECKENROTH, Chester, Pa.; Mary A. Eckenroth executrix of said John P. Eckenroth, deceased. Filed Sept. 25, 1918. Serial No. 255,559. 2 Claims. (Cl. 153—36.)



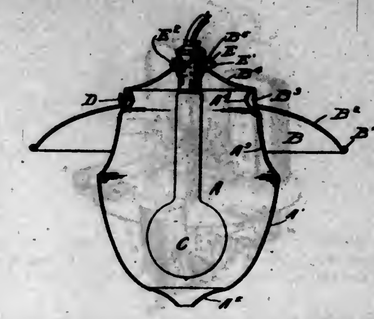
1. In a rolling mill of the character stated, a pair of bending rolls of different lengths, a second pair of bending rolls of different lengths, a rocker bearing for the gudgeons

at one end of each of said pairs of rolls, and an independent rocker bearing for the other end of each of the longer



rolls, said rolls being arranged to act upon and bend both limbs of a channel iron during a single pass thereof through said rolls.

1,397,272. PIE-MAKING MACHINE. WILLIAM EHRLICH, Chicago, Ill., assignor to Case & Martin Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1919. Serial No. 327,252. 22 Claims. (Cl. 107—1.)



5. A pie machine comprising a pie holder mounted for movement along a substantially straight path; and a crimping head mounted for movement in a circular path, said paths being disposed so that the crimping head and pie holder approach each other at points in their paths.

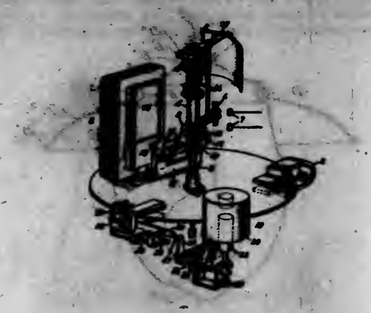
1,397,273. CENTRIFUGAL PUMP. MATTHEW J. FINN, Pittsburgh, Pa. Filed Jan. 21, 1921. Serial No. 438,837. 11 Claims. (Cl. 253—176.)

1. An impeller for centrifugal machines, having a plurality of peripheral vanes, a lateral wing on each side thereof near the base of said vanes, and notches in said wings substantially as described.

1,397,274. LIGHTING-FIXTURE. MAX FIRMAN, Brooklyn, N. Y. Filed Sept. 10, 1920. Serial No. 408,885. 1 Claim. (Cl. 240—92.)

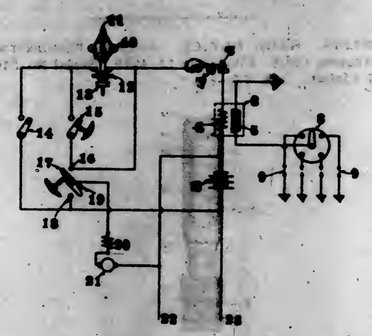
In a lighting fixture, the combination of a support, a single-piece reflector having an inner downwardly convex portion, an intermediate annular vertical portion, and an outer downwardly concave portion, a single-piece globe of translucent material having an annular groove at its top fitting within the vertical portion of the reflector, and an outwardly concave portion opposed to the outer portion of the reflector, supporting means for the globe carried by the vertical portion of the reflector and engaging the groove, and means carried by the inner portion of the reflector for attaching the same to the support.

1,397,275. GAGE DEVICE. JOHN J. FITZGERALD, Los Angeles, Calif. Filed July 11, 1919. Serial No. 310,153. 7 Claims. (Cl. 73—111.)



1. A pressure gage including a tubular terminal head having means at one end for detachably engaging an opening in a fluid pressure container, a valve-engaging seat thereon, a barrel projecting from the terminal head and having exterior graduations thereon, a cap applied to the outer end of the barrel, a plunger slidable within the barrel, a stem carried by the plunger and passing slidably through the cap, a spring interposed between the cap and the plunger, an outer tubular shell telescoping upon the barrel and movable outwardly by the stem, said shell then coöperating with the graduations on the barrel to indicate the pressure, and friction means carried by the before-mentioned cap for engaging the outer shell to hold it in an adjusted position when the plunger returns to the inner end of the barrel.

1,397,276. PROTECTIVE DEVICE. HENRY G. FRENCH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 24, 1919. Serial No. 333,020. 16 Claims. (Cl. 175—294.)



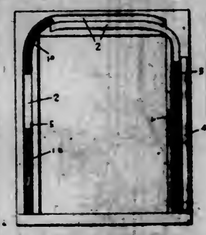
6. In a relay device, the combination with a rotatable armature, a torque element for rotating said armature,

relatively movable coöperating contacts adapted to be brought into engagement by the rotation of said armature,

and means for resetting said contacts independent of said armature.

1,397,277. IGNITION-SWITCH. Valtee A. Fynn, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 2, 1918. Serial No. 221,068. 3 Claims. (Cl. 200—38.)

3. In an ignition and starting system for internal combustion engines, a starting motor, a starting switch therefor, a primary ignition circuit, comprising a source of current, a timer and an ignition switch, means governed by the speed of the engine for closing and opening the ignition switch, an auxiliary circuit in shunt with the contacts of the ignition switch, a spring controlled switch in said circuit, the spring tending to hold the switch in open position, and means controlled by the motor starting switch for closing the primary ignition circuit independently of the ignition switch.

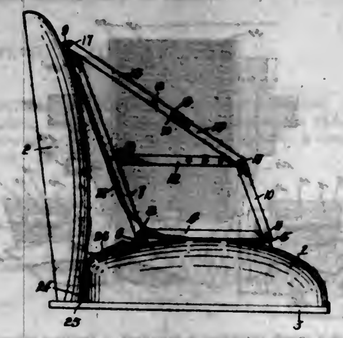


1,397,278. SPEED-REGULATING APPARATUS. Valtee A. Fynn, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 5, 1919. Serial No. 308,905. 14 Claims. (Cl. 290—36.)

A. The combination of a prime mover, speed controlling means therefor, means for actuating the speed controller, said means comprising a generator driven by the prime mover and provided with means causing its excitation to vary with the armature reaction flux and speed of the generator, and an independent source of E. M. F. in

circuit with the generator and connected to oppose the generator E. M. F.

1,397,279. GRAIN-DOOR FOR BOX-CARS. Wilfrid Gelineau, Wadena, Saskatchewan, Canada. Filed Sept. 3, 1920. Serial No. 408,626. 1 Claim. (Cl. 20—32.)



In a grain door for box cars, a flexible grain door of slat formation, a channel guideway wherein said door is adapted to slide, and slide pieces integrally connected on said guideway and adapted to be swung into and thereby close said channel guideway when the door is open, the said door being formed in two sections, the lower one of said sections being provided with a relief door at its bottom edge.

1,397,280. STEPLADDER. Hubert M. Graf, Kansas City, Mo. Filed Sept. 10, 1920. Serial No. 409,402. 9 Claims. (Cl. 228—29.)

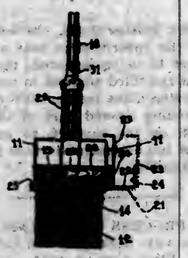
1. A stepladder, having an opening at one side of its steps, a pair of bars pivotally suspended within said opening, foldable braces between the said bars and the frame of the stepladder, and a vertically adjustable table on said bars.

1,397,281. FOLDABLE CHILD'S SEAT FOR AUTOMOBILES. Thomas A. Hall, Toledo, Ohio. Filed July 25, 1921. Serial No. 487,217. 2 Claims. (Cl. 155—71.)

1. A seat of the class described, comprising spaced forwardly and rearwardly extending base-bars, cross members connecting the front and rear ends of the cross-bars, a rear upright bar pivotally rising from the rear end of each base bar, a front short upright bar pivotally rising from the front end of each base bar, an arm rest bar parallel to the base bars and connecting the upper end of each front upright bar to the respective rear upright bar intermediate its ends and being pivoted to each, a pair of hingedly connected brace bars pivoted at their outer ends to the upper ends of the front and rear upright bars, a cross-bar connecting the upper ends of the rear upright bars, a curved member connecting the upper and lower front cross member to form a seat and back portion, and means for anchoring the child's seat to an automobile seat.

1,397,282. FLUID-HEATER. John H. Hanley, Jr., and John L. Krebs, New York, N. Y. Filed Sept. 16, 1920. Serial No. 410,591. 11 Claims. (Cl. 257—230.)

4. In fluid heating apparatus, a tank having a fluid inlet, a tubular flue located in the tank and having a fluid passage therethrough connecting at one end with the body of the tank, the other end of said passage being positioned to receive directly fluid from said inlet, and a fluid heating element in the passage.



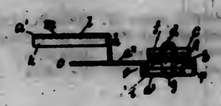
1,397,283. THREAD-BREAKING DEVICE FOR SPINNING-MACHINES. Ferdinand Q. Hartman, Danville, Pa. Filed May 31, 1918. Serial No. 237,600. 4 Claims. (Cl. 19—25.)

2. A thread breaking device for spinning machines in which several threads are independently spun and wound on a single take-up spool, comprising thread guide levers each pivoted in position to drop when its thread breaks, a counterbalanced thread breaker pivoted to swing into position to break a thread, the said breaker being located in position to be thrown off center by the dropping of a thread guide lever, and manually controlled means for temporarily holding the said breaker in inoperative po-

sition, said means comprising a detent mounted on a shaft journaled in the device and a handle for rocking the shaft and detent.

1,397,284. MOP. John T. Heaton, Chicago, Ill., assignor of one-half to Thomas J. Fullen, Jr., and one-half to Philip F. Quinlan, Chicago, Ill. Filed Dec. 18, 1920. Serial No. 431,070. 9 Claims. (Cl. 15—56.)

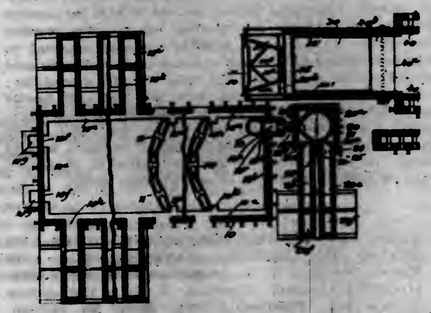
1. The combination of a handle; a bar revolubly mounted thereon; a mopping member carried by said bar; means for rotating said bar for winding the mopping member thereabout; a second bar slidably mounted adjacent to said first named bar; a bail member connected with said second bar for moving it away from the first named bar; a spring interposed between said bail and said handle adapted to hold said second bar yieldingly in close proximity to said first named bar; and a lever swingingly mounted on said bail adapted by manual pressure on said handle to hold said second bar by friction in stationary position against the action of said yielding means.



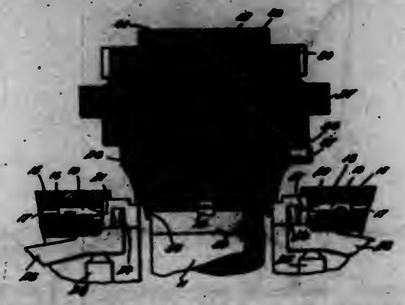
1,397,285. DEVICE FOR CONNECTING BOWLS AND SHADES IN LIGHTING-FIXTURES. Walter R. Kahns, Brooklyn, N. Y., assignor to J. E. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 4, 1921. Serial No. 442,840. 1 Claim. (Cl. 240—115.)

A device for supporting a bowl from a shade in lighting fixtures, comprising a hollow stud having an annular flange at one end to bear against the under surface of the shade, and an interior shoulder, a removable slotted member within said stud seated upon said shoulder, said stud being exteriorly threaded and adapted to enter a hole in the shade, a nut screwed upon the said threaded stud to secure it to the shade, another hollow stud provided with a threaded stem projecting at right angles on one

side adapted to enter a hole in the bowl, a nut screwing it thereto, said second stud also having an interior shoulder, a removable slotted member within said stud abutting against said shoulder, and a flexible chain connection between said studs, its respective ends being attached to said slotted members through the slots therein.



1,397,286. TENSION DEVICE OR YARN-CLEANER FOR CREELS FOR USE IN WARPING OR BEAMING. GEORGE KENSHAW, Whitworth, England. Filed Feb. 20, 1920. Serial No. 360,106. 12 Claims. (Cl. 242—147.)

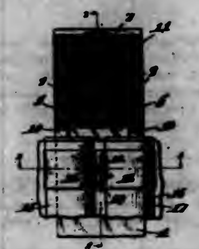


1. A support for tension disks, characterized by three horizontal parts, the uppermost to bear against a rail on which the support is to be mounted, the second having a guide notch and the third adapted to bear tension disks, a plurality of tension disks horizontally mounted thereon and an arm extending around part of the circumference of a tension disk on the support, to present its upper edge a little below the horizontal surface presented by one tension disk to another.

1,397,287. PROCESS OF MAKING PLATE-GLASS. JOHN H. MCKELVEY, Kirkwood, and CHARLES F. RYAN, St. Louis, Mo. Filed Apr. 12, 1915. Serial No. 20,861. 2 Claims. (Cl. 49—87.)

1. The process of making plate glass consisting in first melting the constituents in a furnace, tank, or the like, then conveying and segregating a portion of the molten glass in a collection chamber, then treating said portion by subjecting it to a heat independent of and controlled independently of said furnace for such period of time and at such temperature as to refine such portion, and thereafter depositing said molten glass directly upon a subjacent rolling table and finally rolling same.

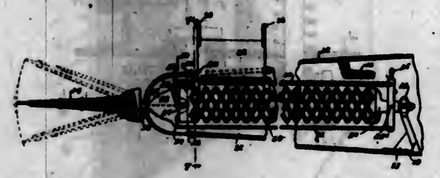
1,397,288. SUSPENSION-SLEEVE FOR GRINDING-MACHINES. RAMATHIL G. MADDAHAN, North Attleboro, Mass. Filed Jan. 3, 1921. Serial No. 434,772. 9 Claims. (Cl. 140—3.)



1. In a mesh machine, a mandrel, a feeding sleeve rotatably mounted around the mandrel, and a rigid suspension sleeve engaging the mandrel and the feeding sleeve.

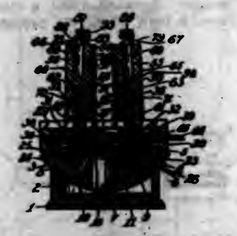
1,397,289. GRINDING-MACHINE. ALBERT H. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 10, 1920. Serial No. 380,393. 8 Claims. (Cl. 51—209.)

5. An attachment for a grinding machine comprising a table having a depending attachment stud and an upwardly projecting positioning plate, a pair of clamping plates carried by the table and terminating in upwardly projecting clamping jaws, means for simultaneously shifting the jaws into or out of operative position, and means on the positioning plate for preventing movement of both jaws in the same direction.



1,397,290. TRANSFER-CLAMP. AUGUST NELSON, Chicago, Ill. Filed Nov. 28, 1919. Serial No. 341,117. 8 Claims. (Cl. 40—11.)

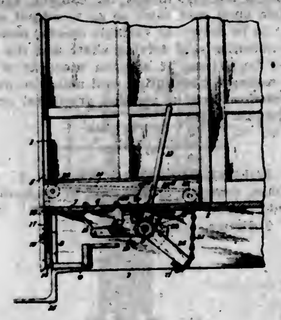
8. A device of the class described comprising a backing member; an elastic member mounted upon said backing member; a wire loop adapted to engage against said elastic member; a spiral coil formed at each end of said wire loop, the ends thereof projecting downwardly and engaging against said backing member; a pin passing through said spiral coils; split keys engaging said pin and passing through said elastic member and backing member for mounting said loop upon said backing member; and means for clamping said backing member to a change container, substantially as described.



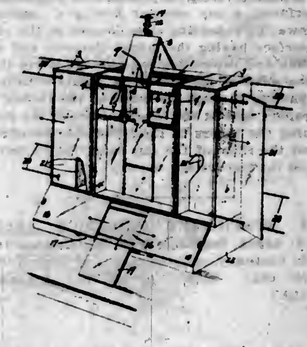
1,397,291. [WITHDRAWN.]

1,397,292. AEROPLANE. GEORGE ORTGIES, East St. Louis, Ill. Filed June 1, 1920. Serial No. 385,588. Renewed Oct. 8, 1921. Serial No. 505,568. 5 Claims. (Cl. 244—29.)

1. An aeroplane comprising a body portion and rear tubular portion, a partially rotating rigid skeleton member located within the tubular portion having one end pivotally mounted therein, a hand lever pivotally connected thereto, a guiding plane mounted in the rear end of the rear portion and pivotally connected to one end of the skeleton member and capable of vertical and lateral adjustment, and a connection between said guiding plane and hand lever whereby the said guiding plane may be vertically and laterally adjusted simultaneously.



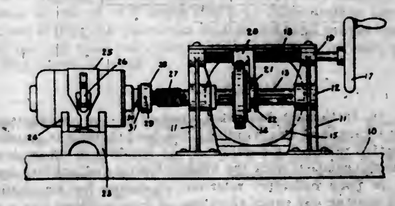
1,397,293. ENGRAVING-BLOCK. HORACE PLUMMER, Lawrence township, Marion county, Ind. Filed Mar. 6, 1919. Serial No. 281,009. 12 Claims. (Cl. 81—4.)



1. An engraving block including a table, two vise jaws removably mounted upon the table and adjustable each toward the other and also rotatably on the table, each vise jaw having a cylindrical socket in the top thereof that has a cylindrical counterbore of uniform diameter extending from the top of the jaw, a plurality of hollow cylindrical holders removably and rotatively seated on the bottom of the counterbore in the sockets respectively, each holder being laterally supported in the socket immediately at the top of the jaw and having each an annular projection at its top, the projection having a beveled edge facing toward the vise jaw, and a plurality of studs adjustably supported vertically and rigidly secured in the holders respectively.

1,397,294. AUTOMATIC RAISING AND LOWERING STEPS. ERNEST B. REMDER, Madison, Ind. Filed Apr. 5, 1921. Serial No. 459,010. 5 Claims. (Cl. 105—431.)

1. In combination with a car having a platform and vertical side walls forming a housing for a stairway; of a permanent step secured between said side walls, upper and lower adjustable steps adapted to coöperate with said permanent step and means separately operative for manually disposing said adjustable steps to their operative and inoperative positions.

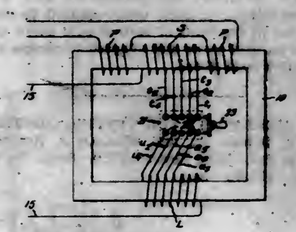


1,397,295. OFFICE FURNITURE. GEORGE A. RITZ, Rochester, N. Y. Filed Mar. 26, 1920. Serial No. 369,018. 5 Claims. (Cl. 40—1.)

1. In office furniture, the combination with a box of hollow doors hinged thereto, cords secured to the inner surface of one of the walls of each of said doors, and panels movable on said cords and adapted to occupy a nested position within said doors.

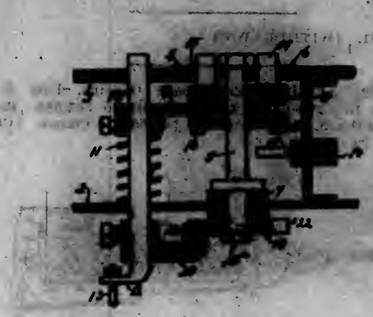
1,397,296. TEST-STAND FOR TESTING GENERATORS. JOSEPH C. SCHAF, Jr., and WILLIAM J. HOLLIDAY, Indianapolis, Ind. Filed Nov. 20, 1920. Serial No. 425,532. 6 Claims. (Cl. 73—51.)

1. A test stand for testing generators and the like including an electric motor having a friction disk, a driving



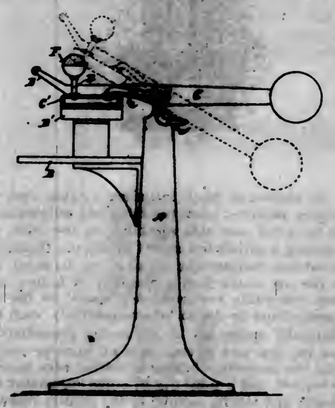
shaft, a friction wheel slidably mounted on said driving shaft so as to engage said friction disk and be driven at variable speeds thereby, means for causing said friction wheel to slide upon said shaft so as to adjust said wheel and cause it to be driven at variable speeds, means for operatively connecting said driving shaft and the generator to be tested for driving it a given speed at which it is tested, and means for mounting said motor so as to maintain said friction disk in yielding frictional engagement with said friction wheel.

1,397,297. ROLLER-BEARING. WILLIAM L. SCRIBNER, Toledo, Ohio, assignor of one-half to Richard T. Dawson, Toledo, Ohio. Filed May 15, 1920. Serial No. 381,664. 2 Claims. (Cl. 64—62.)



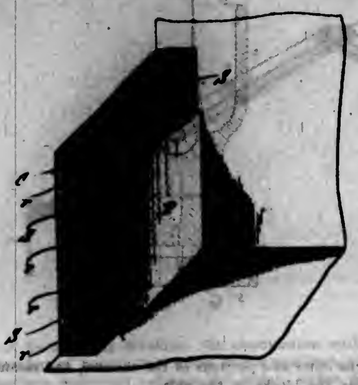
2. In a roller bearing, a plurality of rollers having tapered surfaces, a cup member having a conical surface and an inwardly extending ridge located at the edge of the conical surface having the larger diameter and an elastic contractible and expansible cage having parts thereof engaging the sides of the rollers at points within the cone surface passing through the axes of the rollers for holding the rollers against the inner surface of the cup and for maintaining the rollers in their positions relative to each other, and the ridge of the cup operating to maintain the rollers and the cage within the cup.

1,397,298. STATIONARY INDUCTION APPARATUS. JOHN A. SEBUN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 15, 1921. Serial No. 445,112. 4 Claims. (Cl. 171—119.)



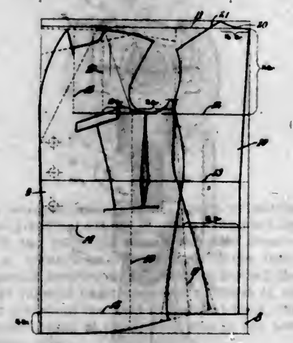
1. In stationary induction apparatus, the combination with a core, and two windings disposed thereon in mutual inductive relation, a portion of one winding being in good inductive relation with the other winding and another portion in poor inductive relation, of means for simultaneously cutting out turns from one of said portions and cutting in a corresponding number of turns of the other portion, whereby the per cent. reactance is altered without altering the resultant terminal voltage of said portions.

1,397,299. LACE-BRAIDING MACHINE. HENRY LEWIS SMITH, Philadelphia, Pa., assignor to Oliver Ellwell, Philadelphia, Pa. Filed Mar. 30, 1920. Serial No. 367,645. 4 Claims. (Cl. 66—4.)



4. In a lace braiding machine, a raceway plate, a bottom plate, posts carried by the bottom plate and projecting through the raceway plate, driver disks on said posts, an operating clutch member mounted on each of said posts, upwardly projecting pins carried by said clutch members for coaction with the driver disks, gear pins depending from the operating clutch members, an oscillating rack adapted to be engaged by said gear pins whereby a rotary motion may be transmitted to the driver disks, and means to actuate the operating clutch members to move the gear pins into engagement with the rack.

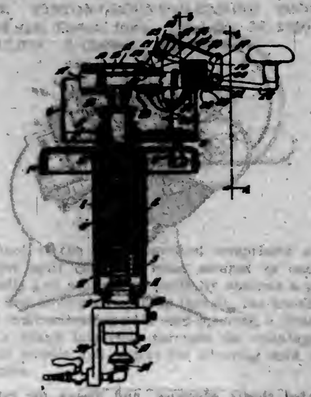
1,397,300. CLOTHES-PRESSING APPARATUS. ARTHUR E. SNOW, Erie, Pa., assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed June 19, 1918. Serial No. 240,866. 6 Claims. (Cl. 68—9.)



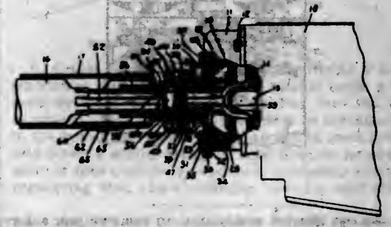
1. In a combined press and puff iron structure, a press including a hollow member provided with steam supply means, a puff iron mounted upon and arranged above said member, and steam connection between said puff iron and said member.

1,397,302. STRUCTURAL FRAMEWORK FOR WALLS, PARTITIONS, ROOFS, &c. FRANCIS P. SMART, Brooklyn, and HERBERT S. BALLEY, New York, N. Y. Filed Oct. 18, 1920. Serial No. 417,717. 7 Claims. (Cl. 72—16.)

1. Structural frame work of the character designated comprising a plurality of hollow skeleton sections of reticulated metal in block form, each of telescopic parts.



1,397,303. CUTTING SYSTEM. JOHN TARASOFF, New York, N. Y. Filed Aug. 31, 1920. Serial No. 407,107. 1 Claim. (Cl. 33—17.)

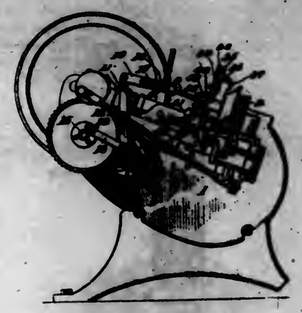


The system of laying out coats for cutting which consists in providing a pattern on which are marked a series of horizontal lines comprising top, breast, waist, seat and bottom lines; said pattern having also a pair of vertical lines extending the full distance thereof at the armhole portion thereof, and a second pair of vertical lines extending from the breast line to the waist line in front of the armhole, proportional measurements along the seat, breast and top lines being based on the breast measurement as a unit, while the distance between the top and breast lines is made one-quarter of the breast line.

1,397,303. COLLAR-SHAPER. CHARLES E. WARREN, Norwood, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Oct. 26, 1920. Serial No. 419,238. 21 Claims. (Cl. 68—9.)

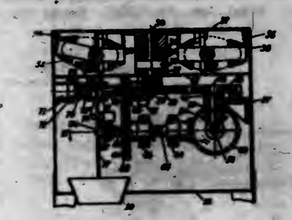
1. A collar shaper, comprising a collar mold member and an ironing member movable one along the other for the ironing operation, said members also having relative movement toward each other, yielding means for producing pressure between said members when in ironing relation, and means for locking said ironing member in ironing relation for movement only in a fixed orbit during locked position.

1,397,304. DETACHABLE TRANSMISSION CONSTRUCTION. D'ORSAY MCCALL WHITE, Indianapolis, Ind., assignor to La Fayette Motors Company, a Corporation of Delaware. Filed Jan. 10, 1920. Serial No. 350,527. 3 Claims. (Cl. 180—68.)



1. A transmission construction including in combination two adjacent and aligning shafts having similarly splined ends, a sleeve having splined slots therein, said sleeve being slidable longitudinally on said shafts, said sleeve having a pair of openings on opposite sides thereof, one of said shafts having an opening extending transversely of said shaft and therethrough, said opening being adapted to register with the openings in said sleeve, a pin insertible in said opening, said pin having a head portion adapted to engage in one of said sleeve openings to secure the sleeve against sliding movement on said shafts, and means operable through the other sleeve opening for securing said pin in said shaft opening.

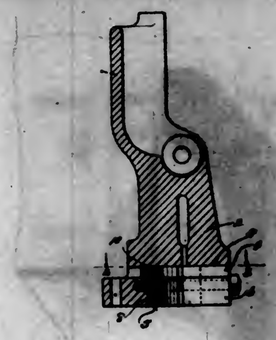
1,397,305. SHEET-FEEDING MECHANISM. EDWIN WHITE, Baltimore, Md., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 9, 1920. Serial No. 416,820. 12 Claims. (Cl. 271—26.)



1. A sheet feeding mechanism comprising means for supporting a stack of sheets, suction cups, means for reciprocating the same to remove the sheets one at a time from the stack, means whereby the stroke of said reciprocating

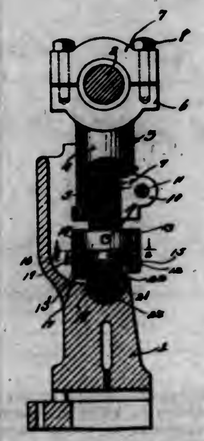
means is automatically altered to compensate for the changing thickness of said stack, means for moving said

separated sheets edgewise, and means for releasing the suction cups prior to such edgewise movement.



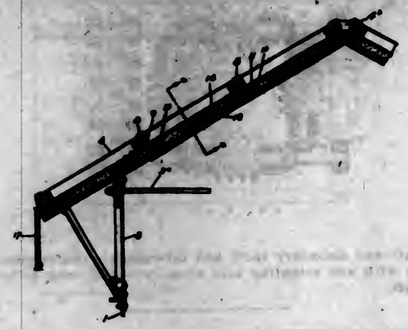
1,397,306. EGG-SHUCKER. WILLIAM C. WHITE, Portsmouth, N. H. Filed Mar. 9, 1921. Serial No. 451,004. 16 Claims. (Cl. 146—7.)

1. An egg-shucker comprising, in combination, a turret, a plurality of egg-holders movable by the turret in a circular path, an oscillatory knife movable in a path which intersects the path of the egg-holders, and operating mechanism including knife-actuating means for causing an oscillatory movement of the knife, and means for rotating the turret step-by-step, said mechanism being organized to hold the egg-holders successively in the path of the knife, and to partially rotate the turret while the knife is out of the path of the egg-holders.



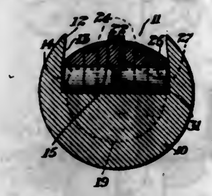
1,397,307. PUNCH-PRESS CHUCK. THEODOR ZETTERLUND, Milwaukee, Wis., assignor to Milwaukee Press & Machine Co., Milwaukee, Wis. Filed Mar. 22, 1920. Serial No. 367,858. 1 Claim. (Cl. 279—85.)

A device of the class described including a chuck body having a chuck block seat, said seat having a block entrance through one wall of the body, the portion of the wall of the seat opposite said entrance being curved, the wall of said seat having a continuous channel, its opposite ends being in communication with said entrance, a pair of blocks slidable into and out of the seat through said entrance, the inner block having one side curved to the shape of the curved portion of the seat wall and provided with a flange engageable in the channel of the last mentioned portion of the seat wall, the outer block having flanges extending from its opposite sides for engagement



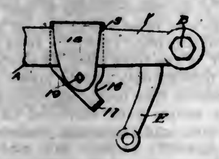
with the outer end portions of the channel, and means for securing the blocks in the side.

1,397,308. CROSSHEAD PITMAN CONNECTION. ADAM ZISKA, Jr., Milwaukee, Wis., assignor to Milwaukee Press & Machine Company, Milwaukee, Wis. Filed Mar. 22, 1920. Serial No. 367,846. 3 Claims. (Cl. 74—48.)



3. In a machine of the class described, a tool carrying member, a crank, and means connecting the same including a two part connector plate pivoted to the tool carrying member and having a flat bearing surface surrounding a socket therein, one part of the plate being removable to provide access to the socket, an internally threaded sleeve open at one end and having its other end connected with said crank, a threaded stem disposed in said sleeve and having a portion projected therefrom, a head on the projected end of the stem and rotatably disposed in said socket, said head being positioned in said socket when the separable portion of the connector plate is removed, and a flange extending radially of said stem, said flange having a flat face for engagement with the bearing surface of the connector plate.

1,397,309. HOOD-SUPPLEMENTED MEANS FOR DRYING-MACHINES. HARRY T. HAINES, Dayton, Ohio, assignor to The Management, Engineering and Development Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 16, 1921. Serial No. 461,961. 4 Claims. (Cl. 34—48.)

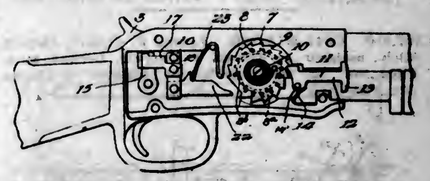


2. In a drying machine, the combination with a hood therefor, of longitudinal truss frame members, transverse members supported between the latter, straps depending from said transverse members, corrugated asbestos sheets bolted to the lower ends of said strap, and gypsum supported by said asbestos sheets.

1,397,310. WINDER-SHAFT. JAMES H. BAKER, Saratoga Springs, N. Y. Filed Oct. 22, 1920. Serial No. 418,776. 3 Claims. (Cl. 242—72.)

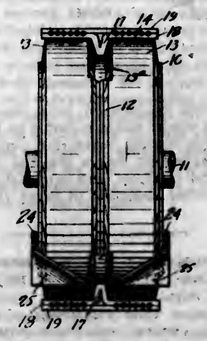
1. A collapsible shaft comprising a cylindrical body having a longitudinal groove therein, a segment member adapted to fit the outer portion of the said groove, and a plurality of transverse ribs secured to the inner surface of the segment member and extending beyond the same, with the ends tapered to fit undercut portions of the said longitudinal groove in the said cylindrical body, the base of the said groove being of the same width as the base of the said transverse ribs.

1,397,311. STOPPING DEVICE FOR STEERING APPARATUS. PERCY D. BENBOW and WILLIAM E. BECK, Winston-Salem, N. C. Filed Aug. 4, 1920. Serial No. 401,196. 2 Claims. (Cl. 280—89.)



2. In combination, an axle, a spindle arm movably mounted on the axle, and a stopping device comprising a head disposed in the path of movement of the spindle arm and adapted to define the innermost position of said arm, and means for supporting said head in longitudinally adjusted position along the axle whereby the stopping position of the head can be varied to vary the innermost position of said arm.

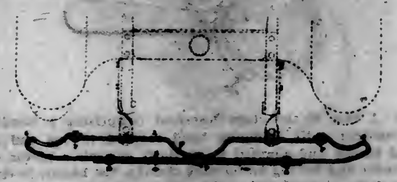
1,397,312. PISTON-GROOVE-CLEANING TOOL. JOE M. BOWMAN, Tipton, Iowa. Filed Oct. 18, 1920. Serial No. 417,674. 3 Claims. (Cl. 83—64.)



1. A tool of the class described comprising a handle, a resilient split clamping band secured to one end of said handle and adapted to partially encircle a piston or cylinder and having an opening therein, the handle having a socket communicating with said opening, a cleaning tool having a shank insertible through the openings in the band and handle and means for securing said shank to said handle.

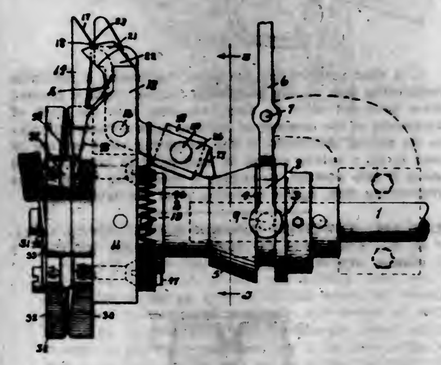
1,397,313. REGISTER FOR FIREARMS. ALFRED COPELLI and FRANK ALBI, Spokane, Wash. Filed Apr. 26, 1917. Serial No. 164,776. 2 Claims. (Cl. 235—91.)

1. A shot register for fire arms comprising a rotatable registering disk having peripheral ratchet teeth, a pivoted lever provided with an arm extending into the path of movement of the hammer of the arm to be actuated thereby in its falling movement, a disk actuating pawl carried by said lever, a spring acting on said pawl to retract it and move it into position to engage a succeeding tooth of the registering disk, and a retaining pawl for said disk.



1,397,314. TRACTOR. ABRAHAM B. COX, Cherry Valley, N. Y. Filed May 24, 1920. Serial No. 383,756. 1 Claim. (Cl. 305—10.)

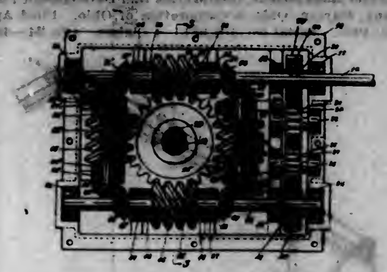
A tractor having wheels spaced apart and provided with circumferential grooves near the center thereof, and a



frame comprising cables for close connection, and outer and inner plates fitting over the said cables and clamping them between them, the inner plates being flanged with inturned bends which fit in the grooves of the wheels.

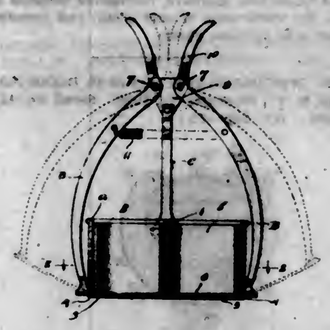
1,397,315. AUTOMOBILE-BUMPER. WILLIAM G. COX, Cleveland, Ohio, assignor to Cox Brass Manufacturing Company, Albany, N. Y., a Corporation of New York. Filed Sept. 6, 1921. Serial No. 498,663. 4 Claims. (Cl. 293—55.)

3. A spring bumper or buffer for an automobile, comprising a rear bar and a front bar united together at their corresponding ends but spaced apart between said ends and the rear bar having an arched portion at its middle engaging said front bar at its middle, an open face-plate of greater width than said front bar having an integral web at its middle bearing against said front bar, and means uniting said plate and front bar together.



1,397,316. COIL-WINDER. JASPER F. CULLIN, Detroit, Mich., assignor to William J. Hartwig, Detroit, Mich. Filed Nov. 12, 1920. Serial No. 423,678. 6 Claims. (Cl. 140—92.2.)

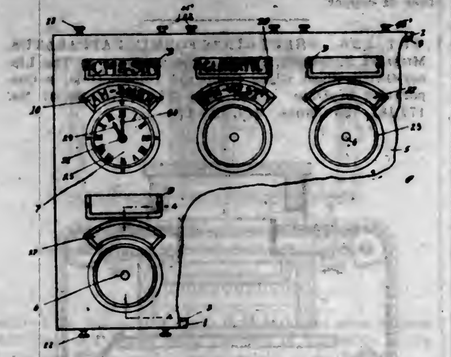
1. In a winding machine for coils, the combination of a shaft and two winder plates mounted on the end thereof, and formed with central contacting portions on which the coils may be wound, and a shearing device mounted on said shaft and rotatable with said plates and having a plurality of cutting members to sever the ends of the finished coils.



1,397,317. WORM-GEAR DRIVE. GEORGE F. ECKART, Cincinnati, Ohio. Filed Feb. 7, 1921. Serial No. 443,169. 4 Claims. (Cl. 74—89.)

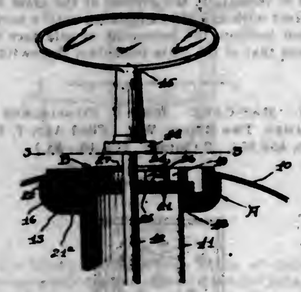
1. A worm gear drive comprising a drive shaft, a secondary shaft, driving connections between said drive shaft and said secondary shaft, a plurality of intermediate shafts between said drive shaft and said secondary shaft, driving connections between said intermediate shafts and said drive shaft, said secondary shaft, a driven shaft, a worm wheel on said driven shaft, and worms on said drive

shaft and secondary shaft and intermediate shafts meshing with and actuating said worm wheel on said driven shaft.



1,397,318. EGG-POACHER. ELMER R. FINK, Pocatello, Idaho. Filed Jan. 6, 1920. Serial No. 340,668. 8 Claims. (Cl. 53—1.)

1. A utensil for poaching eggs including a supporting member, an egg cup supported by said member and having an open bottom, a longitudinally slidable closure for the open bottom of the cup, and an actuating member pivotally secured to the supporting member and connected with the closure for withdrawing the latter from the open bottom of the cup.



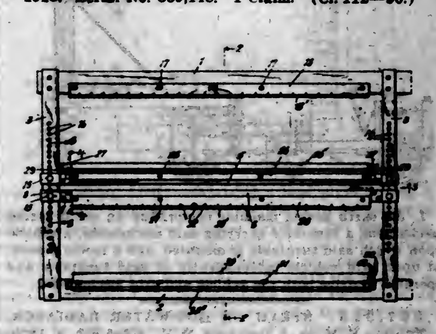
1,397,319. TIME-INDICATING DEVICE. WILLIAM A. LYONS, Litchfield, Minn. Filed Dec. 4, 1920. Serial No. 428,267. 2 Claims. (Cl. 116—131.)

1. A device of the class described, comprising a pair of spaced plates held in parallelism, one behind the other, a plurality of units of the class described, spaced from one another, supported on said plates, each of said units comprising an arbor perpendicular to said plates and extending between and through and beyond said plates and journaled in the rear plate thereof, a clock dial concentric with said arbor on the front plate, an aperture above said clock dial cut through each of said plates one behind the other, hand operable time indicating mechanism, including an hour and a minute hand supported on said arbor in front of said dial, said indicating mechanism extending laterally and upwardly between said plates around one side of said apertures to avoid obstruction of the line of vision through same and to and beyond the outer edge of said plates to be operated thereat, and hand operable sign display mechanism, including a rotary pinnard rotatably supported to the rear of the rear plate of said plates in concentric relation with said arbor, and extending over the aperture in said rear plate, said sign display mechanism extending laterally and upwardly around the other side of the aperture in said rear plate opposite said

time indicating mechanism to avoid obstruction of the lines of vision through same, and to and beyond the outer edge of said plates to be operated thereat.

1,397,320. FILLER-CUP AND CLOSURE FOR PRESSURE-TANKS. RAYMOND RHODEMAN MACDONOUGH, Minneapolis, Minn. Filed June 21, 1920. Serial No. 390,226. 2 Claims. (Cl. 220—66.)

1. The combination with an externally flanged barrel and plunger therefor having opposed lugs thereon, of a filler-cup having an opening in the bottom thereof to removably receive said barrel, an annular shoulder at the margin of said opening, internal segmental flanges within the filler-cup above said shoulder, a gasket resting upon the shoulder and adapted to receive the flange on the barrel, a removable cap, segmental flanges on said cap arranged to engage beneath the flanges of the cup and cooperate therewith to firmly secure the cap in holding position against the cylinder, said cap having a bore therein to slidably and rotatably receive the plunger, a hollow head on said cap, formed with a key-way in the top thereof to receive the lugs on the plunger and radial abutments within the head designed to be engaged by said lugs upon turning movements of the plunger, whereby the cap is turned and released from the cup or fixed in clamped relation with respect thereto.

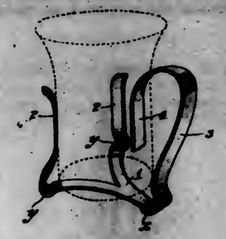


1,397,321. SPARK-PLUG. GEORGES MAGNELLI, New York, N. Y., assignor to A. R. Mosler & Company, Mount Vernon, N. Y. Filed Jan. 31, 1920. Serial No. 355,482. 4 Claims. (Cl. 123—169.)

1. In a mica spark plug, a shell, a baffle plate dividing the spark plug chamber into inner and outer compartments connected by a restricted passage, and a center electrode having a mica covering projecting into the inner compartment, said baffle plate being constructed to prevent a too rapid radiation of the heat from the baffle plate to the

shell, for keeping the exposed portion of the mica covering sufficiently hot without submitting it to the deleterious effects of direct contact with the hot combusted gases and oil.

1,397,322. EXPANDING FRAME FOR EMBROIDERY-MACHINES. KATHARINE MEYER, Carlstadt, N. J., assignor to Oswald Meyer, Carlstadt, N. J. Filed Nov. 19, 1919. Serial No. 339,148. 1 Claim. (Cl. 112—90.)



An embroidery frame comprising a pair of fixed parallel rails, straps connecting said rails, a bar extending between said straps and secured thereto to be adjustable therealong, and fabric holding devices mounted on one of said rails and said bar, said fabric holding devices comprising an elongated clip member having one edge extending backwardly over the body thereof, a flat bar adapted to be inserted under the said backwardly extending edge, a tubular rubber covering for said last mentioned bar, the said last mentioned bar being longer than the said strip and cover to cause the ends thereof to project therebeyond, and hinged latches mounted on the first mentioned bar and adapted to engage the projecting ends of the second mentioned bar, for the purpose set forth.

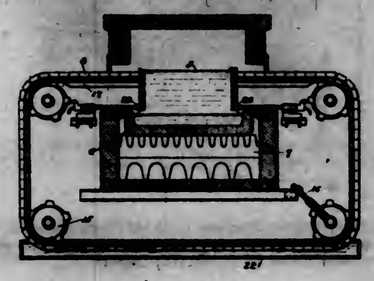
1,397,323. GLASS-HOLDER. ROBERT G. MITCHELL, Mount Vernon, N. Y. Filed Apr. 27, 1921. Serial No. 464,984. 9 Claims. (Cl. 65—61.)

1. A cup holder comprising a base, two upwardly-projecting arms at the forward part of said base arranged to engage the forward side of a cup, a third arm arranged to engage the rear side of a cup, said third arm overlapping the first-mentioned arms, and A support for said third arm

extending upwardly from said base, said third arm being located between said support and said first-mentioned

arms, the lower part of said third arm being free to flex to and fro.

1,397,324. EARTH-BORING MACHINE. WILLIAM E. MOORE, Chicago, Ill., assignor, by mesne assignments, to International Earth-Boring Machine Corporation, a Corporation of Delaware. Filed Apr. 28, 1919. Serial No. 292,183. 19 Claims. (Cl. 255—22.)



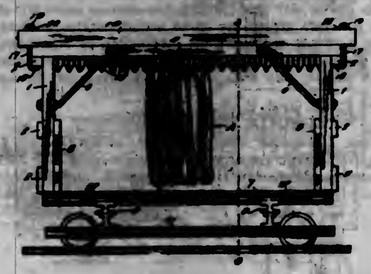
1. An earth boring machine comprising an earth boring mechanism, a turntable carrying said mechanism, a vehicle upon which said turntable is mounted, and a motor mounted upon said vehicle independently of said turntable and operable to drive both the vehicle and said mechanism.

1,397,325. STEAM OR HOT-WATER RADIATOR. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Feb. 4, 1920. Serial No. 356,249. 4 Claims. (Cl. 257—139.)

3. A radiator unit, comprising a plurality of parallel vertical ducts of sheet steel, and a horizontal supporting tube therefor; the said tube being made in two longitudinal half-sections electrically welded together, one of which half sections is integral with said vertical ducts, and the other of copper.

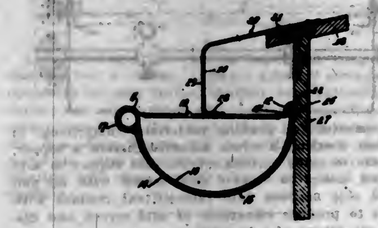
1,397,326. SHEET-GLASS-FORMING APPARATUS. MICHAEL J. OWENS, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 27, 1917. Serial No. 177,181. 26 Claims. (Cl. 49—17.)

18. In a sheet glass drawing apparatus, a receptacle for molten metal, a sheet drawing means, and an intermediate sheet bending device having a non-glass destroying face running in contact with the glass at a point distant from the point of formation, the surface of the glass being free from contact with any solid substance until a surface glaze has formed thereon, the movement of said face being different from that of the glass in contact therewith.



1,397,327. MAP-CASE. JOHN F. PILGRIM and WILLIAM A. NIMMER, Two Rivers, Wis. Filed Apr. 7, 1921. Serial No. 459,364. 2 Claims. (Cl. 40—84.)

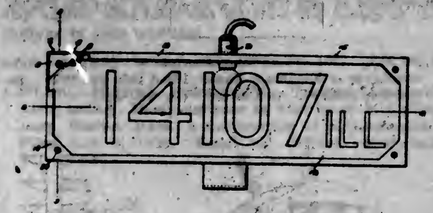
1. A device of the class described comprising a rectangular casing having a hinged bottom, roller supporting heads having end spindles journaled in the sides of the casing, a plurality of equally spaced spring rollers rotatably mounted near the peripheral edge of said head within said casing, a ratchet on one of said heads and spring controlled locking means attached to the casing coöperating with said ratchet to prevent rotation of the heads when moved to a selective position.



1,397,328. PORTABLE VENEER-RACK. ROBERT T. QUICK, Pamplico, S. C. Filed May 8, 1920. Serial No. 379,868. 4 Claims. (Cl. 94—26.)

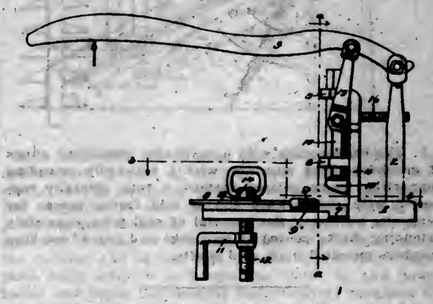
1. In a rack of the class described a rectangular frame, the frame having notched members for securely mounting the rack on a truck, means extending longitudinally of the top of the frame for holding a series of pins, and a plurality of series of pins, the pins being arranged in transversely slanted relation, each of the pins having a slot shaped to readily receive the edges of stripe of veneer, and

each of the pins having means for reinforcing same against splitting, said means being disposed in proximity to the upper end of the notches, substantially as set forth.



1,397,329. GUTTER-HANGER. MAX RACHLIN, New York, N. Y., assignor to Patented Metalware Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 20, 1920. Serial No. 425,424. 2 Claims. (Cl. 108—29.)

1. A gutter-hanger comprising a strap of metal surrounding transversely the gutter, and a bracket attached to said strap, said strap including a curved gutter embracing portion having a hook-shaped section on one of its ends fitting over the bead of the gutter, the opposite end of said curved portion being bent back upon itself and extending downwardly into the gutter, the bight of said bent portion being provided with a transverse slot, said hook-shaped section extending into the gutter and merging into a horizontally extending transverse bar having a flat upwardly projecting end located between the inner face of the gutter and the downwardly extending portion of said bend, said flat portion projecting through said slot and being then bent outward substantially horizontally against said bight, said bracket being attached centrally to said bar.



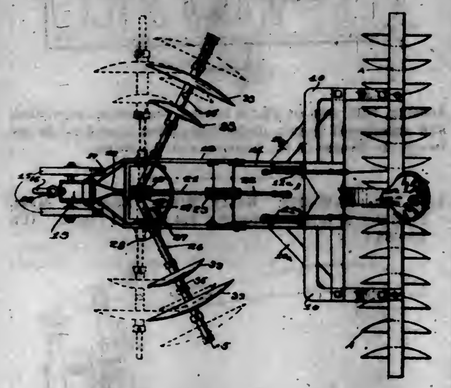
1,397,330. TAIL-LIGHT AND LICENSE-TAG HOLDER. CHRISTOPHER RINGHAM and WALTER H. KLINGBERG, Albert Lea, Minn. Filed July 16, 1921. Serial No. 485,266. 1 Claim. (Cl. 40—132.)

A device of the class described including a housing having a light chamber with an opening in one wall thereof, a laterally and inwardly extending flange surrounding said opening and having attaching plates arranged at intervals around said opening with threaded apertures in said plates, a closure frame adapted to fit over said opening and having an inturned laterally extending flange arranged parallel with the flange of the housing when in operative position, coöperating attaching plates carried by said frame positioned to register with the plates on said

housing, both sets of plates having registering apertures, and superposed license protecting plates shaped to fit between the flanges of the housing and the frame.

1,397,331. SAW-SET. KALLE RINNE, Norwood, Mass. Filed Oct. 2, 1920. Serial No. 414,267. 1 Claim. (Cl. 76—68.)

A saw setting device comprising a base plate having a pair of spaced, vertical standards, a lever pivoted to one of said standards, a setting plunger having a flat projecting end and links connecting said plunger to the lever, guides on the second standard for said plunger, an apertured bottom plate disposed on the base plate beneath the plunger, a horizontally adjustable saw retaining plate superposed on the apertured plate whereby the teeth of a saw may be engaged by the projecting end of the plunger operable through the aperture in the bottom plate and means for clamping said base plate and superposed plates to a support.



1,397,332. HAIR-MARCELING APPARATUS. THOMAS C. RUSSELL, Chicago, Ill. Filed June 22, 1921. Serial No. 479,522. 10 Claims. (Cl. 132—31.)

1. In marceling apparatus, the combination of a clamping structure and a heating structure, said structures being entirely separable, said clamping structure comprising upper and lower jaw members hinged together at one end, said lower jaw member being in the form of a plate, the upper jaw member comprising two side arms having teeth at their lower edges for coöperating with the lower jaw arm to form hair inclosing passageways when said

jaw members are brought together, said heating structure forming a heating end adapted to be applied on said lower jaw member and between said comb sides to heat the hair distributed on said lower jaw member by said comb teeth.

1,397,333. CULTIVATOR. DANIEL W. SCHMITT, Reno county, near Kingman, Kans. Filed Dec. 24, 1920. Serial No. 432,997. 10 Claims. (Cl. 55—83.)

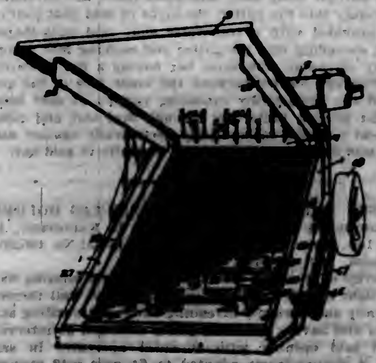
1. The combination with a cultivator embodying gangs of ground-working members, with a forwardly extending supporting frame secured thereto, a yoke pivotally connected with the forward end of said frame, means for vertically adjusting the free end of said yoke, oppositely extending shafts carried by said yoke and ground working members mounted upon said shafts.

1,397,334. PISTON-RING. ADOLPH G. SCHMELZBERGER, St. Louis, Mo. Filed Dec. 8, 1920. Serial No. 429,096. 3 Claims. (Cl. 74—109.)

1. A piston ring having its minimum radial thickness at points substantially 45 degrees on each side of the joint and having its top and bottom faces unreduced at said points, to afford flexibility at said points while maintaining radial width of top and bottom faces for side bearing in the grooves of a piston.

1,397,335. MOTOR-CONTROL SYSTEM. LEIGH J. STEPHENSON, Chicago, Ill., assignor to William T. Fenton, Benjamin V. Becker, Lynn A. Williams, George B. Burrage, and Leigh J. Stephenson, trustees, Chicago, Ill. Filed Nov. 26, 1919. Serial No. 341,264. 22 Claims. (Cl. 172—179.)

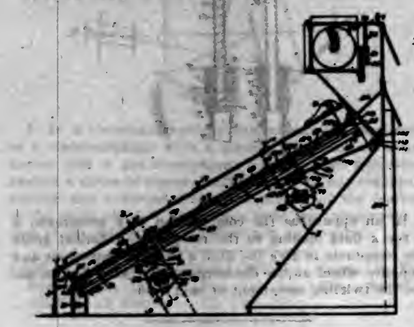
4. The combination with a vehicle provided with a pair of motors of a plurality of electrically operated switches for connecting said motors in different relations, a main controller for controlling the operation of said switches, a motor controller for facilitating the operation of said main controller, and circuits controlled by the current flowing



through said motors and the voltage of one of said motors for controlling the subsequent operation of said main controller.

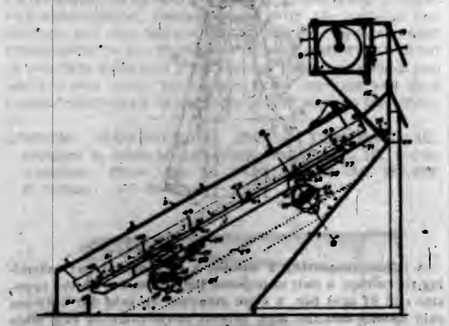
1,397,336. SEPARATOR. THOMAS L. STURTEVANT, Quincy, and THOMAS J. STURTEVANT, Wellesley, Mass., and LAURENCE H. STURTEVANT, Temple, N. H., assignors to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed July 29, 1919. Serial No. 314,650. 7 Claims. (Cl. 83—36.)

1. A separator for grading materials, comprising, in combination, a casing, a screen mounted therein, a hopper, a feed plate to guide materials from said hopper to said screen, and means to vibrate said screen with up and down and side motions into intermittent contact with said plate to produce vibrations of said screen and distributing vibrations of said plate.



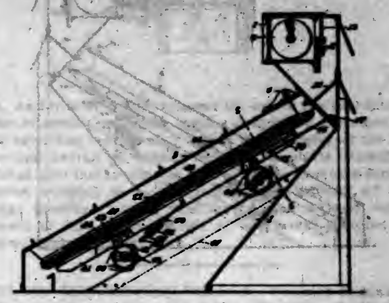
1,397,337. SEPARATOR. THOMAS L. STURTEVANT, Quincy, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 5, 1920. Serial No. 349,497. 37 Claims. (Cl. 83—36.)

1. A separator for grading materials, comprising, in combination, a frame, screen clothing carried by the frame,



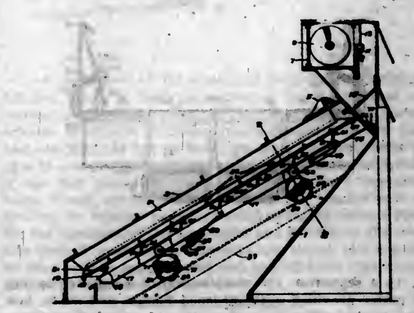
a flexible reticulated fabric supported by the frame in spaced relation by the herein clothing for permitting separate vibrations of the screen clothing and reticulated fabric, and vibrating mechanism for imparting to the frame vigorous movements which cause the screen clothing and reticulated fabric to be vigorously vibrated with an amplitude to cause the vibrations of the two to be transmitted from one to the other for keeping the meshes of the screen clothing in open and cleared condition.

1,397,338. SCREEN-SEPARATOR. THOMAS J. STURTEVANT, Wellesley, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed June 12, 1920. Serial No. 388,461. 17 Claims. (Cl. 83—36.)



1. A separator for grading materials, comprising, in combination, a casing, a frame therein, screen clothing connected to said frame, channel bars extending transversely of said frame and having depending flanges, rollers secured to the channel bars in the space between the depending flanges for protection from the falling materials, cams supporting said rollers, and shafts for rotating said cams, thereby to vibrate said frame and clothing.

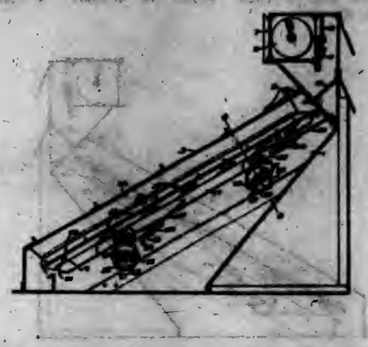
1,397,339. SCREEN-SEPARATOR. THOMAS L. STURTEVANT, Quincy, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed July 22, 1920. Serial No. 396,245. 12 Claims. (Cl. 83—56.)



1. A separator for grading materials, comprising, in combination, a frame including channels and transverse members connected to said channels, a table of sheet material mounted on said frame having a multiplicity of perforations therein with strengthening flanges depending from said perforations, side plates secured to said table, a screen secured to said side plates and having clothing resting on said apertured table, and means operating through said frame and table for causing the clothing to slap against said table and maintain the meshes of the clothing in open condition.

1,397,340. SCREEN-SEPARATOR. THOMAS L. STURTEVANT, Quincy, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 6, 1920. Serial No. 401,601. 8 Claims. (Cl. 83—56.)

1. A separator for grading materials, comprising, in combination, a pair of shafts, cams mounted on said shafts having peripheral projections, a frame resting on and supported by said cams, screen clothing having opposed margins connected to said frame and free end margins, and a series of vibratory members extending along the clothing and having ends secured to said frame, said cams being adapted to jounce the frame up and down bodily and cause the clothing and vibratory members to slap vigorously up and down against each other with a pronounced amplitude of movement.



1,397,341. SCREEN-SEPARATOR. THOMAS L. STURTEVANT, Quincy, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 27, 1920. Serial No. 406,380. 19 Claims. (Cl. 83—56.)

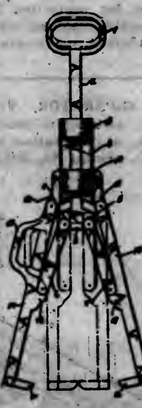
1. A screen for separators, comprising, in combination, a frame having upstanding side plates provided with inturned flanges and seats, jaw plates having edges in said seats and gripping portions coöperating with said inturned flanges, screen clothing having margins between said flanges and gripping portions, and means to force the jaw

plates toward the side plates to grip the clothing, said cents forming abutments to hold the jaw plates from displacement laterally as they are forced into gripping engagement with the clothing.

1,397,842. SCREEN-SEPARATOR. THOMAS LINCOLN STURTEVANT, Quincy, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 3, 1920. Serial No. 406,068. 14 Claims. (Cl. 83—56.)

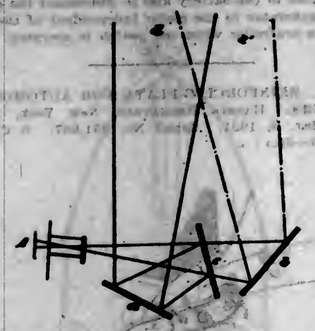
1. In a separator for grading materials, the combination of a supporting frame having side plates, holding plates connected to said side plates, and adjustable relative to the side plates, screen clothing having side bars located between said side plates and holding plates and engaging the latter at points between said plates, and bolts for adjusting the holding plates toward the side plates in a direction in which the plane of the clothing extends to exert a stretching force upon the clothing and to hold the clothing properly positioned.

1,397,843. SCREEN-SEPARATOR. THOMAS L. STURTEVANT, Quincy, Mass., assignor to Sturtevant Mill Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 1, 1920. Serial No. 420,915. 10 Claims. (Cl. 83—56.)



1. In a separator, the combination of a support having side plates provided with inturned flanges and seats, jaw plates having edges in said seats and gripping portions, screen clothing having margins between said inturned flanges and gripping portions, bolts having portions projecting rigidly from the side plates and inclined with respect to said flanges automatically to exert a pulling force upon the jaw plates in an inclined direction toward said flanges to press the gripping portions of the plates against the flanges when the nuts of the bolts are tightened.

1,397,844. SOAP-DISPENSING APPARATUS. ROBERT SWINBURN, New York, N. Y. Filed Jan. 14, 1918. Serial No. 211,744. 4 Claims. (Cl. 137—70.)

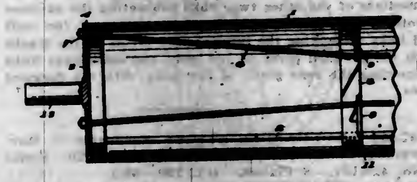


4. In an apparatus the combination of a receptacle, a pipe for a fluid leading to the receptacle, a helical guide in the receptacle to give the fluid a twirling movement and a propeller wheel at the discharge end of said pipe to enhance the twirling movement of said fluid.

1,397,845. UTENSIL IMPLEMENT. FRANK SEMYD, Waltersburg, Pa. Filed Aug. 6, 1920. Serial No. 401,606. 1 Claim. (Cl. 294—115.)

A lifter comprising a handle, a rectangular bar extending therefrom, a pair of opposed lugs formed with the opposite end of said bar, a slide mounted on said bar between said handle and the lugs, lateral projections on said slide in register with said lugs, arms pivoted to said projections, clamp members at the free ends of said arms, projections on the adjacent sides of said arms, links pivoted at their respective ends to said lugs and the arm projections and a handle grip formed with one of said arms whereby they may be actuated.

1,397,846. CINEMATOGRAPHIC ARRANGEMENT. EUGEN WOLFF, Temmelhof, near Berlin, Germany. Filed June 26, 1920. Serial No. 392,668. 2 Claims. (Cl. 88—24.)

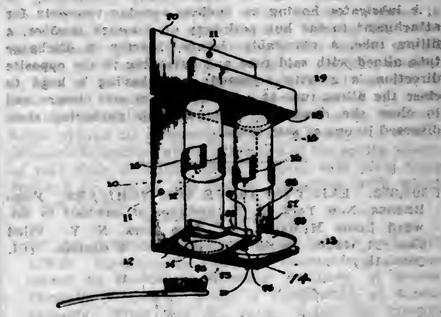


1. In a cinematographic arrangement, the combination of a cinematograph with a screen, consisting of a transparent and a non-transparent portion, and reflectors to project a series of representations onto the non-transparent portion and a second series, the reverse of the former as to the right and left hand sides, onto the transparent portion of the said screen, substantially as set forth.

1,397,847. THRESHING-MACHINE. FRANK J. WOOD, Des Moines, Iowa. Filed Oct. 24, 1919. Serial No. 333,081. 2 Claims. (Cl. 130—26.)

1. In a threshing machine of the class having a cylinder and concave which in operation throw the straw and kernels upwardly and rearwardly, a device for separating the kernels from the straw while they are in the air and during said upward and rearward movement, said device comprising a frame arranged substantially tangential to the delivery end of the concave, and a series of deflector plates supported in said frame, said plates being in direct and uninterrupted communication with the cylinder and concave, and also being widely spaced apart and arranged transversely in the frame and at such angles from front to rear that kernels of grain thrown from the cylinder and concave will strike upon their under surfaces and then rebound rearwardly through the spaces between the plates.

1,397,848. IRONING-ROLL. EDGAR L. YORK, Peoria, Ill., assignor to Oasis Manufacturing Co., Peoria, Ill., a Corporation. Filed May 19, 1920. Serial No. 382,576. 6 Claims. (Cl. 68—9.)

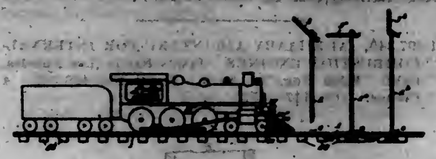


1. In an ironing roll the combination of a cylinder, a ring therein, an end member in each end of the cylinder and truss rods passing through each member relatively near the periphery thereof and having contact with the ring relatively near the center thereof.

1,397,849. AUXILIARY AIR-INTAKE FOR INTERNAL-COMBUSTION ENGINES. JAMES BACON, Los Angeles, Calif. Filed Aug. 30, 1920. Serial No. 406,767. 4 Claims. (Cl. 137—152.)

1. An air inlet device, adapted for use in the fuel intake of an internal combustion engine, comprising a perforated tube extending transversely across the diameter of the intake and having an outside air inlet, a pintle extending through said intake parallel with said tube having a screen thereon adapted to be actuated by the velocity of the charge passing through said intake, and a lever valve secured to said pintle outside of the intake adapted to control said air inlet.

1,397,850. TOOTHBRUSH-HOLDER. CHARLIE BRACKETT BAKER, Amory, Miss. Filed Mar. 16, 1921. Serial No. 452,701. 2 Claims. (Cl. 248—63.)

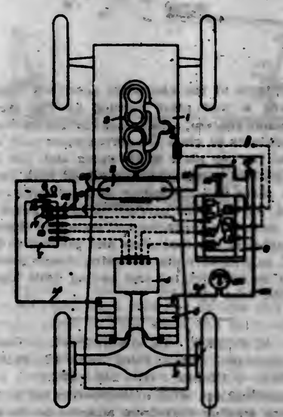


1. A receptacle of the character described comprising a bracket plate, a foot plate carried by the bracket and having openings therein, a top plate carried by the bracket, tubular containers of glass supported upon said foot plate and abutting the top plate at its upper end, the lower end of said receptacles being open and alined with the opening of the foot plate and the upper ends of said receptacles being closed, spring clips carried by the bracket and embracing the tubular receptacles and swinging closure plates for the openings of the foot plate and pivoted to the under side thereof, said closure plates having thumb pieces whereby they may be manipulated and having limit lugs engageable with the foot plate.

1,397,851. ELECTRIC TRAIN-SIGNAL. GARRETT J. BARRY, Sandusky, Ohio. Filed June 12, 1919. Serial No. 303,681. 9 Claims. (Cl. 246—192.)

4. The combination, with a locomotive, of a receptacle having a pipe leading therefrom adapted to be connected with the air brake line, a plunger having a port therein and adapted by its movement in one direction to relieve the

pressure within said receptacle and direct the discharge against the operator, means for automatically locking the

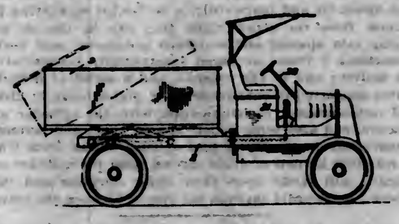


said plunger in its pressure-relieving position, a block signal, and means operative by the setting of said signal to move said plunger to its pressure-relieving position.

1,397,352. AXLE-LUBRICATOR. THOMAS G. BASS, Spur, Tex. Filed Aug. 22, 1917. Serial No. 187,675. 1 Claim. (Cl. 64—26.)

A lubricator having an endless annular reservoir for attachment to the hub periphery of a rotary member, a filling tube, a removable closure therefor, a discharge tube alined with said tube and extending in the opposite direction, a gravity actuated valve having a head to close the filling tube at a distance from said closure and to close the discharge tube; and an anchoring stem disposed in one of said tubes.

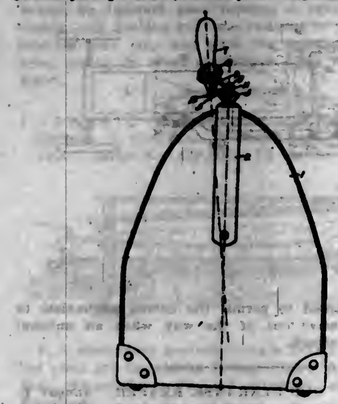
1,397,353. ELECTRIC DRIVE FOR VEHICLES. FRED BERGER, New York, N. Y., assignor of one-half to Edward Louis McManus, Jr., New York, N. Y. Filed Dec. 21, 1920. Serial No. 432,296. 6 Claims. (Cl. 290—10.)



1. A propelling system for vehicles, which comprises a generator, a motor connected to the vehicle for driving the same, a battery and circuits adapted to be established therebetween, a controller operable to selectively establish said circuits, and a switch having a neutral position and adapted when actuated to establish a circuit from the generator to the battery and to disconnect the circuit from the generator to the motor independent of the position of the controller when the switch is operated.

1,397,354. REINFORCING-PLATE FOR AUTOMOBILE-BUMPERS. HARRIS DORENSTEIN, New York, N. Y. Filed Mar. 9, 1921. Serial No. 451,037. 5 Claims. (Cl. 293—55.)

2. The combination with an automobile frame member and a bumper plate having an end portion adapted to lie along and be connected to the frame member, of a channel reinforcing plate adapted to be disposed along the outer face of the end portion of said bumper plate, said channel plate having a curvature corresponding to the curvature of the end of the bumper plate, and means for clamping the bumper plate between the reinforcing plate and the frame member.

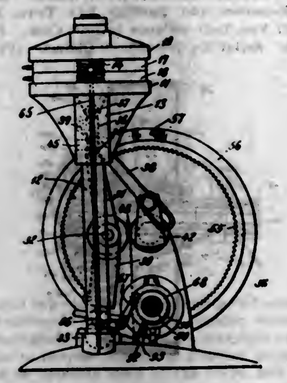


1,397,355. DUMPING-WAGON. DANIEL BIRSTLER, Westchester, N. Y. Filed Dec. 30, 1918. Serial No. 268,922. 3 Claims. (Cl. 298—11.)

1. In a wagon of the class described, a chassis with tracks, a body with three pivots, two sets of movable pivots in said tracks and one set of movable pivots intermediate of the other two, links connecting the extreme pivots of the tracks with the center pivot of the body and links connecting the intermediate pivots of the tracks with the forward pivot of the body and additional links connecting the rear pivot of the body with the forward links.

1,397,356. BAG-HANDLE HINGE. FREDERICK C. BOTWRIGHT, Philadelphia, Pa. Filed Nov. 24, 1920. Serial No. 426,157. 3 Claims. (Cl. 190—57.)

8. In combination with a handle, and a bag to be supported therefrom, of adjustable means connecting the handle and the bag adapted to be adjusted rigidly in a plurality of positions, whereby the bag may be supported



in an offset position on either side of the line of support from the handle.

1,397,357. CUTTING-TOOL. WILHELM B. BRONANDER, Montclair, N. J. Filed Apr. 5, 1919. Serial No. 287,761. 1 Claim. (Cl. 29—96.)

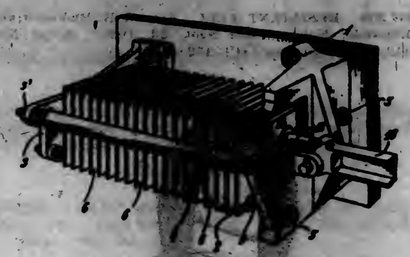
A cutting tool comprising a bit of triangular cross-section, a holder therefor constructed with a V-groove, adapted to receive the bit, the surfaces of said groove diverging at a less angle than do the surfaces of the bit, a support for the lower end of the bit, and a clamp for forcing the bit into said groove.

1,397,358. DIE-PRESS. WILHELM B. BRONANDER, Montclair, N. J. Filed Mar. 4, 1920. Serial No. 363,130. 49 Claims. (Cl. 18—5.3.)

1. The combination with a press having a movable press element, of a double-jointed toggle supported at

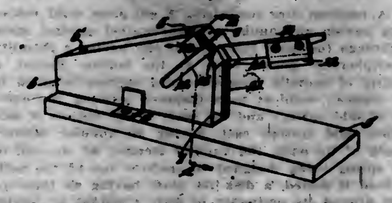
one end and connected with the movable press element at its opposite end, means for operating one of the joints of said toggle with a relatively quick movement and means for operating the other joint of the toggle with a slower movement.

1,397,359. RESILIENT TIRE. ELIJAH B. BROOKSHIRE, Eldorado, Kans. Filed Sept. 23, 1920. Serial No. 412,113. 2 Claims. (Cl. 152—6.)



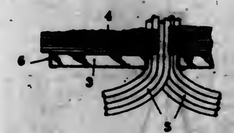
1. A resilient tire comprising a one-piece solid rubber casing having an annular straight walled channel opening through the inner face thereof and having a plurality of peripherally spaced seats at the bottom thereof, a plurality of radially disposed coiled springs mounted in said channel, resilient balls disposed between the outer ends of said springs and the seats at the bottom of said channel, said springs each having an annular member at each of its ends, the annular member at one end of each spring being designed to encircle one of the balls and hold it seated, a disk-like plate having an inturned flange around its perimeter to form a pocket to receive the annular member at the other end of the spring whereby said plate is carried by said spring said plate being designed to rest on the rim in connection with which the tire is used.

1,397,360. METHOD OF MAKING HANDLES AND THE LIKE. HJALMAR G. CARLSON, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 22, 1919. Serial No. 339,990. 9 Claims. (Cl. 76—101.)



1. A method of producing an article from sheet metal which comprises drawing out a flat blank of sheet metal to a general cylindrical shape having a convex closed end and an open end, thickening the walls of the metal at or near the closed end, and then reducing the diameter of the blank from the thickened portion to the open end by a drawing operation.

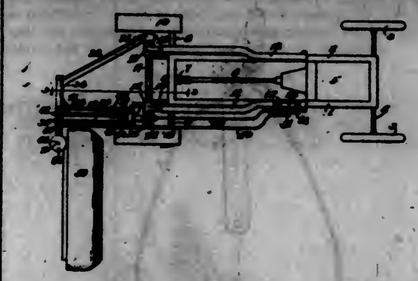
1,397,361. PRESSURE VARIABLE RESISTANCE. ALEXANDER CHURCHWARD, New York, N. Y., assignor to Wilson Welder & Metals Company, Inc., a Corporation of New York. Filed May 7, 1920. Serial No. 379,431. 20 Claims. (Cl. 219—76.)



2. A resistance element for electric pile rheostats comprising a metallic radiating plate, said radiating plate having a block of resistance material extending through a perforation therein and readily detachable therefrom.

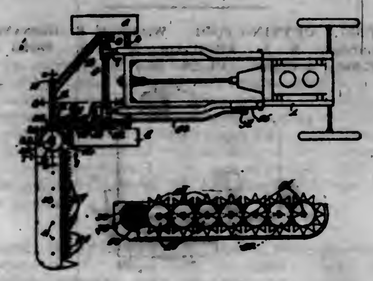
1,397,362. LASHING-CUTTER. PETER J. CLARKE and MICHAEL J. CLARKE, Chicago, Ill. Filed Aug. 28, 1919. Serial No. 320,474. 4 Claims. (Cl. 30—14.)

4. In combination with a lashing cutter having a pivotally mounted spring-actuated lever; a cutting element detachably mounted on the forward end of said lever and extending laterally therefrom; and a pivotally mounted lever having its forward end bent at right angles adapted to engage said spring-actuated lever retaining the same in elevated position, substantially as described.



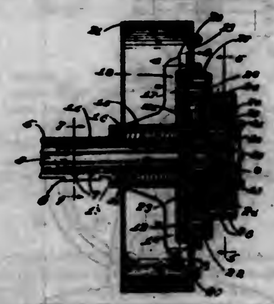
1,397,363. INSULATING END PLATE. LOVELL B. COLE, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 4, 1920. Serial No. 428,409. 4 Claims. (Cl. 171—206.)

1. An insulating plate adapted to be positioned at the end of a slotted core structure of electrical machinery and comprising a sheet of insulating material having teeth and winding slots and a sheet of reinforcing material provided with teeth facing and connected with the teeth of the insulating material.



1,397,364. CHAIN-CUTTER FOR REAPERS. ALBERT E. COOK, Evanston, Ill. Filed Dec. 12, 1917. Serial No. 206,732. 10 Claims. (Cl. 56—25.)

10. The combination with a reaper frame of a vertical shaft supported thereon, a cutter mechanism adjustably supported on said vertical shaft, and a spring controlled mechanism supported on said shaft and on said cutter



mechanism adapted to permit the cutter mechanism to automatically move out of the way when an unusual obstruction is struck.

1,397,365. CIRCULAR-DISK REAPER. ALBERT E. COOK, Evanston, Ill. Filed Dec. 12, 1917. Serial No. 206,733. 3 Claims. (Cl. 56—25.)

1. In a device of the class described, the combination with a vehicle, of a cutting unit adjustably attached to the vehicle, drive wheels forming part of the cutting unit and supporting the rear end of the vehicle, a plurality of cutting disks, gears associated therewith, and means connecting said drive wheels with said gears for rotatably driving said cutting disks in either direction.

1,397,366. SPEED-REDUCTION WHEEL. ALBERT E. COOK, Evanston, and THOMAS VAN TUYL, Kankakee, Ill.; said Van Tuyl assignor to said Cook. Filed June 14, 1918. Serial No. 240,096. 9 Claims. (Cl. 74—34.)

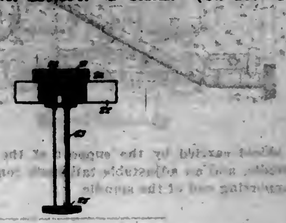
1. A tractor wheel comprising a hub, clutch means formed thereon, a drum casing rotatably mounted upon

said hub, a rim secured thereto, an internal gear ring in said drum casing, held against rotation by said clutch means, an internal gear forming a part of said drum casing, and floating gear mechanisms in mesh with said internal gear ring and with the internal gear of said drum casing to effect a changed drive for said tractor wheel.

1,397,367. CONTINUOUS HEATING-FURNACE. THOMAS J. COSTELLO, Warren, Ohio. Filed Oct. 30, 1920. Serial No. 420,594. 12 Claims. (Cl. 263—6.)

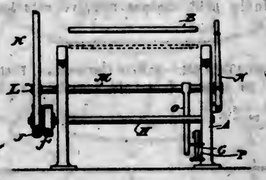
1. A continuous heating furnace having a skid or bearing piece for the blanks formed with a downward curvature intermediate its end portions, substantially as described.

1,397,368. ROPE CONVEYER. ALPHONSE DEBUNCE, Paris, France, assignor to Societe Anonyme Ateliers Otis-Pifre, Paris, France. Filed May 15, 1920. Serial No. 381,722. 12 Claims. (Cl. 104—112.)



6. In a wire rope system, supports, articulations on these supports, levers rocking on these articulations, lengths of cable connecting these levers, a carriage running on these lengths of cable, a second cable, levers carrying this second cable, and rocking on ball joints carried by the supports.

1,397,369. HANDBAG. MORRIS DIAMOND, Caldwell, N. J. Filed Apr. 27, 1921. Serial No. 464,813. 3 Claims. (Cl. 150—34.)

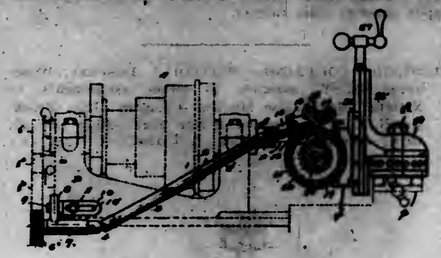


3. A hand bag comprising a plurality of frames hingedly secured together, a body-forming member secured to said frames throughout a portion of its marginal edge in such manner as to provide oppositely disposed looped portions arranged on opposite sides of the frame and a separate lining member secured to said frames throughout their marginal edge, and secured to the body-forming member throughout the marginal edge of the oppositely disposed looped portions whereby a plurality of compartments are formed to which access may be had through the frames and a compartment formed in each of the looped portions upon opposite sides thereof.

1,397,370. COUPLING. WILLIAM J. DRUCKER, Woodhaven, N. Y., assignor, by mesne assignments, to National Mayonnaise Machine Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 12, 1918. Serial No. 257,856. 1 Claim. (Cl. 287—1.)

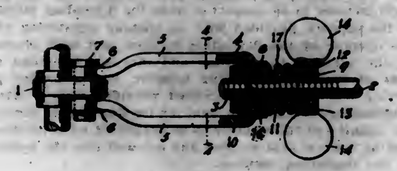
The combination of a stationary support having a depending member provided with a horizontal threaded aperture and with pins propecting from one face thereof, a rigid member to be supported from the depending member of the support, provided with an opening registering with the opening of the depending member and with recesses at the sides of the opening and into which extend the pins of the said depending member, and a headed pin having one end screw threaded provided with a flange intermediate of its length, said pin passing loosely through the opening of the member to be supported with its flange resting against said member and screwed into the opening of the depending member.

1,397,371. SAFETY ATTACHMENT. EUNICE C. ETCHISON, Fairfax, Ala. Filed Oct. 8, 1920. Serial No. 415,530. 2 Claims. (Cl. 192—116.)



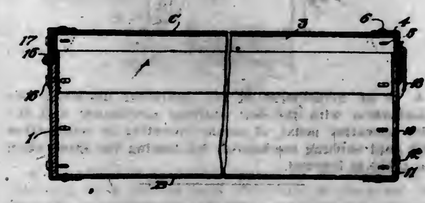
1. In an attachment of the character described, the combination with the belt shifting mechanism and the table operating pedal, of means operating in conjunction with said shifting mechanism for locking the same when the table is lowered.

1,397,372. GEAR-CUTTING MACHINE. ROBERT E. GARRETT, Nashville, Tenn. Filed May 10, 1917. Serial No. 167,681. 2 Claims. (Cl. 90—1.)



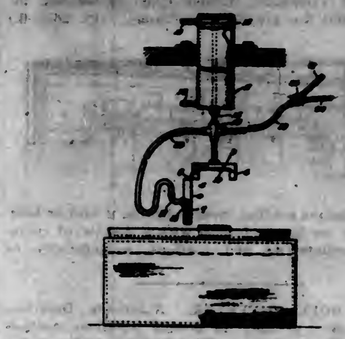
1. In a machine of the class described, the combination with a cutter operating shaft, a cutter on said shaft and a work operating shaft associated with the cutter shaft, of an interposed obliquely arranged jointed shaft, said shaft being telescopic and universally jointed, an extension to the upper end of said obliquely arranged shaft, a worm screw fixed on said extension, a bearing sleeve for

said extension, said bearing above forming a journal bearing for said extension and a housing for the worm sector,



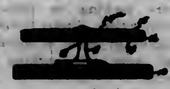
a shield carried by the support of the bearing sleeve, a spindle, and an adjustable tail-stock confronting the work supporting end of the spindle.

1,397,373. AUTOMOBILE-BRAKE ADJUSTER. GEORGE A. GEMMER, Newark, N. J. Filed Nov. 24, 1920. Serial No. 426,141. 14 Claims. (Cl. 85—36.5.)



1. In mechanism of the character described, the combination of a member adapted to be connected to a mechanical element, a second member having a swivel connection with said first-mentioned member and adapted to be connected to another mechanical element, said members being yieldingly held against relative rotation in either direction.

1,397,374. SUITCASE. SIMON GROSSMAN, Pittsburgh, Pa. Filed Apr. 29, 1920. Serial No. 377,596. 3 Claims. (Cl. 190—54.)

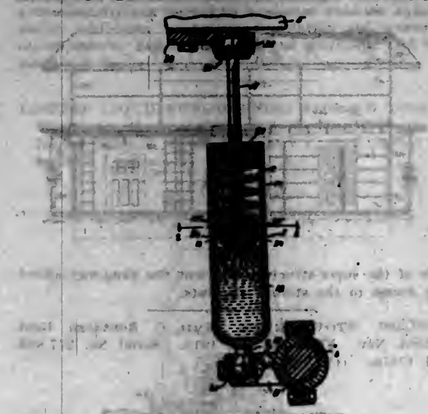


3. In a suit case, the combination with the cover and body of the case and the metal binders for the meeting edges of said cover and body, of metal corner pieces fitting the corners of the cover fastenings securing the corner pieces and metal binders, corner braces fitting the corners of the body, fastenings securing said corner braces and metal binders, corner pieces fitting the corners of said body, and fastenings passing through the corner pieces and corner braces, thus providing separate corner pieces for the cover and body and intermediate braces for the corner of the body.

1,397,375. MOLDING DEVICE. BERTRAND B. GRUNWALD, Seattle, Wash. Filed Apr. 20, 1920. Serial No. 375,277. 6 Claims. (Cl. 92—57.)

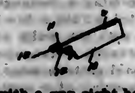
1. A molding apparatus including a material vat, a mold, means for raising and lowering the mold with respect to the material in the vat, and means for evenly filling the mold when beneath the material, and means on the vat for trimming the material at the ends of the mold in the withdrawing movement of the mold.

1,397,376. BUTTON-FASTENER. NATHAN GURWITSCH, Weidling, near Klosterneuburg, Austria. Filed June 1, 1921. Serial No. 476,600. 3 Claims. (Cl. 24—110.)



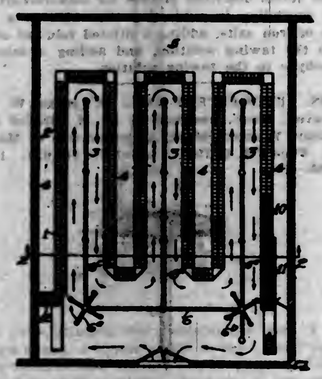
1. A fastener adapted to engage the shank of a button head, said fastener comprising front and rear plates, one of which is formed with a longitudinal slot between the plates and with a pair of notches at a side of said slot, and a spring bent into approximately U-shape, one arm of the spring having guided movement in said slot to be moved across the center, the front plate having a hole intersecting said slot for the protrusion of the shank of the head to bring the eye of the shank into line with said spring arm, the other arm of said spring having an arched portion terminating in a laterally directed dog, said spring being accessible at the peripheries of the plates to be grasped and being slidable to engage or disengage the shank of a button head, and to engage its dog with either of said notches.

1,397,377. SHOCK-ABSORBER. GEORGE E. HARPHAM, Los Angeles, Calif. Filed Sept. 1, 1916. Serial No. 117,088. Renewed Apr. 2, 1921. Serial No. 456,067. 2 Claims. (Cl. 267—8.)



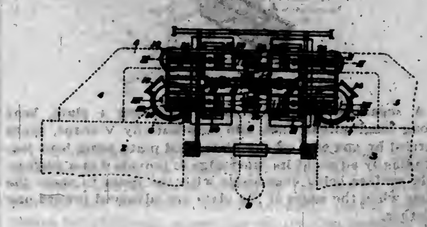
1. A shock absorber comprising a cylinder; a floating piston having a working fit in the upper portion of said cylinder and having a central aperture therethrough; a check valve piston below said floating piston having a loose fit in the lower portion of said cylinder; check valves in said last piston; a stem secured thereto and extending upwardly through the floating piston to a point above the

cylinder; a closure for the upper end of said cylinder; a rebound spring between said closure and said floating piston;



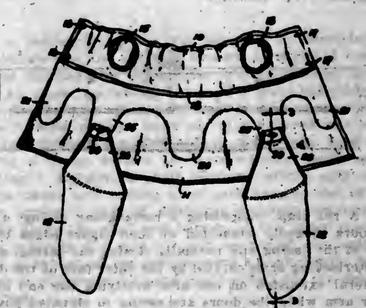
means to secure said cylinder and stem of said check valve piston to the appropriate parts of the vehicle, and liquid in said cylinder below the floating piston.

1,397,378. GUN-SIGHT. THOMAS E. JACKSON, Rogersville, Ala. Filed Dec. 27, 1919. Serial No. 347,700. 1 Claim. (Cl. 33—47.)



In combination with a gun sight having a sighting notch a gun sight attachment comprising a body bent upon itself to form diverging legs adapted to frictionally engage said sight and also to define a sight opening between said legs and sight, an extension formed on one end of said body and of substantially V-shape in cross section, said extension having its edges bent upwardly and outwardly to define feet adapted to rest against the walls of the notch of the gun sight.

1,397,379. SELF-SERVING STORE. FRANK E. JONES, San Diego, Calif., assignor to David B. Red, Hattiesburg, Miss. Filed Sept. 22, 1919. Serial No. 325,514. 1 Claim. (Cl. 211—8.)



1. In a self-serve store apparatus, the combination with an inclosure of a display cabinet located within said inclosure and made up of portions arranged in a general zigzag form so as to produce a number of oppositely disposed aisles, these aisles being parallel to each other, and opening in opposite directions.

1,397,380. VALVE MECHANISM FOR REVERSING REGENERATIVE FURNACES. LUTHER L. KNOX, Bellevue, Pa. Filed Apr. 3, 1918. Serial No. 226,402. 3 Claims. (Cl. 277—6.)

1. Furnace reversing mechanism, comprising a pair of valves for controlling the flow through the air ports, a second pair of valves for controlling the flow through the gas ports, a pair of air inlet valves, and a pair of gas inlet valves, a single actuating shaft for all the valves, means for turning said shaft in both directions, a single separate actuating cable for each of said valves, said cables being all connected to said shaft at one end and to the respective valves at the opposite ends, all of said cables being connected directly to their respective valves, some rigidly and others of said cables being connected to their valves through adjustable telescopic members, whereby some of the valves will be actuated simultaneously and others thereof non-simultaneously, substantially as described.

1,397,381. INFANT'S GARMENT. SALLIE W. LAING, Shreveport, La. Filed Oct. 8, 1919. Serial No. 329,295. Renewed Oct. 6, 1921. Serial No. 505,966. 1 Claim. (Cl. 2—98.)

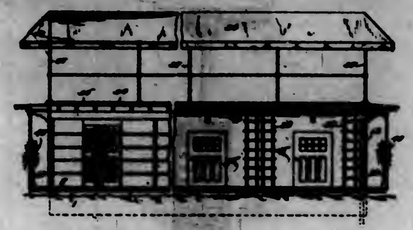
As an article of manufacture, an infant's garment, comprising an infant's waist adapted to be opened and closed at the back, the said waist being provided at the front and back with diaper tabs and at the sides with stocking supporting tabs, the tabs depending from the lower edge of the waist, and an abdominal binder attached at its upper end to the lower portion of the waist above the said tabs, the said binder extending beyond the lower edges of the said tabs and the latter overlying the binder on the outside thereof, the side edges of the binder being in alinement with the side edges of the waist, the said side edges of the waist and binder diverging in a downward direction.

1,397,382. ATTACHING MEANS FOR SEPARABLE-FASTENER ELEMENTS. Abraham Levine, Brooklyn, and Louis Opperman, New York, N. Y., assignors to Presto Metal Stamping Corporation, New York, N. Y., a Corporation of New York. Filed June 7, 1921. Serial No. 475,580. 1 Claim. (Cl. 24—227.)

A separable fastener element including a plate, bent along longitudinal lines into substantially V-shape, spurs carried by one edge of the plate, said plate being bent longitudinally adjacent its other edge to provide a cam surface, said surface being engageable with the spurs to upset the same when the edges of the plate are advanced toward one another.

1,397,383. PETROL-TANK AND THE LIKE. Allan Macbeth, Paris, France, assignor to Stè The Dunlop Rubber Co. Limited, Paris, France. Filed Aug. 22, 1918. Serial No. 251,004. 7 Claims. (Cl. 154—46.)

2. A reservoir for liquid fuel comprising a layer of non-vulcanised rubber and two layers of vulcanised rubber, said layer of non-vulcanised rubber being contained between the vulcanised layers of rubber.



1,397,384. RAT-TRAP. Tsunetaro Nagayama, Hilo, Hawaii. Filed Aug. 12, 1920. Serial No. 402,947. 2 Claims. (Cl. 43—61.)

1. A rat trap, comprising a rectangular casing, a pair of doors hingedly connected at their upper edges to the ends of the casing and normally closing the casing, a pair of interlocking arms carried by the outer face of the doors, a lateral extension on one arm overlying the end of the other arm when the doors are swung to elevated position and extending beyond the edge of the casing, a flexible device depending from the projecting end of the extension, a trip plate carried by the flexible device, means frictionally engageable with the trip plate for holding the doors in elevated position, and means whereby the weight of an animal in the trap releases said last mentioned means.

1,397,385. FLOATING STORAGE-PORT. George K. Reiser, Harrisburg, Pa. Filed Jan. 21, 1920. Serial No. 353,060. 4 Claims. (Cl. 114—0.5.)

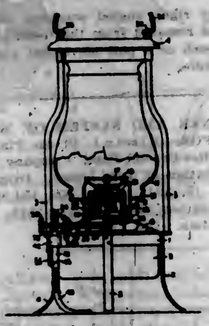
1. A floating storage port comprising a floatable substructure, a super-structure thereon, inset from a side edge of the substructure to provide a gang-way, storage elements extending from one side of the superstructure to the other and arranged in parallel relation, and ports in the

side of the super-structure adjacent the gang-way affording access to the storage elements.

1,397,386. STOVE-GRATE. Emil G. Rosseler, Goldfield, Nev. Filed Feb. 18, 1919. Serial No. 277,803. 1 Claim. (Cl. 126—163.)

A stove grate comprising a rectangular grate member adapted to be supported within a fire box with its outer edges in engagement with the walls of the fire box and having a centrally arranged rectangular opening with recesses at its corners, said grate member having draft openings, a second grate member of a semi-elliptical shape in vertical cross section resting on the first grate member with its walls spaced from the walls of the fire box and disposed over the rectangular opening and provided with a plurality of draft perforations disposed radially of the center line of the base of said second grate member, and lugs formed on the second grate member and received by the recesses to prevent relative movement of the first and second grate members.

1,397,387. PROCESS FOR THE MANUFACTURE OF IRON-LEATHER. Otto Röhm, Darmstadt, Germany. Filed July 9, 1920. Serial No. 395,146. 5 Claims. (Cl. 149—5.)

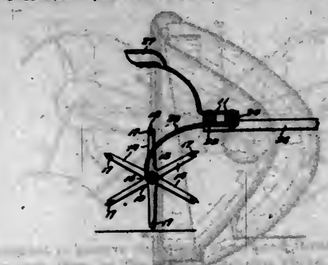


4. The herein described process for manufacturing iron leather, consisting in subjecting the skins to a tawing solution of iron salts, adding a diluted solution of water glass to the tawing solution, and adding a solution of formaldehyde to the tawing solution.

1,397,388. UPHOLSTERY-NAIL. Charles W. Torry, Fairhaven, Mass., assignor to M. M. Rhodes & Sons Company, Taunton, Mass., a Corporation of Massachusetts. Filed Feb. 9, 1921. Serial No. 443,621. 1 Claim. (Cl. 85—22.)

A device of the character stated comprising an annular body portion, a nail driven through the body portion and a sheet of material fitting over the body portion and concealing the head of the nail, said body portion including a downwardly and outwardly presented rounded annular flange, said cover including an inwardly and upwardly curved annular flange rolled over and concealing said first mentioned flange.

1,397,389. LIQUID-FUEL BURNER. Andrew O. Vestine, Watertown, Mass., assignor to L. C. Chase & Company, Boston, Mass., a Firm. Filed May 1, 1919. Serial No. 293,905. 3 Claims. (Cl. 67—78.)



1. In a device of the class described comprising a reservoir, a wick, extinguishing means, including a wick moving means having means normally tending to depress said wick to inoperative position, means for raising said wick to burning position against the action of said depressing means, a spring actuated locking member for said wick moving means located externally of said reservoir and having a curved offset portion extending beneath the central portion of the device and normally held by the weight of said device in locking position, but adapted automatically to release said wick moving means, if the device is tilted beyond the predetermined amount in any direction.

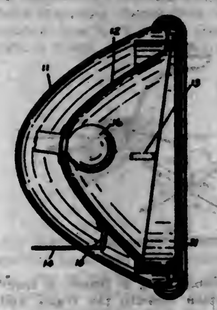
1,397,390. VALVE-GRINDER. Carl H. Viebrock and Henry W. Viebrock, Douglas, Wash. Filed Feb. 2, 1921. Serial No. 441,880. 14 Claims. (Cl. 51—29.)

1. A valve grinding tool comprising a stem, a head including a shank, a square socket in one of said parts, and a cooperating member on the remaining part and of square form in equatorial section to conform to the socket and having its four outer surfaces coinciding with elements of a sphere.

1,397,391. CUTTER AND ROLLER. James V. Adams, Yowell, Tex. Filed Feb. 27, 1920. Serial No. 361,664. 3 Claims. (Cl. 55—61.)

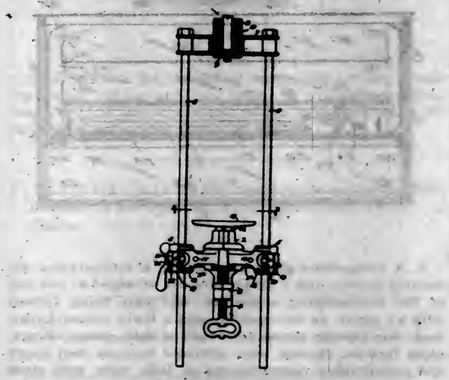
1. A machine comprising a frame, a traction member mounted for rotation beneath the frame and supporting the latter, cutting blades carried by the traction member and resilient outwardly and downwardly curved bearing means for yieldingly connecting the traction members and frame.

1,397,392. COMBINED COOLER DISPLAY-CASE AND REFRIGERATOR. George C. Amend, Des Moines, Iowa. Filed July 25, 1921. Serial No. 487,333. 4 Claims. (Cl. 62—37.)



1. A refrigerator show case having a refrigerating apparatus therein and a blower element arranged at one end of the refrigerating apparatus, said case being formed with an upper, an intermediate and a lower compartment, doors for gaining access into each of said compartments, pipes forming passage ways provided between said upper and intermediate compartments at their ends, said pipes having a flange formed on their adjacent surfaces for forming a support, a shelf received within said upper compartment and resting upon said flanges, one of said pipes having a pair of discharge openings arranged at points above the shelf and bottom of the upper compartment whereby the cold air will be forced out over the shelf or bottom of the compartment a considerable length before it will descend to any great extent for the purposes specified.

1,397,393. AUTOMOBILE-HEADLIGHT APPARATUS. Samuel F. Arbuckle, Indianapolis, Ind., assignor to United States Automotive Corporation, Connersville, Ind., a Corporation of Delaware. Filed Sept. 15, 1919. Serial No. 323,774. 1 Claim. (Cl. 240—41.)



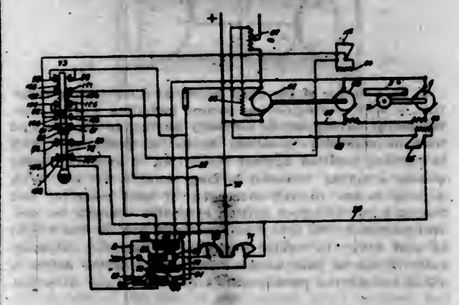
A headlight including a stationary lamp casing, a metal band secured in the front part of said lamp casing and having a pair of ribs at diametrically opposite points, one pair of ribs being below and the other pair above the central horizontal plane through the lamp casing, a reflector having an outwardly turned beaded edge, a hooked-shape hinge plate secured to said metal band on the outer surface near each pair of said ribs and turned

inward and extending into the head of the reflector between said ribs, means secured to the reflector on each

side of said hooked-shape plate for preventing any displacements of the reflector, and means for tilting the reflector substantially as set forth.

1,397,394. BOTTLE-CAPPING MACHINE. HARRY E. ASBURY, Philadelphia, Pa., assignor to The Enterprise Manufacturing Company of Pennsylvania, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1919. Serial No. 315,855. 1 Claim. (Cl. 226—84.)

The combination in a bottle capping machine, of a base; a plunger in the base; a table carried by the plunger; a lever for raising the plunger; two rods; a crosshead carried by the rods; means for clamping a cap onto a bottle, said means being mounted in the cross head; a fixed jaw at each side of the base through which the rods extend, each fixed jaw having a forked projection; a bar extending between the forks; a movable jaw at each side having a hook engaging the bar and also having a perforated projection; a headed bolt extending through the perforations on both movable jaws, said bolt being threaded; and a nut mounted on the threaded portion of the bolt so that, on turning the nut in one direction, the jaws will clamp the rods, holding them firmly to the base.

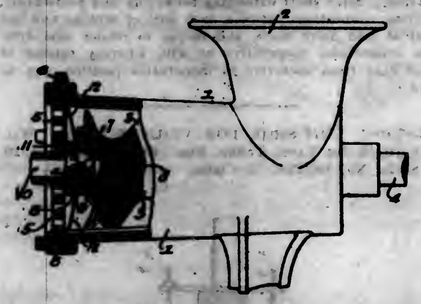


1,397,395. DENTAL SCALER. WILLIAM H. H. BIXLER, Philadelphia, Pa., assignor to de Sanno & Hoskins, a Corporation of Pennsylvania. Filed Oct. 14, 1920. Serial No. 416,886. 1 Claim. (Cl. 32—10.)

A dental hand tool for scaling purposes, consisting of a handle extended into a shank whose operating end portion is reversely bent and terminating in a chisel end whose cutting edge is arranged transversely to the axis of the handle, said reversely bent end portion being substantially rectangular in cross section so as to provide

four substantially right angled scraping edges, whereby the tartar may be removed from the tooth by said scraping edges by a push or a pull movement along the axial length of the handle.

1,397,396. PLANER, AND SYSTEM OF MOTOR CONTROL THEREFOR. HAROLD L. BLOOD, Plainfield, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Original application filed Mar. 15, 1917, Serial No. 154,927. Divided and this application filed Jan. 7, 1918. Serial No. 210,624. 3 Claims. (Cl. 172—240.)



3. The combination of a reciprocating table, a reversing electric motor connected with the table, a resistance in circuit with the motor field, an automatic table actuated switch normally serving to successively reverse the motor and cause it to drive the table successively in opposite directions, a manually operable switch supplemental to the table actuated switch for controlling and reversing the motor, and a circuit extending through the supplemental switch and serving to short-circuit the motor field resistance upon movement of the supplemental switch to an operative position.

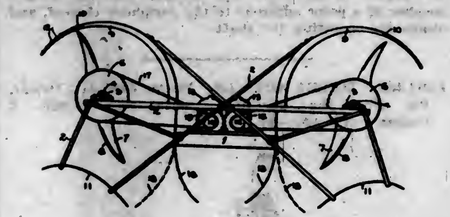
1,397,397. POLISH FOR STOVES AND OTHER ARTICLES. NATHAN BOYNOFF, Webster City, Iowa. Filed Feb. 9, 1921. Serial 443,811. 2 Claims. (Cl. 134—25.)

1. A polish for stoves and the like consisting of "Ivory" soap, flaked graphite, lamp black and water.

1,397,398. MEAT-CHOPPER. JOHN WILSON BROWN, Jr., Philadelphia, Pa., assignor to The Enterprise Manufacturing Company of Pennsylvania, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 16, 1920. Serial No. 424,357. 1 Claim. (Cl. 17—20.)

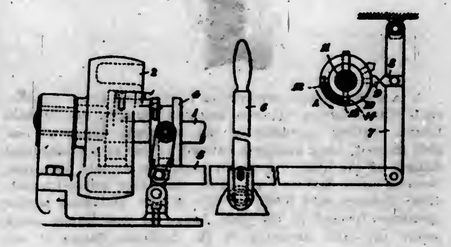
The combination in a meat chopper, of a casing; a perforated plate at the end of the casing; a feed screw within the casing; a spindle projecting from the end of the feed screw, said spindle having a rectangular portion; a socket in the end of the feed screw; and a cutter having a hub and blades, said blades fitting against the perforated plate, the hub being mounted on the rectangular portion of the spindle and the rear of said hub being rounded and fitting the socket forming a ball and socket joint, the opening in the cutter being tapered from the

rear to a point near the front and flared from this point to the front so as to allow the cutter to accommodate itself to the plate and to hold the cutter centrally on the spindle.



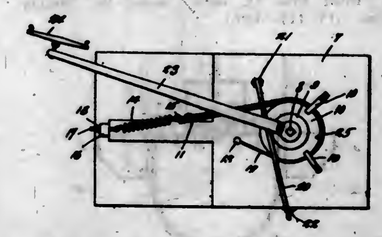
1,397,399. MEANS FOR POLISHING MULTIFOCAL LENSES. LUCIAN W. BUGBEE, Indianapolis, Ind., assignor to Onepiece Bifocal Lens Company, Indianapolis, Ind., a Corporation. Filed Mar. 18, 1920. Serial No. 365,400. 9 Claims. (Cl. 51—131.)

2. The combination with a lens holder for holding a lens blank having a plurality of concentric surfaces to be polished, and means for rotating the same, of a polishing button for each surface thereof, a pin frame having a pin for loosely engaging each button, and vertically movable means to which said pin frame is pivoted between the pins so the pin frame can rock thereon vertically.



1,397,400. AERIAL APPARATUS OR FLYING-MACHINE. ELVYN FREMONT BURRILL, Berkeley, Calif. Filed Dec. 4, 1919. Serial No. 342,567. 4 Claims. (Cl. 244—16.)

1. In an aerial apparatus, or flying machine, propelling means comprising a pair of vertically and oppositely rotating tangential fans, or accelerators; positive collector or guide planes, cylindroidal in shape, placed above and about said accelerators, adapted to collect the dispersed upward tending and upper-horizontally tending tangential streams and to turn said streams into a downward direction; and negative collector or guide planes, cylindroidal in shape, placed below said accelerators, having their curves inverse to the circles of rotation of the fans,



adapted to receive the negative upward thrusts generated beneath them by the partial vacuums above, and to turn the lower-horizontally tending streams into a downward direction; all substantially as specified.

1,397,401. CLUTCH. ARTHUR BUTTERWORTH, ARTHUR BUTTERWORTH, Jr., and HAROLD BUTTERWORTH, Rochdale, England. Filed Nov. 13, 1919. Serial No. 337,842. 2 Claims. (Cl. 192—33.)

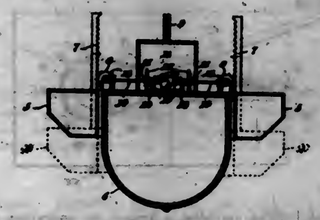
1. In a machine tool the combination of a work spindle, driving means to rotate said spindle, a clutch between said spindle and said driving means, a stop for automatically actuating said clutch after a predetermined number of revolutions of the spindle, a pivoted arm adapted to engage with said stop, a projection on said arm, means connecting said pivoted arm to said clutch, a driving shaft, a sleeve having angular motion relatively to said driving shaft and a spring connecting said sleeve to said driving shaft and limiting said angular motion.

1,397,402. HOOP-COILING MACHINE. STONEWALL JACKSON CAROLAND, Woodlawn, Tenn. Filed Oct. 13, 1920. Serial No. 416,745. 1 Claim. (Cl. 144—268.)

In a hoop coiling machine, a frame, an operating shaft mounted on the frame, a drum secured to the operating shaft to move therewith, a strip of flexible metal having one end anchored to the frame at a point adjacent

to the drum, resilient means for connecting the opposite end of the flexible member to the frame, clamping fingers carried by the frame and overlying the upper edge of the drum, a pivoted lever adapted to move across one corner of the drum and contact with the flexible member at a point adjacent to the periphery thereof, and means for operating the shaft.

1,397,403. TOILET ARTICLE. FRANK CHEBOSAK, Orient, Pa. Filed June 20, 1921. Serial No. 479,062. 3 Claims. (Cl. 132—87.)

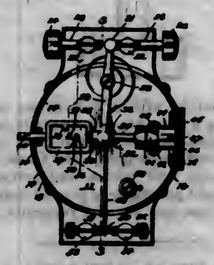


3. A toilet article comprising mirror and brush frames, each frame having opposed marginal flanges, one of said frames having openings in the marginal flange at one side thereof, hook members carried by one of the marginal flanges of the other frame for reception in said openings, tension latch devices connecting the other adjacent marginal flanges, said tension latch devices including keeper openings formed in the side flange of one frame, latch levers pivotally mounted in the adjacent flange of the other frame, a spring associated with each latch lever for holding the same under tension, and finger levers for operating the tensioned latch levers.

1,397,404. COMPOSITION FOR THE TREATMENT OF CAST-IRON. HENRY L. COLBS, Hamilton, Ohio, assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed July 10, 1920. Serial No. 395,187. 15 Claims. (Cl. 75—45.)

1. A composition for the treatment of iron, comprising a mixture of an alloy of titanium, an alloy of manganese and a softening agent.

1,397,405. SHIP-PROTECTOR. YURAJ DEDIK, Boswell, Pa. Filed June 11, 1920. Serial No. 388,114. 1 Claim. (Cl. 114—123.)

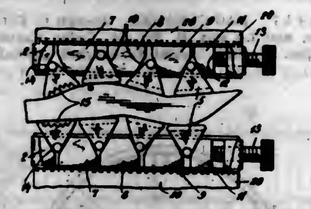


A ship protector comprising in combination with a vessel, an endless horizontally disposed hollow float conforming to and extending entirely around the hull of the vessel adjacent the waterline thereof, forward and rear pairs of rack bars rigid with and extending upward from the float at the opposite sides of the hull, pinions meshing with said rack bars and mounted on the deck of the vessel, a motor mounted on the deck of the vessel and having a drive shaft extending forwardly and rearwardly, driving connections between each pair of pinions and one end of said drive shaft, and means to render said driving connections inoperative at will, whereby raising of said float from operative to inoperative position may be had.

1,397,406. GRIP-SHOE FOR VEHICLE-TIRES. WILLIAM G. DE VANE, Trilby, Fla. Filed Aug. 23, 1920. Serial No. 405,281. 1 Claim. (Cl. 152—14.)

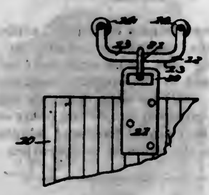
A grip shoe for vehicle tires comprising a relatively wide body having a semi-circular concave portion intermediate its ends of such size as to snugly receive the tire of the vehicle, the inner surface of said concave portion being smooth, the ends of said body constituting wings inwardly of the widest portion of the tire, flanges at the longitudinal edges of said wings extending outwardly therefrom, the said flanges being relatively shallow for the greater part of their length and being of increased depth as they approach the concave portion, the said flanges joining the concave portion at the sides and well above the tread portions thereof, the outer surface of the shoe being otherwise smooth and unobstructed, and means for securing said shoe upon the tire.

1,397,407. THERMOSTAT AND SIMILAR CONTROL DEVICE. PARRIS DODGE, Washington, D. C., assignor to The Johnson Service Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 13, 1920. Serial No. 381,200. 10 Claims. (Cl. 236—47.)



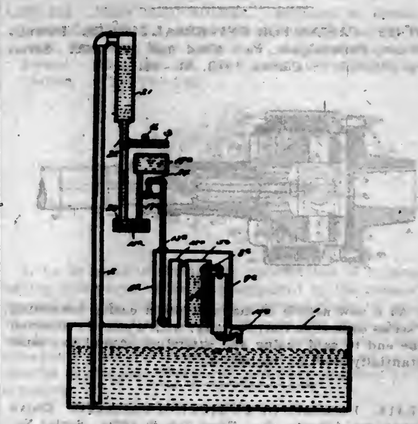
1. The combination of an automatic control device including a responsive element; a movable member for adjusting the action of said element; stops serving to limit the movement of said member in opposite directions; a reversible spring mechanism serving to hold said member against each of said stops in alternation, as the action of the spring mechanism is reversed; and means for shifting said spring mechanism to reverse its action.

1,397,408. RAILWAY-SWITCH-OPERATING MECHANISM. JAMES R. DUDLEY, Bessemer, Ala. Filed Aug. 8, 1921. Serial No. 490,677. 5 Claims. (Cl. 246—297.)



1. An operating mechanism for railway switches and gates comprising a bar movable transversely of the track, a segmental member fixed thereto, an oppositely facing segmental member carried by a locomotive and vertically positioned rollers on one of said segmental members, substantially as set forth.

1,397,409. EQUALIZING ATTACHMENT FOR VISE-JAWS. WALTER SCOTT DOWELIUS, Cincinnati, Ohio. Filed Oct. 5, 1918. Serial No. 256,990. 7 Claims. (Cl. 81—38.)



1. An equalizing attachment for vise jaws comprising an elongated casing provided with an inwardly directed flange along each longitudinal edge, and a plurality of substantially triangular members protruding from the casing and provided with lugs at their inner ends adapted to engage the flanges to retain them within the casing, one of said triangular members being formed with a curved outer face having vertical serrations therein, and others of said members being formed with flat outer faces having horizontal channels therein and also indentations to receive the heads of screws that may be held by the triangular members.

1,397,410. BOX-CAR-DOOR HANGER. CLAUDE HARMON ENDICOTT, Bayard, Nebr. Filed July 14, 1920. Serial No. 396,087. 1 Claim. (Cl. 16—103.)

A door hanger having a stirrup attached to the upper edge of the door, the said stirrup being formed with a loop, a traveler for movement on a track consisting of a member shaped to provide forwardly and rearwardly extending arms, rollers carried at the extremities of said arms, and a link disposed around said traveler and through the loop in said stirrup, the link having a substantial movement longitudinally of the traveler and also having a substantial movement in the loop of the stirrup.

1,397,411. STATIONARY CHEMICAL-MIXING FIRE-EXTINGUISHER SYSTEM. JOHN W. ENRIGHT, New Orleans, La. Filed Mar. 10, 1919. Serial No. 281,680. 8 Claims. (Cl. 169—8.)

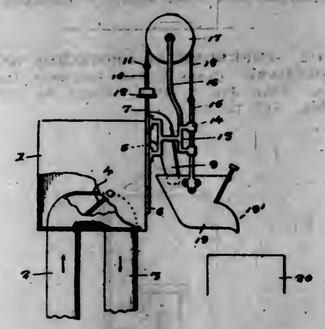
1. In a stationary chemical mixing fire extinguisher system, a tank for an alkaline solution normally under atmospheric pressure, an acid receptacle, means set in operation by a pneumatic impulse for effecting the transfer of acid from said receptacle to said tank, a receptacle to contain liquid, means to transmit said pneumatic impulse and through which said liquid may flow to generate said impulse, a mercury trap for holding said liquid in said receptacle, and fluid means normally holding said trap operative and acting automatically under fire emergency conditions to render said trap inoperative whereby said liquid may pass to said impulse transmitting means.

1,397,412. THERMOMETER PROTECTOR AND SHIPPING-GUARD. CLAUS EDWARD ERICKSON, Des Moines, Iowa. Filed Jan. 2, 1920. Serial No. 349,116. 7 Claims. (Cl. 73—52.)

1. In a device of the class described, a means for protecting a thermometer tube mounted on a support formed with a recess, said recess being designed to receive said thermometer tube, said first means comprising a guard

adapted to be placed over said thermometer tube, and means for detachably fastening said guard to said support, said last means comprising fingers formed on said guard adapted to extend through said support.

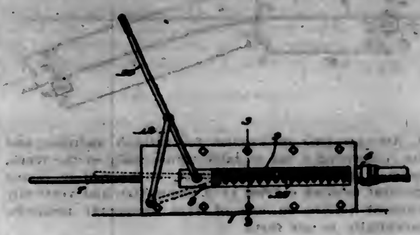
1,397,413. CASING FOR UNIVERSAL JOINTS. Powell Evans, Philadelphia, Pa. Filed Apr. 19, 1920. Serial No. 375,029. 8 Claims. (Cl. 61—91.)



8. As a new article of manufacture a casing consisting of a series of flexible convolutions; with a sleeve connected at one end to said casing and extending around the same substantially coaxial therewith.

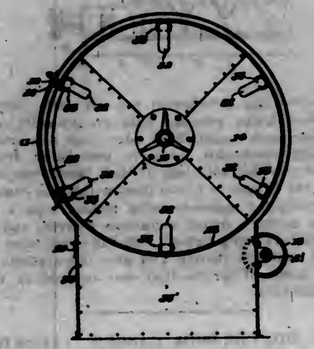
1,397,414. PROCESS OF PURIFYING BAUXITE. Edgar Everhart, Atlanta, Ga. Filed Feb. 9, 1920. Serial No. 357,409. 2 Claims. (Cl. 23—84.)

1. A separating process, consisting in subjecting clay contaminated bauxite ores to disintegration, and agitation, in a clay deflocculating liquid, until the clayey components are suspended, and then separately removing the suspended clay and the granular bauxite; the disintegration being regulated to retain bauxite in granular form.



1,397,415. PULP-FEED REGULATOR. Henry Andrew Fensky, Ladysmith, Wis. Filed Aug. 14, 1920. Serial No. 403,534. 4 Claims. (Cl. 97—46.)

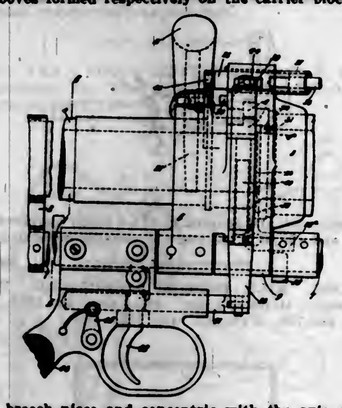
1. In combination with a stuff box and mixing box of a paper pulp apparatus, a gage plate for controlling the outlet port of the stuff box, a spout on said gage plate, a hopper for receiving the pulp in said spout and directing it into the mixing box, a slidable frame connected with the hopper, a pulley, a cable connecting the slidable frame with the gage plate and passing over said pulley and a weight rest connected with the gage plate.



1,397,416. FOOT-OPERATED PUMP FOR PNEUMATIC TIRES. George J. Fleuer, Brooklyn, N. Y. Filed May 28, 1920, Serial No. 385,039. Renewed Oct. 11, 1921. Serial No. 507,156. 3 Claims. (Cl. 230—37.)

1. In a device of the class described, the combination of a cylinder, a tribrachial member, a piston head secured to the ends of the branches of said member, a main frame for supporting said cylinder, and slides secured to each of

the other branches of said member, and mounted in apertures formed in said frame.



1,397,417. BAG-CLEANER. Joseph C. Fulkerson, Marion, and Le Roy B. Stuart, Cedar Rapids, Iowa. Filed Dec. 23, 1919. Serial No. 346,906. 1 Claim. (Cl. 15—8.)

A bag cleaner comprising a cylindrical supporting casing, a foraminous drum trunnioned axially of said casing, means for rotating said drum exteriorly of the casing, channel bars secured by the opposite ends of the opposing faces of the end walls of said drum in spaced relation interiorly thereof, inwardly projecting floats secured by one of their ends to the channel bars and adapted for engaging the bags when the drum is in operation.

1,397,418. MECHANISM FOR NON-RECOIL BREECH-LOADING GUNS. Belton Tattnall Hamilton, London, England. Filed May 4, 1918. Serial No. 232,626. 12 Claims. (Cl. 89—40.)

2. In a non-recoil gun of the type described, a fore barrel and a rear barrel, the faces of the said barrels being locked together in axial alinement in the firing position, a carrier block rotatably mounted at the breech end of the fore barrel and carrying the rear barrel, a rotatable shaft disposed parallel to the axis of the gun, and on which the carrier block is fixed, a breech piece on the gun and ribs and grooves formed respectively on the carrier block and

on the breech piece and concentric with the axis of the said shaft.

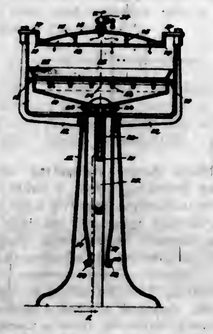
1,397,419. RAILWAY-SIGNAL. Newton L. Harkness, Parsons, Kans. Filed June 6, 1921. Serial No. 475,505. 1 Claim. (Cl. 246—293.)

In a railway signal apparatus, a trip arm movably supported and adapted to be actuated by a moving train, a signal carrying arm initially in horisontal position, coupling means between said trip arm and signal conveying arm, and a combined guide and holding device coacting with the signal carrying member and including converging portions with which the signal carrying arm frictionally engages when in one position.

1,397,420. TRANSMISSION-LOCK. William Hebern and Albert J. Gray, Oakland, Calif., assignors to Security Auto Lock Co., a Copartnership consisting of Albert J. Gray, William Hebern, and David Guild, Jr. Filed Jan. 7, 1920. Serial No. 349,956. 6 Claims. (Cl. 70—128.)

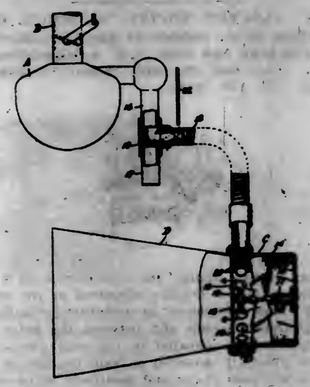
2. The combination with the gear shift lever on an automobile and the casing in which the lever is supported, of a base member adapted to inclose the upper end of the casing, said base member consisting of two separable sections, means for securing said sections with relation to each other and with relation to the casing, and a pair of locking members carried by the base member adapted to embrace the gear shift lever and lock it against movement, and also adapted to entirely inclose the base member and cover the means whereby the base sections are secured.

1,397,421. ELECTRIC SIGNAL. Richard M. Hopkins, Rutherford, N. J., assignor to American District Telegraph Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 25, 1918. Serial No. 259,616. 5 Claims. (Cl. 177—329.)



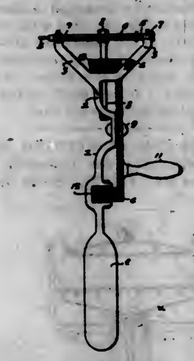
1. In an electric signal, the combination of a magnet having pole pieces; a bracket supported by the magnet in proximity to the pole pieces; an armature pivotally mounted intermediate its ends and between the poles on said bracket on an axis parallel to the pole pieces; and a semaphore pivotally mounted on said bracket on an axis parallel to the pole pieces and positively actuated by the armature.

1,397,422. HAND-FIRED FURNACE. William S. Hotchkiss and John E. W. Sherman, Memphis, Tenn. Filed June 3, 1919. Serial No. 301,555. 4 Claims. (Cl. 110—74.)



1. A combined forced draft and natural draft shaker grate comprising alternately arranged hollow and shaker grate bars, the former being provided with crowns having twyer openings and the latter consisting of series of independently movable elements having trunnions mounted in bearings on the side walls of the hollow bars, means respectively for supplying a forced draft to the hollow bars, and means for operating said shaker bars.

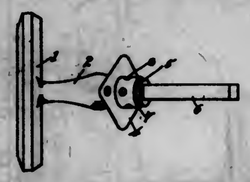
1,397,423. DEVICE FOR MOISTENING AND WRINGING COMPRESSES. Clinton Clarence Humphries, Norfolk, Va. Filed Mar. 8, 1921. Serial No. 450,608. 8 Claims. (Cl. 68—37.)



3. The combination of a water spraying device; a water expressing device; and means for causing each of said devices to act on a compress without intervening manipulation of the compress.

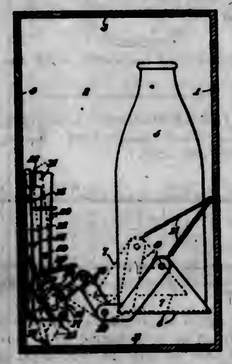
1,397,424. AUTOMOBILE-SIGNAL. GRAHAM WYLIE JARVIS, Charlottesville, Va. Filed May 3, 1921. Serial No. 466,411. 1 Claim. (Cl. 116—138.)

An automobile signal comprising a horn, a diaphragm, a casing attached to the rear of the horn having a perforated rear wall, a bearing secured to said wall, a shaft mounted to rotate in said bearing, a cam on the shaft for engagement with the diaphragm, a rotor mounted on the shaft, an annular chamber surrounding the casing at one end, a plurality of communications between the interior of the casing and the annular chamber, and means attached to the annular chamber for causing a current of air to pass through the perforations in the rear wall into the casing to cause rotation of the rotor and shaft, substantially as set forth.



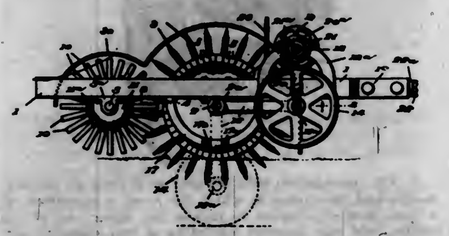
1,397,425. PYROTECHNIC DEVICE. JOHN JEX, Newark, Del. Filed Nov. 26, 1919. Serial No. 340,695. 4 Claims. (Cl. 102—20.)

1. A pyrotechnic device consisting of a supporting structure having diverging arms; a shaft; a rotary abrasive member mounted on the shaft; a body of material supported by each of said arms and coacting with the abrasive member to produce incandescent particles when the latter is turned; and means for rotating the shaft.



1,397,426. VEHICLE DOOR-HANDLE. JOHN G. KAEFER, Norwood, Ohio, assignor to The Cincinnati Aluminum Casting Company, Norwood, Ohio, a Corporation of Ohio. Filed July 8, 1920. Serial No. 394,680. 4 Claims. (Cl. 292—348.)

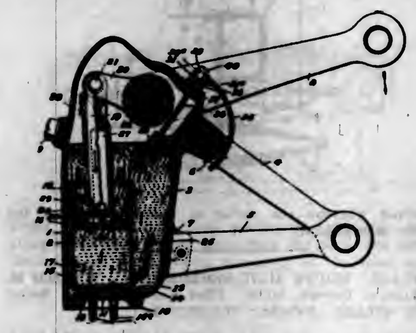
1. In a device of the character described, the combination of a handle shaft, an abutment thereon, an escutcheon plate engaging against said abutment, and a metallic member set over the shaft on the other side of the plate from



the abutment, and adapted to be set firmly against the said plate and united to the shaft by metallic indentation.

1,397,427. MILK-BOTTLE RECEPTACLE. WILLIAM KASNUS, Meriden, Conn. Filed Sept. 15, 1921. Serial No. 500,729. 3 Claims. (Cl. 232—41.)

1. A device of the class described comprising a receptacle having a hinged door, a pivotally mounted platform within the receptacle, a sliding keeper bolt carried by one wall of the receptacle, lever and link connections between the keeper bolt and platform, a locking bolt carried by the door adapted to be engaged by the keeper bolt to hold the door in locked position, and a latch lever having one end thereof adapted to overlie the keeper bolt to prevent upward movement thereof and be engaged by the lock bolt upon the door to displace the same from engaging position with the keeper bolt to permit coöperation of the lock and keeper bolts.



1,397,428. SOIL-DISINTEGRATOR. ISAAC A. KNER, Memphis, Tenn. Filed Dec. 17, 1920. Serial No. 431,412. 5 Claims. (Cl. 97—63.)

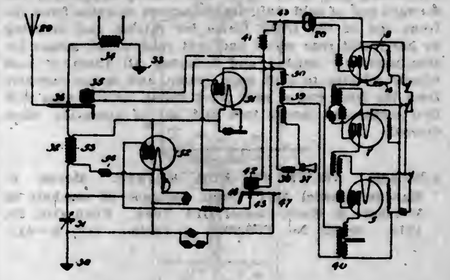
1. For a machine of the character described, a disintegrating cylinder comprising pairs of bars and series of

spikes or digging members clamped between the bars, said bars being provided with notches in their heads to position the spikes, substantially as described.

1,397,429. SHOCK-DIFFUSER. FRANK F. LANDIS, Waynesboro, Pa. Filed July 7, 1916. Serial No. 108,036. 32 Claims. (Cl. 188—88.)

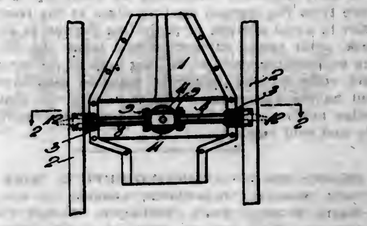
12. A shock diffuser comprising a liquid containing casing, a cylinder in said casing, a piston operable in said cylinder, a piston rod connected to said piston and provided with an air chamber, said air chamber providing a cushion to initially diffuse the shock, and means communicating with the atmosphere for admitting air into the air chamber, substantially as set forth.

1,397,430. BRAKE. SANDER LANKHEET, Hamilton, Mich. Filed July 20, 1920. Serial No. 397,587. 3 Claims. (Cl. 188—77.)



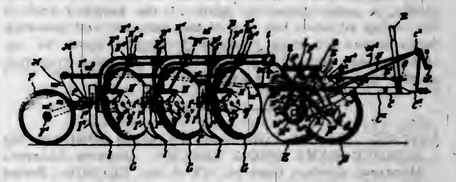
1. A brake comprising a brake band, means for mechanically forcing the ends of the brake band together, and a spring directly providing a connection between said means and brake band.

1,397,431. SPRING-LINK. LEE J. LITCHFIELD, Elsie, Mich. Filed Mar. 12, 1920. Serial No. 365,306. 1 Claim. (Cl. 24—73.)



In a spring link the combination of a pair of buttons having clips upon their backs, said clips formed of resilient material and having separable ends lying in abutment, and a spiral spring having each end portion formed in a loop for engagement in said clips.

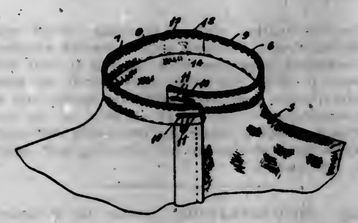
1,397,432. SIGNALING SYSTEM. CHARLES V. LOCWOOD, New York, N. Y. Filed June 16, 1917. Serial No. 175,131. 5 Claims. (Cl. 250—6.)



1. The combination with a receiving circuit and a transmitting circuit, provided with a common antenna, a switch normally connecting said antenna to said receiving circuit, a relay controlling said switch, an audion, a signaling device associated with said audion and with said transmitting circuit, means actuated by the operation of said signaling device for paralyzing said audion, and means operated thereby for actuating said relay to operate said switch.

1,397,433. MOTOR-SUPPORT. JOHN H. MCCORMICK, Creston, Iowa. Filed Oct. 7, 1920. Serial No. 415,326. 2 Claims. (Cl. 180—64.)

2. A motor support comprising hanger bars each having a fastener receiving foot at its inner end and spaced chassis bar engaging hooks at its outer end, the hanger bar being bent transversely, adjacent the hooks to offset the hooks and again bent transversely in spaced relation to the hooks and curved longitudinally from the second bend to said foot, and fastener means adjustably connecting the feet of the base.



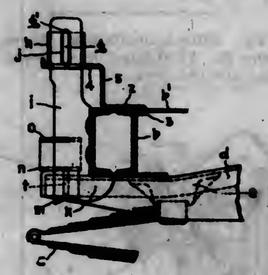
1,397,434. DISK PLOW AND SUBSOILER. AUGUSTA POSTELLE MCKAY, Rome, Ga., assignor to McKay Disk Plow Co., Rome, Ga., a Corporation of Georgia. Filed Sept. 15, 1920. Serial No. 410,563. 12 Claims. (Cl. 97—36.)

1. Apparatus of the character described, comprising a main frame, a rear wheel pivoted thereto, plows car-

ried by said main frame, a truck frame pivoted to and supporting said main frame near its forward end, a road wheel and a furrow wheel journaled beneath and supporting said truck frame and thereby supporting the forward end of said main frame, screws operable from the front end of the truck frame for raising and lowering by hand said rear wheel and said road wheel, means for simultaneously raising and lowering all three of said wheels relative to said main frame, and means operable from the front end of said truck frame for throwing said first mentioned means into and out of operation when desired.

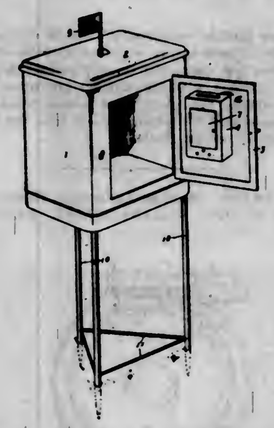
1,397,435. NECKBAND FOR SHIRTS. MOSES E. MANIAN, Chapel Hill, Tenn., assignor of one-half to Marshall B. Kerr, Chapel Hill, Tenn. Filed Oct. 25, 1918. Serial No. 259,699. 1 Claim. (Cl. 2—41.)

A shirt neckband comprising an inner ply in a single piece from the opposed meeting edges at the front of the shirt to avoid a rough or projecting portion to annoy the neck, outer bands stitched to said inner ply, the stitching terminating short of the rear ends of the outer bands, said ends forming relatively movable tabs overlapping and having registering holes to receive the shank of a collar button whose base is retained between the first ply and said bands.



1,397,436. SNOW-GATHERING DEVICE. MIKO MARKOVICH, Bosevac, Jugo-Slavia, assignor of one-half to David Stupich, South Wellington, British Columbia, Canada. Filed Oct. 22, 1920. Serial No. 418,865. 5 Claims. (Cl. 37—62.)

1. A device of the class described comprising an elongated casing having an open forward end and adapted for travel upon a track, an endless conveyer within the casing, a snow gathering plate at the forward end of the casing adjacent one end of the conveyer and breaking down means for snow mounted for travel upon the top of the casing normally positioned for use projecting forwardly and above said plate.

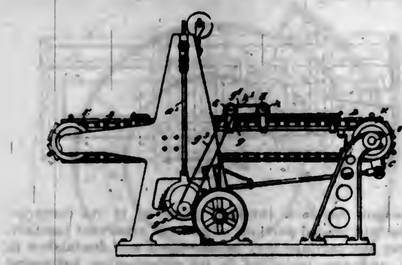


1,397,437. MEANS FOR COMPRESSING SPRINGS TO REMOVE SAME FROM TRUCKS. JOSEPH MARTEL, Montreal, Quebec, Canada. Filed Dec. 31, 1919. Serial No. 348,538. 7 Claims. (Cl. 29—87.1.)

1. Means for compressing springs to remove same from trucks consisting of means detachably engaging a fixed part of the truck, and an expansile device adapted to act as a strut between the said means and the spring to be

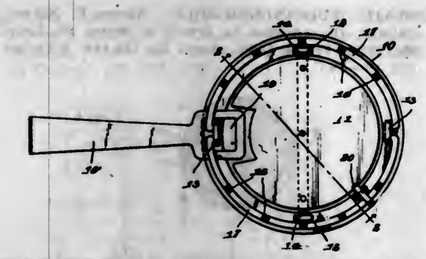
removed whereby the latter is compressed when the device is expanded.

1,397,438. HOUSE MAIL-RECEPTACLE. WILLIAM H. MARTIN, Detroit, Mich. Filed Sept. 1, 1920. Serial No. 407,522. 1 Claim. (Cl. 232—24.)



A deposit receptacle for accommodating letters and packages comprising, a large compartment having a hinged cover to provide for receiving packages, a hinged signal thereon, a hinged side door therefor, a small compartment for receiving letters mounted upon the inner side of the door, said door having a slot affording means whereby letters may be deposited in the said small compartment when the door is closed, a hinged protecting cover for the slot, a hinged door on the inner side of said small compartment whereby the letters may be removed when the aforementioned hinged side door is open, a lock for the hinged door on the small compartment and posts on the receptacle for supporting it on the lawn.

1,397,439. FEED MECHANISM FOR WIRE-BOUND BOX-BLANK MACHINES. HOWARD G. MEAD, St. Louis, Mo., assignor, by mesne assignments, to Wirebounds Patents Company, Kittery, Me., a Corporation of Maine. Filed July 14, 1911, Serial No. 638,575. Renewed Dec. 20, 1919. Serial No. 346,437. 53 Claims. (Cl. 1—8.3.)

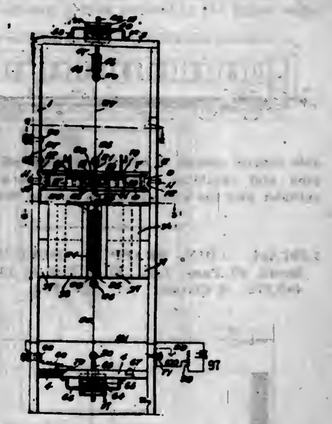


16. In a machine for making wirebound box blanks, the combination of a main feed mechanism for causing

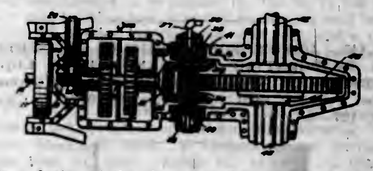
the cleats and sheets to move along in properly assembled relation; mechanism for securing the sheets to the cleats; and an auxiliary feed mechanism operative to advance the sheets on the cleats before they are secured to the

cleats, said auxiliary feed mechanism, at times, operating at a higher rate of speed than the main feed mechanism and, at other times, operating at the same speed as the main feed mechanism.

1,397,440. ANIMAL-TRAP. KARP MELNICK, Plantsville, Conn. Filed Jan. 12, 1920. Serial No. 350,962. 1 Claim. (Cl. 43—92.)



A trap comprising a base having a central opening, spaced pairs of diametrically opposed lugs rising from the base, a shaft journaled between one pair of lugs, a disk carried by said shaft and movable within the opening of the base, jaws pivoted between the other lugs, a spring having one end secured to the base and its opposite end associated with the jaws to forcibly move the latter into gripping relation, spaced lugs rising from the base, an elongated member pivoted between the latter mentioned lugs, a shoulder formed on one side of the elongated member, a right angularly disposed extension constituting the terminal of said member and projecting from the opposite side of said member, said member being disposed vertically in active position, and having its shoulder reposing upon said disk, said extension being arranged in a plane above said shoulder and adapted to overlie one of said jaws, whereby the said jaws are held in a set position.



1,397,441. ELECTRICAL MEASURING INSTRUMENT. CARL DANFORTH MILLER, Rockville, Mass. Filed Apr. 5, 1919. Serial No. 287,726. 9 Claims. (Cl. 171—95.)

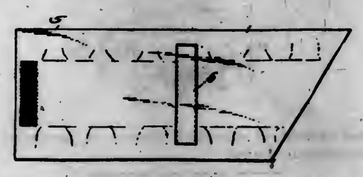
1. An electrical measuring instrument comprising an electrometer, and electromagnetic torque producing means, the rotary elements of said electrometer and electromagnetic torque producing means being mechanically connected.

5. The method of measuring electrical potential difference which consists in causing balanced counter torques to be produced directly upon a common rotatable member by the electro-static effect of the potential to be measured and by electro-magnetic means, respectively, and measuring the amount of electrical current in producing the electro-magnetic torque.

1,397,442. TRANSMISSION-GEARING. CLAUD E. MILLS, Des Moines, Iowa. Filed Oct. 28, 1919. Serial No. 334,058. 1 Claim. (Cl. 74—58.)

In a device of the class described, an engine shaft, a driven shaft, a clutch connection between said shafts, gears rotatably but non-slidably mounted on said driven shaft having clutch members thereon, a sliding clutch member non-rotatably mounted on the driven shaft and adapted to be moved to selectively engage with the clutch members on the respective gears on said shaft, a counter-shaft parallel with said driven shaft, non-slidable gears fixed on said counter-shaft in mesh with the respective gears on said driven shaft, a transverse shaft, spaced beveled gears thereon slidably but non-rotatably mounted, a gear of smaller diameter connecting said spaced beveled gears, a beveled gear on said counter-shaft adapted to mesh with said respective beveled gears in different positions thereof, means for sliding said beveled gears, a differential gear in mesh with the gear which connects said beveled gears, a beveled gear rotatably mounted on said counter-shaft having a clutch member, a clutch member slidably but non-rotatably mounted on said counter-shaft adapted to coact with the clutch member on said last gear, a second driven shaft having a gear thereon in mesh with said last beveled gear.

1,397,443. RAILWAY-BRAKE. TAKEO MIYAGI, Waipahu, Hawaii. Filed Jan. 8, 1921. Serial No. 435,871. 12 Claims. (Cl. 303—18.)

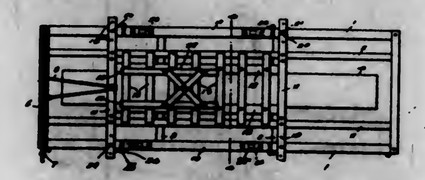


1. In a railway brake, the combination of brake shoes, rods connected therewith, a lever connected with said rods, a lever arranged in parallel relation to the first-named lever, one of said levers having pins and the other abutments opposed to the pins, a cylinder, a piston movable in the cylinder and connected with the second-named lever, a train pipe for fluid under pressure, means to es-

tablish communication between the train pipe and the cylinder to set the brake shoes against wheels, and mov-

able control means to cut the cylinder off from the train pipe and establish communication between the brake cylinder and the atmosphere to release the brake shoes.

1,397,444. COIN-WRAPPING DEVICE. ARTHUR D. MOHR, El Paso, Tex. Filed Feb. 8, 1921. Serial No. 443,372. 6 Claims. (Cl. 133—10.)



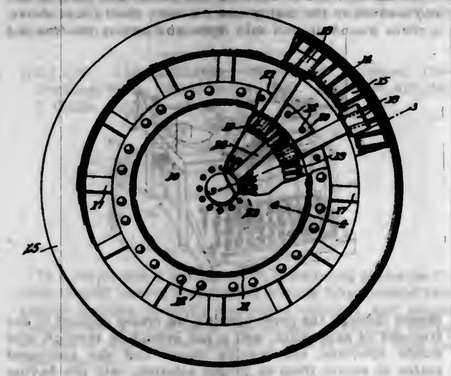
1. A wrapper of the class specified having a medium for producing on a part of the wrapper a record of the number of coins originally inclosed in the wrapper.

1,397,445. DEVICE FOR ATOMIZING AND DRYING OR EVAPORATING MILK AND OTHER LIQUID SUBSTANCES. PHILIPP MÜLLER, Leipzig, Germany. Filed Feb. 24, 1920. Serial No. 360,907. 2 Claims. (Cl. 127—9.)

1. In a device for atomizing and drying or evaporating milk and other liquid substances, the combination of a discharge tube for the substance to be treated with a member projecting into the discharge opening of said discharge tube so as to transform the discharge flow of liquid into an annular jet, said member having discharge openings for a pressure medium within said member, said discharge openings being positioned in proximity to the discharge opening of said tube and another member for feeding a drying medium, the discharge opening of said last named feeding member being disposed below said discharge openings for said pressure medium, whereby the substance to be treated is first atomized and then subjected to the drying action of said drying medium.

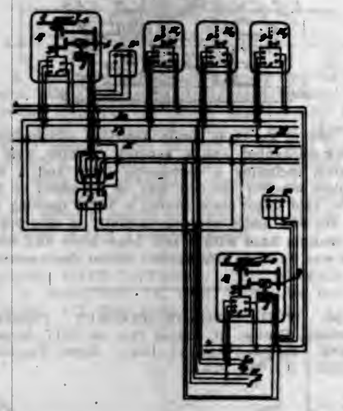
1,397,446. WAGON-HAYRACK CARRIAGE. JACOB S. MYERS, Hagerstown, Md., assignor to Warren Murray Buechtel and Joseph K. Hoffman, Hagerstown, Md. Filed Mar. 2, 1921. Serial No. 449,099. 1 Claim. (Cl. 296—6.)

A wagon hay-rack carriage including in its construction upright lapped portions adjustably connected together, whereby the carriage may be increased and diminished in depth, and also including in its construction horizontal transverse portions and horizontal longitudinal portions adjustably connected to the transverse portions whereby the carriage may be increased and diminished in width, rollers carried by and under the said longitudinal horizontal portions and arranged to bear on the side rails of a wagon bed, pendent portions carried by said longitudinal horizontal portions, and rollers mounted on said pendent portions and arranged to bear against the outer edges of said rails.



1,397,447. VULCANIZING-MOLD. ELMER F. NELSON, Chicago, Ill., assignor to Arnold A. Weiss, St. Louis, Mo. Filed Feb. 4, 1920. Serial No. 356,188. 5 Claims. (Cl. 18—38.)

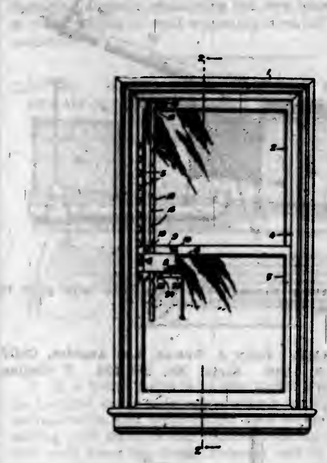
1. A portable rubber vulcanising mold for cushion tire-fillers and the like, the same including, in combination, a shell comprising a pair of rigid ring-shaped separable sections substantially semi-cylindrical in shape in cross-section, said sections being adapted for coöperation to approximately meet at their edges to substantially house the rubber to be vulcanized, the shell being adapted for location during vulcanisation within a vulcanizing or heating kettle, a tubular member disposed within both the chamber formed by said sections and the rubber contained therein for vulcanisation, said member having communication through said rubber with the exterior of the shell for conducting heating fluid from the kettle into the interior of the rubber being vulcanised within the shell for facilitating vulcanisation of the interior of the rubber, means within the shell and rubber being vulcanised for channeling said rubber to permit ready removal of the tubular member after rubber vulcanisation, and means for rigidly locking said sections detachably together in rubber housing coöperation, said heating fluid conducting-member being locked within the shell when said sections are so locked together in rubber housing coöperation.



1,397,448. SPRING-WHEEL. WILLIAM F. NORRIS, Kansas City, Mo. Filed Feb. 14, 1921. Serial No. 444,785. 2 Claims. (Cl. 152—29.)

2. A spring wheel comprising a pair of disks formed with mating pressed out portions coöperating to define a channel, spacing elements between the disks operating to define a series of radial openings leading into said channel, a coil spring located within said channel, a hub member at the centers of said disks, a coil spring located between the disks and surrounding said hub, a plurality of elongated loops engaging both of said springs, an outer rim

member, and a plurality of spokes slidable through said radial openings and having forked ends engaging against said first named spring and said rim member.



1,397,449. ELECTRICALLY OPERATING MECHANISM FROM A DISTANCE. ALEXANDER PARSHIN, London, England. Filed Nov. 20, 1918. Serial No. 263,288. 14 Claims. (Cl. 172—293.)

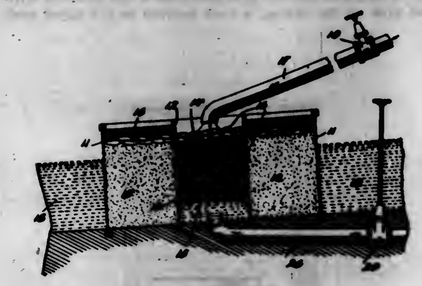
1. A system of operating electrically synchronous mechanisms from a distance, comprising an electric circuit carrying current which periodically increases and diminishes in strength, electric motors adapted to be operated by such current and connected in parallel in the circuit, means for closing the circuit when the condition of the said current is such that the synchronous mechanisms cannot immediately operate and means for opening the circuit at moments when the current strength therein is about zero value.

1,397,450. SASH-FASTENER. LONNIE T. PENNY, Raleigh, N. C. Filed Feb. 17, 1921. Serial No. 445,740. 2 Claims. (Cl. 292—305.)

1. In combination with a window casing and sashes, a rack secured to the casing at one side, a latching member secured to the upper portion of the lower sash, a latching bolt in said member having a passage therein provided with a lug, and further provided with a lug to latch with said rack on the casing, a rack secured to the upper sash

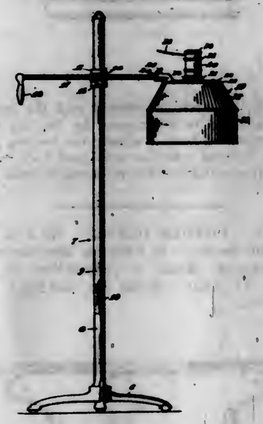
and guided in the latching member and the latching bolt thereof and adapted to be engaged by the lug in the passage of said latching bolt, a spring for forcing said latching bolt into latched relation with said rack, and a lever engaging said latching bolt for releasing it from said racks.

1,397,451. FENDER DEVICE. MILO D. RATHBUN, Muncie, Ind., assignor to Rathbun Manufacturing Company, Muskegon, Mich., a Corporation of Michigan. Filed Feb. 11, 1921. Serial No. 444,268. 3 Claims. (Cl. 293—55.)



2. In a fender device, the combination of a spring member to be connected to the vehicle frame the spring member being of divided form the ends thereof being in alinement one upon the other, a fender bar carried by the spring and being channel shaped in cross section, a back plate between the edges of the fender bar, check plates inside the back plate, set screws passed through holes in the back plate, and threaded through the check plates and to be tightened against the spring bar, substantially as shown.

1,397,452. APPARATUS FOR PURIFYING WATER. ANDREW J. REED, Wilkes-Barre, Pa. Filed June 28, 1921. Serial No. 481,024. 3 Claims. (Cl. 210—122.)



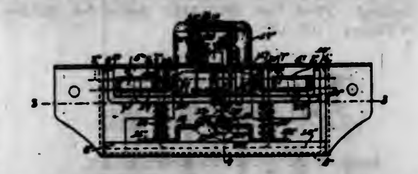
1. Apparatus of the character described including in combination, a mass of coarse anthracite ashes within a reservoir, the upper surface of said mass being normally at a higher elevation than the surface of the water in the reservoir, means to deliver water having matter in suspension into the central part of said mass below its surface,

and a valve controlled drain pipe having its inlet disposed at the bottom of the mass, whereby water may be drained

from the reservoir through the mass into said pipe to clean the mass.

1,397,453. LAMP. JOHN J. REKAR, Los Angeles, Calif. Filed Mar. 3, 1919. Serial No. 280,424. 3 Claims. (Cl. 240—1.)

1. In a lamp, a standard mounted to rotate freely, a clamp-sleeve thereon, a second clamp-sleeve affixed to said first named clamp-sleeve and extending at right angles thereto, a cross arm slidably carried intermediate its ends in said last named clamp-sleeve and adapted to be held against turning thereby in various positions, a lamp shade carried directly by said cross arm and opening at right angles thereto, an electric lamp encircled by said shade, and a handle on the other end of said cross arm whereby the cross arm may be rotated axially to dispose the lamp and shade in various positions.



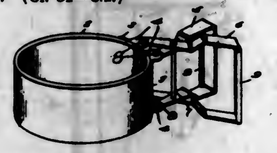
1,397,454. ATTACHMENT FOR TYPEWRITERS. EDWIN H. REYNOLDS, Brooklyn, N. Y., and RICHARD E. BLEAZARD, Fall River, Mass. Filed Aug. 26, 1920. Serial No. 406,225. 2 Claims. (Cl. 120—36.)

2. A typewriter attachment including a substantially rectangular casing having one open side and a pair of alined openings in its ends, a cover for the open side having an opening therein, a drum in said casing, a bearing sleeve in said drum and projecting from one end thereof, a substantially rectangular centrally apertured plate mounted on said sleeve and bearing against said casing, a second centrally apertured plate carried by said sleeve and spaced from the other plate, a convolute spring surrounding said sleeve between the plates and having one end secured to the casing and its other end to said sleeve, a chain wound around said drum and having its free end

passed through the cover opening, an eraser secured to the free end of said chain, and a pin extending through said alined openings, the bearing sleeve and the apertured plates to secure them in proper relation, said pin having a threaded end projecting out of the casing to provide means for attaching the entire device to a typewriter.

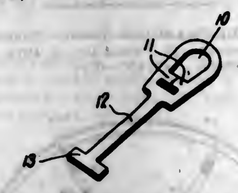
1,397,455. BAG-LOCK. BRODIE J. RICHARDSON and CLAIRE S. BARBER, Waterbury, Conn. Filed Dec. 18, 1920. Serial No. 431,545. 14 Claims. (Cl. 70—2.)

3. A lock of the class herein described comprising suitable lock-mechanism and a housing therefor, said lock-mechanism including a depressible bolt; and a hollow finger-piece whereby the bolt may be depressed by finger-pressure, said finger-piece having a major opening at its top; a key-way finder working partially in said opening; and a medium fixed within said finger-piece and whereby the key-way finder is held against casual displacement.



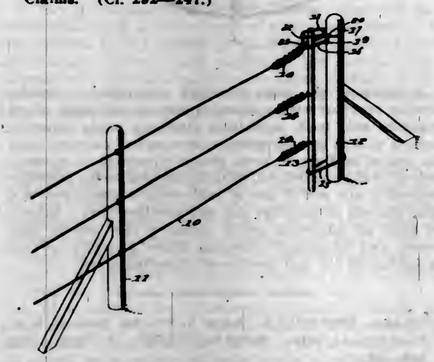
1,397,456. WINDOW-SHADE BRACKET. CHARLES H. ROBINSON, Venice, Ill. Filed Feb. 24, 1917, Serial No. 150,703. Renewed Apr. 21, 1921. Serial No. 463,356. 1 Claim. (Cl. 156—24.)

In a shade bracket, the combination with a bar, of a tubular slide in surrounding relation to the bar, the slide being formed with a pair of transversely disposed ribs in spaced relation to each other, a base plate formed with three longitudinal slots therein, the said ribs passing



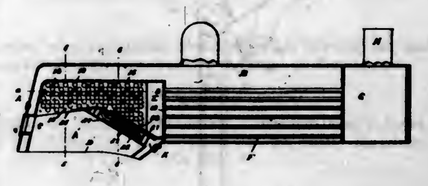
through the two outside slots, and a set screw passing slidably through the center slot and threadingly engaging the sleeve member and bearing upon the bar, whereby the base plate may be adjusted longitudinally along the bar or laterally with respect thereto, the base plate being provided with a shade bracket.

1,397,457. JAR-HOLDER. HAROLD P. EYKEMN, Port Orchard, Wash. Filed Dec. 4, 1920. Serial No. 428,329. 1 Claim. (Cl. 81—3.2.)



In a jar holder, a flexible strap, reinforcing plates on the ends thereof having outstanding alining lugs, crossed bail-shaped handles pivotally connected together and hinged respectively to the pairs of lugs on said reinforcing plates, and one of said handles being of a greater length than the other handle.

1,397,458. LINK. JOHN V. SANDQUIST, Houston, Tex. Filed July 13, 1920. Serial No. 395,918. 2 Claims. (Cl. 59—91.)



1. A link comprising a member having an opening therein, and a substantially T-shaped bendable member projecting from one end of the link, bendable lugs projecting from the opposed sides of said opening, the T-shaped member being adapted to be bent upon itself to provide a loop with the head thereof passed through said opening and arranged at one side of the link, and said lugs arranged with their free ends contacting to unitedly define a locking bar arranged to engage one side of the head of said T-shaped member.

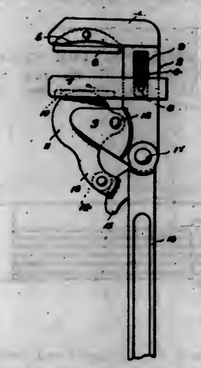
1,397,459. GATE-FASTENER. CARL SCHMELE, Newell, S. D. Filed Sept. 14, 1920. Serial No. 410,108. 2 Claims. (Cl. 292—247.)

1. A gate stick and fastener embodying oppositely extending loops for respective engagement with a gate stick and a gate post, and a looped operating element having the extremities of its legs loosely connected with the extremity of one of said loops and extending through eyes on the extremities of the other loop, those portions of the operating element connecting the two loops being disposed at right angles to said operating element for the purpose specified.

1,397,460. WATER-ARCH FOR THE FURNACES OF STEAM-BOILERS. ROBERT G. SHAMAN, Summerhill, Pa. Filed Nov. 17, 1917. Serial No. 202,547. 3 Claims. (Cl. 122—65.)

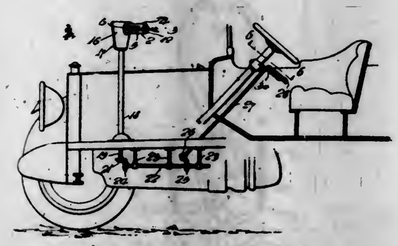
1. In a boiler furnace having upper and lower portions, an inclined water arch comprising a casing having top and bottom walls and longitudinal flues extending through the casing, said flues having intakes opening through the bottom wall near the lower forward end of the firebox and having outlets through the top wall of the casing, discharging at a point approximately midway of the front and rear walls of the furnace, the upper and lower portions of the furnace chamber being in communication at the rear of the water arch.

1,397,461. EMBRYOTOMY DEVICE. THOMAS J. SHUMATE, Washington, D. C. Filed Aug. 23, 1920. Serial No. 405,491. 6 Claims. (Cl. 128—353.)



1. An embryotomy device comprising a member of a size to be grasped and surrounded by the hand, said member having a forward end across which the fingers can be hooked, tongs or forceps connected to said member and extending from said forward end thereof and arranged to be opened and closed by the hand, and means operable by the hand for holding said tongs or forceps in position.

1,397,462. WRENCH. HUNTER SMITH, Jr., Seattle, Wash., assignor of one-half to James T. Lawler, Seattle, Wash. Filed May 21, 1920, Serial No. 383,145. Renewed Sept. 24, 1921. Serial No. 503,119. 3 Claims. (Cl. 81—87.)



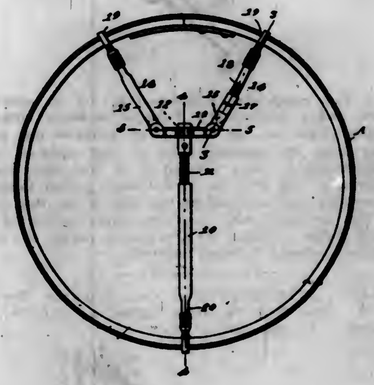
1. A wrench comprising a stationary jaw, a plate pivoted thereto, a shank extending from the jaw, a movable

jaw mounted on the shank, a spring arranged to force the movable jaw in one direction, a cam member pivoted to the

shank, and a handle pivoted to the shank and constructed to force the said cam member to move the said movable jaw against action of said spring.

1,397,463. AUTOMOBILE-SIGNAL. WILLIAM ERNEST SQUIRE, Burkburnett, Tex. Filed Jan. 27, 1921. Serial No. 440,452. 5 Claims. (Cl. 116—43.)

1. The combination with a vehicle; of a signal supported on the latter near the front thereof, said signal including a pair of rearwardly diverging duplicate indicating devices, secured against movement relative to the vehicle and one or the other of which is visible to a person standing at any point within a radius of approximately two hundred and seventy degrees.



1,397,464. FRUIT-GATHERER. GEORGE SROMOVSKY, Manistique, Mich. Filed Jan. 22, 1921. Serial No. 439,222. 5 Claims. (Cl. 56—333.)

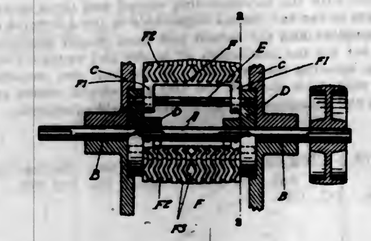
3. A fruit gatherer comprising a pair of pole arms, a pair of pivoted cutting blades having the inner ends thereof adjustably secured in the outer ends of the arms, a gathering receptacle adjustably supported on said arms, said gathering receptacle including a resilient wire frame having bent inner ends, there being aligned socket openings in said poles with the inner bent ends of the frame selectively

received therein and clips carried by the upper edge of the receptacle for attachment to the frame.

1,397,465. TIRE-CHANGING TOOL. ERNEST B. STEFFEY, Lawrenceville, Ill. Filed Dec. 1, 1919. Serial No. 341,573. 1 Claim. (Cl. 157—1.)

A device of the class described comprising a tubular member provided with a threaded bore, an adjusting screw engaging said bore, adjustable clamping hooks pivotally secured to said tubular member, a cross bar swiveled upon the end of said screw, arms pivotally secured to opposite ends of said cross bar, adjustable clamping hooks pivotally secured to the end of one of said arms, a sleeve swiveled upon the end of the other arm and provided with a threaded bore, an adjusting screw engaging the bore in said sleeve, and adjustable clamping hooks pivotally secured to the end of the last mentioned adjusting screw.

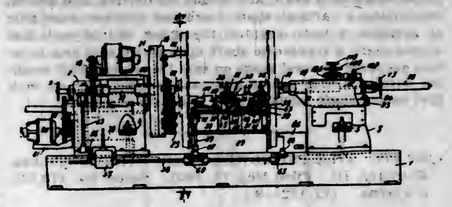
1,397,466. UMBRELLA. LEON A. SYOLES, Newark, N. J. Filed Feb. 11, 1919. Serial No. 276,333. 1 Claim. (Cl. 135—33.)



A cover for umbrellas having a staff and ribs, said cover comprising a plurality of substantially triangular sections

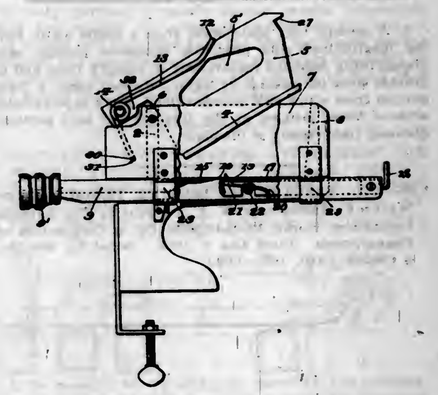
of india rubber, which sections have their side edges vulcanized together to overlie the said ribs in overlapped con-

dition, a reinforcing strip of india rubber vulcanized to the outer edge of the cover to complete the same, and a staff receiving cap arranged vertically of said cover.



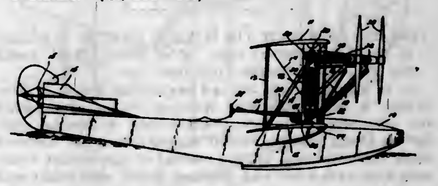
1,397,467. PULVERIZER. JOHN C. TARVIN, Maryville, Tenn.; Mary C. Tarvin administratrix of said John C. Tarvin, deceased. Filed June 13, 1919. Serial No. 303,955. 12 Claims. (Cl. 83—11.)

1. In a pulverizing machine of the nature described, the combination with a rotary body, of a hammer hinged on a line parallel to and outside of the axis of said body and said hammer having a body parallel to said axis and said hammer body having a transversely-ribbed working or impact face at each side and on its top, said ribs forming cutting edges, substantially as described.



1,397,468. QUARTERING AND CRANK-PIN-TURNING MACHINE. DANIEL H. TEAS, Chicago, Ill., and AUGUSTUS WOOD, Hamilton, Ohio, assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Original application filed May 8, 1919, Serial No. 295,801. Patent No. 1,370,715, dated Mar. 8, 1921. Divided and this application filed Feb. 11, 1920. Serial No. 357,808. 10 Claims. (Cl. 29—27.)

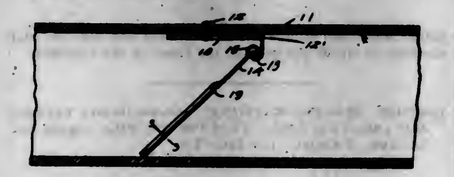
6. In a machine for quartering locomotive wheels in place on their axles, the combination of a headstock, a tailstock, a boring spindle mounted on the headstock with its axis in the same vertical plane as the wheel axis, a second boring spindle having means at each end for the attachment of a tool, and mechanism mounted on the tailstock for supporting and operating the second spindle at the same level with the wheel axis, the said mechanism to-



gether with the spindle being reversible end for end and movable to either the back or the front of the tailstock.

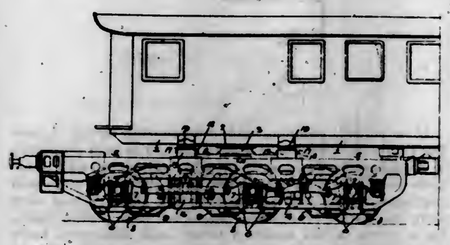
1,397,469. SLICING-MACHINE. JOSEPH DANIEL VAUGHN, Salt Lake City, Utah. Filed Oct. 29, 1919. Serial No. 334,146. 1 Claim. (Cl. 146—7.)

In a slicing, chipping and comminuting device, a container, a cover therefor, a sliding bottom in said container, a stationary knife secured in said bottom, an adjustable knife carried by said bottom and properly spaced from said stationary knife, said adjustable knife being formed with slots and with a contiguous downward bent portion forming a guide, a rod mounted below said adjustable knife and a supplemental knife mounted upon said rod and having its cutting teeth projecting up through the slots of said adjustable knife.



1,397,470. HYDROPLANE. ROBERT EMMET VENTRESS, Sr., Mobile, Ala. Filed Nov. 16, 1920. Serial No. 424,424. 3 Claims. (Cl. 244—14.)

1. In an aeroplane including a body and spaced wings, pairs of uprights extending between the wings and secured thereto, a plurality of arm members journaled between



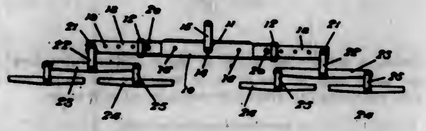
the upright, means for swinging said arm members simultaneously, a shaft rotatable within each arm member, a propeller on each shaft, and means for driving said shafts, comprising a vertical shaft journaled between each pair of uprights, a bevel gear on the upper end of each last named shaft, a transverse shaft upon which said arm members are secured, bevel gears on said transverse shaft meshing with said first named gear, and a bevel gear on each first named shaft meshing with said pair of gears.

1,397,471. TILE AND SEWER TRAP. WILLIAM WALKER, Fairbury, Ill. Filed May 18, 1921. Serial No. 470,733. 3 Claims. (Cl. 182—9.)

1. A conduit trap plate made from a single blank having longitudinal slits providing elongated prongs, said prongs being deflected transversely to rigidify them and to provide slots for passage of water between them, a plate portion from which said prongs extend, and a substantially arcuate hinge member at the free edge of said portions disposed transversely of the plate.

1,397,472. ELECTRIC-LOCOMOTIVE TRUCK. ALLEN WALLACE, Moorestown, N. J., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 6, 1921. Serial No. 490,336. 4 Claims. (Cl. 105—113.)

1. The combination in an electric locomotive truck of the three axle type in which each axle is independently driven by a motor, of a center bearing located at one side of the center axle to balance the truck; and an H-shaped bolster frame carrying the center frame and mounted on the side frames of the truck.



1,397,473. GAS AND AIR MIXING DEVICE. CHARLES H. WERLIN, Columbus, Ohio. Filed June 7, 1920. Serial No. 386,954. 5 Claims. (Cl. 158—119.)

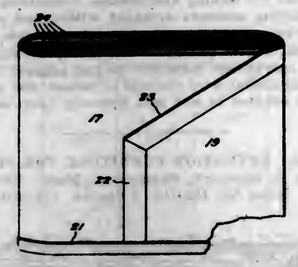
1. In a proportional air and gas mixing device, a valve casing, a valve rotatably mounted within said casing for governing fuel flow therethrough, a mixing shell having an air opening formed therein threadedly mounted upon the outlet end of said casing, an air shutter rotatable with said valve and disposed within said mixer and operable upon the rotation of said valve to increase or decrease the effective area of said air opening, a slidable sleeve mounted upon said mixer and operable in conjunction with said shutter to control the effective area of said opening, and locking means for retaining said mixer in various positions of circumferential adjustment with

respect to said air shutter, whereby the effective operation of said shutter in opening or closing said air opening may be retarded or accelerated.

1,397,474. DRAFT-EVENER. CHALMERS A. WEST, Mangum, Okla. Filed June 25, 1920. Serial No. 391,667. 2 Claims. (Cl. 278—8.)

1. A draft evener of the character described, comprising a tubular evener bar having an aperture midway between its ends, apertures between said aperture and ends of the bar and other apertures adjacent to the ends of said bar, an extension slidable in each end of said bar and having a longitudinal series of apertures to register simultaneously with the corresponding second and third named apertures of the bar, means engageable in the apertures of the extensions and the second and third named apertures of the bar for the connection of double and swingle trees and for securing the extensions to the bar, and coupling means engageable through the first and second named apertures and corresponding apertures of said extensions.

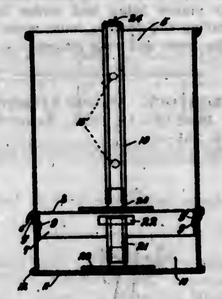
1,397,475. PICKER. HORATIO G. WEST, Harrisville, R. I. Filed Apr. 10, 1920. Serial No. 372,802. 1 Claim. (Cl. 139—21.)



A picker comprising a body having its upper portion formed with a bore counterbored throughout the major portion of its length, a removable bearing sleeve disposed within said counterbore and adapted to slide upon a guide rod, the lower end of the body being formed with a head adapted to engage a shuttle, said sleeve being provided at its uppermost and lowermost points with alined threaded holes, the upper portion of the body being provided with a threaded socket registering with the lowermost of the said holes, the uppermost portion of the body being formed with a threaded opening registering with the uppermost of said threaded holes, a screw threaded through the lower-most hole in the sleeve and engaging within said socket, access to said screw being had through the uppermost hole in the sleeve and the last named hole in the body, and a second screw threaded into the last named hole and engaging within the uppermost hole in the sleeve.

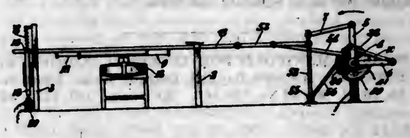
1,397,476. ADVERTISING NOVELTY. ERNEST S. WILSON, Garrison, Iowa. Filed June 11, 1920. Serial No. 388,259. 1 Claim. (Cl. 40—86.)

A device of the class described comprising a casing provided with an elongated opening in one side, having an open end, and a pair of spaced openings in the opposite closed end thereof, a cover hingedly connected to one side of said casing and provided with a spring cage adapted to engage the opposite side and close the open end of said casing, a partition disposed in said casing adjacent said open end and provided with a pair of spaced openings in alinement with the openings in said casing, a tube secured to said partition and arranged longitudinally in said casing, a pair of headed rollers arranged on opposite sides of said tube and extending through the openings in said partition and in said casing, and a pair of operating handles secured to the outer ends of said rollers.



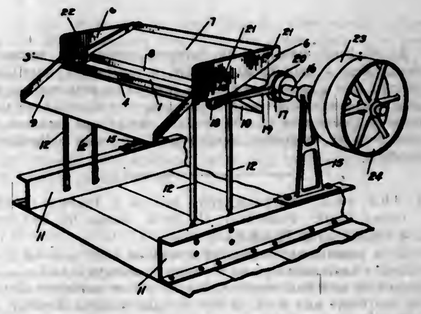
1,397,477. RECORD-ENVELOP. FRANK WOKOUN, Baltimore, Md. Filed Sept. 11, 1920. Serial No. 409,521. 2 Claims. (Cl. 229—72.)

1. A record envelop formed from a single piece of sheet material having its side edges folded back upon themselves in opposite directions, the sheet being subsequently folded longitudinally to define two similar contacting portions, of identical size and shape, said folded portions being subsequently scored transversely along a plurality of equi-distant lines to define a plurality of panels, and the successive panels being folded upon said lines successively whereby to define a plurality of entirely separate compartments, the last panel having its edges secured upon the superposed panels.



1,397,478. FLOUR-SIFTER. ANNABELLE F. ZOOK, Lewistown, Mont. Filed Feb. 1, 1921. Serial No. 441,620. 2 Claims. (Cl. 83—60.)

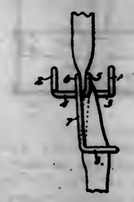
1. In a flour sifter, a body portion having its lower edge turned in to provide a groove, a sieving member disposed within the groove, a collar having a flange disposed within the groove and adapted to retain the sieving member in the groove, a lower section having openings and carrying a sieving member, pins carried by the collar and adapted to be positioned in the openings for securing the lower section to the body portion, a support secured to



the body portion, a handle having pivotal connection with the support, an agitating member on one end of the handle and operating over the first mentioned sieving member, and an agitating member removably connected to the opposite end of the handle and adapted to move over the second mentioned sieving member.

1,397,479. VIOLIN-PLAYING ATTACHMENT FOR PIANOS, PIPE-ORGANS, OR SIMILAR INSTRUMENTS. DAVID R. ADAMSON, Brooklyn, N. Y. Filed Mar. 11, 1916, Serial No. 83,561. Renewed Apr. 18, 1921. Serial No. 462,343. 9 Claims. (Cl. 84—326.)

1. In a device of the character described, the combination of a stringed instrument, two bows for operative engagement with the same string thereof, means for moving said bows in opposite directions, and means for causing both of said bows to engage said string but only one of said bows to engage with said string at a time.



1,397,480. ORE-SEPARATOR. GEORGE W. ARNOLD, Denver, Colo. Filed Nov. 6, 1920. Serial No. 422,198. 4 Claims. (Cl. 83—88.)

1. In a separator of the class described, the combination with a deck having front and rear riffles, an inclined apron

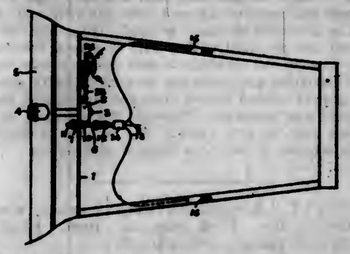
having a vertical depending flange positioned between the rifles, means whereby the apron and thus the flange can be adjusted vertically or horizontally toward or away from either rifle and toward or away from the deck, said flange serving to separate the deck space into front and rear planes, communication between the front and rear planes being had under the flange, and means for vibrating the deck to cause wave movements of the water in the front and rear planes.

1,397,481. PINCHCOCK. WALTER SANFORD AVERY, Knoxville, Tenn. Filed Oct. 18, 1920. Serial No. 417,631. 2 Claims. (Cl. 251—5.)

1. A pinchcock comprising a single piece of wire bent upon itself to form a pair of parallel jaws, a spring holding the jaws together and terminating in a rigid tube-receiving portion positioned transversely thereof, and a pair of handles in parallelism with the spring and jaws and in alinement with the jaws, said spring and jaws so arranged that a movement of the handles toward one another serves to separate the jaws.

1,397,482. MANIFOLD FOR INTERNAL-COMBUSTION ENGINES. ANDREW BACHLE, Detroit, Mich. Filed Nov. 15, 1919. Serial No. 338,167. 5 Claims. (Cl. 123—52.)

1. An inlet manifold for internal combustion engines, comprising a cylindrical conduit, a stationary partition therein, and a member rotatably adjustable with respect to said stationary partition for enlarging and diminishing the cross-sectional area of said conduit, the axis of rotation of said member extending longitudinally of said cylindrical conduit.



1,397,483. MONUMENT. ROLLIE A. BROWN, Pacific Grove, Calif. Filed Mar. 10, 1919. Serial No. 281,791. 4 Claims. (Cl. 72—7.2.)

1. A monument comprising a wooden body portion providing a base member and a separate upright member supported by said base member, sheets of non-corrodible metal on the front and back of the upright wooden member, a sheet of non-corrodible metal covering the top and sides of said upright wooden member and having flanges pinned to the front and back metal sheets and to the wooden upright member, and sheets of non-corrodible metal covering

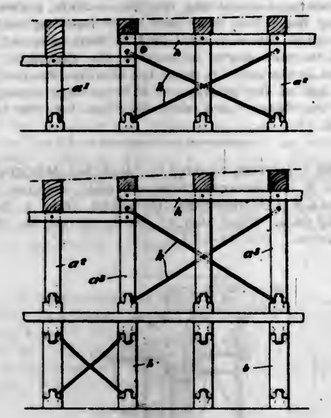
the base wooden member, the top sheets of the metal covering of the base member pinned to the latter.

1,397,484. SYSTEM OF LOCKING AUTOMOBILES. THOMAS J. COO, Toronto, Ontario, Canada. Filed July 5, 1919. Serial No. 306,696. 1 Claim. (Cl. 180—82.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A means for locking automobiles, comprising a plurality of locking members arranged within and adapted to seal the engine inclosure, flexible wire controls connected with each of said locking members, a manually operable member operatively connected to and adapted to operate all of said flexible wire controls in unison, and a combination lock adapted to lock said manually operable member.

1,397,485. EXTENSION FURNITURE FOR PRINTERS. HARRY H. HANCOCK, Swampscott, Mass. Filed Oct. 6, 1920. Serial No. 415,013. 5 Claims. (Cl. 101—402.)

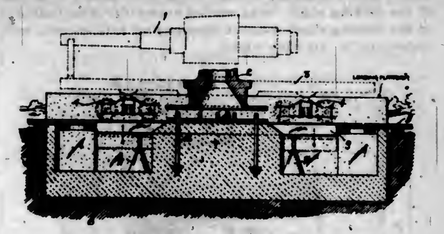
1. Extension furniture for printers constituting a complete article of manufacture of a size adapted for use in a chase, comprising two elongated mutually engaged counterpart members, each of said members having at adjacent vertical walls a longitudinal recess and a longitudinal under-cut groove in the inner wall of said recess, and said groove providing a longitudinal lip, said lips being located in said grooves and in contact throughout approximately the longitudinal, central, vertical plane of said furniture.



1,397,486. EXTENSION FURNITURE FOR PRINTERS. HARRY H. HANCOCK, Swampscott, Mass. Filed Apr. 7, 1921. Serial No. 459,344. 9 Claims. (Cl. 101—402.)

1. Extension furniture for printers, constituting a complete article of manufacture less than type-high and having a width based on a unit of measurement used by printers, the furniture comprising two elongated members, which are longitudinally extensible the one on the other for substantially their full lengths, each of said members having a larger body portion, and said body portions being at the outer ends of the furniture, and co-acting means at the inner extremity of the smaller portion of one of said members and the inner extremity of the enlarged body

portion of the other of said members, for precluding the longitudinal separation of said members when so extended, the restrictive action of said means being just sufficient to prevent such separation, and means at the meeting surfaces of said members for maintaining the lateral sides of the furniture always in one longitudinal, vertical, plane at any length of the furniture.



1,397,487. KEEL-BLOCKS FOR BUILDING SHIPS. JOHN MURRAY LEIGHTON, Westminster, London, England, assignor to Concrete Piling Ltd., Westminster, London, England. Filed Nov. 29, 1919. Serial No. 341,405. 5 Claims. (Cl. 61—66.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A keel supporting structure consisting of similar series of keel blocks the blocks of each series increasing in height in constant progression, in combination with series of base blocks of different heights to suit the gradient of the keel relative to the slipway, a series of the keel blocks being laid to give a step by step increase in height followed by repeats of the series supported successively on the series of base blocks.

1,397,488. RAILWAY-ARTILLERY. GUSTAVE R. LUKESH, U. S. Army. Filed Sept. 5, 1919. Serial No. 321,995. 7 Claims. (Cl. 89—40.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

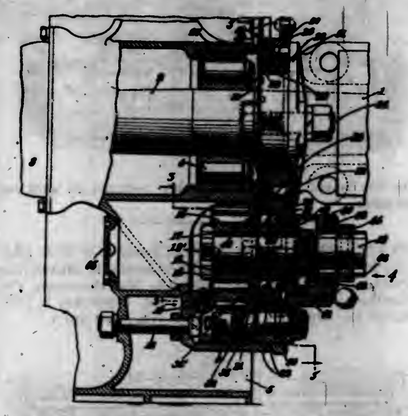
7. In combination a railroad track, an emplacement over which the track passes, a car adapted to travel over said track, a gun carrying mount disposed on said car, and means for lowering the car with relation to the mount to

place the latter in load supporting position on said emplacement.

1,397,489. METHOD OF AND APPARATUS FOR GLUING SHEETS EDGE TO EDGE. GEORGE R. MEYERCORD, Chicago, Ill., assignor to Haskelite Manufacturing Corporation, a Corporation of New York. Filed May 8, 1920. Serial No. 379,770. 12 Claims. (Cl. 144—281.)

1. In a machine of the character described, a flat work support yieldable in the downward direction under pressure, a clamping element for holding a sheet on said support, a second clamping element lying above said support, and actuating means constructed and arranged to move the latter element up and down and simultaneously move it from and toward the first clamping element.

1,397,490. INCLINOMETER. ANTONIO PERADOTTO, Turin, Italy. Filed Oct. 18, 1920. Serial No. 417,828. 6 Claims. (Cl. 33—206.)



1. An inclinometer, comprising a transparent hollow globe having indicia visible on its outer surface; a neck rigidly secured to said globe and sealed at its outer end; a conical nipple in the inner end of said neck having openings in its apex and base communicating, respectively, with the interior of the neck and the interior of the globe; a transparent, expansible and contractible liquid filling said globe and extending into said nipple; and an indicating element for coöperation with said indicia suspended in the liquid in said globe.

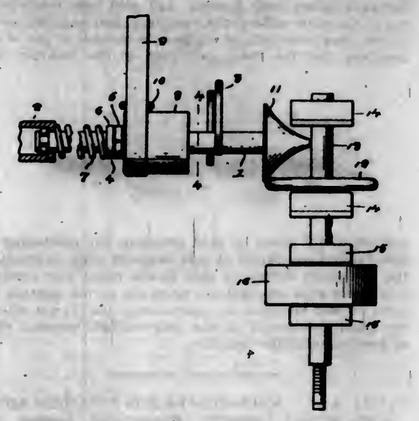
1,397,491. DRIVING MECHANISM FOR MOTOR-VEHICLES. VIGGO V. TORBENSEN, Cleveland, Ohio, assignor to The Torbensen Axle Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 28, 1918. Serial No. 237,040. 17 Claims. (Cl. 74—7.)

4. In driving mechanism for vehicles, the combination of a supporting axle, a traction wheel thereon, a driving

shaft for said wheel, gearing at the outer end of said driving shaft by means of which the driving shaft drives said wheel, said shaft and gearing being constructed to permit of the driving shaft being moved outwardly longitudinally of the driving shaft without disengaging said gearing with respect to the traction wheel.

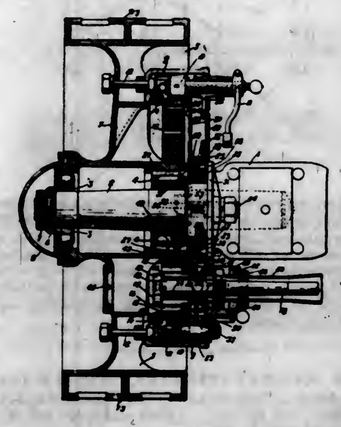
7. In driving mechanism for vehicles, the combination of a traction wheel, an axle therefor, an internal gear rigid with the wheel, a driving shaft, differential gearing with which the inner end of said shaft has a slidable driving connection, a pinion geared to said internal gear for driving the latter, and a sleeve supporting said pinion independently of the driving shaft, said pinion being detachably interlocked with said shaft whereby the shaft drives the pinion but the shaft may be shifted axially of the pinion to remove it from interlocking engagement with the differential gearing without disturbing the position of the pinion.

1,397,492. AUTOMOBILE-ENGINE FUEL-SUPPLY. JOHN GOOD, Garden City, Long Island, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed July 14, 1920. Serial No. 396,242. 1 Claim. (Cl. 158—36.)



In an internal combustion engine the combination with two liquid fuel float chambers each having a fuel inlet duct, an outlet duct to the engine and a float and a valve controlled by the float to control the inlet duct, of a single valve member for positively closing both the inlet duct and the outlet duct of each chamber substantially simultaneously and the ducts of the two chambers alternately.

1,397,493. PYROXYLIN SOLVENT. ROWLAND BRITTAIN MITCHELL, Athol, Mass., assignor to Athol Manufacturing Company, Athol, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1920. Serial No. 405,053. 4 Claims. (Cl. 134—79.)

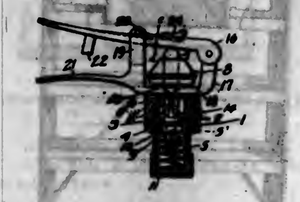


1. A solvent for pyroxylin containing ethyl propionate and toluol.

1,397,494. TRANSMISSION MECHANISM. LEON B. STRONG, Livingston, Mont. Filed Sept. 26, 1919. Serial No. 326,433. 1 Claim. (Cl. 74—26.)

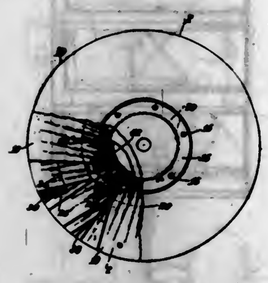
A transmission mechanism comprising a yieldably supported drive shaft, a cone carried by one end thereof, a driven shaft arranged at a right angle to the drive shaft, a disk carried by the second mentioned shaft and normally engaging that portion of the cone of greatest diameter, spaced bearings supporting the driven shaft, a sleeve surrounding the latter mentioned shaft between said bearings, a spiral thread carried by said shaft, a spiral groove formed in said sleeve to receive the thread, a pulley mounted on the sleeve between the bearings, flanges formed on the hub of the pulley, and ball bearings arranged between the flanges and said bearings for the purpose specified.

1,397,495. MOTOR-VEHICLE DRIVING MECHANISM. VIGGO V. TORBENSEN, Cleveland, Ohio, assignor to The Torbensen Axle Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 17, 1918. Serial No. 235,085. 19 Claims. (Cl. 74—7.)



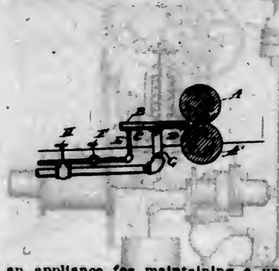
2. In a motor vehicle, the combination of a wheel, an internal driving gear therefor, a pinion driving said gear, a shaft driving said pinion, said gear and pinion being inclosed on one side by a part of the wheel structure, a plate for inclosing the other side, a packing forming a running joint between the plate and wheel structure, and means yieldingly pressing said plate toward the wheel.

REISSUES.



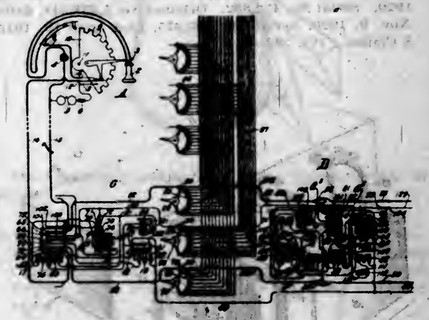
15,224. [WITHDRAWN.]

15,225. **SELF-CLOSING TAP.** HAROLD JARVIS, Toronto, Ontario, Canada. Filed June 1, 1920. Serial No. 385,852. Original No. 1,314,195, dated Aug. 26, 1919. Serial No. 189,062, filed Aug. 31, 1917. 5 Claims. (Cl. 251—134.)



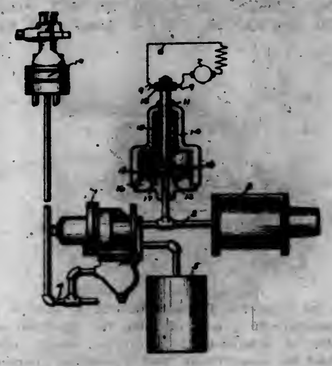
2. In a self-closing tap, a unitary body having an integral internal annular shoulder presenting a flat valve seat with an opening therethrough, and such body having a chamber communicating with the seat and the chamber having an entrance with closure; a valve stem having a valve head, the entrance through the chamber permitting the passage of the valve head, such valve head presenting a flat annular face to come into flat contact with the face of the shoulder and adapted to close said opening, said stem passing through the opening in the valve seat and having a portion adjacent to the valve head adapted to close said opening sufficiently prior to the seating of the valve head to prevent water-hammer, said stem having above the last mentioned portion straight grooves parallel to its axis and with their ends toward the valve head gradually diminished in depth.

15,226. **BUFFING OR POLISHING WHEEL.** ALEXANDER LEVETT, New York, N. Y., assignor to Benjamin D. Riegel, trustee, Fairfield, Conn. Filed Mar. 24, 1921. Serial No. 455,145. Original No. 1,298,522, dated Mar. 25, 1919, Serial No. 249,846, filed Aug. 14, 1918. 11 Claims. (Cl. 51—193.)



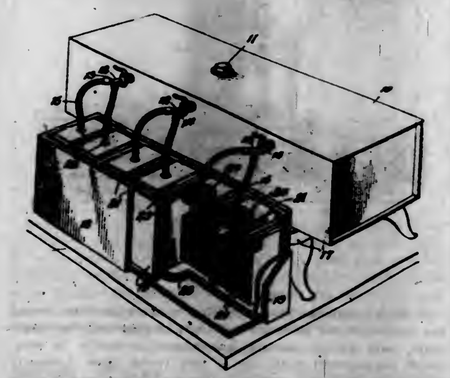
1. A buffing or polishing wheel comprising a hub and a body, the body being made of a helically wound strip of material doubled up widthwise and having its median line gathered and wound around the said hub, the outer raw edge of the strip forming the peripheral face of the wheel.

15,227. **MEANS FOR REGULATING THE TEMPERATURE OF ROLLS.** JAMES G. MAXWELL, Cleveland, Ohio. Filed May 2, 1921. Serial No. 466,208. Original No. 1,366,581, dated Jan. 25, 1921, Serial No. 368,550, filed Mar. 25, 1920. 8 Claims. (Cl. 80—41.)



1. In an appliance for maintaining a uniform degree of temperature in a pair of rolls, the combination with said rolls, of independently controlled supply pipes for steam and air respectively, and a common chamber into which said pipes discharge, said chamber provided with an elongated discharge opening adjacent to the contacting surfaces of said rolls.

15,228. **AUTOMATIC TRUNKING SYSTEM.** FRANKLIN J. TRUBY, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 30, 1916. Serial No. 117,816. Original No. 1,122,556, dated Dec. 29, 1914, Serial No. 603,303, filed Jan. 18, 1911. 25 Claims. (Cl. 179—18.)



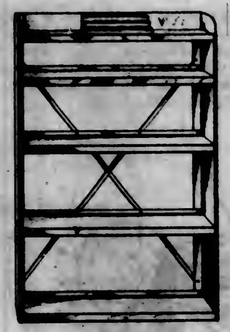
1. In a telephone system, a line, a non-numerical trunking switch, trunk lines for talking purposes leading therefrom, said switch having line wipers normally in electrical engagement with one of said trunk lines, normally open connections between said line and line wipers, a relay having a pair of windings, means for energizing one of said windings to energize said relay to close said normally open connections when connection is made with an idle trunk, and means to energize both of said windings to prevent said relay from operating when said wipers contact with a busy trunk.

15,229. REGENERATIVE BRAKE DEVICE. WALTER V. TURNER, deceased, Wilkinsburg, Pa., by the Westinghouse Air Brake Co., Wilmerding, Pa., a Corporation of Pennsylvania, assignee. Filed June 8, 1920. Serial No. 387,469. Original No. 1,283,979, dated Nov. 5, 1918, Serial No. 177,975, filed June 30, 1917. 12 Claims. (Cl. 303—3.)

5. The combination with means for applying air brakes to a railway train unit and means for applying electric braking to the same unit, the two braking means being each normally separately operable, of an engineer's valve for controlling the air-brakes, and means responsive to the movement of the engineer's valve to the emergency position for rendering the electric braking inoperative.

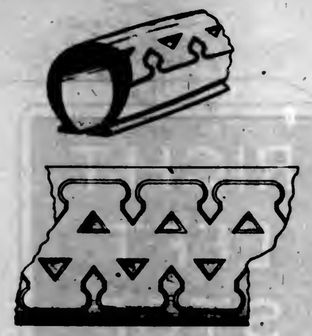
15,230. METHOD FOR DISMANTLING SECONDARY BATTERIES. RUDOLPH F. STEIN, Minneapolis, Minn., assignor to United States Ordnance Company, Washington, D. C., a Corporation of Virginia. Filed Dec. 23, 1920. Serial No. 432,882. Original No. 1,358,344, dated Nov. 9, 1920, Serial No. 305,375, filed June 19, 1919. 8 Claims. (Cl. 263—5.)

6. The method of loosening the seal on a storage battery, which consists in applying low pressure steam thereto and covering the top of the battery to confine the steam, whereby the seal is gradually softened.



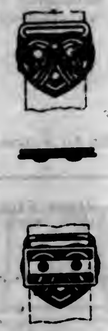
DESIGNS.

59,617. METAL RACK. HARRY L. BEACH, Coshocton, Ohio. Filed Oct. 30, 1919. Serial No. 334,537. Term of patent 7 years.



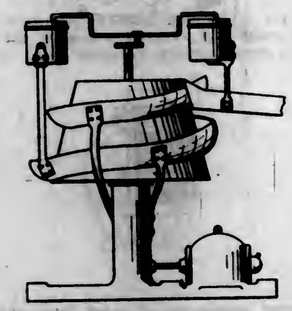
The ornamental design for a metal rack, substantially as shown.

59,618. DISPLAY-STAND. HARRY L. BEACH, Coshocton, Ohio. Filed Aug. 26, 1920. Serial No. 406,242. Term of patent 7 years.



The ornamental design for a display stand, substantially as shown.

59,619. NON-SKID TIRE. WILLIAM A. BRUBAKER, Akron, Ohio, assignor to Harry McCreary, Indiana, Pa. Filed Feb. 10, 1921. Serial No. 444,040. Term of patent 14 years.

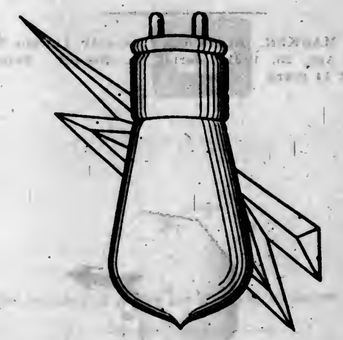


The ornamental design for a non-skid tire, as shown.

59,620. RIBBON-CLASP. SIMON BRUNER, New York, N. Y. Filed July 2, 1921. Serial No. 483,230. Term of patent 3½ years.

The ornamental design for a ribbon clasp, as shown.

59,621. DOUGH-ROUNDER. THOMAS H. CLARK, Des Moines, Iowa. Filed Nov. 26, 1920. Serial No. 426,651. Term of patent 7 years.

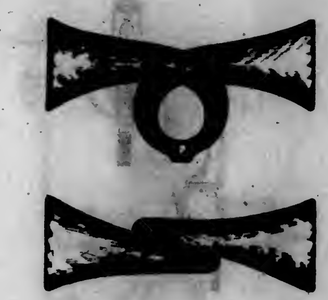


The ornamental design for a dough rounder, as shown.

59,622. BACK PLATE OF A WALL-BRACKET FOR LIGHTING-FIXTURES. HARRY COHN, Brooklyn, N. Y., assignor to Hygrade Lighting Fixture Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 14, 1921. Serial No. 452,325. Term of patent 7 years.

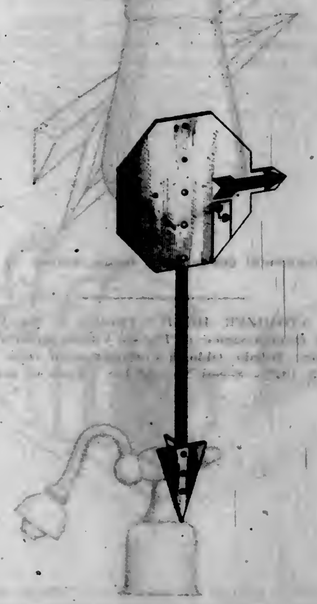
The ornamental design for a back plate of a wall bracket for lighting fixtures, as shown.

59,623. BADGE, BUTTON, OR PIN. ALFRED P. DANIEL, Houston, Tex. Filed June 20, 1921. Serial No. 479,139. Term of patent 3½ years.



The ornamental design for a badge, button, or pin as shown.

59,624. ATOMIZER-HEAD. THOMAS A. DE VILBISS, Toledo, Ohio, assignor to The De Vilbiss Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 12, 1920. Serial No. 358,148. Term of patent 3½ years.

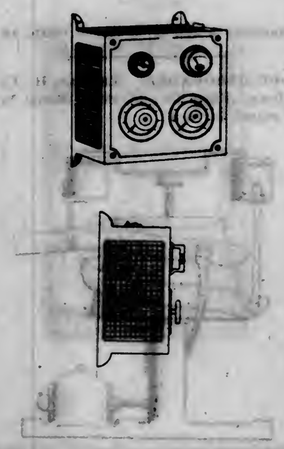


The ornamental design for an atomizer head substantially as shown.

59,625. SOUND-AMPLIFIER. CHARLES J. DOBER, Brooklyn, N. Y. Filed Aug. 30, 1921. Serial No. 497,064. Term of patent 7 years.

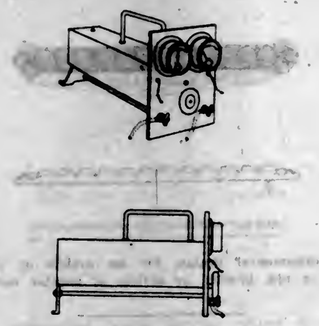
The ornamental design for a sound amplifier as shown.

59,626. MARKER. ALEXANDER J. DUNLAP, Lincoln, Nebr. Filed Apr. 25, 1921. Serial No. 464,461. Term of patent 14 years.



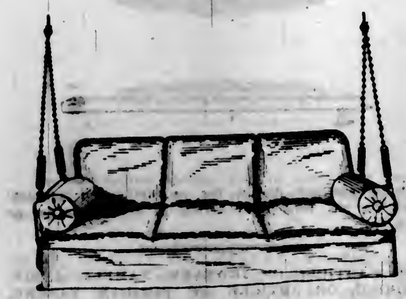
The ornamental design for a marker as shown.

59,627. SIGNAL FOR AUTOMOBILES. LLOYD M. DUNKEY and HERBERT J. MONTGOMERY, Franklin, Pa. Filed June 20, 1921. Serial No. 481,401. Term of patent 7 years.



The ornamental design for a signal for automobiles, as shown.

59,628. RECTIFIER. JAMES KNOX ELDERKIN, Newark, N. J. Filed June 1, 1921. Serial No. 474,264. Term of patent 7 years.



The ornamental design for a rectifier, as shown.

59,629. BATTERY-TESTER. JAMES KNOX ELDERKIN, Newark, N. J. Filed June 1, 1921. Serial No. 474,265. Term of patent 7 years.

The ornamental design for a battery tester, as shown.

59,630. HAMMOCK. BENJAMIN B. ENGLANDER, Brooklyn, N. Y., assignor to Englander Spring Bed Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 10, 1920. Serial No. 423,196. Term of patent 14 years.

The ornamental design for a hammock substantially as shown.

59,631. EMBLEM, BADGE, STICKPIN, OR SIMILAR ARTICLE. HAROLD G. ESSAYAN, Providence, R. I. Filed June 17, 1921. Serial No. 478,441. Term of patent 3½ years.

The ornamental design for an emblem, badge, stickpin or similar article as shown.

59,632. SPOON-HOLDER. JOHN EUGENE FRIENTAS, Milford, Ohio. Filed Mar. 14, 1921. Serial No. 452,328. Term of patent 3½ years.

The ornamental design for a spoon holder as shown.

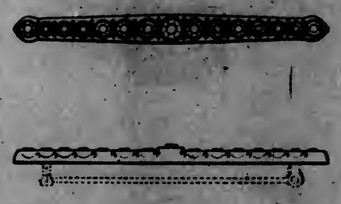
59,633. BUCKLE. LESLIE H. FISHEL, New York, N. Y. Filed June 7, 1919. Serial No. 302,609. Term of patent 7 years.

The ornamental design for a buckle, as shown.

59,634. BUCKLE. LESLIE H. FISHEL, New York, N. Y. Filed June 7, 1919. Serial No. 302,610. Term of patent 7 years.

The ornamental design for a buckle, as shown.

59,635. BUCKLE. LEWIS H. FISHEL, New York, N. Y. Filed June 7, 1919. Serial No. 302,611. Term of patent 7 years.



The ornamental design for a buckle as shown.

59,636. ARTICLE OF JEWELRY—NAMELY, A PIN, BROOCH, OR ARTICLE OF SIMILAR NATURE. HENRY W. FISHEL, New York, N. Y. Filed Oct. 16, 1919. Serial No. 331,173. Term of patent 7 years.

The ornamental design for an article of jewelry, namely, a pin, brooch, or article of similar nature as shown.

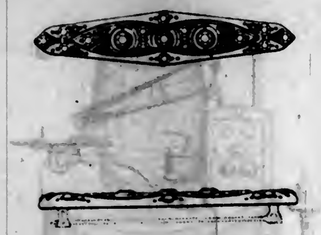
59,637. ARTICLE OF JEWELRY—NAMELY, A PIN, BROOCH, OR ARTICLE OF SIMILAR NATURE. HENRY W. FISHEL, New York, N. Y. Filed Oct. 16, 1919. Serial No. 331,174. Term of patent 7 years.

The ornamental design for an article of jewelry, namely, a pin, brooch, or article of similar nature as shown.

59,638. ARTICLE OF JEWELRY—NAMELY, A PIN, BROOCH, OR ARTICLE OF SIMILAR NATURE. HENRY W. FISHEL, New York, N. Y. Filed Oct. 16, 1919. Serial No. 331,175. Term of patent 7 years.

The ornamental design for an article of jewelry, namely—a pin, brooch, or article of similar nature as shown.

59,639. ARTICLE OF JEWELRY—NAMELY, A PIN, BROOCH, OR ARTICLE OF SIMILAR NATURE. HENRY W. FISHEL, New York, N. Y. Filed Oct. 16, 1919. Serial No. 331,176. Term of patent 7 years.

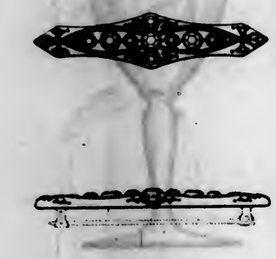


The ornamental design for an article of jewelry, namely—a pin, brooch, or article of similar nature as shown.

59,640. ARTICLE OF JEWELRY—NAMELY, A PIN, BROOCH, OR ARTICLE OF SIMILAR NATURE. HENRY W. FISHEL, New York, N. Y. Filed Oct. 16, 1919. Serial No. 331,177. Term of patent 7 years.

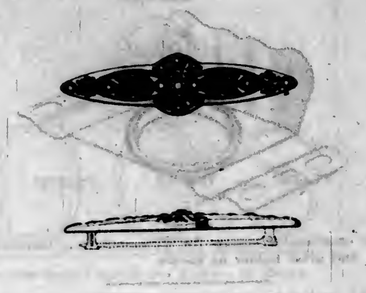
The ornamental design for an article of jewelry, namely—a pin, brooch, or article of similar nature as shown.

59,641. ARTICLE OF JEWELRY—NAMELY, A PIN, BROOCH, OR ARTICLE OF SIMILAR NATURE. HENRY W. FISHEL, New York, N. Y. Filed Oct. 16, 1919. Serial No. 331,178. Term of patent 7 years.



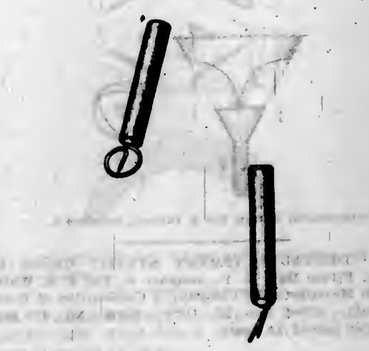
The ornamental design for an article of jewelry, namely—a pin, brooch, or article of similar nature as shown.

59,642. ARTICLE OF JEWELRY—NAMELY, A PIN, BROOCH, OR ARTICLE OF SIMILAR NATURE. HENRY W. FISHEL, New York, N. Y. Filed Oct. 16, 1919. Serial No. 331,179. Term of patent 7 years.



The ornamental design for an article of jewelry, namely—a pin, brooch, or article of similar nature as shown.

59,643. ARTICLE OF JEWELRY—NAMELY, A PIN, BROOCH, OR ARTICLE OF SIMILAR NATURE. HENRY W. FISHEL, New York, N. Y. Filed Oct. 16, 1919. Serial No. 331,180. Term of patent 7 years.



The ornamental design for an article of jewelry, namely—a pin, brooch, or article of similar nature as shown.

59,644. ARTICLE OF JEWELRY—NAMELY, A PIN, BROOCH, OR ARTICLE OF SIMILAR NATURE. HENRY W. FISHEL, New York, N. Y. Filed Oct. 16, 1919. Serial No. 331,182. Term of patent 7 years.

The ornamental design for an article of jewelry, namely—a pin, brooch, or article of similar nature as shown.

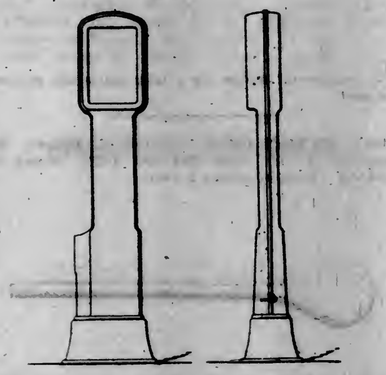
59,645. MILK-BOTTLE-CAP REMOVER. EDWARD H. FOOTE, Somerville, Mass. Filed Apr. 15, 1919. Serial No. 290,347. Term of patent 7 years.

The ornamental design for a milk bottle cap remover, as shown.

59,646. SUCTION-BULB. AUGUST E. FRAASS, New Rochelle, N. Y. Filed Nov. 20, 1920. Serial No. 425,583. Term of patent 7 years.

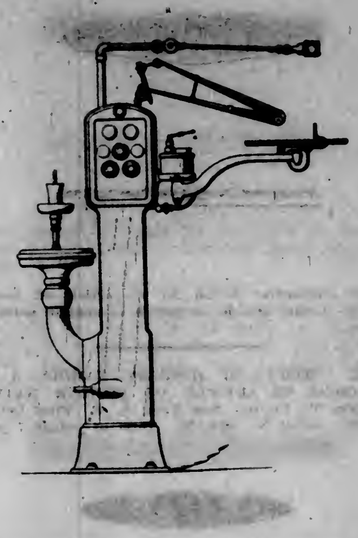
The ornamental design for a suction bulb as shown.

59,647. COMBINATION TOOTHBRUSH, PASTE, AND GLASS HOLDER. KARL FROST and OSWALD JESEL, Chicago, Ill. Filed June 4, 1921. Serial No. 475,110. Term of patent, 7 years.



The ornamental design for a combination toothbrush, paste, and glass holder as shown.

59,648. FUNNEL. GEORGE GREGORY, Bay City, Mich. Filed May 24, 1921. Serial No. 472,290. Term of patent 14 years.



The ornamental design for a funnel, as shown.

59,649. DENTAL-EQUIPMENT STAND. GEORGE D. HECK, Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 27, 1920. Serial No. 433,482. Term of patent 14 years.

The ornamental design for a dental equipment stand, as shown.

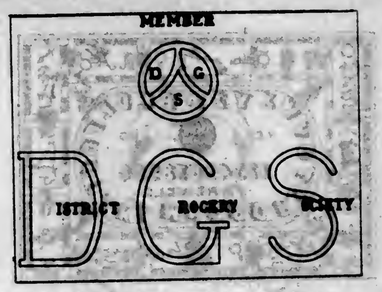
59,650. DENTAL-EQUIPMENT STAND. GEORGE D. HECK, Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 29, 1920. Serial No. 433,951. Term of patent 14 years.

The ornamental design for a dental equipment stand, as shown.

59,651. GOBLET. T CLARENCE HEISEY, Newark, Ohio, assignor to A. H. Heisey & Co., Newark, Ohio. Filed Mar. 19, 1921. Serial No. 453,754. Term of patent 14 years.

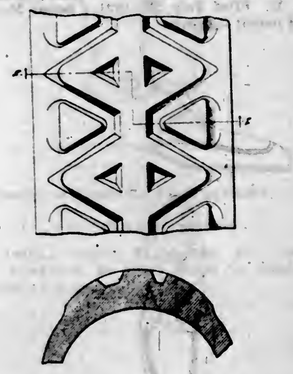
The ornamental design for a goblet, as shown.

59,652. BEVERAGE-DISPENSER. FREDERICK W. HOLDERLE and CARL L. HOLDERLE, Rochester, N. Y. Filed June 18, 1921. Serial No. 478,755. Term of patent 7 years.



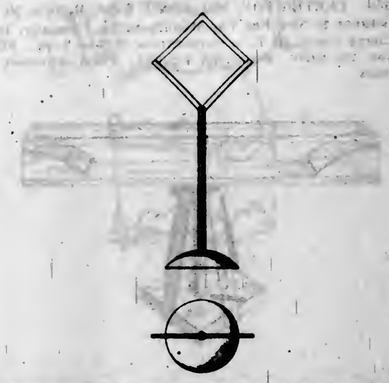
The ornamental design for a beverage dispenser, substantially as shown.

59,653. TIRE. CLAIR G. HOOVER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 10, 1921. Serial No. 476,578. Term of patent 14 years.



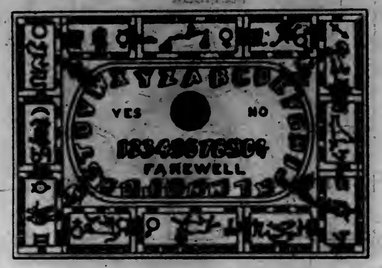
The ornamental design for a tire as shown.

59,654. SIGN. WILLIAM M. HORNSTEIN, Washington, D. C. Filed Mar. 7, 1921. Serial No. 450,488. Term of patent 3½ years.



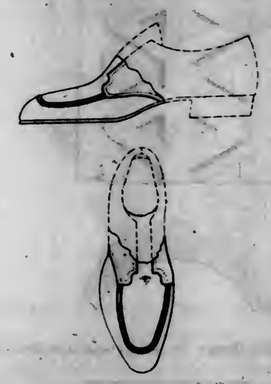
The ornamental design for a sign, as shown.

59,655. AUTOMOBILE-TIRE. JOHN HOTCHKISS, Sebring, Ohio. Filed July 28, 1920. Serial No. 399,627. Term of patent 14 years.



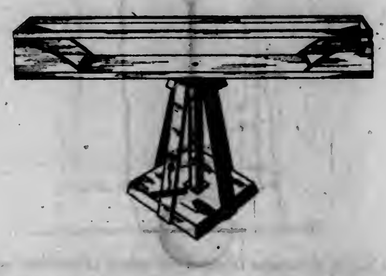
The ornamental design for an automobile tire substantially as shown.

59,656. PAPER-WEIGHT. CLARENCE D. HUDSON, Los Angeles, Calif. Filed June 1, 1920. Serial No. 385,835. Term of patent 3½ years.



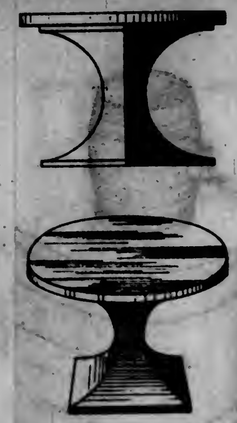
The ornamental design for a paper weight, as shown.

59,657. ASTRAL BOARD. MAX JACOBSON, New York, N. Y. Filed June 10, 1920. Serial No. 388,290. Term of patent 3½ years.



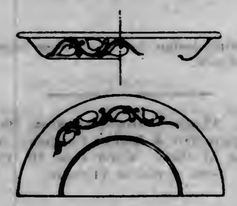
The ornamental design for an astral board, as shown.

59,658. VAMP OF A SHOE. IRVING J. KAUDER, Brooklyn, N. Y. Filed July 23, 1921. Serial No. 487,190. Term of patent 3½ years.



The ornamental design for a vamp of a shoe, as shown.

59,659. TEETER TOY. CHARLES J. KERN, Buffalo, N. Y., assignor to New Era Toy Manufacturing Company, Inc., Cherry Creek, N. Y., a Corporation of New York. Filed Nov. 20, 1920. Serial No. 425,562. Term of patent 3½ years.



The ornamental design for a teeter-toy, as shown.

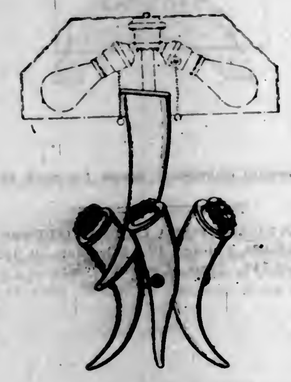
59,660. TOY TABLE. CHARLES J. KERN, Buffalo, N. Y., assignor to New Era Toy Manufacturing Company, Inc., Cherry Creek, N. Y., a Corporation of New York. Filed Nov. 20, 1920. Serial No. 425,564. Term of patent 3½ years.

The ornamental design for a toy-table, as shown.

59,661. CANDLE-PLATE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1920. Serial No. 420,290. Term of patent 3½ years.

The ornamental design for a candle plate, as shown.

59,662. BOTTLE PROTECTING AND CARRYING DEVICE. HECTOR LAUZON, Cincinnati, Ohio. Filed Mar. 14, 1921. Serial No. 452,214. Term of patent 3½ years.



The ornamental design for a bottle protecting and carrying device as shown.

59,663. MEDALLION. ARTHUR J. LAWS, Cleveland, Ohio, assignor to J. E. Townsend, S. P. Fetzer, and W. Benson James, trustees, Lakewood, Ohio. Filed Mar. 30, 1921. Serial No. 457,038. Term of patent 3½ years.

The ornamental design for a medallion, as shown.

59,664. STANDARD. ADALBERT LISKOWACKI, Detroit, Mich. Filed Feb. 25, 1921. Serial No. 447,886. Term of patent 3½ years.

The ornamental design for a standard, substantially as shown.

59,665. RING OR SIMILAR ARTICLE. JOSHUA W. MAYER, New York, N. Y. Filed Sept. 15, 1921. Serial No. 500,981. Term of patent 7 years.

The ornamental design for a ring or similar article, as shown.

59,666. DOLL. FRANK L. MILLER, Jr., Chattanooga, Tenn. Filed Sept. 24, 1921. Serial No. 503,116. Term of patent 14 years.

The ornamental design for a doll as shown.

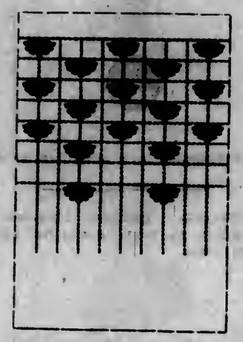
59,667. DOLL. FRANK L. MILLER, Jr., Chattanooga, Tenn. Filed Sept. 24, 1921. Serial No. 503,117. Term of patent 14 years.

The ornamental design for a doll, as shown.

59,668. BADGE. THORNTON F. MILLER, Pittsburgh, Pa., assignor to Imperial Counsel of the Universe, Princes of Mosera, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 22, 1921. Serial No. 494,442. Term of patent 14 years.

The ornamental design for a badge, substantially as shown.

59,669. TALKING-MACHINE CABINET OR CASING. ALVIN MORELLE, Doylestown, Pa. Filed May 2, 1921. Serial No. 466,243. Term of patent 3½ years.



The ornamental design for a talking machine cabinet or casing, as shown.

59,670. CLAMP FOR HOLDING PARTITIONS, &c., IN SHOWCASES AND THE LIKE. JOHN D. MOSER, Hamilton, Ontario, Canada. Filed Feb. 11, 1921. Serial No. 444,304. Term of patent 3½ years.

The ornamental design for a clamp for holding partitions, &c., in showcases and the like, as shown.

59,671. CLOTH. CHARLES OSCAR MUELLER, New York, N. Y., assignor to Lamkay & Seaman, Inc., New York, N. Y., a Corporation of New York. Filed June 20, 1921. Serial No. 479,105. Term of patent 7 years.

Claims use since January, 1913.

Ser. No. 137,615. (CLASS 37. PAPER AND STATIONERY.) JEANNE BLANCHE HURWITZ, Berlin, Germany. Filed Sept. 25, 1920.

Opalographs

Particular description of goods.—Duplicating Machines, Such as Hectographs, Multigraphs, Mimeographs, &c., and Attachments Therefor.
Claims use since Dec. 12, 1910.

Ser. No. 138,433. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) JOHN H. FLYNN, Jr., Cincinnati, Ohio. Filed Oct. 16, 1920.

EUREKA

Particular description of goods.—Tackle-Blocks.
Claims use since Feb. 20, 1895.

Ser. No. 138,884. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE WONDER BUILDER TOY CO., Gallipolis, Ohio. Filed Oct. 27, 1920.

Wonder-Builder

No claim being made to the exclusive use of the word "Builder" apart from the mark shown on the drawing.
Particular description of goods.—Building Elements Made of Metal, Used in the Construction of Toy Vehicles and Parts Therefor.
Claims use since July 19, 1920.

Ser. No. 139,870. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) IDELLA E. RADCLIFF, Glendale, Calif. Filed Nov. 8, 1920.

IDELL'S TRADE MARK

No claim being made to the words "Trade Mark" apart from the mark shown.
Particular description of goods.—A Compound for Poultry Which Increases Laying and Which Prevents and Removes Roup and Cholera.
Claims use since Aug. 15, 1920.

Ser. No. 140,305. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MARSHALL FIELD & COMPANY, Chicago, Ill. Filed Nov. 27, 1920.

ECLIPSE

Particular description of goods.—Piece Goods—Namely, Muslin.
Claims use since 1900.

Ser. No. 140,687. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) KAUFMAN-STRAUS CO., Louisville, Ky. Filed Dec. 6, 1920.

ESTELLE

Particular description of goods.—Tooth, Nail, Hand, and Bath Brushes.
Claims use since Nov. 30, 1905.

Ser. No. 140,689. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) TUSKELOID COMPANY, INC., New York, N. Y. Filed Dec. 6, 1920.

TUSCULOR

Particular description of goods.—Hair, Nail, Tooth, Hat, and Cloth Brushes.
Claims use since July 1, 1916.

Ser. No. 140,692. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) TUSKELOID COMPANY, INC., New York, N. Y. Filed Dec. 6, 1920.

TUSKELOID

Particular description of goods.—Nail-Polishers and Atomisers.
Claims use since July 1, 1916.

Ser. No. 140,693. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) TUSKELOID COMPANY, INC., New York, N. Y. Filed Dec. 6, 1920.

TUSCULOR

Particular description of goods.—Nail-Polishers and Atomisers.
Claims use since July 1, 1916.

Ser. No. 140,694. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) TUSKELOID COMPANY, INC., New York, N. Y. Filed Dec. 6, 1920.

TUSKELOID

Particular description of goods.—Hair, Nail, Tooth, Hat, and Cloth Brushes.
Claims use since July 1, 1916.

Ser. No. 140,697. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) HENRY M. JONES, Chicago, Ill. Filed Dec. 15, 1920.

METABOLMETER

Particular description of goods.—Diagnostic Instruments for Measuring the Rate of Oxygen Consumption.
Claims use since on or about Aug. 15, 1920.

Ser. No. 141,062. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE STANLEY WORKS, New Britain, Conn. Filed Dec. 14, 1920.

STANLEY SW

Particular description of goods.—Butts, Hinges, Door-Holders, Hasps, Latches; Fasts and Fasteners for Securing Window-Sashes, Window-Blinds, Shutters, and the Like; Stays for Doors, Windows, Lids, Desks and Similar Articles; Slides for Desks, Covers, Cabinets, and Similar Articles; Ladder-Joints; Handles for Doors, Drawers, Boxes, Chests, and Similar Articles; Pulls for Doors, Sashes, Screens, Chests and Similar Articles; Bolts for Securing Doors, Windows, and the Like; Shutter-Bars, Trap-Door Rings, Door-Hangers, Sash and Screen Hangers; Lifts for Doors, Sashes, Screens, Chests, and Similar Articles; Transom-Plates, Corner-Irons, Door-Rails, Bar-Holders, Catches, Braces for Stiffening Corners, Stake-Holders, T-Plates, Staples, Hooks, Door-Buttons, Floor-Clips, Metal Washers, Rivet-Burs, Springs for Doors and Windows, Box-Strapping, Metal Fasteners for Wooden Joints, Metal Couplings for Door and Window Screens, Mending-Plates; Brackets—Namely, a Fixture Used as a Support.
Claims use since Nov. 26, 1920.

Ser. No. 141,199. (CLASS 31. FILTERS AND REFRIGERATORS.) THE UTILITY COMPRESSOR COMPANY, Detroit, Mich. Filed Dec. 16, 1920.

UTILITY

No claim is made to the words "Electric Refrigerator" apart from the mark shown.
Particular description of goods.—Artificial Refrigerating Units and Household Refrigerators.
Claims use since on or about Oct. 21, 1920.

Ser. No. 141,126. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) METROPOLITAN-VICKERS ELECTRICAL CO. LTD., London, England. Filed Dec. 31, 1920.

No claim being made to the letters "E" and "C" shown in the drawing separately from the other features.
Particular description of goods.—Steam-Turbines, Power-Transmission Gearing, Steam-Condensers, Pumps of All Kinds, Blowers, Compressors, Steam-Ejectors, Small Condensers, and Drainage-Separators, Air-Extractors, and Winding-Machines.
Claims use since September, 1919.

Ser. No. 141,951. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) THE FULLER BRUSH COMPANY, Hartford, Conn. Filed Jan. 7, 1921.

Fuller

The shading being for the purpose of denoting red.
Particular description of goods.—Mops; Fiber, Bowl, Scouring, Mat, Clothes, and Washing Brushes; Bristle and Hair, Window, Ice-Chest, Radiator, Bowl, Hearth, Utility, Milk-Bottle, Test-Tube, Percolator, Stove, Shoe, Hair, Clothes, Wall, Shampoo, Flesh and Massage, Dental-Plate, Tooth, and Toothbrush-Refilling Brushes; Pastry and Manicure Brushes; Shower-Bath Brushes, Hat-Brushes, Crumb-Brushes, Phonograph-Brushes, Furniture-Brushes, Hand-Brushes, Automobile-Brushes, Floor-Brushes of the Push-Broom Type, Fiber Brooms, Cotton Daubers, and Dusters.

STRUMENT

Particular description of goods.—Accumeters for Testing Hearing, Adenotomes for Removal of Adenoids, Air-Bags for Treatment of the Ears; Applicators for Applying Medicine to Ear, Nose, Throat, and other Cavities of the Human Body; Anesthesia Apparatus, Anatomical Models for Teaching Anatomy and Demonstrating Surgical Technique, Angiotribes for Clamping Off Blood Vessels; Aspirators for Withdrawing Blood and Secretions from Body During Operations, &c.; Atomizers for Applying Fluid Matter to Patient in Spray Form, Burs for Operating on Any Part of the Human Skeleton, Bistouries for Doing Any Kind of Cutting During Operations, Bougies for Distending Natural Body-Passages; Batteries, Electric, for Therapeutic Purposes and for Illuminating Field of Operation, Also for Lighting Lamps for Diagnostic Purposes; Bronchoscopes for Examining and Operating on Bronchi, Curettes for Cutting and Scraping of Bone and Soft Tissues in Operations, Cannulas for Irrigating Parts of Body for Therapeutical and Diagnostical Purposes; Catheters for Irrigating Parts of Body for Therapeutical and Diagnostical Purposes, Also for Treating Ears by Means of Compressed Air; Compressors for Stopping Flow of Blood During Operations, Chisels for Bone Operations; Clamps for Stopping Hemorrhages, Also for Closing Wounds; Craniochast for Crushing Skull of Infant in Obstetrics; Condensers for Intensifying Light, for Illuminating Field of Operation, and for Treatment; Dissectors for Separating Tissues and Organs from their Natural Seats, Drills for Operating on any Part of the Human Skeleton, Directors for Guiding Knives During Operations, Douches for Irrigating Body-Cavities, Dilators for Distending Natural Body-Passages, Elevators for Separating Tissues and Organs from Their Natural Seats, Eye-Droppers for Applying Fluids to Eyes, Ear-Spouts Used for Irrigating Ears, Evacuators for Drawing Secretions from Any Part of the Body, Esophagoscopes for Examining and Operating on Esophagus, Endoscopes for Examining and Operating on Any Body-Cavity; Forceps Used for Dressing, Cutting,

Breaking, and Crushing During Operations; Gouges for Operations on Bone; Hooks for Retracting and Engaging Tissues of Body, Foreign Bodies, &c.; Hemostats for Stopping Hemorrhages; Headbands for Fastening Reflectors, Headlights, &c., to Head of Operator; Headlights Used by Operator to Illuminate Field of Operation, Hammers Used for Operating with Chisel or Gouge, Irrigators for Irrigating Body-Cavities; Injection-Needles for Applying Medicine, Vaccination, Anesthetizing, &c.; Inhalers for Applying Air in Treatment of Diseases, Inhalers for Applying Medicine to Air-Passages by Means of Air or Steam, Knives for Doing Any Kind of Cutting During Operations; Lancets for Opening Blood Vessels, Abscesses, &c.; Laryngoscopes for Examining and Operating on Human Larynx; Ligature-Carriers Used to Surround Vessels, for Tying Off Blood Vessels, &c.; Ligatures, Surgical Sewing Materials; Mouth-Gags for Keeping Mouth Open During Operations Thereon, Magnifiers for Examining Superficial Parts of Body, Mirrors Used for Examining and Reflecting Light into Cavities, Mallets Used for Operating with Chisel or Gouge, Needle-Holders for Holding Surgical Needles in Sewing Up Wounds, Nebulizers for Application of Fluids in Vapor Form, Perforators for Opening Body-Cavities, Pumps for Compressing Air for Medical Purposes; Packers for Dressing Wounds, &c.; Probes for Sounding Wounds, Passages, and Cavities; Powder-Blowers for Applying Medications in Powder Form, Retractors for Holding Back Edges of Wounds or Opening Body-Passages to Make Them Accessible to Operator, Reamers for Operating on Any Part of the Human Skeleton, Rongeurs for Cutting Bone, Rasps for Removing Bony Structures, Rheostats for Controlling Electric Current Used for Lighting Diagnostic Apparatus; Surgical Scissors for Cutting Tissues, Bandages, &c.; Spatulas for Depressing Tongue and other Soft Parts in Examining and Operating; Suction-Tubes for Drawing Secretions from Any Part of Body and for Withdrawing Fluids and Secretions from Body During Operations, &c.; Suppositors, Abdominal; Snares for Removing Organs and Pathological Structures by Means of Wire Loop, Saws for Operations on Bone, Syringes for Irrigating and Injecting Purposes; Suture-Needles, Surgical, for Closing Up Wounds; Splints for Straightening out Deflected and Broken Parts of Body, Sterilizers for Rendering Instruments and Appliances Sterile by Boiling or Placing in Disinfecting Solutions, Stethoscopes for Auscultation (examination of Body, Specula for Holding Back Edges of Wounds or Opening Body-Passages to Make Them Accessible to Operator; Searchers for Sounding Wounds, Passages, and Cavities; Scoops for Cutting and Scraping of Bone and Soft Tissues in Operations; Sounds for Sounding Wounds, Passages, and Cavities; Suction Apparatus Used for Drawing Blood or Secretions from Body, Also Used for Treating Diseases; Spuds for Depressing Tongue and other Soft Parts in Examining and Operating, Trocars for Making Artificial Openings into Cavities for Purpose of Withdrawing of Fluids and Irrigating, Tongue-Depressors for Holding Down Tongue When Operating in Mouth, Trephines for Operating on Any Part of the Human Skeleton, Tracheotomes for Opening Windpipe from the Outside, Tuckers for Shortening Eye-Muscles; Tenacula for Retracting and Engaging Tissues of Body, Foreign Bodies, &c.; Tonsillotomes for Removing Tonsils, Transformers Used in Connection with Electromedicinal Apparatus, Tracheal Tubes Used After Windpipe has been Opened Surgically, and Medical and Surgical Furniture, Such as Operating-Tables, (General;) Examining-Tables, Instrument-Tables, Bottle-Stands, Irrigator-Stands, Basin-Stands, Immersion-Stands, Stools for Operating-Room, Waste-Receptacles, Wall-Stands, Sponge-Racks, Electric-Light Stands, Observation-Stands, Instrument-Cabinets, Instrument and Dressing Cabinets, Wall-Cabinets, Laboratory-Tables, Dressing-Containers, Towel-Warmers, Blanket-Warmers, Wheel-Stretchers, Dressing-Carriages, Dressing-Tables, Nurse-Desks, Chart-Holders, Wall-Shelves, Dish-Carriage, Food-Car, Linen-Hamper, Specialists' Cabinets, Specialists' Chair, Office-Stools, Treatment-Tables, Office-Spittoons, and Specialists' Tables.

Claims use since Jan. 1, 1919.

Ser. No. 144,144. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) THE MEASUROGRAPH COMPANY, St. Louis, Mo. Filed Feb. 28, 1921.

The lining expressing the color red, no claim being made for the word "Time" apart from the remainder of the representation.

Particular description of goods.—Time-Controlled Signals and Trip Mechanisms for Automatically Arresting Operation of a Machine.

Claims use since Jan. 28, 1921.

Ser. No. 144,397. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) THE INLAND CO., Providence, R. I. Filed Mar. 7, 1921.

Fifi

Particular description of goods.—Cigarette-Cases.

Claims use since Jan. 1, 1921.

Ser. No. 144,449. (CLASS 11. INKS AND INKING MATERIALS.) THE COLUMBIA CARBON COMPANY, Dayton, Ohio. Filed Mar. 8, 1921.

Particular description of goods.—Inked Ribbons and Carbon-Sheets for Duplicating or Transferring Impressions.

Claims use since about Oct. 1, 1920.

Ser. No. 144,718. (CLASS 22. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GEBR. & HARBECK, Hamberg, Germany. Filed Mar. 14, 1921.

Normannia

Particular description of goods.—Sewing-Machines.

Claims use since 1905.

Ser. No. 144,900. (CLASS 22. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) ELECTRO-STROP MANUFACTURING COMPANY, INC., Philadelphia, Pa. Filed Mar. 18, 1921.

MOTOSTROP

Particular description of goods.—Razor Stropping and Honing Machines, Razor-Blade Holders, and Razor-Blade Hones and Strops for Razor-Sharpening Machines.

Claims use since Dec. 20, 1920.

Ser. No. 144,965. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) CARTIER, INC., New York, N. Y. Filed Mar. 19, 1921. Under ten-year proviso.

CARTIER

Particular description of goods.—Cigarette and Cigar Cases and Snuff-Boxes.

Claims use since 1859.

Ser. No. 145,062. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) SAMUEL GORDON, New York, N. Y. Filed Mar. 22, 1921.

Particular description of goods.—Pipes, Cigar and Cigarette Holders, Pouch Tobacco-Bags, Humidors, and Cigar and Cigarette Cases.

Claims use since Oct. 1, 1920.

Ser. No. 145,078. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) G. MAZALONE, Chicago, Ill. Filed Mar. 22, 1921.

No claim is made to the exclusive use of the words "Italy Brand" and "Torre Annunziata Style" apart from the mark shown on the drawing.

Particular description of goods.—Macaroni and Spaghetti and Alimentary Paste.

Claims use since 1919.

Ser. No. 145,143. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) WICKWIRE SPENCER STEEL CORPORATION, Worcester, Mass. Filed Mar. 23, 1921. Under ten-year proviso.

CLINTON

Particular description of goods.—Wire-Cloth of Brass, Bronze, and Copper, Black and Galvanized; Wire-Cloth for Window-Screens and Conveyer Belts; Wire-Cloth with Diamond Mesh, Square Mesh, and Double Crimped; Locomotive, Poultry, Glass, and Fish-Trap Wire-Netting; Wire Trellis, Wire Plant-Supports; Spiral Wire Fabric for Conveyer-Belts, Welded Screen and Welded Wire Fabric.

Claims use since 1856.

Ser. No. 145,262. (CLASS 9. EXPLOSIVES, FIRE-ARMS, EQUIPMENTS, AND PROJECTILES.) FOREIGN MANUFACTURERS SALES CORPORATION, New York, N. Y. Filed Mar. 26, 1921.

LIBIA

Particular description of goods.—Pistols.

Claims use since about Dec. 1, 1920.

Ser. No. 145,629. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) The Geo. H. Jones Co., Cincinnati, Ohio. Filed Mar. 30, 1921.

No exclusive claim is made to the representation of the human foot except in the connection shown.

Particular description of goods.—Arch-Braces.

Claims use since Dec. 1, 1921.

Ser. No. 145,619. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Equinox Mountain Springs, Inc., New York, N. Y. Filed Apr. 2, 1921.

Particular description of goods.—Maple-Syrup, Maple-Sugar, Maple-Sugar Candy, and Maple-Cream.

Claims use since Feb. 1, 1921.

Ser. No. 146,176. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) The Wawbeek Spring Water Co., Suffield, Conn. Filed Apr. 14, 1921.

The various cross-lines or hatchings shown in the drawing of the mark are disclaimed for any purpose except shading.

Particular description of goods.—Ginger-Ale, Ginger-Beer, Sarsaparilla, Birch-Beer, Root-Beer, Strawberry-Soda, Raspberry-Soda, Orangeade, Lemon-Sour, Lemon-Soda, Lemon and Lime, Carbonated Water, Spring-Water, Natural Water, and Non-Alcoholic Carbonated Beverages.

Claims use since Apr. 1, 1918.

Ser. No. 146,240. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) Samuel M. Sharps, New York, N. Y. Filed Apr. 15, 1921.

Particular description of goods.—Dental Floss.

Claims use since Mar. 12, 1921.

Ser. No. 146,242. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) Charles Scardone, Newfield, N. J. Filed Apr. 15, 1921.

Particular description of goods.—Fire-Crackers.

Claims use since Mar. 27, 1920.

Ser. No. 146,305. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) Richard Franklin, New York, N. Y. Filed Apr. 18, 1921.

Particular description of goods.—Clinical Thermometers.

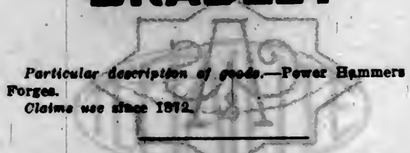
Claims use since June 1, 1920.

Ser. No. 146,305. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) Bradley Pulverizer Co., Boston, Mass. Filed Apr. 19, 1921.

Particular description of goods.—Grinding and Pulverizing Mills.

Claims use since 1909

Ser. No. 146,377. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Andrea Dellape, Altoona, Pa. Filed Apr. 19, 1921.



The trade mark is a portrait of applicant's son.

Particular description of goods.—Medicine for Spanish Flu.

Claims use since Mar. 1, 1920.

Ser. No. 146,623. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) C. C. Bradley & Son, Syracuse, N. Y. Filed Apr. 23, 1921. Under ten-year proviso.

Particular description of goods.—Power Hammers and Forges.

Claims use since 1872.

Ser. No. 146,669. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) Carl Schneider, Nutley, N. J. Filed Apr. 23, 1921.

The word "Automatic" appearing in the mark is disclaimed apart from the mark shown by the drawing.

Particular description of goods.—Check-Valves, Siphons, Cocks, Automatic Valves, Metal Tubes, Metal Piping, Metal Pipe-Fittings, Metal Flexible Tubing.

Claims use since Apr. 1, 1921.

Ser. No. 146,970. (CLASS 37. PAPER AND STATIONERY.) Money Irwin, Cleveland, Ohio. Filed Apr. 29, 1921.

Particular description of goods.—A Household and General Office Inventory Record-Blank.

Claims use since Mar. 1, 1921.

Ser. No. 147,040. (CLASS 28. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) I-C Manufacturing Company, Chicago, Ill. Filed Apr. 30, 1921.

The lines forming the background in the drawing of the mark are intended to indicate the color of red.

Particular description of goods.—Grease and Oil Guns and Connections Therefor.

Claims use since Nov. 1, 1920.

Ser. No. 147,118. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) The New Britain Tool and Manufacturing Company, New Britain, Conn. Filed May 2, 1921.

Particular description of goods.—Milling-Cutters, Reamers, Counter Bores, Arbors, Nurling-Tools, Special Metal-Working Tools Made for Sale Upon Order, Universal Dividing-Heads, and Vises.

Claims use since about July, 1919.

Ser. No. 147,190. (CLASS 37. PAPER AND STATIONERY.) THE ALLING AND CORY COMPANY, Pittsburgh, Pa. Filed May 4, 1921. Under ten-year proviso.

STANDARD

Particular description of goods.—Ledger-Papers.
Claims use since Jan. 1, 1890.

Ser. No. 147,277. (CLASS 11. INKS AND INKING MATERIALS.) CARBIS MFG. CORPORATION, Rochester, N. Y. Filed May 6, 1921.

Particular description of goods.—Carbon-Paper and Typewriter-Ribbons.
Claims use since Dec. 17, 1917.

Ser. No. 147,354. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) DAVID LANGHEEN, New York, N. Y. Filed May 7, 1921.

SANITEX

The crosses are not printed in red nor upon a red background.
Particular description of goods.—Gauze and Cheese-Cloth for Surgical Purposes.
Claims use since Mar. 1, 1921.

Ser. No. 147,402. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHANNEL COMMERCIAL CO., Los Angeles, Calif. Filed May 9, 1921.

No claim is made to the word "Brand" apart from the mark shown in the drawing.
Particular description of goods.—Canned Fruits, Canned Vegetables; Canned Meats—Namely, Little Links, Deviled Meat Products, Cooked Beef-Tongues, Veal Loaf, and Meat Products; Canned Fish, Canned Oysters, Dried Fruits, Bird-Seed, Candies, Catsup, Breakfast Cereals, Maraschino Cherries, Chocolate, Crackers, Wheat-Flour, Fruit Jams, Berry Jams, Fruit Jellies, Evaporated Milk, Unshelled Nuts, Olives, Salad-Oil, Condiments, Pickles, Pimientos, Fruit Preserves, Rice, Rolled Oats, Tapioca, and Vinegar.
Claims use since July 5, 1913.

Ser. No. 147,496. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) CLAUDIUS ASH, SONS & COMPANY, LIMITED, London, England. Filed May 10, 1921.

Particular description of goods.—Dental Apparatus and Supplies—Namely, Pulp-Canal Cleansers; Pulp-Canal Cleansers, Spring-Tempered; Pulp-Canal Cleansers, Soft-Tempered; Pulp-Canal Cleansers, Assorted; Tongue-Holders, Metal Water-Syringes, Rubber Carbo Separating-Disks, Gum-Tragacanth for Securing the Adhesion of Artificial Dentures, Sticky Wax, Pattern-Lead, Model-Cement, Dental Rubber, Artificial Teeth.
Claims use since September, 1910.

Ser. No. 147,678. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LEO S. OSMAN, Washington, D. C. Filed May 13, 1921.

TU-RA-HE

Particular description of goods.—Corn and Bunion Salve, Cold and Catarrh Cream, Cold and Coryza Tablets, Pile-Tablets, Bladder-Tablets, Tablets for Female Troubles; Nerve, Blood, and Stomach Tablets; Constipation-Tablets, Tablets for Difficult Breathing, Worm-Tablets, Blood and Skin Tablets; Tablets for Fever, Gassy, or Upset Stomach; Headache-Tablets, Tablets for Nervousness, Tablets for Colds, Tablets for Indigestion; Herb Tablets for Nerves, Blood, and Strength; Tablets for Tonsilitis; Laxative, Tonic, and Blood Tablets; Herb Laxative Tablets, Tablets for Heat and Fever, Tablets for Enlarged Glands and Swellings, Tablets for Neuralgia, "Flu"-Tablets, Kidney-Tablets, Tablets for Dropsy, Beauty-Cream, Hair and Scalp Pomade, Perfume-Oil, Blood Medicine and Nerve-Tonic; Healing-Syrup for Coughs, Colds, Bronchial Trouble and Throat Irritation; Toilet Powder, Leucorrhea-Tablets, General Tonic, Healing and Vitalising Oil, Incense, Fine-Tar Ointment, Body-Odor Preparation, Uric-Acid Tablets; Astringent, Antiseptic, Healing Powder; Herb Tea for Medicinal Uses.
Claims use since 1915.

Ser. No. 147,872. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) L. F. GRAMMES & SONS, Allentown, Pa. Filed May 18, 1921.

Particular description of goods.—Nail-Pullers.
Claims use since Mar. 11, 1910.

Ser. No. 147,940. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) EARLE F. POTTER, Creston, Iowa. Filed May 19, 1921.

TELTAILITE

Particular description of goods.—Detectors for Indicating the Condition of Automobile Ignition and Signaling Circuits.
Claims use since May 11, 1921.

Ser. No. 147,955. (CLASS 37. PAPER AND STATIONERY.) THE DUPLEX ENVELOPE COMPANY, Quincy, Ill. Filed May 20, 1921.

The Duplex Envelope Company

Particular description of goods.—Envelops for Mailing Articles and for Correspondence.
Claims use since Jan. 1, 1921.

Ser. No. 148,034. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) PREMIER CUTLERY, INC., New York, N. Y. Filed May 21, 1921.

Elk

Particular description of goods.—Table Flat-Ware and Cutlery of Base Metal, Consisting of Table-Knives, Table-Forks, Table-Spoons, Pocket-Knives, Scissors, Razors, Shears, Carving Sets.
Claims use since Apr. 5, 1921.

Ser. No. 148,035. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) PREMIER CUTLERY, INC., New York, N. Y. Filed May 21, 1921.

Premier

Particular description of goods.—Table Flat-Ware and Cutlery of Base Metal, Consisting of Table-Knives, Table-Forks, Table-Spoons, Pocket-Knives, Scissors, Razors, Shears, Carving Sets.
Claims use since Apr. 5, 1921.

Ser. No. 148,085. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) RALPH S. PEIRCE, Hinsdale, Ill. Filed May 23, 1921.

HICO

Particular description of goods.—Expansion-Bolts.
Claims use since Oct. 1, 1920.

Ser. No. 148,245. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE O. P. SCHRIVER CO., Cincinnati, Ohio. Filed May 25, 1921.

No claim being made to the exclusive use of the word "Fruit" except in the connection shown.
Particular description of goods.—Fruit-Presses.
Claims use since May 17, 1921.

Ser. No. 148,340. (CLASS 20. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) MAGNETO ATTACHMENTS CO. INC., New York, N. Y. Filed May 27, 1921.

MATCO

Consisting of the word "Matco."

Particular description of goods.—Attachments for Fitting Magnetos to Internal-Combustion Engines and Magneto Drive-Couplings Therefor.

Claims use since about Apr. 1, 1920.

Ser. No. 148,454. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) "PEP" LABORATORY, Chicago, Ill. Filed May 31, 1921.

PRESTO! PRESTO!

Particular description of goods.—A Non-Alcoholic, Non-Cereal, Maltless Beverage Sold as a Soft Drink and Powder for Making the Same.

Claims use since March, 1921.

Ser. No. 148,655. (CLASS 27. HOROLOGICAL INSTRUMENTS.) HAMMEL, RIGLANDER & CO., New York, N. Y. Filed June 4, 1921. Under ten-year proviso.

POLTOCK'S

Particular description of goods.—Small Metallic Washers Placed under Clock and Watch Dials and Known as "Dial-Washers."

Claims use since 1891.

Ser. No. 148,773. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) WESTERN CARTRIDGE COMPANY, East Alton and Springfield, Ill. Filed June 6, 1921.

LUBALOY

Particular description of goods.—Non-Fouling Bullets.

Claims use since about Jan. 1, 1921.

Ser. No. 148,778. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) WESTERN CARTRIDGE COMPANY, East Alton and Springfield, Ill. Filed June 6, 1921.

Lubaloy

Particular description of goods.—Non-Fouling Bullets.

Claims use since about Jan. 1, 1921.

Ser. No. 148,782. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ARNETH COMPANY, Washington, D. C. Filed June 7, 1921.

Particular description of goods.—An Ointment for Rheumatism, After Shaving, Catarrh in Nose, Falling Hair, Dandruff, Headache, Corns, Chapped Hands, Poison-Oak, Burns, Wounds, Hives, and Itching, for Growing Hair on the Scalp and Eyebrows.

Claims use since April, 1920.

Ser. No. 148,800. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) SIGMUND ISAACS, New York, N. Y., and Yokohama, Japan. Filed June 7, 1921.

KEENSTEELITE

Particular description of goods.—Safety-Razors and Safety-Razor Blades.

Claims use since January, 1918.

Ser. No. 148,827. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GEO. A. HORMEL & CO., Austin, Minn. Filed June 8, 1921.

HORMEL

No claim being made to the words "Good Food" except as associated with the design and the word "Hormel."

Particular description of goods.—Bacon, Breakfast-Sausage; Sausage, Bologna Style; Link-Sausage; Sausage, Frankfort Style; Sausage, Wiener Style; Pork Sausage, Pigs' Feet, Dried Beef, Pork and Beans, and Peanut-Butter.

Claims use since Mar. 16, 1920.

Ser. No. 148,948. (CLASS 37. PAPER AND STATIONERY.) PACKAGE PAPER & SUPPLY CORPORATION, Springfield, Mass. Filed June 10, 1921.

KRYSTALLENE

Particular description of goods.—Waxed and Transparent Papers.

Claims use since Apr. 10, 1921.

Ser. No. 148,950. (CLASS 37. PAPER AND STATIONERY.) PACKAGE PAPER & SUPPLY CORPORATION, Springfield, Mass. Filed June 10, 1921.

MIRROWAX

Particular description of goods.—Waxed and Transparent Papers.

Claims use since Apr. 10, 1921.

Ser. No. 149,076. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) RAFAEL ESCOFET, Tarragona, Spain. Filed June 13, 1921.

MOSTELLE

Particular description of goods.—Unfermented Grape-Juice and Unfermented Juice of other Fruits.

Claims use since September, 1907.

Ser. No. 149,152. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) SOCIÉTÉ DES USINES CURIAL, Paris, FRANCE. Filed June 14, 1921.

Curial

Particular description of goods.—Metal-Working Tools, Taps, Dies, Milling-Cutters, Reamers, Work-Holding Arbors, Collets and Sockets, Twist-Drills, Punches and Dies, Hand-Chasers, and Countersinks.

Claims use since Dec. 10, 1919.

Ser. No. 149,272. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) DEFENDER PHOTO SUPPLY COMPANY, INC., Rochester, N. Y. Filed June 17, 1921.

DEFENDER

Particular description of goods.—Sensitized Photographic Paper.

Claims use since March, 1912.

Ser. No. 149,321. (CLASS 34. METALS AND METAL CASTINGS AND FORGINGS.) GREAT WESTERN SMELTING & REFINING COMPANY, Chicago, Ill. Filed June 17, 1921.

G W

Particular description of goods.—Babbitt Metal, Solder, Brass, Bronze, Aluminum, Aluminum-Bronze, White Brass, White Bronze, Type Metals, Pattern Metal, and Special Alloys Composed Wholly or in Part of Copper, Lead, Tin, Antimony, Aluminum, Bismuth, Phosphorus, Zinc, and Manganese.

Claims use since June 1, 1918.

Ser. No. 149,314. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LOUIS BADER, Passaic, N. J. Filed June 18, 1921.

ELBAY

Particular description of goods.—Cold-Creams, Tissue-Creams, Vanishing Creams, Witch-Hazel Creams, Face and Hand Lotions, and Cuticle-Removers.

Claims use since May 13, 1921.

Ser. No. 149,366. (CLASS 37. PAPER AND STATIONERY.) WHITE & WYCKOFF MANUFACTURING COMPANY, Holyoke, Mass. Filed June 18, 1921.

Consists in the representation of blue birds and the words "Blue Bird." No claim is made to the words "The," "School," or "Series" apart from the mark shown in the drawing.

Particular description of goods.—Writing-Tablets.
Claims use since Jan. 1, 1916.

Ser. No. 149,391. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) DEXTER FOLDER COMPANY, New York, N. Y. Filed June 20, 1921.

Applicant disclaims the exclusive right to the use of the words "Manufactured by," "General Office," and "New York, N. Y., U. S. A.," apart from the mark as shown.

Particular description of goods.—Paper-Handling Machines—Namely, Paper-Feeders, Cross Continuous Feeders, Reloading-Feeders, Paper-Cutting Machines; Inserting, Covering, and Wire-Stitching Machines; Bundling-Machines; Automatic Feeding, Folding, Collating, Covering, and Wire-Stitching Machines, Bundling-Presses, and Folding-Machines.
Claims use since 1880.

Ser. No. 149,424. (CLASS 37. PAPER AND STATIONERY.) REALITE PENCIL CO., Chicago, Ill. Filed June 20, 1921.

Realite

Particular description of goods.—Lead-Pencils.
Claims use since Apr. 15, 1921.

Ser. No. 149,512. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) MARCUS & SMITH, New York, N. Y. Filed June 22, 1921.

Silk Edge Puff

No claim is made to the word "Puff" apart from the mark shown.

Particular description of goods.—Powder-Puffs.
Claims use since about Mar. 4, 1919.

Ser. No. 149,570. (CLASS 15. OILS AND GREASES.) WAVERLY OIL WORKS COMPANY, Pittsburgh, Pa. Filed June 23, 1921.

THIN-THICK

Particular description of goods.—Lubricating-Oils.
Claims use since June 11, 1921.

Ser. No. 149,698. (CLASS 37. PAPER AND STATIONERY.) GRAHAM PAPER COMPANY, St. Louis, Mo. Filed June 27, 1921.

Particular description of goods.—Tissue Toilet-Paper.
Claims use since December, 1919.

Ser. No. 149,818. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) PENBERTHY INJECTOR COMPANY, Detroit, Mich. Filed June 29, 1921.

PENBERTHY

The word "Products" being disclaimed apart from the mark shown on the drawing.

Particular description of goods.—Flow-Meters, Water-Gages, and Oil-Gages.
Claims use since July 1, 1902.

Ser. No. 149,832. (CLASS 37. PAPER AND STATIONERY.) SHAMAN PATRICK PAPER CO., Detroit, Mich. Filed June 29, 1921.

TUF-FOLD

Particular description of goods.—Enamel-Paper.
Claims use since May 1, 1918.

Ser. No. 150,012. (CLASS 37. PAPER AND STATIONERY.) INDUSTRIAL PAPER COMPANY, Baltimore, Md. Filed July 5, 1921.

WHITE CAP

BICKMORE'S

Particular description of goods.—External Remedies—Namely, a Family-Liniment and a Skin-Ointment and a Liniment and a Healing-Powder for Live-Stock.
Claims use since Feb. 6, 1900.

148,572. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Clarence W. Brown, Philadelphia, Pa. Filed July 16, 1921. Serial No. 150,435.

HONEY-SPUN

Particular description of goods.—Candies.
Claims use since Jan. 1, 1920.

148,573. (CLASS 7. CORDAGE.) Columbian Rope Company, Auburn, N. Y. Filed Aug. 5, 1921. Serial No. 151,447.

COLUMBIAN ROPE CO

Particular description of goods.—Rope, Twine, and Cordage of Vegetable Fiber.
Claims use since June 1, 1904.

148,574. (CLASS 28. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) Davis Machine Tool Company, Inc., Rochester, N. Y. Filed June 12, 1917. Serial No. 104,405.

Close Coupled

Particular description of goods.—Lathes.
Claims use since June 1, 1917.

148,575. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) Henry L. De Zeng, Camden, N. J. Filed April 25, 1921. Serial No. 146,697.

De Zeng

Particular description of goods.—Medical and Surgical Appliances Consisting of Eye, Ear, Nose, and Throat Diagnostic Instruments, Including Pharyngoscopes, Otoscopes, Speculums, Tongue Depressors, &c.
Claims use since May 6, 1906.

148,576. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) Eng-Skell Company, Inc., San Francisco, Calif. Filed Jan. 29, 1921. Serial No. 142,926.

BERKELEY CREAM

Particular description of goods.—Non-Alcoholic, Maltless Beverage Sold as a Soft Drink and Flavoring for the Same.
Claims use since 1902.

148,577. (CLASS 20. BROOMS, BRUSHES, AND DUSTERS.) The James Lowe Shaving Co., New York, N. Y. Filed Jan. 6, 1921. Serial No. 141,995.

SOLID SET

Particular description of goods.—Shaving-Brushes.
Claims use since about December, 1916.

148,578. (CLASS 20. BROOMS, BRUSHES, AND DUSTERS.) The Folberth Auto Specialty Co., Cleveland, Ohio. Filed July 9, 1921. Serial No. 150,188.

FOLBERTH

Particular description of goods.—Windshield-Cleaners, Squeegee Type.
Claims use since Jan. 1, 1920.

148,579. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) M. M. Gassen Co., Duluth, Minn. Filed June 6, 1921. Serial No. 148,731.

MOOSE LAKE

Particular description of goods.—Butter.
Claims use since 1919.

148,580. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Geigy Company, Inc., New York, N. Y. Filed July 26, 1920. Serial No. 135,418.

Diazophenyl

Particular description of goods.—Dyestuffs.
Claims use since 1910.

148,581. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) Robert Harding, New York, N. Y. Filed Nov. 8, 1916. Serial No. 99,167.

PERFECTION

Particular description of goods.—Dynamo and Electric-Motor Brushes—Namely, Copper-Woven-Wire Brushes, Bronze-Woven-Wire Brushes, Copper-Leaf Brushes, Carbon Brushes, Graphite Brushes, Copper-Graphite-Composition Brushes, Brush-Holders for Dynamo and Electric-Motor Brushes.
Claims use since June, 1886.

148,582. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS AND PARTS THEREOF.) S. S. Hepworth Company, New York, N. Y. Filed May 16, 1921. Serial No. 147,781.

MACKINTOSH

Particular description of goods.—Centrifugal Driers, Centrifugal Filters, and Centrifugal Separators and Unloaders, Conveyers, Elevators, and Mixers Therefor.
Claims use since 1910.

148,583. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Hood River Apple Vinegar Co., Hood River, Oreg. Filed Aug. 3, 1921. Serial No. 151,317.

HOOD RIVER

Particular description of goods.—Vinegar.
Claims use since November, 1916.

148,584. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) Hurff-Peck & Company, Indianapolis, Ind. Filed Jan. 3, 1921. Serial No. 141,778.

Cherry Mellow

Particular description of goods.—Non-Alcoholic, Maltless Beverage Sold as a Soft Drink.
Claims use since February, 1920.

148,585. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) Independent Canning Co., Chicago, Ill. Filed May 24, 1921. Serial No. 146,147.

BARRON

Particular description of goods.—Canned Vegetables.
Claims use since Dec. 21, 1911.

148,586. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) Keystone Albumen & Paint Company, Philadelphia, Pa. Filed Dec. 6, 1920. Serial No. 140,658.

ALBUMEN

Particular description of goods.—Ready-Mixed and Paste Paints, Enamel Paints, and Flat Wall-Finishes.
Claims use since about 1900

148,587. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Keystone Albumen & Paint Company, Philadelphia, Pa. Filed Dec. 6, 1920. Serial No. 140,659.

TANNERS ALBUMEN

Particular description of goods.—A Preparation for Use in the Tanning of Hides and Leather.
Claims use since about 1900.

148,588. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) James S. Kirk & Company, Chicago, Ill. Filed July 7, 1921. Serial No. 150,112.

KIRKOLIVE

Particular description of goods.—Toilet Soap.
Claims use since on or about July 12, 1915.

148,589. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) La Meda Manufacturing Company, Chicago, Ill. Filed Nov. 22, 1920. Serial No. 139,264.

La Meda
Cold Creamed Powder

Particular description of goods.—Cold-Creamed Powders.
Claims use since November, 1917.

148,590. (CLASS 15. OILS AND GREASES.) Larsen Oil Co., Inc., Providence, R. I. Filed May 9, 1921. Serial No. 147,427.

NUN-BET-ER

Particular description of goods.—Gasolene.
Claims use since Mar. 4, 1920.

148,591. (CLASS 43. THREAD AND YARN.) H. R. Locke & Company, Inc., Boston, Mass. Filed July 21, 1919. Serial No. 120,759.

ALLSTON

Particular description of goods.—Thread and Yarn.
Claims use since January, 1899.

148,592. (CLASS 44. FOODS AND INGREDIENTS OF FOODS.) Lion & Greenway, Liquors, Ltd. Filed Oct. 8, 1920. Serial No. 133,666.

EVER GOOD

Particular description of goods.—Wheat-Flour.
Claims use since Sept. 18, 1920.

148,593. (CLASS 20. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) W. S. Mershon Company, Bedford, Ind. Filed Apr. 1, 1921. Serial No. 145,574.

Splint

Particular description of goods.—Steels for Sharpening.
Claims use since 1910.

148,594. (CLASS 40. KNITTED, NETTED, AND TEXTILE FABRICS.) Jacob Mandel Sons & Co, Philadelphia, Pa. Filed Sept. 16, 1920. Serial No. 137,265.

CHARING

Particular description of goods.—Piece Goods of Cotton, Silk, Linen, Mixtures of Cotton and Silk and Linen and Silk.
Claims use since Aug. 31, 1920.

148,595. (CLASS 14. METAL AND METAL CASTINGS AND FORGINGS.) Morey Flux & Chemical Company, Inc., Parkersburg, Pa. Filed May 19, 1921. Serial No. 147,983.

Morey

Particular description of goods.—Welding and Brazing Rods of Certain Metals and Metallic Electric Welding-Rods.
Claims use since Jan. 2, 1912.

148,596. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Parke, Davis & Company, Detroit, Mich. Filed May 2, 1921. Serial No. 147,134.

LACTONE

Particular description of goods.—Buttermilk Tablets for Medicinal Use.
Claims use since 1909.

148,597. (CLASS 32. BROOMS, BRUSHES, AND BRUSHMAKERS' STOCK.) Pittsburgh Plate Glass Company, Kenwood-Klenzle Division, Baltimore, Md. Filed Mar. 7, 1921. Serial No. 144,421.

SERVICE

Particular description of goods.—Paint, Varnish, Whitewash, Calcimine, Plasterers', Paper-Hangers', Dusting, Sweeping, Artists', Stencil, Glue, Scrubbing, Washing, and Rubbing Brushes.
Claims use since May 28, 1919.

148,598. (CLASS 32. BROOMS, BRUSHES, AND DUSTERS.) Pittsburgh Plate Glass Company, Kenwood-Klenzle Division, Baltimore, Md. Filed Mar. 7, 1921. Ser. No. 144,422.

EFFICIENCY

Particular description of goods.—Paint, Varnish, Whitewash, Calcimine, Plasterers', Paper-Hangers', Dusting, Sweeping, Artists', Stencil, Glue, Scrubbing, Washing, and Rubbing Brushes.
Claims use since May 28, 1919.

148,599. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) Simeon L. & George H. Rogers Company, Hartford, Conn. Filed Jan. 8, 1921. Serial No. [illegible].

Simeon L. & George H. Rogers Company

Particular description of goods.—Silver-Plated Flat and Hollow Ware.
Claims use since 1901.

148,600. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Rudolph Scheibler Inc., New York, N. Y. Filed Aug. 9, 1921. Serial No. 151,595.

WOOL WEAR

Particular description of goods.—Woolen Cloth in the Piece.
Claims use since about Jan. 1, 1917.

148,601. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Rudolph Scheibler Inc., New York, N. Y. Filed Aug. 10, 1921. Serial No. 151,638.

Standware

Particular description of goods.—Worsted Cloths in the Piece.
Claims use since about Jan. 1, 1912.

148,602. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Gotham Silversmiths Inc., New York, N. Y. Filed Aug. 10, 1921. Serial No. 151,639.

Peerless

Particular description of goods.—Woolen Cloth in the Piece.
Claims use since about Jan. 2, 1914.

148,603. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) E. & B. Sign Co. Inc., New York, N. Y. Filed May 8, 1920. Serial No. 132,210.

SEGMENT-ON WINDOW SIGN

Particular description of goods.—Electric Display-Signs for Windows and Storerooms.
Claims use since July 1, 1918.

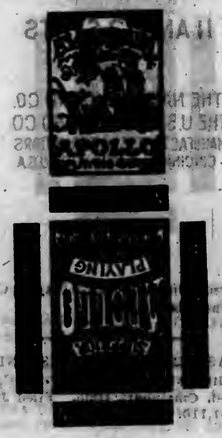
148,604. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) Paul P. Sly, Santa Monica, Calif. Filed June 20, 1921. Serial No. 149,425.

Sly

Particular description of goods.—Soap and Soap Tablets for Laundry and Toilet Use.
Claims use since May 1, 1920.

148,605. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) Stovell-Patterson Hardware Co., Salt Lake City, Utah. Filed July 29, 1921. Serial No. 148,175.

Veribest



Particular description of goods.—Toy Sleds, Fishing-Tackle, and Toy Coaster-Wagons.
Claims use since Dec. 17, 1920.

148,606. (CLASS 20. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) The Tobbin Air Tool Company, Cleveland, Ohio. Filed May 23, 1920. Serial No. 138,071.

"AIR PLANER"

Particular description of goods.—Planers.
Claims use since September, 1917.

148,607. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) The United States Playing Card Company, East Norwood, Cincinnati, Ohio. Filed July 29, 1921. Serial No. 151,105.

Particular description of goods.—Playing-Cards.
Claims use since about 1888.

148,608. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) The United States Playing Card Company, East Norwood, Cincinnati, Ohio. Filed July 29, 1921. Serial No. 151,106.

DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Fourth Circuit.

BALTIMORE & O. R. CO. *v.* WALTER S. NEWHALL CO.

Decided July 5, 1921.

(274 Fed. Rep., 869.)

1. PATENTS—DEVICE NOT USING ELEMENT OF PATENTED DEVICE HELD NOT TO INFRINGE PATENT.

A patent on a plant for thawing frozen contents of cars by inclosed stalls in which hot air is introduced, which may be deflected by means of dampers to other stalls, is not infringed by a plant of the same construction, where the stalls are independent and separate and no use is made of dampers for deflecting air-currents.

2. SAME—CHANGE IN PLAN OF CONSTRUCTION OF PLANT HELD TO AVOID INFRINGEMENT OF PATENT.

Where a plant for thawing frozen contents of cars was being constructed to use dampers for deflecting air-currents in such a way as to infringe a patent covering such a plant, but the plan of construction was changed by securely closing the openings left for the dampers with plates, there is no infringement of the patent, though the plates could be removed and the dampers mounted with little expense.

3. SAME—No. 1,044,230, CLAIMS 20, 23, FOR THAWING APPARATUS, HELD NOT INFRINGED.

Patent No. 1,044,230, claims 20 and 23, for plant for thawing frozen contents of cars, *Held* not infringed.

4. SAME—FILING OF SUPPLEMENTAL BILL FOR INFRINGEMENT HELD UNNECESSARY.

Where an interlocutory decree over a year before enjoined infringement of a patent, and the final decree provided that the injunction should continue, except with respect to a released plant, the filing of a supplemental bill for an injunction with respect to another plant was unnecessary.

Appeal from the District Court of the United States for the District of Maryland, at Baltimore; John C. Rose, judge.

Suit by the Walter S. Newhall Company against the Baltimore & Ohio Railroad Company. From a decree for plaintiff (258 Fed., 650) defendant appeals. Reversed.

Mr. Arthur C. Fraser (*Mr. Duncan K. Brent* on the brief) for the appellant.

Mr. Albert H. Bates and *Mr. Maurice B. Saul* (*Messrs. Bates & Mecklin*, *Messrs. Prichard, Saul, Bayard & Evans*, and *Messrs. Haman, Cook, Chesnut & Markell* on the brief) for the appellee.

Before KNAPP, Circuit Judge, and SMITH and WATKINS, District Judges.

KNAPP, *Cir. J.*:

The appellee, Walter S. Newhall Company, plaintiff below, is the owner of Letters Patent No. 1,044,230, issued November 12, 1912, for an apparatus for thawing the contents of freight-cars which have become frozen. This suit involves its use for thawing cars of coal in that condition. Briefly described, the apparatus consists of a train-shed long enough to hold a number of cars and provided with doors for closing its ends. On top of the shed, at an intermediate point, is a blower-house, in which air is heated and blown through appropriately arranged ducts or conduits, and the openings therein, and thereby directed against the bottoms and sides of the cars. The air is then sucked back into the blower-house, to be again heated and driven through the ducts, and thus kept in constant circulation. The shed is made of sufficient width to cover the number of tracks desired to be used in connection with the thawing apparatus, and when built for more than one track is divided by partitions into as many compartments as there are tracks.

After protracted negotiations with plaintiff for the construction of a thawing plant at Curtis Bay, Md., the defendant rejected its proposals and in January, 1916, gave the contract to the Surety Engineering Company, which offered to build it for a smaller sum and to protect defendant from suits for infringement. The work was begun soon afterward and appears to have been completed some months later. Claiming that the plant as built infringed its patent, plaintiff brought this suit in December, 1916. In the meantime defendant had decided to construct another thawing plant at Arlington, Staten Island, twice the size of the one at Curtis Bay. Plaintiff was a bidder for this work also, but was again underbid by the Surety Engineering Company, to which the contract was awarded in August of that year. The original bill, however. was confined to the Curtis Bay plant, as was the evidence at the first trial in the early part of June, 1917. On the 23d of that month the court below filed an opinion holding that four of the twenty-three claims of the patent were valid, and that two of them, 20 and 23,

had been infringed (243 Fed., 615.) An interlocutory decree was entered on the 6th of September, enjoining defendant from further infringement of these claims, and providing for the taking of testimony in open court on the question of damages. The final decree of November 19, 1917, awarded plaintiff $5,500 for actual damages and $4,600 for litigation expenses, or a total of $9,500, which defendant subsequently paid without appeal. It was agreed that the damages then under consideration should be limited to the Curtis Bay plant, and that plaintiff should have the right to proceed thereafter in regard to the Arlington plant.

Accordingly, on February 1, 1919, plaintiff filed a supplemental bill relating to that plant, pleading the prior adjudication and alleging the same infringement as in the original bill, especially of claims 20 and 28. The answer denied infringement and set up other defenses. The result of the second trial was a decision, reasons for which are stated in an opinion, sustaining the charges of infringement as to the two claims mentioned, and awarding actual damages in the sum of $11,000, with $7,418.85 added for expenses, or a total of $18,418.85. For reasons which may be omitted, this total was by stipulation reduced to $18,028.44, for which final decree was entered October 6, 1919. From that decree defendant appeals.

[1] The underlying question takes a two-fold form. To what extent, if at all, does the Arlington structure infringe the plaintiff's patent? And to what damages, if any, is the plaintiff entitled? The claims held to be infringed read as follows:

20. In an apparatus of the class described, the combination of two train sheds side by side, individual hot air and return ducts for each shed, a blowing apparatus connected with the ducts of both sheds, and dampers adapted to reverse the action of such apparatus to either shed.

28. In an apparatus of the class described, the combination of a train shed, a blower room located at an intermediate point at the top of the train shed, a pair of blowers in said blower room discharging in opposite directions, means for conducting air from each blower through the train shed and returning it to the blowers, and means for heating such air.

It seems obvious that these claims would not be infringed by a thawing apparatus of the same general type as the one under review, if it were so constructed that each of the side by side sheds or stalls was wholly independent of the other and there was no opening in the partition between them; for the invention held valid and infringed is the device of dampers, consisting of sheet-metal doors adapted to be positioned to deflect the air, by means of which the heated air from the fan of one stall can be diverted into the ducts of the adjoining stall as occasion may require. As the learned district judge says in his opinion:

With the dampers in place, claims 20 and 28 are infringed. Without these appliances, there is no infringement.

It appears to be conceded, and will be assumed, that if the Arlington plant had been built as originally designed and intended, and as contracted for, it would have infringed these two claims the same as does the Curtis Bay plant; for the specifications on which the contract was based state, among other things:

Four separate duplicate units are provided. Each unit is primarily intended to serve one stall. The unit for stall No. 1, by an arrangement of dampers, can be made to serve stall No. 2. In like manner, the unit for stall No. 2 can be made to serve stall No. 1. A like combination will develop in the case of stalls Nos. 3 and 4.

But defendant asserts that the plant was not built in that way, with "an arrangement of dampers," or with any dampers at all, and it therefore becomes important to know what the facts are in that regard. As above recited, the contract was let in August, 1916, but the plant was not finished and turned over by the contractor until the latter part of December of the following year. In the course of construction openings were made where dampers were to be placed with hinges on their frames on which the dampers were to be hung. The dampers themselves were fabricated for at least two stalls, though apparently not completed with corresponding hinges. They were once "stood in place" for a short time, "jammed and wedged in place," in stalls 3 and 2 only, to permit an experimental test of the heating capacity of the furnaces, but were not otherwise used. They were never put in a normal or operative position, and certainly never employed to deflect heated air from one stall to another.

[2, 3] In July or August, 1917, after the decision in the Curtis Bay case, orders were issued to do away with the dampers altogether, and not long afterward they were entirely removed. The openings were covered with plates of galvanized steel of the same material and thickness as the walls of the ducts, to which they were firmly bolted. It is not perceived that the work could well have been done in a more suitable or substantial manner. We cannot believe that defendant was bound, under the conditions then existing, to demolish this expensive building and erect another with solid partitions between the stalls; it was enough to close the openings securely, as it did, and to abandon definitely the plan and purpose of using dampers. True, the plates could be taken off and dampers mounted in a comparatively short time and at no great expense; but for all practical purposes the altered structure was as devoid of dampers as though originally so designed. Each stall became a separate and independent thawing apparatus unrelated to the others except by proximity. As one witness says:

You could take any one away without interfering with any of the others.

And as another witness says:

So far as the operation is concerned they might have been built as four separate units, spaced apart.

In short, while the plant was still incomplete and unusable, the damper feature was wholly eliminated by an effective and permanent change of construction. The trial court finds that it "was never used in its infringing form by the defendant," and in point of fact it seems not to have been used in any form prior to January 1, 1918, when all the

properties of defendant were taken over by the Government.

Taking into account these facts, which are either undisputed or appear to be established by the clear weight of evidence, we are unable to see that the Arlington plant infringes or ever has infringed the plaintiff's patent. As we read the record, all that fairly can be said is that, if this plant had been built as designed and contracted for in August, 1916, it would have infringed the two claims which nearly a year later were held valid and infringed in the case of the Curtis Bay plant. But it was not so built. Shortly after the decision in that case was announced, and before the interlocutory decree was entered, and while the structure was so far from completion as to be incapable of use for thawing purposes, the original design was changed as respects the parts here in dispute, all dampers discarded, the openings left therefor closed up as effectually as was practicable, and the plant finished in a wholly non-infringing form.

As will be observed, the patent in suit has but limited validity. It does not cover a complete thawing apparatus, or even an essential element of such an apparatus; it is confined to the type in which dampers are provided for deflecting the heated air from one stall to another. If that particular feature be left out, any one has the right to build a plant which otherwise copies the one at Curtis Bay. As the trial court decided, "without these appliances [dampers] there is no infringement," and we are convinced, after careful and repeated scrutiny of the evidence, that the Arlington plant did not have dampers at any stage of its construction, certainly not in any practical or substantial sense, and therefore has never infringed the claims in question. For of claim 28, which makes no mention of dampers but calls for a trainshed and "a pair of blowers" discharging in opposite directions, it is enough to say, as the court below inferentially held, that the elimination of dampers in effect eliminated the pair of blowers, since without dampers the combination described in this claim would not be operative.

The conduct of defendant, in appropriating a general plan which Newhall appears to have originated, may not be commendable—it is not for us to judge—but if it had the right to do what it did, as we are constrained to hold, the plaintiff has no legal ground of complaint and must be denied an award of damages. And if it be argued that the original design shows intent to infringe, the sufficient answer is that the intent was not carried into effect, and that beyond doubt infringement cannot be predicated upon mere intention. (*Sheffield* v. *Foundry Co.*, [C. C.,] 177 Fed., 713; *Luten* v. *Town of Lee*, [D. C.,] 206 Fed., 904.)

[4] It is only needful to add that plaintiff had no occasion to file the supplemental bill for the purpose of preventing a threatened or potential infringement, for the interlocutory decree of September, 1917, a year and a half before, granted an injunction—

against the defendant, its agents and employees, restraining further infringement of claims 20 and 28 of said patent;

while the final decree of November following, under which the Curtis Bay plant was to be released upon payment of the damages therein awarded, also provided, "but with that exception the injunction shall continue." The Arlington plant is manifestly covered by the injunction so granted and continued, and there is no suggestion that it has not been scrupulously obeyed by defendant.

It follows that the supplemental bill should have been dismissed, and the decree appealed from will accordingly be reversed.

ADJUDICATED PATENTS.

(U. S. C. C. A. Md.) The Newhall *et al.* patent, No. 1,044,230, for thawing apparatus, claims 20, 28, *Held* not infringed. *Baltimore & O. R. Co.* v. *Walter S. Newhall Co.*, 274 Fed. Rep., 889.

(U. S. D. C. N. Y.) The Gans patent, No. 1,195,923, for a water-softening apparatus, *Held* valid and infringed. *Permutit Co.* v. *Harvey Laundry Co.*, 274 Fed. Rep., 937.

Disclaimers.

993,031. *Clyde J. Coleman*, New York, N. Y. BRAKE-FACING. Patent dated May 23, 1911. Disclaimer filed November 5, 1921, by *John O. Bigelow, receiver of The Asbestos Brake Co.*, assignee.

Does hereby disclaim from said claims 16, 17, 18, 21 and 22 any brake-facing composed of compressible woven asbestos fibers, or a compressible woven asbestos textile fabric, or an asbestos fabric and a metallic reinforce, unless such asbestos fibers or fabric be combined with and reinforced by wires or metallic strands, as claimed in other claims of said Letters Patent.

And your petitioner disclaims said claim 20.

1,316,101. *Talbot G. Martin*, Chicago, Ill. TELEPHONE-EXCHANGE SYSTEM. Patent dated September 16, 1919. Disclaimer filed October 31, 1921, by the patentee, the assignee, *Automatic Electric Company*, consenting.

Enters this disclaimer—

"To claims 28, 29 and 30 in said specification which is in the following words, to wit:

"28. In a telephone system, a link circuit for extending connection between calling and called lines, fixed terminals for said link over which said link is seised, movable terminals for said link for extending the connection to a called line, a source of current, means for supplying current to said fixed terminals, means for supplying current to said movable terminals, and means for reversing the current supply to said movable terminals.

"29. In a telephone system, a link circuit for extending connection between calling and called lines, fixed terminals for said link over which said link is seised, movable terminals for said link for extending the connection to a called line, a source of current, means for supplying current to said fixed terminals, means for supplying current to said movable terminals, and means for reversing the current supply to said fixed and movable terminals.

"30. In a telephone system, an automatic progressively movable switch for extending connection between calling and called lines, fixed terminals for said switch over which said switch is seised, movable terminals for said switch for extending the connection to a called line, a source of current, means for supplying current to said fixed terminals, means for supplying current from said source to said movable terminals, and means for reversing the current supply to said movable terminals."

THE OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 292—No. 4. TUESDAY, NOVEMBER 22, 1921. Price—$6 per year.

(Entered as second-class matter, Dec. 31, 1903.)

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $6.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latest, address the Commissioner of Patents, Washington, D. C.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE.
Washington, D. C., November 9, 1921.

Adolph Fuchs, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Joseph E. Pellegrino, Mamaroneck, N. Y., for patent and patent granted December 16, 1919, No. 1,326,193, to Adolph Fuchs, 289 Holbrook avenue, Detroit, Mich., and a notice of such declaration sent by registered mail to Fuchs at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Adolph Fuchs, his assigns or legal representatives, shall enter an appearance thereto within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., November 9, 1921.

Russel & Miller Milling Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Edgar O. Challenger, of Produce Exchange, New York, N. Y., for registration of a trade-mark and trade-mark registered December 24, 1895, No. 27,808, to Russel & Miller Milling Co., of Valley City, N. D., and West Superior, Wis., and a notice of such declaration sent by registered mail to said Russel & Miller Milling Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Russel & Miller Milling Co., its assigns or legal representatives, shall enter an appearance thereto within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., November 16, 1921.

Julius Medvecsky, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the patent of Francis W. Bonfoe, 1,366,898, dated January 25, 1921, and application for patent of Julius Medvecsky, 95 Wilbur avenue, Long Island City, N. Y., and a notice of such declaration sent by registered mail to Medvecsky at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Medvecsky, his assigns or legal representatives, shall enter an appearance thereto within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Assistant Commissioner.

The Official Gazette.

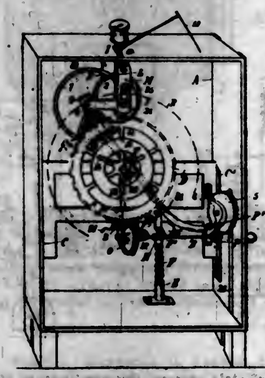
THE OFFICIAL GAZETTE is published every Tuesday simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1873, it was published and bound in semi-annual volumes; from July 1, 1873, to December 31, 1902, in quarterly volumes; from January 1, 1903, to December 31, 1906, in bimonthly volumes; since January 1, 1907, in monthly volumes. Terms: Annual subscriptions, $6; monthly, 50 cents. For postage upon foreign subscriptions, except those from Canada and Mexico, $3 or more, as required. Moneys received from foreign subscribers in excess of the subscription price of $6 will be deposited to the credit of the subscriber and applied to postage upon the subscription as incurred. Single copies, 10 cents; if mailed to foreign countries, excepting Canada and Mexico, 10 cents additional for postage. *Payment in advance required. No club rates. No discount to newsdealers. No sample copies.* All subscriptions must commence with the beginning of a volume. None taken for less than an entire volume. All orders should be addressed to "The Superintendent of Documents, Government Printing Office, Washington, D. C."

Amendment Under Rule 78.

The entry of an amendment under Rule 78 takes much more time than would its entry during the regular prosecution of the case, since the docket clerk must get the file from the Issue and Gazette Division, send it to the Examiner for report, submit it to the Commissioner, notify the applicant of the Commissioner's action, and if the petition is granted return the file to the Examiner for entry of the amendment.

Attorneys are therefore requested to take all possible steps to obviate the necessity of the presentation of such an amendment.

Condition of Applications Under Examination at Close of Business November 12, 1921.



Room No.	Divisions, Examiners, and subjects of inventions. (Oldest new case, Nov. 5; oldest amended, Feb. 18.)	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

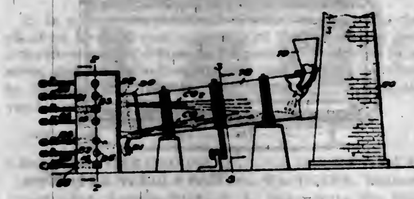
PATENTS

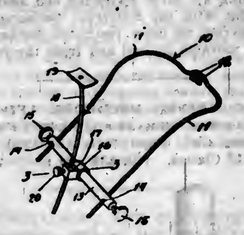


GRANTED NOVEMBER 22, 1921.

1,397,496. COMBINED APPARATUS FOR TAKING AND PROJECTING PICTURES. EMILE ALLAIS, Reims, France. Filed Aug. 6, 1914. Serial No. 855,481. 1 Claim. (Cl. 88—16.8.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

An apparatus of the character described for taking pictures comprising in combination, a casing, a movable frame within said casing, means for elevating and lowering said frame, support secured to the top of said casing and comprising a sleeve adapted to receive the objective for taking pictures, a flexible spring in front of said support, a disk having a sensitized surface between said support and said spring, means for partly covering said sensitized surface, and a shutter or sector for uncovering the non-covered parts of said surface for taking pictures, means for reducing the speed of the shutter and means for connecting said reducing means to said shutter, substantially as described.

1,397,497. PROCESS FOR CONVERTING SODIUM SULFATE TO SODIUM SULFID. ROBERT JAMES ANDERSON, El Paso, Tex., assignor to International Fuel Conservation Co., Phoenix, Ariz., a Corporation of Arizona. Original application filed Mar. 6, 1919, Serial No. 281,087. Divided and this application filed Sept. 30, 1920. Serial No. 413,752. 3 Claims. (Cl. 23—13.)

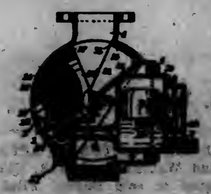


1. A process for the conversion of sodium sulfate to sodium sulfid consisting of the submission of sodium sulfate to the direct action of CO gases when at a temperature at which conversion may occur.

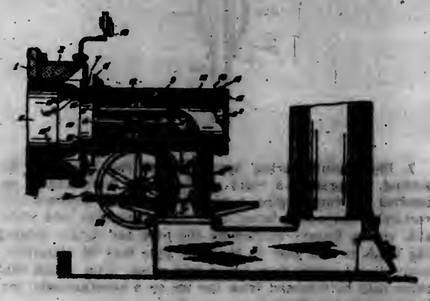
1,397,498. ICE-MANUFACTURING APPARATUS. JOHN P. BOYLE and WALTER A. INMAN, Chicago, Ill.; said Inman assignor to said Boyle. Filed June 8, 1918. Serial No. 239,009. 9 Claims. (Cl. 62—159.)

1. Ice manufacturing apparatus of the character described comprising a rigid substantially horizontally extending air supply pipe, a plurality of rigid substantially vertically extending tubes depending therefrom, and yieldable spring fingers carried by the pipe for rigidly joining the tubes to the pipe so that the pipe may be simultaneously disconnected from all of said tubes, after which said tubes may be removed from the ice by a substantially vertical movement thereof.

1,397,499. CHIN-SUPPORT. MICHAEL E. BRENNAN, Hudson, N. Y. Filed May 24, 1921. Serial No. 472,150. 3 Claims. (Cl. 27—25.)



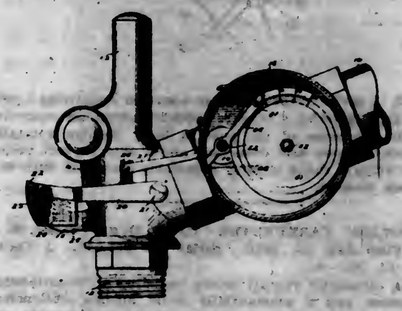
2. A device of the character described comprising a yoke of rigid material, a cross bar slidably adjustably connected with the arms of the yoke, a block member rotatably mounted upon said cross bar, and a chin support proper including a shank slidably adjustably connected with said block member.



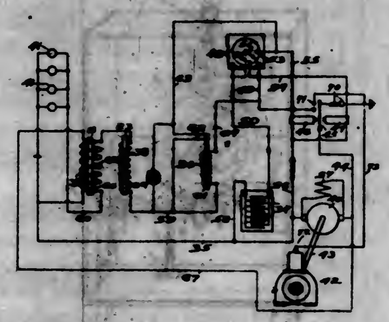
1,397,500. CARBURETER. CAY P. BUHL, Passaic, N. J. Filed Jan. 24, 1920. Serial No. 353,715. 1 Claim. (Cl. 261—44.)

A carbureter venturi means including a throat-forming member and a substantially ovoid air-flow obstructing member arranged in the throat of the first member and spaced therefrom, one of said members being shiftable relatively to the other in a path curved around an axis trans-

verse to and exterior of the throat and the throat being tapered and curved around said axis, the obstructing member having its smaller end projecting toward the smaller end of the throat.



1,397,501. GAS-BURNER. WILBUR T. CLARK, Cleveland, Ohio, assignor of one-half to Patrick J. Moran, East Cleveland, Ohio. Filed Sept. 17, 1920. Serial No. 410,903. 17 Claims. (Cl. 158—7.)



1. In a gas burner, the combination with a furnace having a combustion chamber; of a nozzle comprising concentric tubular conduits forming air and gas passages, the outer conduit extending beyond the inner and having a restricted discharge end; and a tubular casting fixed to the furnace, having an outer restricted end adapted to make a smooth joint with the restricted discharge end of said nozzle and having an inner restricted discharge end, said nozzle being movable toward and from the furnace.

1,397,502. COMBINED RECORDER AND REGISTER. RALPH BLANCHET CORMANY and ALBERT FRANKLIN HERRING, Rome, Ga. Filed Nov. 17, 1920. Serial No. 424,618. 15 Claims. (Cl. 234—84.)

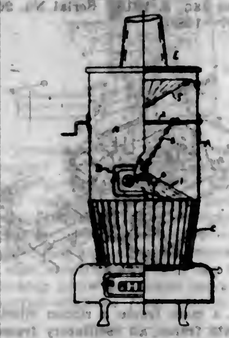
1. In combination, a fluid dispensing mechanism including a support for the container into which the fluid is to be dispensed, a register, operating means for the register including a lever having a portion associated with the support, spring means for normally holding said lever arm spaced from said support, a pawl and ratchet mechanism actuated by said lever, a recorder associated with said register including a record sheet and a stylus adapted to mark the sheet to record the volume and to punch the sheet to record the frequency, a zero setting device for the register and common means to operate the stylus of the record to punch the sheet and actuate the zero setting device of the register.

1,397,503. ENGINE-CONTROLLER. MARK C. CONSTANT, Sandusky, Ohio, assignor to Matthews Engineering Company, Sandusky, Ohio, a Corporation of Ohio. Filed Jan. 28, 1918. Serial No. 214,131. 18 Claims. (Cl. 290—30.)

1. In an electric system, the combination of an engine driven shunt wound dynamo, a storage battery connected to the dynamo, a circuit having translating devices connected to the battery and the dynamo, means for regulating the speed of the engine, an electromagnetic means connected to the regulating means and located in the circuit of the battery and the translating devices and in the circuit of the terminals of dynamo, for keeping a substantially constant difference between the voltages of the dynamo and the battery notwithstanding the changes of the current flow in the circuit having the translating devices.

1,397,504. STERILIZING PROCESS. JACOB DINER, New York, N. Y., assignor to Manila Sterilizing Corporation, Manila, Philippine Islands, a Corporation of the Philippine Islands. Filed Oct. 2, 1920. Serial No. 414,258. 4 Claims. (Cl. 167—3.)

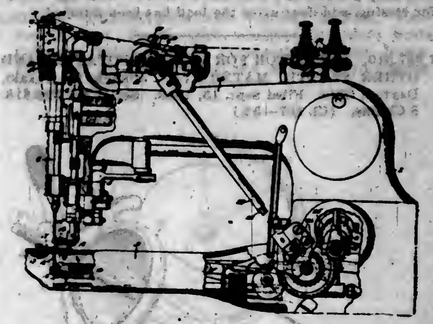
1. The herein described process of sterilizing packaged tobacco products, consisting in subjecting the packed tobacco products to a dry heating action, within a hermetically sealed compartment and eliminating therefrom all moisture and moisture producing elements.



2. The herein described process of sterilizing tobacco products contained in packages, consisting in subjecting the packages, while in a hermetically sealed compartment, to the action of heat and the fumes from a heated chemical.

1,397,505. PAVING-BRICK. FRANK B. DUNN, Conneaut, Ohio. Filed May 2, 1919. Serial No. 294,226. 1 Claim. (Cl. 94—14.)

As an article of manufacture, an unpressed paving brick cut from a continuous column of clay having two transverse grooves in one of the die-formed surfaces thereof, and perimetrical studs projecting from the surface of said die-formed surface adjacent to the same relative side of each of said transverse grooves, substantially as set forth.

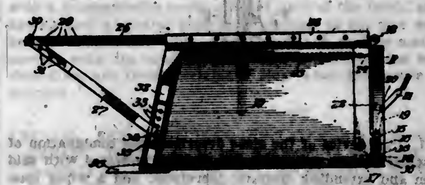


1,397,506. STOVE. MATTHEW H. FARMER, Logan, Utah. Filed July 15, 1921. Serial No. 484,922. 3 Claims. (Cl. 126—83.)

1. In a stove the combination with the side walls thereof, of an inverted cone secured near the top of said stove; a frusto-conically shaped baffle vertically movable in said stove, and having outwardly and upwardly flared portion in the base edge thereof; and means to move said baffle vertically in said stove.

1,397,507. THREAD-CONTROLLING MECHANISM FOR MULTIPLE-NEEDLE SEWING-MACHINES. GEORGE S. GASTMANN, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Sept. 25, 1919. Serial No. 326,290. 17 Claims. (Cl. 112—241.)

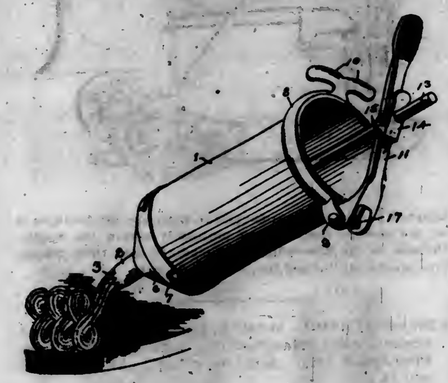
1. A sewing machine having a plurality of needles set in a plane crossing the line of feed, a looper cooperating therewith to form stitches, means for tightening the needle-loops as they are shed from the looper, and yielding means disposed out of engagement with the needle-threads at the beginning of the down-stroke of the needles and



adapted to come into engagement with the needle-threads as the needles descend and uniformly strain the needle-threads as the descending needle-points pass their respective previously formed loops on the looper.

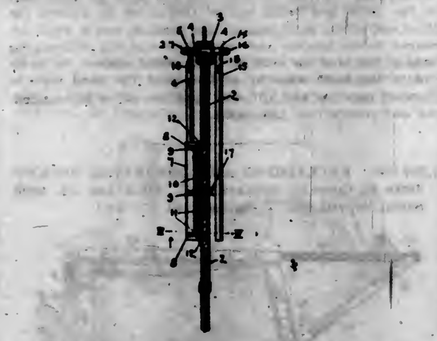
1,397,508. CLAMP. ALEXIS F. GILLET, Omaha, Nebr., assignor to Jubilee Manufacturing Company, Omaha, Nebr. Filed June 6, 1921. Serial No. 475,187. 3 Claims. (Cl. 24—19.)

2. A hose clamp comprising a flexible metallic band adapted to encircle a hose and arranged with its ends in overlapping relation, a bracket carried upon the inner end of the band and being spaced therefrom to receive the other end of the band beneath the bracket, and a worm arranged in the bracket and exposed toward the overlapping ends of the band for binding engagement against the outer end of the band whereby said ends of the band may be clamped together and slid one upon the other for expanding and contracting the clamp.



1,397,509. RECLAIMING AND CONVEYING BUCKET. JOHN F. GODFREY, Elkhart, Ind. Filed Aug. 23, 1920. Serial No. 405,451. 4 Claims. (Cl. 37—54.)

1. A bucket of the class described including a body portion, a latch hook secured to said body portion, a dump door pivotally connected to said body portion, a releasable latch carried by said dump door normally engaging said

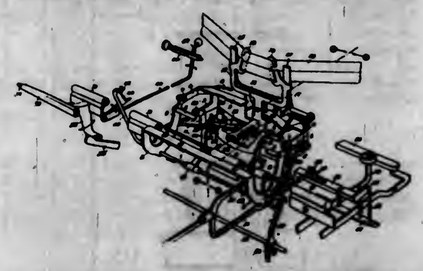


hook for holding the door in closed position and having an operating lever adapted to be operated for permitting the release of said door for dumping purposes, by engagement with the ground and a balance spring operative between said body portion and door and mounted within the bucket for closing said door after the load has been dumped.

1,397,510. DEPOSITOR FOR MASHED POTATOES AND OTHER PLASTIC MATERIALS. JOSEPH G. GRASSI, Dayton, Ohio. Filed Sept. 15, 1919. Serial No. 323,818. 8 Claims. (Cl. 107—52.)

1. A device capable of being moved to and fro in the hands of the operator for forming plastic material into strands, comprising a reservoir having a discharge orifice at one end thereof, substantially axially aligned with the reservoir a plunger in said reservoir, and means for intermittently advancing the plunger through a step by step movement while the device is being shifted to and fro, substantially as specified.

1,397,511. WINDSHIELD-CLEANER. CHARLES F. GREEN, Toledo, Ohio, assignor to The Willys-Overland Co., Toledo, Ohio, a Corporation of Ohio. Filed June 5, 1916. Serial No. 101,661. 3 Claims. (Cl. 15—59.)

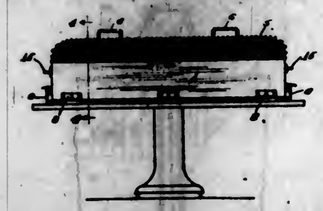


1. In a device of the class described, the combination of a wiper arm, a removable pin rigidly connected with said arm and extending laterally therefrom, and a wiper comprising a clip and yieldable member directly engaged and held by the clip, said clip being loosely mounted upon the arm and having a circumferential slot extending transversely of the arm for receiving said pin to permit a limited rotative movement of the clip upon the arm.

1,397,512. CULINARY IMPLEMENT. HERMAN M. GAMMONS, Chicago, Ill. Filed Sept. 27, 1921. Serial No. 503,490. 2 Claims. (Cl. 146—15.)

1. A culinary implement comprising a handle, and a dasher comprising a shank attached to the handle and consisting of laterally spaced side portions having at their extremities a transverse connecting portion consisting of spaced and parallel cross bars and return bends connecting the ends thereof, said cross bars adjacent to the return bends having upward bends forming upstanding end portions of the cross bars.

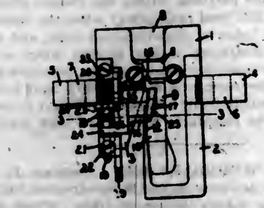
1,397,513. RIBBON-MOVEMENT FOR TYPEWRITERS. JOHN A. HAGMEYROM, Cranford, N. J., assignor to Victor Typewriter Company, Scranton, Pa., a Corporation of New York. Filed Jan. 2, 1919. Serial No. 269,298. 11 Claims. (Cl. 197—158.)



1. In a typewriter, a main frame, a ribbon vibrator reciprocable on said main frame, an oscillatory frame journaled on an axis fixed with respect to said main frame, a lever movable about an axis on said oscillatory frame and slidably engaging said ribbon vibrator, and means for adjusting said lever to vary its point of contact with said ribbon vibrator with respect to the distance of said point of contact from the axis of said oscillatory frame.

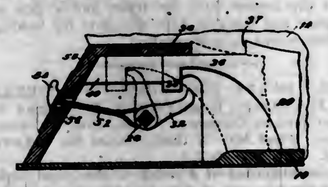
1,397,514. PROCESS FOR DEPOSITING A METALLIC COATING ON VARIOUS METAL ARTICLES OR OBJECTS. FREDERICK W. HAINES, township of Sandwich East, Ontario, Canada, and FRANK L. SOMMERS, Detroit, Mich., assignors, by direct and mesne assignments, to The Metal Protection Laboratory, Detroit, Mich., a Corporation of Michigan. Filed Sept. 28, 1916. Serial No. 256,123. 9 Claims. (Cl. 204—8.)

1. The process of coating metal articles by replacement in a solution of the desired coating metal, which contains



the step of restraining the deposition by placing in the solution an oxid, which in this process is not reduced to its metallic form.

1,397,515. CORPSE-CARRYING DEVICE. GEORGE F. HARRINGTON and ARTHUR J. PODAWILTZ, Eau Claire, Wis. Filed Aug. 2, 1920. Serial No. 400,772. 3 Claims. (Cl. 27—28.)



2. A corpse carrying device comprising an elongated corpse containing member having a removable cover, hinged members closing the bottom of said device, and latch members sustaining the said hinge members and so positioned that they may be released while said corpse containing member is resting on a table, whereby said device may be lifted vertically to remove its contents through the bottom.

1,397,516. PRESSER-FOOT FOR BLINDSTITCH SEWING-MACHINES. THOMAS J. HAYES, Roslindale, Mass., assignor to Arbetter Felling Machine Company, Boston, Mass., a Corporation of Maine. Filed Aug. 20, 1917. Serial No. 187,059. 11 Claims. (Cl. 112—151.)

1. A presser foot for sewing machines for felling a superimposed layer upon a base layer of material comprising toe portions adapted to engage respectively the base and superimposed layers, guiding means for the superimposed layer including a plurality of vertically movable guiding instrumentalities pivotally mounted upon the presser foot and operating successively to engage and direct said superimposed layer as the same approaches the stitching point and means operable to remove one of said instrumentalities from guiding position.

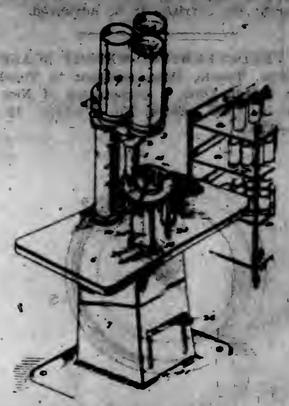
1,397,517. PHONOGRAPH-RECORD CABINET. JOHN HEITMAN, Seattle, Wash. Filed Nov. 8, 1920. Serial No. 422,628. 21 Claims. (Cl. 211—16.)

9. The combination with a casing, of carriages therein, a swinging and slidable ejector for said carriages, means holding the ejector against sliding movement when advanced, means normally spacing said ejector from the carriages, and an adjusting device for positioning said ejector adjacent the carriage to be advanced.

1,397,518. PREDETERMINED-WEIGHT SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Apr. 5, 1920. Serial No. 371,278. 10 Claims. (Cl. 116—129.)

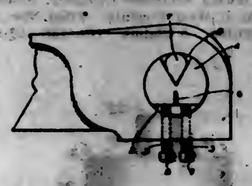
1. In a weighing scale, in combination, a casing, a series of pointers movably mounted therein, and a single means operable from without the casing for engaging and moving each of the pointers of said series, substantially as described.

1,397,519. NOZZLE FOR OXYACETYLENE AND SIMILAR TORCHES. BENJAMIN HEYMAN, Newark, N. J., assignor to Oxweld Acetylene Company, Newark, N. J., a Corporation of West Virginia. Filed Nov. 19, 1919. Serial No. 339,158. 5 Claims. (Cl. 158—27.4.)



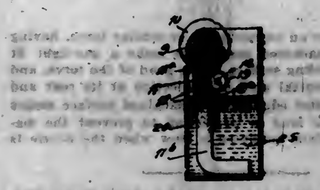
1. A nozzle for an oxyacetylene or similar torch, having at its rear a machined surface to make a gas-tight fit with a corresponding surface in the head of the torch, and having also a central stud or projection at its rear and having at the outer edge of said machined surface means serving with the stud or projection to prevent the machined surface from receiving a blow when the nozzle is dropped.

1,397,520. ART OF FILLING CONTAINERS WITH ICE-CREAM. HAROLD C. HOWE, Rutland, Vt., assignor to Sealright Co. Inc., Fulton, N. Y., a Corporation of New York. Filed Jan. 26, 1921. Serial No. 439,995. 35 Claims. (Cl. 226—24.)



11. An ice cream container filling machine having a container filling nozzle with a free end discharge, said nozzle formed to longitudinally and slidably receive a container

with the bottom of the container opposite said discharge end to fill the container as the same slides from the needle,



and means for maintaining a supply of flowable ice cream flowing through said nozzle.

1,397,521. WEIGHING-SCALE. SAMUEL N. HUBT, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Dec. 27, 1920. Serial No. 432,196. 9 Claims. (Cl. 74—104.)

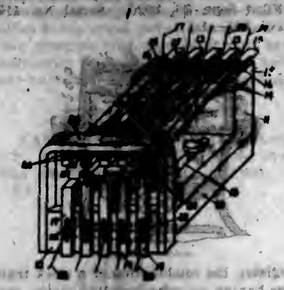
1. In a device of the class described, in combination, a member having a bore therein, a pivot, a pivot retainer mounted in said bore, said pivot retainer having a recess adapted to receive the pivot, and means for deforming said pivot retainer to clamp said pivot in said recess.

1,397,522. OILING DEVICE FOR FIBER SILK AND THE LIKE. JOSEPH JACOBS, Brooklyn, N. Y. Filed Nov. 21, 1919. Serial No. 339,571. 5 Claims. (Cl. 91—48.)

2. An oiling device for fiber silk and like threads embodying a container provided with an oil containing portion, a roller having an unyielding, hard surface mounted to rotate freely above said containing portion and feeding means for supplying a thin film of oil from the containing portion to said roller.

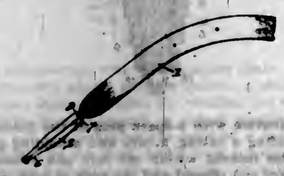
1,397,523. FUEL-RESERVOIR-SUPPLY SYSTEM FOR SELF-PROPELLED VEHICLES. Benjamin Jonsson, Jr., Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed May 26, 1919. Serial No. 299,863. 32 Claims. (Cl. 158—46.5.)

1. A liquid control device comprising a closure arranged to be connected with an aspirator and adapted to be inserted within a liquid holding receptacle, said closure having a liquid inlet passageway sealed by the liquid in the receptacle, means partially within the closure arranged to automatically close said passageway when the liquid in the receptacle falls below a predetermined level, and a holder for said last mentioned means serving when connected therewith to prevent the closing of the passageway when the liquid in the receptacle stands below said lever, said means being automatically released from said holder when the liquid in the receptacle rises above said level.



1,397,524. AUTOMOBILE-LOCK. THOMAS J. KEHOE, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Aug. 16, 1917. Serial No. 186,488. 10 Claims. (Cl. 70—181.)

10. The combination with a gear shifting segment having a slotted guide for a control lever, of a casing fixed upon the segment and having parallel guide members and a plate adapted to be guided thereby across the top of the segment in a path extending at a right angle to the slot and into engagement with the lever, and a lock carried by the plate and movable with the plate for locking said plate when moved to said position.



1,397,525. MEANS FOR MEASURING VIBRATION. JOHN E. KENNEDY, Glens Falls, N. Y., assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed May 3, 1920. Serial No. 378,607. 10 Claims. (Cl. 234—36.5.)

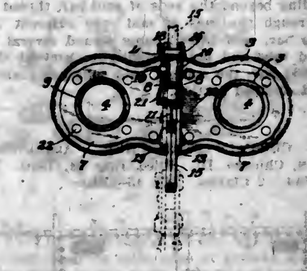
4. The combination of a series of electrically operated recording devices controlled by a series of electric circuits, and a corresponding series of vibration or shock receiving members actuated by vibrations or shocks of different intensity, to close the respective circuits, in order to make a record indicative of the number and relative intensity of the vibrations or shocks received.

9. The combination of a plurality of electric circuits, a series of recording devices operatively connected with said circuits, and vibration actuated mechanism for controlling said circuits to effect progressive operation of said recording devices through vibrations of different intensity imparted to said mechanism.

1,397,526. TIP FOR LACINGS. EDWARD FRANCIS KING, Providence, R. I., assignor, by direct and mesne assignments, to What Cheer Braid Company, Providence, R. I., a Corporation of Rhode Island. Filed Aug. 22, 1919. Serial No. 319,153. 3 Claims. (Cl. 24—143.)

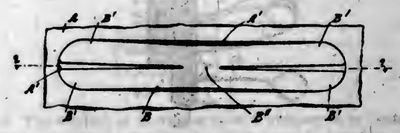
1. The combination with a lacing, of a metallic tip, formed of a blank of substantially conoidal outline or contour and folded about the lacing and overlapped upon itself and having its leading end or point tapering and its overlapped butt constricted about the lacing and gripping it superficially, the constricting of the butt serving to interlock the folds of the tip with one another and with the lacing.

1,397,527. SCOW. CHARLES KULMAN, Brooklyn, N. Y., assignor of one-half to Albert E. Thomas, West New York, N. J. Filed May 16, 1921. Serial No. 470,140. 7 Claims. (Cl. 114—37.)



1. A dumping scow having an opening through the rear wall thereof, out through which material in the scow may flow and a door for said opening hinged to swing downwardly and outwardly to open the opening.

1,397,528. ART OF MANUFACTURING PRINTERS' ROLLERS. SOLOMON KUSNER, Chicago, Ill., Assignor, by mesne assignments, to Rapid Roller Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1919. Serial No. 289,327. 1 Claim. (Cl. 106—5.5.)



The herein described method of producing material for cores of printers' rollers which consists in mixing substantially 800 parts by weight of a vegetable oil, 15 parts by weight of calcium oxid, 12 parts by weight of a mineral oil, and 100 parts by weight of sulfur chlorid, agitating the mixture and allowing the same to cool, the agitation permitting the escape from the mixture of the occluded gases, and resulting in a viscous liquid; then adding to 100 parts by weight of the result of the first step ten parts by weight of sulfur chlorid gradually adding the sulfur chlorid and agitating the mixture as the sulfur chlorid is added, then while the mixture is still heated pouring the mixture into a suitable mold for the production of the product desired such as the core of a printer's roller.

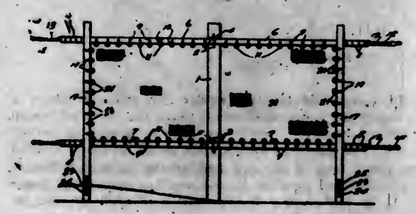
1,397,529. NON-SKID AND TRACTION CHAIN. HERRON BERNARD LAYMAN, New York, N. Y., assignor to Never-skid Manufacturing Co., Incorporated, a Corporation of New York. Filed Feb. 6, 1919. Serial No. 275,811. 4 Claims. (Cl. 152—2.)

3. In a non-skid traction device the combination of a pad comprising a stamped metal plate the edges of which are cupped outward relatively to the wheel in which they are to be placed, two stamped metal members riveted to the inner face of the pad and having in-turned flanges which are aligned parallel to one another across the inner face of the pad, and a flexible chain pivoted to said inwardly projecting flanges.

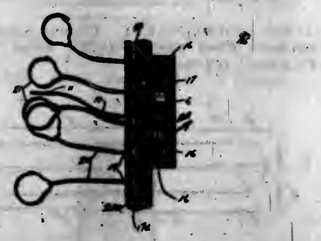
1,397,530. COUPLING-KEY. HILDING LÜBECK, Hesserud, Sweden. Filed Feb. 4, 1919. Serial No. 274,991. 7 Claims. (Cl. 64—96.)

7. A structure comprising two parts rotating about the same axis, one of said parts having a socket, a key connected with the other part and having a portion projecting into said socket, said key being elastic circumferentially of said parts and occupying, during the normal transmission of power, a position intermediate between its fully relaxed and fully stressed positions, whereby during normal transmission of power said key may either increase or decrease its state of elastic tension according as the driving pressure or resistance increases or decreases.

1,397,581. HATPIN-GUARD. JOSEPH LUCIUS, Champion, Mich. Filed May 28, 1921. Serial No. 471,846. 2 Claims. (Cl. 132—72.)



1. The combination with a hat pin, of a member, slidable upon the shank of the hat pin to a point adjacent the head thereof, a guard to cover the projecting end of the hat pin, and means coöperatively uniting the member and guard for holding the latter on the pin.



1,397,532. CURLER. KATHERINE MCCLAIRE, Chicago, Ill. Filed June 8, 1921. Serial No. 476,061. 2 Claims. (Cl. 132—43.)

2. A curler comprising an integral bar of soft copper of substantial size and circular in shape, a tube of flexible material within which said bar is placed, the ends of said tube extending beyond the ends of said bar, thread being stitched through the ends of said tube adjacent to the ends of the bar, said thread being wound several times around said tube and drawn tightly to prevent the removal of said bar, the ends of said tube being extended beyond said confined portion.

1,397,583. CURTAIN-STRETCHER. ALEXANDER P. MCMAHON, Chicago, Ill. Filed June 14, 1920. Serial No. 388,844. 2 Claims. (Cl. 45—24.)

1. In a curtain stretcher, a standard, end rails formed with longitudinal recesses, folding side rails formed with longitudinal recesses and with a plurality of perforations, sliding strips disposed in the recesses of said side and end rails, cover strips for said sliding strips, the cover strips for the sliding strips carried by the end rails being perforated, wires secured to both sets of sliding strips, one set of wires extending through the perforations in the perforated strips and the other set extending through the perforations in the side rails, and split rings carried by said wires.

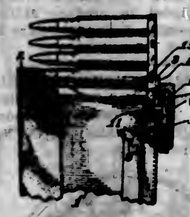
1,397,594. REGISTER FOR WATER-METERS, &c. WILLIAM L. MASSEN, New York, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 30, 1920. Serial No. 418,777. 3 Claims. (Cl. 235—1.)

1. In a register, the combination of a clock train, a supporting frame having spaced supporting plates, one of such plates having counter-sunk recesses and elongated slots, bushings in the seats of the supporting plate, and a locking plate to cover and retain the bushings in their seats and having prongs to enter the slots of the supporting plate and engage the supporting plate.

1,397,535. SPARK-PLUG. CHARLES G. MINOR, Duluth, Minn. Filed Mar. 25, 1920. Serial No. 368,502. 1 Claim. (Cl. 123—169.)

The combination with a spark plug of the character described including a casing, a core and a holding gland, of two electrodes incased within the core and extending beyond the lower end thereof and the ends of both electrodes being bent inwardly toward each other and one above the other, whereby the spark may occur either intermediate of the end of the shorter terminals and the vertical portion of the opposite electrode or between the two horizontal portions of the terminals, substantially as described.

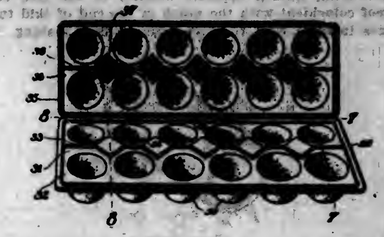
1,397,536. KETTLE. HARTWIG A. MOORE, Chicago, Ill., assignor of one-half to Alfred C. Moore, Chicago, Ill. Filed June 25, 1921. Serial No. 480,397. 2 Claims. (Cl. 53—8.)



1. A unitary cast metal kettle comprising an inner cup-shaped receptacle, an outer wall spaced from said receptacle and extending beyond the upper and lower ends of said receptacle, a horizontally disposed annular supporting ledge connecting the upper edge of said receptacle with said outer wall, said ledge being arranged below and in spaced relation to the upper end of said outer wall for supporting a bag clamping ring, said outer wall having vents arranged adjacently below said ledge, and a spout formed on said outer wall above said annular supporting ledge.

1,397,537. CAN-OPENER. GEORGE D. MUNSING, New York, N. Y. Filed Feb. 1, 1919, Serial No. 274,511. Renewed May 18, 1921. Serial No. 470,607. 3 Claims. (Cl. 30—3.)

1. The combination with a supporting plate, of a vertical rod secured in spaced relation thereto, a shelf mounted to slide along said rod, means for securing the shelf to the rod at different adjustments, a cutter mounted to slide along the rod to operate on the head of a can when the latter is placed on the shelf, and a lever pivotally connected to the plate and cutter for actuating the latter.



1,397,538. MAGAZINE-LOADER. CHARLES A. NELSON, Utica, N. Y., assignor to Savage Arms Corporation, Utica, N. Y., a Corporation of Delaware. Filed Dec. 3, 1918. Serial No. 265,140. 2 Claims. (Cl. 42—67.)

2. In a magazine loading machine for loading separate magazines, a cartridge chute formed at its entrance end to receive a cartridge clip and provided with an automatically operating ejector for the empty clip.

1,397,539. EGG-CARTON. RISDON MOORE ODELL, Decatur, Ill. Filed Jan. 14, 1920. Serial No. 351,376. 3 Claims. (Cl. 217—26.)

1. An egg holding tray having folded portions provided with means forming egg receiving pockets or cells arranged in rows and also provided with relatively engaging ribs and grooves around the pockets, adjacent to its edge and

between the rows of pockets or cells and with embossed projections and recesses at spaced points along the ribs and grooves between the said rows.

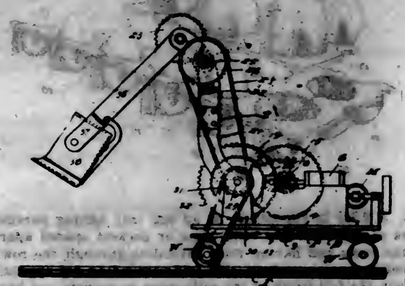
1,397,540. RECEPTACLE AND CARRIER FOR EGGS. RISDON MOORE ODELL, Decatur, Ill. Filed Jan. 14, 1920. Serial No. 351,377. 8 Claims. (Cl. 217—26.)

1. A filler in the nature of an egg tray having parallel rows of egg receiving cells, cups or pockets spaced apart in the rows and having folds extending through the rows of cells, cups or pockets, said folds extending for approximately the full depth of the cells, cups or pockets and having means in the nature of crimps in the spaces between said cells, cups or pockets to prevent communication therebetween for the major portions of their depth as described.

1,397,541. METHOD FOR USE IN CONNECTION WITH THE TESTING OF MATERIALS. JAMES W. OWENS, Cradock, Va., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 3, 1920. Serial No. 356,064. 11 Claims. (Cl. 29—148.)

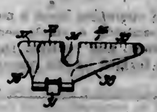
1. The method of operating upon a member to be tested, which comprises removing a small section therefrom to obtain a test specimen, and refilling the void within said member which was formed by the removal of said section.

1,397,542. CORE FOR ROLLS OF PAPER AND THE LIKE. HOWARD PARKER, Berlin, N. H., assignor to Brown Company, Portland, Me., a Corporation of Maine. Filed Mar. 25, 1918. Serial No. 224,412. 1 Claim. (Cl. 242—68.)



A core of the class described comprising in combination with a tube having one end thereof provided with a notch,

a normally expanded, split, contractile, protecting bushing of spring sheet metal fitted in the end of said tube, said bushing having opposite notches in the free ends thereof coincident with the notch in the end of said tube, flanges integral with the free ends of said bushing, the

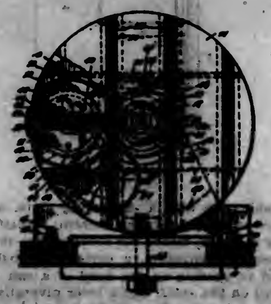


ends of said flanges being serrated and folded outwardly and backwardly upon the adjacent edges of said notch in the end of said tube, and an outwardly projecting prong from the wall of said bushing adapted for engagement with the inner wall of said core.

1,397,543. DIGGING-MACHINE. Albert Peters, Bahpeming, Mich. Filed Mar. 24, 1920. Serial No. 368,450. 5 Claims. (Cl. 214—138.)

1. A machine of the class described comprising a platform, a table rotatably supported thereby, a member mounted on the platform and rotating about a substantially horizontally disposed axis, means for rotating the member, an arm having an end portion fixed to said member movable in a vertical direction therewith, a second rotatable member supported by the opposite end portion of the arm, a second arm having one end portion fixed to said second rotatable member, means for rotating said second rotatable member, and a digging element carried by the outer end portion of the second named arm.

1,397,544. TYPEWRITING-MACHINE. Edwin A. Peterson, Madison, Wis., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 2, 1920. Serial No. 362,644. 3 Claims. (Cl. 197—190.)



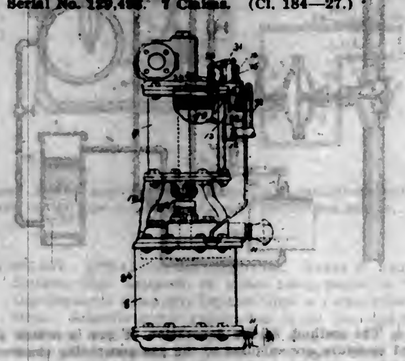
1. A wing-scale for a typewriting machine having a long aligning edge to lie along the platen at the printing line and at one side of the printing point, and an erasure opening in said wing-scale at said aligning edge to enable the contour of previously-typed characters in the printing line when said characters are brought opposite the erasure opening by longitudinal shifting of the platen.

1,397,545. [illegible]. Wm. H. Fontaine, Chicago, Ill., assignor to Westinghouse Pump and Machinery Company, a Corporation of Virginia. Filed July 31, 1920. Serial No. 401,540. 6 Claims. (Cl. 257—230.)

1. The combination with a surface condenser and its circulating water inlet chamber, of a rotatable strainer extending over and inclosed within the chamber, and means for rotating the strainer.

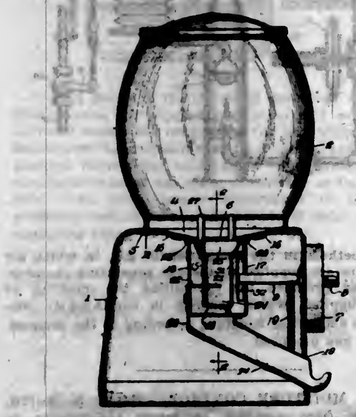
1,397,546. OVAL CHUCK. August Rebelski, Brooklyn, N. Y., and Mathew Torre, Hoboken, N. J. Filed May 25, 1920. Serial No. 384,102. 8 Claims. (Cl. 82—18.)

1. In a device of the character described, a primary rotary member, a secondary member shiftably mounted relatively to said primary member, and rotatable therewith, rotatable means carried by said primary member, and adapted to have relative rotary movement during the rotation of said primary member, lever means connecting said secondary member to said rotatably carried means, the connection of said lever means with said rotatably carried means adapted to produce shifting movement of said secondary member during its rotary movement with said primary member.



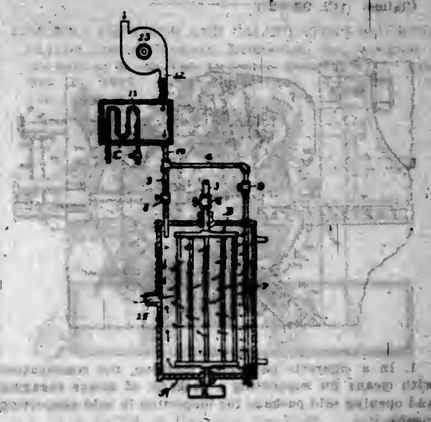
1,397,547. PREDETERMINED-WEIGHT SCALE. Orwell C. Reeves, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Mar. 22, 1920. Serial No. 367,659. 7 Claims. (Cl. 116—128.)

3. In a device of the class described, in combination weighing mechanism, an indicator shaft connected thereto,



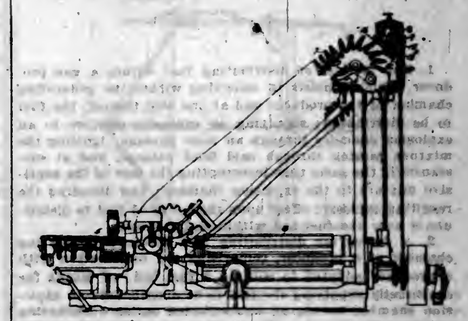
an indicator hand fixed to said shaft and capable of a complete rotation and a plurality of manually-operable hands rotatably mounted on an axis substantially coincident with that of said indicator shaft.

1,397,548. PUMP-LUBRICATOR. Edward G. Ripley, Minneapolis, Minn., assignor of one-half to Henry L. McCullough, Minneapolis, Minn. Filed Nov. 4, 1916. Serial No. 129,493. 7 Claims. (Cl. 184—27.)



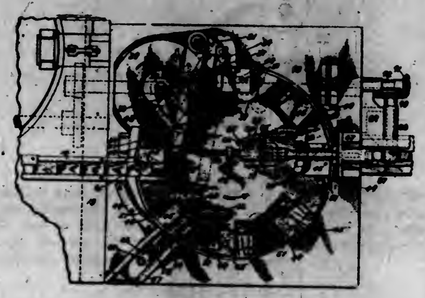
6. The combination with a reciprocating engine comprising a main cylinder and coöperating piston working therein, which has exposed reciprocating parts of much less length than the length of the stroke of said piston, of a lubricator pump cylinder and piston, means extending through the head of said main cylinder and operable by the piston therein, and an intermediate step-by-step transmission mechanism including a pivoted tappet lever operated by and disposed between said means and the piston of said lubricator whereby said lubricator piston will be operated at a speed proportional to the speed of reciprocation of said main piston.

1,397,549. VENDING-MACHINE. Charles S. Scott, Chicago, Ill. Filed Apr. 25, 1921. Serial No. 464,068. 4 Claims. (Cl. 211—8.)



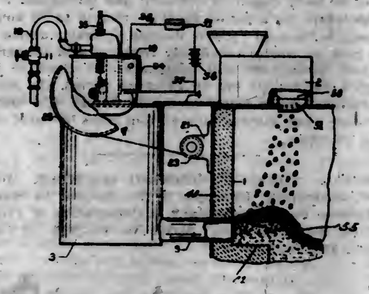
1. A vending machine comprising a container, a delivery outlet, a movable receiver intermediate said container and outlet for delivering articles of merchandise to said outlet, and a member controlling the passage of articles through said outlet, said receiver being shiftable back and forth beyond opposite sides of said member for delivering an article on its forward movement and another article on in its return movement.

1,397,550. PROCESS OF TREATING LIQUIDS. Thomas Sinclair, Taylors Falls, Minn. Filed Dec. 6, 1917. Serial No. 206,244. 1 Claim. (Cl. 99—15.)



A process of preparing milk or cream containing a germ valuable to the digestive system consisting of gradually heating the milk or cream to about 145 to 150 degrees Fahrenheit to inure the germ and its spores to an increased temperature and to destroy deleterious organisms, meanwhile introducing sterile air in intimate contact with the milk or cream, next flashing the temperature to about 170 to 185 degrees Fahrenheit to destroy deleterious organisms remaining, then cooling the milk or cream to about 50 to 65 degrees Fahrenheit and incubating at that temperature for a period ranging from 48 to 96 hours to propagate the seed germ to develop agreeable aromas from the milk or cream, and finally reducing said temperature to and maintaining said temperature at about 35 to 45 degrees Fahrenheit for an extended period, the said introduction of air being continued during said steps to scavenge away substantially all foul gases liberated by the milk or cream.

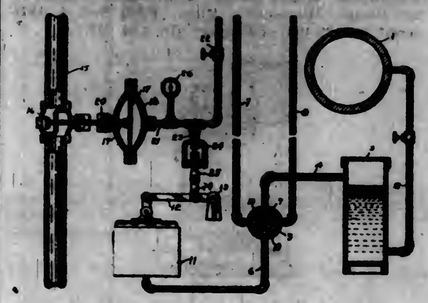
1,397,551. TOBACCO-STEMMING MACHINE. Joseph W. Slaughter, Brooklyn, N. Y., assignor to Standard Tobacco Stemmer Company, a Corporation of Virginia. Filed Sept. 30, 1920. Serial No. 413,686. 3 Claims. (Cl. 131—57.)



3. In a tobacco stemming machine, the combination with a series of traveling stem butt grippers, of a source of solvent supply, and a felt wheel intermittently in contact with and operated by said grippers and receiving solvent from said source and applying it to said grippers.

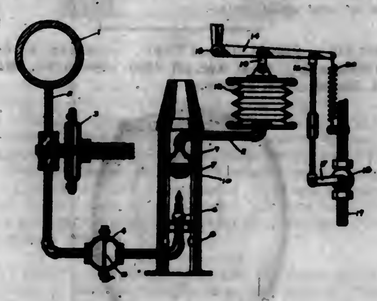
1,397,552. CIGARETTE-PACKAGING MACHINE. Seamour D. Smith, Brooklyn, N. Y., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Sept. 25, 1920. Serial No. 412,702. 22 Claims. (Cl. 93—2.)

1. In a cigarette packaging machine, the combination with means for supporting a package, of means engaging and opening said package for inspection in said supporting means.



1,397,553. METHOD OF AND APPARATUS FOR DISTRIBUTING MATERIAL. Harry F. Smith, Lexington, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 4, 1917. Serial No. 159,843. 4 Claims. (Cl. 110—101.)

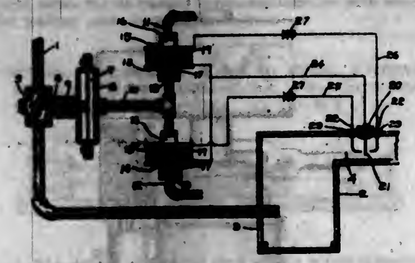
1. The method of distributing fuel within a gas producer, which consists in collecting within the generating chamber of the producer and at one side thereof, the fuel to be distributed; supplying an explosive mixture to an explosion chamber through an inlet passage; igniting the mixture passing through said inlet passage, and at substantially the same time interrupting the flow of the explosive mixture to the explosion chamber; and directing the resulting explosive effect upon the collected fuel to distribute it over the fuel bed within the producer.



2. A device for distributing fuel within a generating chamber of a producer, comprising the combination with a producer adapted to contain a fuel bed; of means for continually supplying the fuel to be distributed; an explosion chamber having an unobstructed outlet, terminating adjacent the fuel to be distributed; means for introducing an explosive mixture thereinto; means for interrupting the flow of explosive mixture into the chamber; and means for igniting the mixture within the chamber, the interrupting means and the igniting means being adapted to function at substantially the same time.

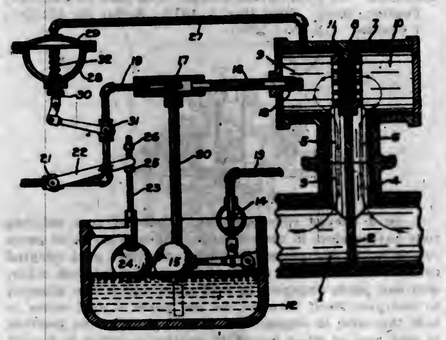
1,397,554. STEAM REGULATION. Harry F. Smith, Lexington, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 28, 1917. Serial No. 188,234. 25 Claims. (Cl. 48—87.)

1. The method, in the generation of gas in which air and moisture are supplied to the gas generating chamber, which consists in continuously controlling the amount of moisture supplied according to the specific gravity of the gas produced.



1,397,555. MOISTURE REGULATION. Harry F. Smith, Lexington, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 7, 1917. Serial No. 200,850. 17 Claims. (Cl. 48—87.)

1. The method, in the generation of gas, in which air and moisture are supplied to the gas generating chamber, means being provided for controlling the quantity of moisture supplied, which consists in continuously controlling the amount of moisture according to the composition of the gas produced.

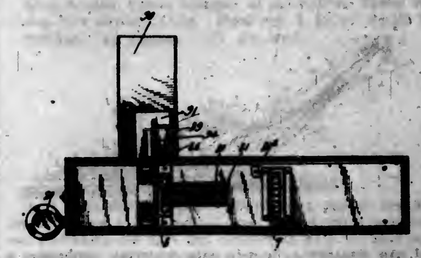


1,397,556. MOISTURE CONTROL. Harry F. Smith, Lexington, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 28, 1918. Serial No. 218,918. 8 Claims. (Cl. 48—180.)

1. In a device for controlling the amount of moisture in a gas, a saturator having a gas inlet at one end and an outlet at the other end thereof; a steam supply pipe leading into the saturator adjacent the inlet; a valve for controlling flow through said steam supply pipe; electrically operated controlling means for said valve;

and means responsive to temperature conditions within the outlet pipe for actuating said controlling means.

1,397,557. SPRAYING MECHANISM. Harry F. Smith, Dayton, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Substitute for application Serial No. 195,849, filed Oct. 8, 1917. This application filed Oct. 27, 1919. Serial No. 333,504. 24 Claims. (Cl. 299—25.)

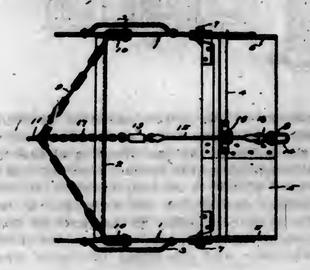


1. In a device of the character described, a distributing pipe; means for supplying fluid to said pipe; pressure operated means for controlling the said supplying means, constructed to maintain said supplying means in operative position during the continuance of predetermined pressure conditions at the place of delivery of the distributed fluid; and other means constructed to interrupt, at predetermined intervals, the supply of fluid to said fluid supplying pipe.

1,397,558. OVERHEAD CRANE. Edwin H. Steedman, St. Louis, Mo., assignor to Curtis & Co. Mfg. Co., Wellston, Mo., a Corporation of Missouri. Filed June 11, 1921. Serial No. 476,962. 13 Claims. (Cl. 105—163.)

1. An overhead crane composed of two end frames each of which consists of a number of flanged members connected together, and a transversely disposed connecting means for said end frames arranged wholly within the space between same and having its opposite ends directly connected to said end frames.

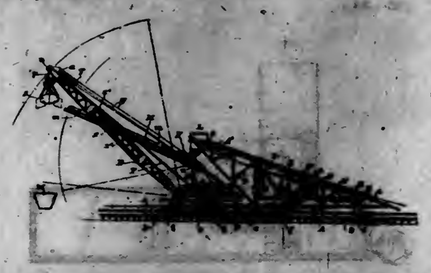
1,397,559. PRINTING AND CALCULATING MACHINE. Claude Jarvis Stimson, Brunswick, Ga., assignor of one-half to H. R. Van Deventer, Sumter, S. C. Filed Nov. 27, 1917. Serial No. 204,234. 7 Claims. (Cl. 235—58.)



1. In a device of the class described, a plurality of type elements, a platen, means for shifting said elements, means for moving said platen, and means for preventing actuation of the typing elements of higher order after the operation of a typing element of lower order.

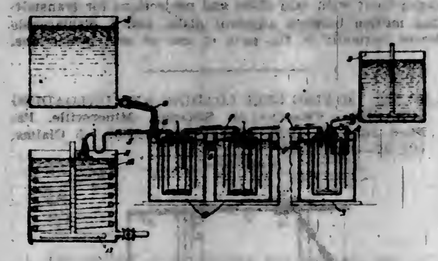
4. In a device of the class described, a plurality of type bars, means for shifting the same, a stamping bar below said type bars, a slide adapted to receive a check or the like and to be moved into and from position between the type bars and stamping bar, a ribbon, and flexible ribbon-engaging means carried by the slide for moving the ribbon when the slide is moved.

7. In a device of the class described, a plurality of type bars, a registering disk operatively connected to each of said type bars, a projection on each disk, means in engagement with said disks and projections for transmitting motion between adjacent disks, and a displaceable detent normally in the path of one of said projections.



1,397,560. MINING SELF-LOADING AND UNLOADING SCRAPER. Charles H. Strange, Minersville, Pa. Filed June 29, 1920. Serial No. 392,862. 5 Claims. (Cl. 37—19.)

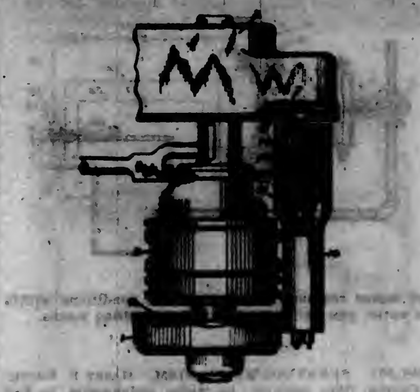
1. A scraper for transferring coal detached from a vein from the working face of a chamber to a car in the entry of a mine, said scraper having an open top, open bottom and open front end and comprising substantially vertical side plates, transversely extending arches connecting the side plates, a transversely extending back plate hinged at its lower edge to the lower edges of the side plates, means for the connection of the head rope to the side plates,



means for the connection of a tail rope to the hook plate, and a flexible connection between said head and tail rope connection means.

1,397,561. APPARATUS FOR CONVEYING, DELIVERING, AND GATHERING MATERIAL. Francis Lee Stuart, New York, N. Y. Filed June 18, 1920. Serial No. 389,979. 4 Claims. (Cl. 214—86.)

1. An apparatus for delivering material, comprising a truck, a turntable thereon, a vertical frame on the turntable, a stacker boom equipped with a conveyer and pivotally connected at its inner end with the frame on the turntable to move about the horizontal axis, a main conveyer belt delivering to the stacker boom, and a boom connected with the outer portion of the stacker boom at a considerable distance from its pivotal connection with the turntable and which is pivotally connected with the turntable below the inner end of the stacker boom.



1,397,562. OXIDATION AND REDUCTION PROCESS AND APPARATUS THEREFOR. Charles J. Tratcher, New York, N. Y. Filed Jan. 24, 1920. Serial No. 353,742. 11 Claims. (Cl. 204—3.)

1. The process of electrolytic oxidation or reduction, which consists in inducing a flow of spent electrolyte, exposing the electrolyte in the first direction of flow to electrolytic action opposed to the primary reaction, and in the reverse direction of flow to electrolytic action inducing the primary reaction, introducing the substance to be converted by the primary reaction at substantially the most inert condition of the electrolyte, collecting the electrolyte and said substance, and separating the latter from the former.

1,397,563. COMBINED BRAKE VALVE AND SWITCH. Thomas H. Thomas, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Jan. 20, 1921. Serial No. 438,799. 3 Claims. (Cl. 303—15.)

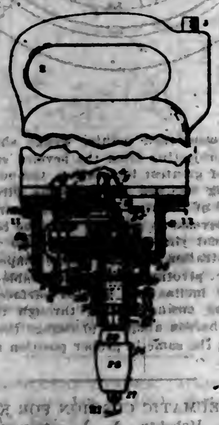
1. A combined brake valve and brake switch device comprising a main brake valve and brake switch portion having a contact connected to a wire leading to the brake switch and a blocked portion for receiving the main portion

and having a contact adapted to engage the contact in the main portion upon assembling the parts.

1,397,564. AUTOMOBILE-LOCK. Charles G. Trosien, Pontiac, Mich. Filed Mar. 8, 1919. Serial No. 281,381. 7 Claims. (Cl. 70—126.)

1. In a change speed gearing, a pair of gear shifting rods having slots in their adjacent sides, a series of parts consisting of end parts and an intermediate part adapted to limit the movement of the end parts toward each other, said end parts engaging in said slots, and a cam adapted to interpose itself between the end parts of said series to hold the same in engagement in said slots in one position of said cam or when moved to another position to permit the movement of said end parts.

1,397,565. DEMOUNTABLE RIM AND MEANS FOR FASTENING SAME. James H. Wagenhorst, Jackson, Mich. Filed Oct. 24, 1919. Serial No. 332,961. 4 Claims. (Cl. 301—30.)

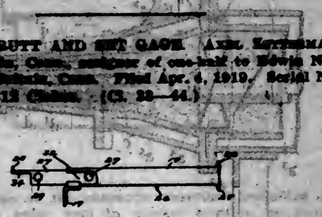


1. The combination with a channeled sheet metal fixed rim, the outer flange of which is depressed at definite points, of bolts passing through said fixed rim in line with the said depressions, a demountable tire carrying rim having an inwardly extending rib upon the inner face of the base thereof, said rib being removed at definite points, said demountable tire carrying rim being adapted to be placed upon said fixed rim so that the points of removal of the rib upon the demountable rim will be in alinement with the depressions in the flange of the fixed rim and clamping members arranged upon the bolts, said clamping members having one portion adapted to engage the demountable tire carrying rim on the side thereof and also having a member adapted to engage the depressions in the fixed rim and the demountable tire carrying rim at the point where the rib thereof is removed together with means for binding said parts together.

1,397,566. METHOD OF FORMING STEEL WHEELS. William H. Walter, Alliance, Ohio. Filed Oct. 5, 1920. Serial No. 414,905. 6 Claims. (Cl. 78—81.)

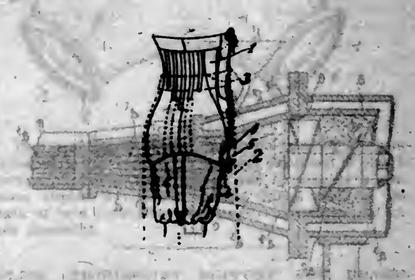
1. The method of forming steel wheels which comprises placing a heated billet upon a fixed bottom die and between a pair of horizontally separable, vertically fixed side dies and pressing the billet into said bottom die and side dies by a vertically movable top die.

1,397,567. ELECTRICAL TOOL. Carl S. Wenandt, Pittsburgh, Pa. Filed Sept. 14, 1920. Serial No. 410,306. 10 Claims. (Cl. 74—14.)



2. A tool for the purpose set forth comprising a tool holder carrying shaft, an electric driving element, an operative drive connection permanently connected with said element and having means detachably connected to the inner end of the shaft for rotating the latter when coupled thereto, and means operated from said connection when said means is uncoupled from the shaft for driving the latter in an oscillatory manner.

1,397,568. CHAIN-FASTENER. Charles J. Williams, Thermopolis, Wyo. Filed Dec. 18, 1919, Serial No. 345,708. Renewed Sept. 23, 1921. Serial No. 502,550. 1 Claim. (Cl. 24—262.)

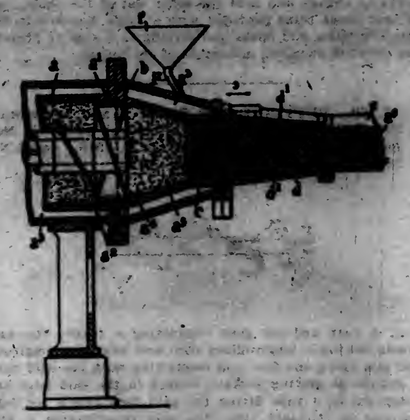


A device for fastening anti-skid chains upon tires, consisting of a member of resilient material bent upon itself, forming two flexible arms terminating each in a hook, a pivot pin passing through said arms and projecting beyond the same, a link adapted to be connected to one end of the chain and having upon the pivotal engagement with the projecting ends of said pin, a tongue pivotally mounted upon said pin between said arms and cooperating with said hooks to engage and hold the other end of the chain, one of said hooks being provided with a tooth disposed in the space between said hooks and serving as a stop to prevent the outward swinging movement of the tongue.

1,397,569. BUTT AND SET GAGE. Axel Matthiesman, New Britain, Conn., assignor of one-half to Edwin Nelson, New Britain, Conn. Filed Apr. 4, 1919. Serial No. 287,846. 13 Claims. (Cl. 33—44.)

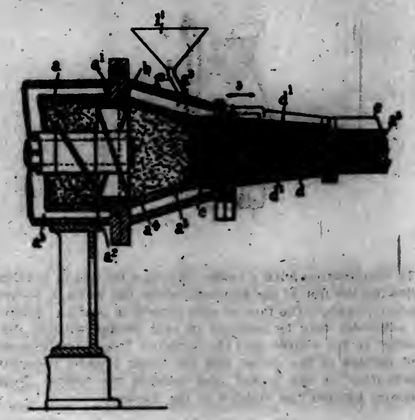
1. A butt and set gage comprising a frame, the said frame having a longitudinal bore and having a longitudinal slot along one face and connecting with the said bore, a composite moving portion housed in the said bore and composed of a tube fitting the said bore and a rod telescoping in the said tube, the said tube having a first marker at one end that extends radially through the said slot and having a second marker at the other end, the said rod having a third marker at the end corresponding to the end of the tube having the said first marker, and the parts being constructed and arranged so that all of the said three markers will be active at one time, with the second marker projected beyond one end of the frame, the third marker projected beyond the other end thereof, and the first marker projected radially through the said slot.

1,397,570. CORSET. Alice K. Botz, Cincinnati, Ohio. Filed Feb. 16, 1921. Serial No. 445,444. 1 Claim. (Cl. 2—78.)



In combination with a corset having a formed-in portion following the line of the abdomen below the waist, a pocket mounted against the face of said formed-in portion, whereby valuables may be inserted in said pocket without discomfort to the wearer, and the normally free space between said portion of the corset and the outer apparel prevents observation of the pocket and relieves the wearer from pressure against the articles in the pocket.

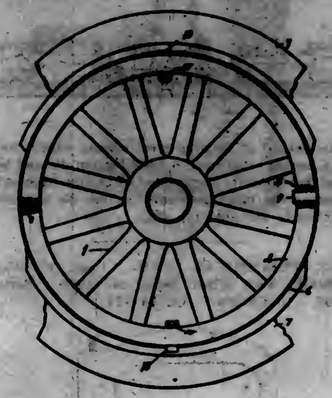
1,397,571. APPARATUS FOR THE PRODUCTION OF ARTIFICIAL FUEL. Richard Bowes, Cheltenham, England, assignor to Laminated Coal, Limited, London, England. Filed Apr. 14, 1920. Serial No. 373,881. 7 Claims. (Cl. 25—33.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. Apparatus for producing artificial fuel having in combination a container, means for extruding the material

through an orifice in the container, means for separating the material into layers, a press for pressing the layers into

a block and means for adjusting the distance between the press and the orifice in the container substantially as set forth.

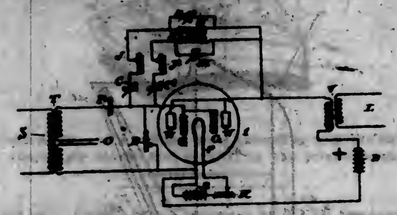


1,397,572. PROCESS FOR THE PRODUCTION OF ARTIFICIAL FUEL. Richard Bowen, Cheltenham, England, assignor to Laminated Coal, Limited, London, England. Filed Apr. 14, 1920. Serial No. 373,822. 6 Claims. (Cl. 25—11.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A process for producing laminated artificial fuel from a combustible material mixed with a bituminous material in a heated chamber which consists in forming the material into layers, treating them to prevent perfect adhesion and then applying pressure to the layers to cause them to adhere imperfectly, substantially as set forth.

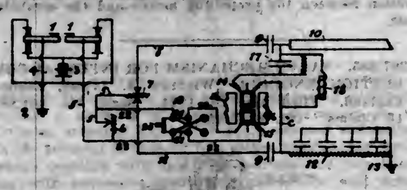
1,397,573. QUICK-ACTING DEMOUNTABLE RIM. Hayden Bowen, Plymouth Meeting, Pa. Filed Nov. 3, 1919. Serial No. 335,397. 1 Claim. (Cl. 301—13.)

In combination, a permanent wheel rim having a beveled outer surface inclined in opposite directions at two diametrically opposite points and decreasing inclination to two other diametrically opposite points midway between



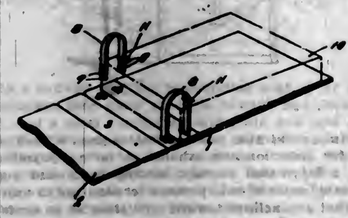
the two first mentioned points, wedge shaped keys on said rim and projecting from the beveled surface thereof at the points of greatest inclination, the outer surface of said keys being inclined in the same direction as the beveled surface of the rim, a demountable rim having its inner surface beveled to coincide with the beveled surface of the permanent rim and provided with transverse recesses for registration with the wedge shaped keys, means for detachably pivoting the demountable rim at the points of least inclination, beveled surfaces and spring actuated locking means passing through the permanent rim, the keys thereon adapted to engage the demountable rim for holding the same in proper position relative to the permanent rim.

1,397,574. PNEUMATIC CUSHION FOR KEYS. James J. Coomber, Hoboken, N. J., assignor to Munson Supply Company, New York, N. Y., a Corporation of New York. Filed Mar. 14, 1921. Serial No. 452,159. 10 Claims. (Cl. 197—108.)



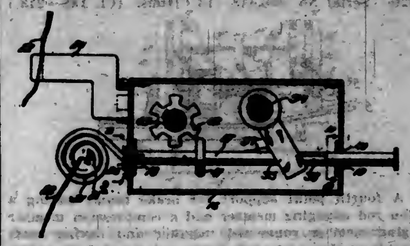
1. As a new article of manufacture, a pneumatic cushion for keys comprising a resilient cushioning member adapted for attachment to a securing member, the said cushioning member including a top or crown portion and a depending body portion, the said depending portion being provided with a rigid reinforce in the body thereof adapted for coöperation with the said securing member.

1,397,575. SELECTIVE AUDION-AMPLIFIER. Lee de Forest, New York, N. Y., assignor to De Forest Radio Telephone and Telegraph Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 9, 1915. Serial No. 20,173. 12 Claims. (Cl. 179—171.)



2. An amplifier, including an input and an output circuit, circuit connections therefor, and means associated therewith to selectively amplify the current of certain frequencies in the input circuit.

1,397,576. TELEGRAPHY. Thomas Bullitt Dixon, New York, N. Y. Filed Nov. 1, 1917. Serial No. 199,651. 26 Claims. (Cl. 178—63.)



1. The method of neutralizing the effects of disturbing currents on the home receiving instrument, due to outgoing signaling currents from the home battery sent to line under conditions of imperfect balance between the main and artificial lines, which consists in utilizing outgoing currents having time and energy factors corresponding substantially to the time and energy factors of the disturbing currents to neutralize their own disturbing effects on the home receiving instrument.

1,397,577. LOOSE-LEAF BINDER. Julius Engelland, St. Louis, Mo. Filed Jan. 27, 1921. Serial No. 440,390. 1 Claim. (Cl. 129—1.)

A loose leaf binder comprising a cover portion having a keeper plate provided with key hole openings, a detachable U-shaped spring clip, each leg of which is notched on opposite edges near its lower end and which legs are adapted to be moved toward each other for introduction into the larger portion of said keeper plate openings, said legs springing into the smaller portion of said key-hole openings to receive the edges thereof in said notches, thereby providing separate and detachable locking engagement for each leg.

1,397,578. GRAPHIC RECORDING MECHANISM FOR SPINNING-MACHINES. Seymour A. Gabel and Daniel R. Cahill, Bethlehem, Pa. Filed Feb. 24, 1921. Serial No. 447,396. 9 Claims. (Cl. 234—1.)

2. A machine of the character described including a movable yarn guide held in normal position by yarn passing therethrough; recording means, said yarn guide being automatically movable upon release of tension by the breaking of the yarn to effect the operation of said recording means, said recording means including a chart; and means for making a mark on said chart; substantially as described.

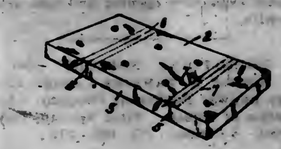
1,397,579. GARMENT-PROTECTOR. George K. Guinemund, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed July 2, 1920. Serial No. 393,526. 7 Claims. (Cl. 128—238.)

1. In a garment having an expansible opening the combination with the body of the garment composed of elastic waterproof material surrounding said opening of a continuous elastic waterproof binding which incloses the margin of said expansible opening and contracts and expands therewith.

1,397,580. THIRD-POINT SUPPORT FOR BRAKE-BEAMS. Arthur W. Hawkins, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 19, 1920. Serial No. 374,980. 4 Claims. (Cl. 188—213.)

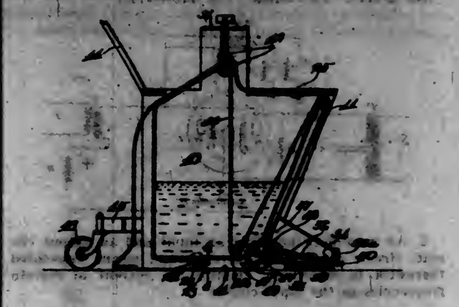
4. A brake beam comprising a compression member, a tension member and a strut, the latter having its inner ends spaced apart, and a forging secured to said inner ends, said forging having a seat for the tension member and a rubbing shoe to form a third point support.

1,397,581. RAILWAY SIGNAL. [illegible], Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1920. Serial No. 396,448. 13 Claims. (Cl. 188—213.)



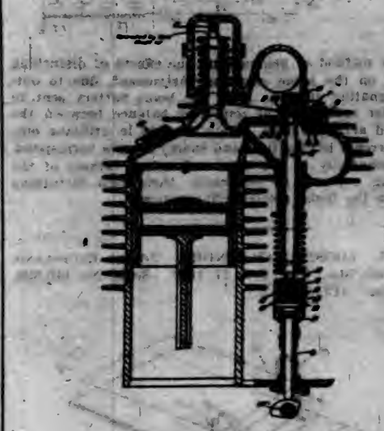
5. A fourth point support for brake beams having a tension rod engaging member and a compression member engaging member connected together and having seats for said tension rod and compression member, which seats are open at one side for quick detachment and attachment.

1,397,582. ELECTRIC SIGNAL. EDGAR W. HAMMAN, New York, N. Y. Filed July 14, 1916. Serial No. 109,241. 5 Claims. (Cl. 177—7.)



1. In a signal, the combination of a circuit, a magnet in the circuit, a rocking armature, means for producing electric impulses in the magnet, a diaphragm, and spring means acting to hold the armature normally in a position in which it exerts no pressure on the diaphragm but permitting a rocking movement past such normal position in either direction whereby the armature is caused to vibrate in time with the electric impulses and vibrate the diaphragm at each impulse and between impulses.

1,397,583. CHICK-BOX. WILLIAM C. HUBER, Fostoria, Ohio. Filed June 7, 1920. Serial No. 388,941. 1 Claim. (Cl. 229—6.)



A box of the class described having a cover provided with depending side flanges and a perforated top, the opposite side flanges being slit entirely throughout their width, the meeting edges of the top and side flanges being slit in crossing and intersecting relation to each flange slit, and the top material between the edge slits being outwardly doubled to form a pair of external ridges, and the side flanges at the edges of the flange slits being fixed together in lapped relation, the ridges being disposed above the top and above the flanges thereof so as to provide a pair of supports to hold a superposed box spaced above the cover perforations and having their ends completely open to afford air inlets.

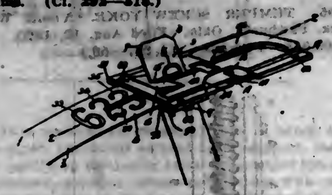
1,397,584. [illegible] AND SCRUBBING. [illegible], Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed July 31, 1920. Serial No. 400,702. 4 Claims. (Cl. 15—53.)

1. In a combined mopping and scrubbing machine, a mop, a traveling support for the mop, propelling means for said support, a vertically adjustable scrubbing unit detachably connected to the support, and a driving connection between the propelling means and the scrubbing unit.

1,397,585. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. WILLIAM A. JAMES, London, England. Filed Apr. 26, 1921. Serial No. 463,881. 15 Claims. (Cl. 123—78.)

1. In an internal combustion engine, a port serving both for induction and exhaust, a valve controlling said port, a bifurcated passage leading from said port, the bifurcated arms of said passage terminating in valve seatings that are inclined toward each other at an acute angle, and a flap valve oscillating between said seatings.

1,397,586. BRUSH. CHARLES B. JEWETT, North Andover, and FRED BRINKMANN, Lawrence, Mass. Filed Nov. 26, 1920. Serial No. 426,587. 2 Claims. (Cl. 15—32.)



1. In a dubbing brush for sanding machines, the combination of a bristle block formed with a recess and a plurality of bristles being extending from one face thereof to said recess, said bristles being provided with a tuft of bristles, a plurality of staple blocks of penetrable material

an said recess, staples driven in said blocks and engaging the bristle tufts on setside the recess in the backs in the

bristle block, and a backing plate extending over the backs of the staple blocks and secured to the bristle block.

1,397,587. SEAL-LOCK. RAYMOND H. JONES, Marysville, Calif. Filed Apr. 28, 1920. Serial No. 377,867. 5 Claims. (Cl. 292—318.)

1. A seal comprising a casing, a lockable member, an actuator formed with bent sections extending within the casing, a plurality of identifying characters on the actuator arranged so that they are exposed successively as the actuator is brought to a locked position and detent means coacting with said bent sections and corresponding with successive identifying characters, said detent means and the bent sections preventing any return movement of the actuator, after each exposure of the successive identifying characters.

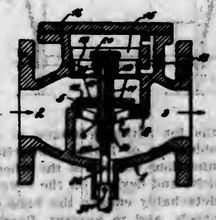
1,397,588. UPPER BUFFER FOR VESTIBULE CARS. PETER KASS, Chicago, Ill., assignor of one-third to Edward Brittain and one-third to Julius J. Acker, Chicago, Ill. Filed July 27, 1921. Serial No. 487,825. 8 Claims. (Cl. 105—10.)

1. In a railway car, the combination with a car frame, a diaphragm face plate movable toward and from said frame, and a hood connecting said plate and said frame, of a buffer between said frame and said plate above said hood comprising a bracket mounted on said frame, a spring controlled plunger slidable in said bracket, and a link connecting said plunger and said face plate and movable in a substantially horizontal plane.

1,397,589. FRAMING AND MITER GAGE. JAMES HARMER KNIGHT, Westtown, Pa. Filed Dec. 12, 1919. Serial No. 344,442. 1 Claim. (Cl. 143—69.)

In a gage of the class described, a frame, guide casings arranged in spaced relation vertically on the frame, saw carrying slides each mounted in a respective casing and movable vertically thereto, the casings and slides being correspondingly slotted to receive and support a saw passing therethrough, vertical screws each freely mounted

on the frame adjacent a respective casing, and thumb nut engaging notches at their upper ends engaging respective nuts, said nuts being independently revoluble whereby to effect independent adjustment of the respective slides.

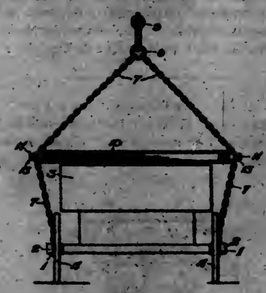


1,397,590. BRAKE. JOHN M. LANSDEN, New York, N. Y. Filed Dec. 2, 1918. Serial No. 264,891. 17 Claims. (Cl. 188—79.)

1. A brake, comprising a drum, a plurality of pairs of brake shoes pivoted within the drum, the shoes of each pair being arranged on diametrically opposite sides of the drum, and means outside of the drum for independently engaging a shoe of each pair to the drum.

1,397,591. VALVE. CHARLES C. LAUBITSEN, Cleveland, Ohio, assignor to The Ohio Body & Blower Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 12, 1920. Serial No. 373,801. 7 Claims. (Cl. 137—104.)

8. In a valve of the character set forth, the combination of a casing divided into an inlet and an outlet compartment by a partition having an opening surrounded by a valve seat, the casing involving a cylinder opening into the inlet compartment, a piston within the cylinder, a valve element for cooperation with the valve seat and having operative connection with the piston so as to move in unison therewith, the piston having a greater area exposed to the inlet compartment than has the valve element, there being a by-pass through which the outer end

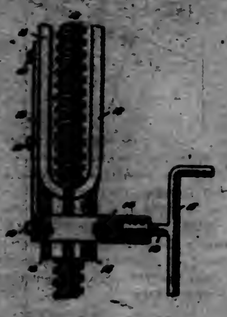


of the cylinder, communicating with the valve compartment and which is closed from the valve compartment when the valve element is on its seat, and element governing the escape of fluid from the cylinder.

1,397,592. TIRE-CHAIN TOOL. JOHN D. McCOY, Kirksville, Mo. Filed Sept. 23, 1920. Serial No. 412,622. 1 Claim. (Cl. 254—72.)

In a device of the class described, a pair of crossed members pivotally connected at their point of crossing and each comprising a jaw and a handle, the jaws being provided on their side surfaces, at points adjacent to their ends, with hooks which project toward each other, the hooks being located in a plane at right angles to the plane defined by the jaws and the handles.

1,397,593. WAGON-LIFTING APPARATUS. CHAUNCEY L. C. MAGUN, Chicago, Ill. Filed May 20, 1920. Serial No. 382,881. 12 Claims. (Cl. 214—42.)

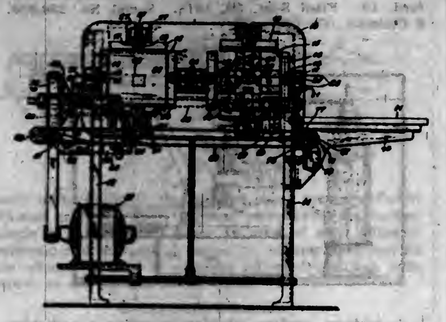


1. In apparatus for lifting a wagon or other wheeled vehicle, the combination of lifting connections, means to support said connections outside of the wheels at opposite sides of the vehicle, and devices on the lower ends of said connections to detachably engage the hubs outside of the spokes of the wheels, and to prevent disconnection from the hubs while the lifting strain is on said connections.

1,397,594. VEHICLE CONSTRUCTION. HOMER CHESTER MOORE, New York, N. Y., assignor of one-half to William P. Hammond, Passaic, N. J. Original application filed Oct. 25, 1917, Serial No. 198,977. Divided and this application filed June 9, 1919. Serial No. 302,690. 5 Claims. (Cl. 280—110.)

1. A vehicle-body provided with front and rear compartments and having side entrances communicating with said compartments, seats within said compartments, and a sill member for guiding movement by way of said side entrances from one compartment to the other, said sill member having a transom and adapted to be arranged over either one of said compartments.

1,397,595. TEMPER-SCREW YOKE. VIRGIL WARREN MORRIS, Pawhuska, Okla. Filed Aug. 12, 1920. Serial No. 403,060. 4 Claims. (Cl. 287—20.)



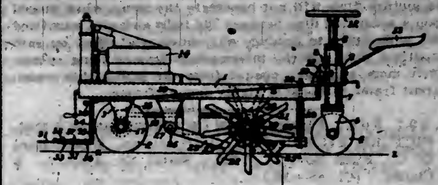
1. A yoke for temper screws having a threaded opening in one side for the yoke screw and an upwardly extending brace on its opposite side.

1,397,596. CALCULATING DEVICE. HENRY MUELLER, East Orange, N. J. Filed July 12, 1916. Serial No. 108,846. 6 Claims. (Cl. 235—60.)

1. A calculating device comprising a collection of loose calculating slides of equal length, and a composing holder having a support and adapted to receive a selection of said slides in any predetermined order.

1,397,597. MACHINE FOR PRESSING NECKS IN BOXES. CHARLES H. RUESCH, Philadelphia, Pa., assignor to Stokes and Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 20, 1919. Serial No. 312,960. 20 Claims. (Cl. 93—55.)

1. In a machine for pressing necks in boxes, a stationary support, two forms secured to the support, each adapted to receive an externally located assembled box and neck for pressing, pressing means coöperating with each form to press the sides of the box assembly located thereon, and means for operating the two pressing means alternately.

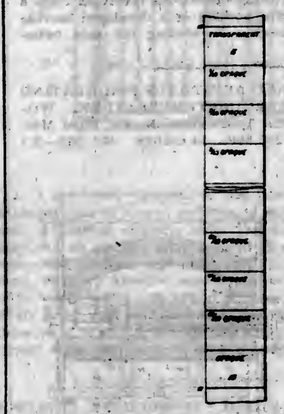


1,397,598. SUPPORT FOR ROCKER-SHAFTS AND THE LIKE. BRUNO V. NORDBERG, Milwaukee, Wis. Filed June 1, 1920. Serial No. 385,496. 6 Claims. (Cl. 64—14.)

6. In combination with a shaft; a pintle like support for each end of the shaft; and a plurality of parallelogram like supporting members for the shaft, each member comprising a lever secured to the shaft, the fulcrum whereof is coincident with the axis of the shaft, a second lever fulcrumed at its center upon a fixed element located to one side of the shaft, and a pair of parallel links pivotally connected to the opposite ends of the levers in pairs.

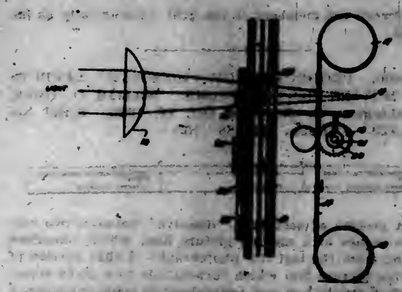
1,397,599. AGRICULTURAL IMPLEMENT. CHARLES OWENS, Chattanooga, Tenn. Filed Sept. 9, 1920. Serial No. 409,084. 9 Claims. (Cl. 55—85.)

1. In combination in an agricultural implement, a frame, a grid consisting of arms supported at their front ends and a spring for pressing the rear ends down and permitting the grid to yield vertically, and rotary cutters operating between the members of the grid, substantially as described.



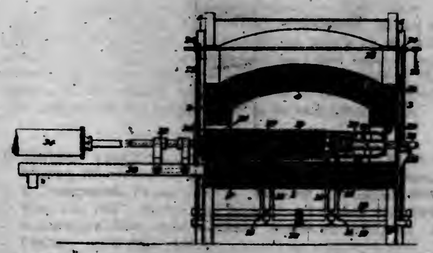
1,397,600. PRODUCTION OF "DISSOLVE" EFFECTS IN MOVING-PICTURE FILMS. WILLIAM O. OWEN, Washington, D. C. Filed Oct. 12, 1920. Serial No. 416,429. 6 Claims. (Cl. 88—16.)

1. A process of making a "dissolve" between two successive scenes of a moving picture film, which comprises printing from the last few photographs of that portion of a moving picture film which corresponds to a given scene, such photographs being of approximately equal intensity, a succession of prints upon a moving picture film, such succession of prints being of successively lower intensity, such successively lower intensity being produced by gradually reducing the light admitted to such printing operation, also printing upon the said portion of such second-mentioned film from the first few photographs of that portion of a moving picture film which corresponds to the commencement of the succeeding scene, such photographs also being of approximately equal intensity, a succession of prints of successively greater intensity, such successively greater intensity being produced by gradually increasing the light admitted to such printing operation, the margins of the two sets of prints being substantially coincident, and thereafter developing the said second-mentioned film.



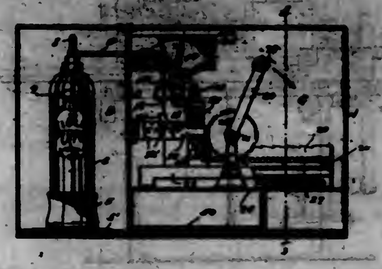
1,397,601. DEVICE FOR USE IN FADE-PRINTING. WILLIAM O. OWEN, Washington, D. C. Filed Nov. 11, 1920. Serial No. 423,418. 3 Claims. (Cl. 88—19.5.)

1. A film for fade-printing a moving picture film, composed of a series of frames each being unprovided with pic-



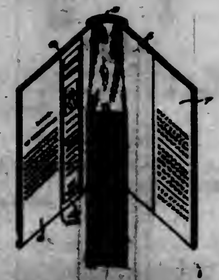
tween, the frame at one end being highly transparent and the frame at the other end being of sufficient opacity so that the amount of light ordinarily used in printing moving picture films will not penetrate the same, when placed upon a sensitized film, between the light and said sensitized film, sufficiently to produce any substantial effect on said sensitized film, and the intermediate frames being successively more and more opaque from the said highly transparent frame to the said highly opaque frame.

1,397,602. PRODUCTION OF EFFECTS ON MOVING-PICTURE FILMS. WILLIAM O. OWEN, Washington, D. C. Filed Nov. 11, 1920. Serial No. 423,417. 4 Claims. (Cl. 88—16.)



1. A process of printing moving picture films having inset portions, which comprises covering up a corresponding portion of each of a series of frames of the section of an undeveloped sensitized film strip being printed upon, by an appropriately shaped opaque cut-out, located between the source of light and the strip being printed upon, while such strip is being intermittently moved past said cut-out, and while said film strip is being passed through a printing operation, thereby printing images upon the exposed portions of each of such frames, such film being of a size adapted for use in a moving picture projection apparatus; and without developing such partly printed film, intermittently moving such partly printed film into successive positions, in which the portions of the successive frames printed upon in such first printing operation are covered up by an appropriately shaped cut-out located between the film being printed upon and the source of light, while printing from some other film structure, a series of photographic images upon the portions of the frames not printed upon in such first-mentioned printing operation; at least one of such printing operations involving from a succession of frames of a portion of a developed moving picture film; and thereafter developing the said twice-printed film.

1,397,603. METHOD AND APPARATUS FOR HEATING LONG BLANKS TO FORGING TEMPERATURE. WILLIAM B. PEIRCE, North Tonawanda, N. Y. Filed Mar. 28, 1919. Serial No. 285,980. 14 Claims. (Cl. 263—3.)

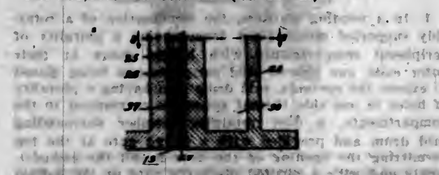


1. The method of heating a long metal blank which method consists in forming the same into an open helical coil long enough to make a self-supporting coiler when laid on its side, and rolling the base coil progressively upon its own periphery along a suitable support in a reverberatory furnace.

1,397,604. VENDING-MACHINE. ALBERT E. PYAU, Rockford, Ill. Filed Sept. 30, 1918. Serial No. 256,236. 6 Claims. (Cl. 221—102.)

1. A perfume vending machine including a container equipped with compressible means for dispensing the contents thereof, a rotatable shaft carrying mechanism to operate the compressing means, gear wheels carried by said shaft, and springs actuated vault bars in mesh with said gear wheels and operable by movement of said shaft to tension the springs of the rack bars whereby the latter are automatically returned when the shaft is released.

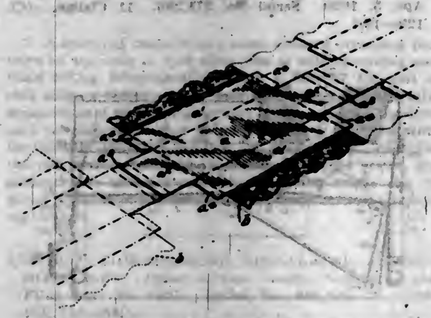
1,397,605. BOOK-COVER. WILLIAM M. REGARS, Philadelphia, Pa., assignor to Penn Publishing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 5, 1921. Serial No. 489,812. 4 Claims. (Cl. 281—34.)



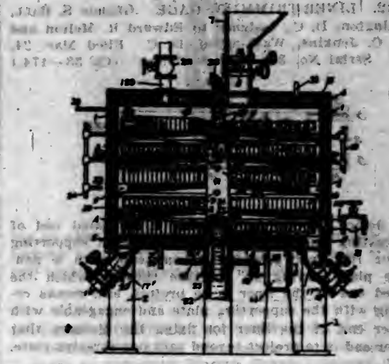
1. A device of the class described, comprising an elongated strip of material adapted to be folded along spaced, transversely extending lines to form a relatively narrow section, sections of equal width on each side of and adjacent thereto and end sections of unequal width, one of said end sections being provided with a transversely extending row of perforations to facilitate the detachment of the extreme end portion of the section therefrom, said perforations being disposed at such a point that when said end section is detached the remaining portion of the device will be substantially symmetrical with respect to said relatively narrow section.

1,397,606. SAFETY-SHIELD FOR CIRCULAR SAWS. CHRISTIAN M. SMITH, Elgin, Ill. Filed July 29, 1918. Serial No. 247,273. 3 Claims. (Cl. 143—159.)

1. In a safety shield for saws, the combination of a guard arm member, means for pivotally supporting said guard arm member in position to swing in the same vertical plane with and extend over the upwardly moving peripheral portion of a saw, a vertical guard plate mounted in position to extend over and in the same vertical plane with such saw and below the free end of said pivoted guard arm, an outer hood-shaped member adjustably connected upon said guard arm member and having transparent wall portions adapted to extend over and in position to inclose the upper peripheral portion of the saw, said hood being adapted to be raised and lowered bodily with respect to said pivoted guard arm to different adjusted positions over the saw, and having its bottom margin in a horizontal plane in each of such adjusted positions, and mechanical means for raising and lowering said adjustable hood to different adjusted positions with respect to the pivoted guard arm.

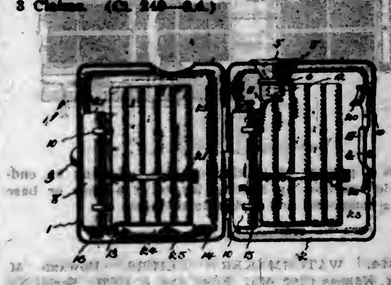


1,397,607. PROCESS OF MAKING METALLIC PRINTING-PLATES. CHRISTIAN M. SMITH, Elgin, Ill. Original application filed May 24, 1917, Serial No. 170,669. Divided and this application filed Oct. 20, 1918. Serial No. 260,408. 13 Claims. (Cl. 22—2.)



1. The process of making metallic printing plates, which consists in placing a metallic electrotype shell in a mold, placing a flexible metallic barrier sheet in contact with the back of the electrotype shell in position to hold said shell in contact with the wall of the mold, then introducing molten metal in contact with the exposed surface of the flexible barrier sheet and in position to press said sheet against the back of the electrotype shell, then causing the molten metal to come into uniting contact with the electrotype shell, and then permitting the molten metal and electrotype shell to cool.

1,397,608. PAPER-BOX CONSTRUCTION. HARRY BERGEMAN SMITH, Brooklyn, N. Y. Filed June 1, 1918. Serial No. 237,710. 3 Claims. (Cl. 229—34.)



1. As a new article of manufacture, a covering blank adapted to be adhesively attached to the exterior walls of a paper box shell, said blank being formed of flexible, readily foldable material, and comprising a body portion having integral side and end wings all of proper dimensions to cover the bottom side and end walls of the box shell, each of the side wing portions of the blank having integral facially embossed extensions constituting edging strips, said edging strips being spatially positioned to permit projection into the covered box shell in overlying relation to the marginal portions of opposite walls of the shell.

1,397,609. METHOD FOR PERFORMING CHEMICAL REACTIONS. WALTER O. SNELLING, Long Island City, N. Y. Filed Sept. 7, 1916. Serial No. 118,843. 5 Claims. (Cl. 23—21.)

1. The process of making ammonia that comprises progressively advancing alkali earth cyanamid in contact with an aqueous fluid.

1,397,610. COMBINED CIGARETTE OR LIKE CASE AND ELECTRIC TORCH. SAMUEL A. APPELL, New Haven, Conn. Filed Feb. 25, 1920. Serial No. 361,146. 3 Claims. (Cl. 240—6.4.)

1. A combined cigarette or like case and electric torch having a pair of hinged sections; a battery cell secured in each section on opposite sides thereof when in a closed position; an electric lamp secured in one section; a fixed connection between said lamp and the cell secured in the same section; another connection between said battery cells, which latter connection is made and broken respectively when said sections are in the closed and open positions; and a switch for making and breaking an electric circuit from said battery cells to said lamp.

1,397,611. BATH-BRUSH. HORACE E. BAILEY, Brookline, Mass. Filed June 21, 1919. Serial No. 305,768. 5 Claims. (Cl. 15—26.)

1. A bath brush comprising a resilient porous body and a back of impervious material overlying the body and

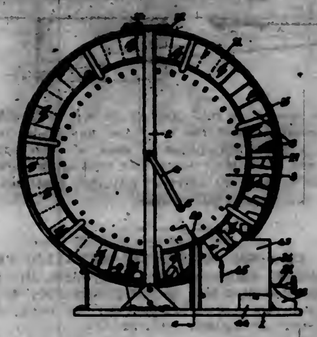
secured directly thereto throughout the marginal portions of the body, the central portion of the trunk being free

from the body, thereby to form a pocket, and said pocket having a slit constituting an opening into the pocket through which soap may be introduced therewith.

1,397,612. LINER-TRIMMING GAGE. GEORGE S. BALL, Washington, D. C., assignor to Edward R. Melton and John C. Jenkins, Washington, D. C. Filed Mar. 24, 1920. Serial No. 368,220. 6 Claims. (Cl. 33—174.)

1. A device for use in trimming a mutilated end of a type casting machine liner comprising a flat supporting plate for the liner provided at one end with a non-abrasive plate having an aperture through which the mutilated end of the liner is to project, and means co-operating with the supporting plate and engageable with the other end of the liner for fixing the distance that the inner end is to project beyond said non-abrasive plate.

1,397,613. PROCESS OF MAKING CYANIDS. OSCAR L. BARNEBEY, Cleveland, Ohio. Filed Mar. 19, 1919. Serial No. 283,638. 12 Claims. (Cl. 23—13.)

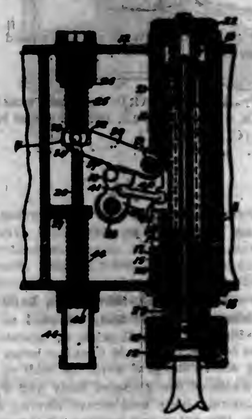


1. In a process of making cyanide, effecting an endothermic reaction by heating layers of a base or base yielding compound and carbon in nitrogen.

1,397,614. WATCHMAKER'S PLIERS. EDWARD M. BARY, Kansas City, Mo. Filed Apr. 5, 1920. Serial No. 371,262. 2 Claims. (Cl. 29—88.1.)

1. Staking tool pliers comprising a pair of relatively movable jaws, one of said jaws having a stump receiving socket and a plunger guiding passage in alinement with said socket, the other of said jaws having a punch receiving opening and a passage intersecting said opening, a block fitting said second passage and provided with an opening for accommodating the punch and means for securing said block in changing engagement with the punch with the latter in sliding relation to said guiding passage.

1,397,615. VENDING-MACHINE. FRED R. BASSETT, Paw Paw, Mich. Filed May 16, 1921. Serial No. 469,806. 10 Claims. (Cl. 211—8.)



1. In a vending machine, the combination of a rotatably supported merchandise drum having a plurality of peripheral compartments with hinged doors at their outer ends, one side of said compartments being glazed to expose the contents, said drum also having a plurality of holes in one side thereof spaced to correspond to the compartments, a door retaining member surrounding said drum and provided with a filling gate at the top permitting the opening of the door to fill the compartments and with a pivoted discharge gate at the bottom adapted to allow the opening of a door alined therewith to discharge the contents of a compartment, a drum lock pivotally mounted to project upwardly at the side of the drum and having an engaging portion adapted to enter said holes in the drum when one of the drum compartments is in discharging position relative to said discharge gate, a push rod, operating connections for said push rod to said drum lock whereby actuation of the push rod to open the gate is prevented except when one of the holes in the side of the drum is in alinement with the locking dog and rotation of the drum is prevented while the discharge gate is open, and a coin controlled locking means for said push rod.

1,397,616. LOOSE-LEAF-FILING-SYSTEM POSTING-TRAY. HARRY C. BASTEN, Benton Harbor, Mich. Filed Apr. 5, 1920. Serial No. 371,296. 11 Claims. (Cl. 129—16.)

1. In a device of the class described, means for supporting a filing drawer thereon, and means associated with said means for upsetting leaves in said drawer when the drawer is supported on the first named means, in combination with instrumentalities for automatically operating said upsetting means, whereby the latter are, by the manipulation or shifting of the leaves, caused to move intermittently toward the rear end of the filing drawer.

1,397,617. BOTTLE-CAPPING APPARATUS. CLEMENTS G. BELDEN, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, a Corporation of Maryland. Filed Apr. 5, 1919. Serial No. 287,711. 11 Claims. (Cl. 220—84.)

1. In a capping apparatus, the combination with a capping head, of a throat device carried by said head and movable relative thereto, a compensating spring, a lever acted upon by said spring, a force transmitter in engagement with said lever and movable to make a shifting contact along said lever, and a connector between said force transmitter and said throat device and having a pivotal relation with said elements.

1,397,618. STAIR-ROD. WILLIAM ALBERT BURNS, London, England. Filed May 20, 1920. Serial No. 382,954. 2 Claims. (Cl. 16—12.)

1. A stair rod comprising a stem, reduced extending portions at the ends of said stem, one of said extending portions fitting telescopically within a hole at the end of said stem, a spring within said hole adapted to normally maintain said telescoping portion in the extended position, said telescoping portion being adapted to be forced into the hole in the stem against its spring, when engaging the rod with fastening devices secured on the stairs, and subsequently released so that the spring forces the reduced portions of the rod into engagement with the fastening devices.

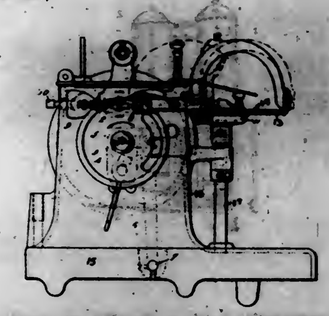
1,397,619. LOW-PRESSURE SIGNAL FOR AUTOMOBILE-TIRES. LODGE YOKON CHARD, Newcastle, Ind. Filed Apr. 30, 1921. Serial No. 465,880. 1 Claim. (Cl. 116—34.)

In a low pressure tire alarm, a plunger adapted to contact with the stem of the tire valve, a spring for the plunger, an internally threaded cap comprising a whistle, said cap engaging the spring to vary its pressure and having an annular flange extending over the whistle opening forming a protective casing to prevent access of dust to said opening, substantially as set forth.

1,397,620. MULTIPLE-URN CONSTRUCTION. WARREN F. CLARK, Cleveland, Ohio, assignor, by mesne assignments, to Automatic Electric Heater Company, Warren, Pa., a Corporation of Delaware. Filed Dec. 24, 1919. Serial No. 347,238. 6 Claims. (Cl. 219—44.)

1. The combination with a plurality of liquid containing receptacles, a beverage receptacle located in each of the liquid containing receptacles, means for dispensing the beverage from said beverage receptacles, a heating receptacle, conduits connecting two points of each receptacle with two points of the heating receptacles, valves controlling said conduits whereby either or both of the liquid containing receptacles may be connected with the heating receptacle and means for heating said heating receptacle.

1,397,621. CONDENSER. JOHN C. CORBIN, Seattle, Wash. Filed May 4, 1920. Serial No. 378,862. 4 Claims. (Cl. 257—29.)



1. The combination with a condenser, of an oil intercepting chamber adapted to be normally submerged in the cooling medium circulating through said condenser, said chamber having suitable opening for the ingress and

ceiver of the gases to be purified and confined, means for drawing the intercepted gases from said chamber, and

means actuated by the pressure of said gases adapted to automatically control the flow of said sealing medium.

1,397,622. SEWING-MACHINE. HERBERT CORBALL, Helensburgh, Scotland, assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Feb. 19, 1918. Serial No. 218,016. 8 Claims. (Cl. 112—18.)

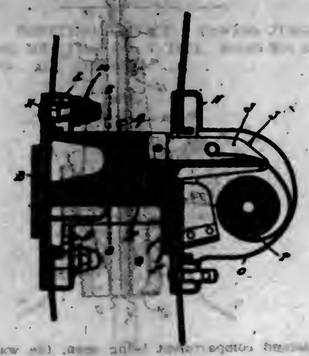
1. In a sewing machine, in combination, a feed-wheel against which the material is held during the feed movements thereof, a presser opposed to said feed-wheel, a mainshaft and connections for shifting the presser toward and away from the feed-wheel, said connections including to-and-fro moving actuator, and a spring interposed between said actuator and presser and adapted to be compressed by the actuator in forcing the presser toward the feed-wheel.

1,397,623. REINFORCING-CORNER FOR RECEPTACLES. HENRY C. DORN and HERMAN A. LUNDIN, Milwaukee, Wis., assignors to D & L Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 16, 1920. Serial No. 359,023. 5 Claims. (Cl. 217—69.)

1. A device of the class described comprising a reinforcing-corner of sheet metal having a raised portion and intervening inwardly-drawn flat edges thereof, and a second reinforcing-

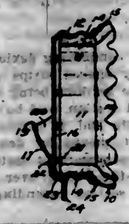
corner shaped to depend outside of the raised portion of the other corner.

1,397,624. HAND-GUARD. GILES THOMAS EPLING, Welch, W. Va. Filed June 12, 1920. Serial No. 388,465. 3 Claims. (Cl. 128—133.)



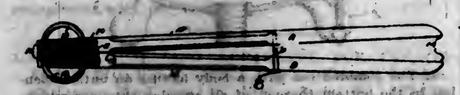
1. As a new article of manufacture, a hand guard for infants comprising a globular body adapted to house the hand and provided in its wall with an opening through which the hand is insertible, said opening being defined by an outstanding sleeve integral with the wall of the globular body, the walls of the globular body and sleeve being elastic, said globular body and sleeve having a normally fixed formation, the outer end portion of the sleeve being provided with openings at substantially diametrically opposed points, an elastic tape threaded through each of said openings and having its end portions in overlying relation, and a garment penetrating member carried by the free end portions of each of the tapes to provide attaching means.

1,397,625. RADIATOR UNIT. JOHN M. FREEMAN, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Feb. 20, 1920. Serial No. 360,207. 5 Claims. (Cl. 257—128.)



1. A radiator unit comprising a strip of sheet metal bent to form a triple corrugation on one of its sides, a double corrugation on its opposite side and two pairs of transverse walls, said triple corrugations consisting of a central corrugation and two side corrugations each of which tapers outwardly to a central longitudinal summit, each of said pairs of corrugations being arranged diametrically opposite one of the side members of the triple corrugations and tapering outwardly to a central longitudinal summit and each pair of transverse walls having an outer wall connecting the corresponding outer longitudinal edges of one of the pairs of corrugations and the adjacent side member of the triple corrugation, and an inner wall connected with the inner longitudinal edge of one of the pair of corrugations and engaging its opposite edge with one of the longitudinal faces between the intermediate and one of the side members of the triple corrugations.

1,397,626. DEMOUNTABLE WHEEL-SUPPORT. GEORGE G. C. FIELDSEND, Detroit, Mich., assignor to Detroit Pressed Steel Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 27, 1919. Serial No. 347,793. 6 Claims. (Cl. 224—29.)



6. A demountable wheel support, comprising a member provided with a plurality of disk wheel seats arranged in spaced relation with each other, means extending beyond the outermost seat to form a guide for directing applied disks to the respective seats, in combination with means for facilitating the mounting of the disks and means for securing the disks both separately and collectively.

1,397,627. JAR-FOUNTAIN WATERER. JOHN M. FLITCRAFT, Elkhart, Iowa. Filed Jan. 31, 1921. Serial No. 441,589. 1 Claim. (Cl. 119—77.)

The combination of a cylindrical jar, having a reduced screw threaded neck, a cover adapted to coöperate with said jar whereby the jar and cover may be used as a drinking fountain, said cover having a screw threaded annular flange to coöperate with said neck and having a hole and a single piece of material for forming a combined trough and supporting member, said piece of material being bent so as to provide a portion spaced away from the cover and a portion adapted to rest against the outer for forming the trough and said material being also bent so as to provide a portion for engaging a part of the flange of the cover and thence bent downwardly for forming the support.

1,397,628. CLOTHES-TONGS. JOHN M. FLITCRAFT, Elkhart, Iowa. Filed Mar. 8, 1921. Serial No. 451,020. 1 Claim. (Cl. 68—6.)

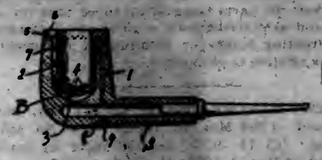
A pair of clothes tongs comprising a pair of similar members having portions thereof adapted to normally abut against each other for providing a fulcrum, a pivot member pivotally received in the abutting sections of said members, the rear ends of said members being provided with registering grooves, a spring extended around the rear ends of said members and received in said grooves for normally holding the opposite ends of said pair of members spaced away from each other, and means mounted in one of said members and slidably received in the other of said members for limiting the movement of said members relative to each other; the parts being so arranged that the said last means and said spring form a guide and retaining means for preventing rotary or longitudinal movement of the members relative to each other.

1,397,629. MANURE. HARRY ERNEST FRY, Dorchester, England. Filed Mar. 16, 1921. Serial No. 452,770. 7 Claims. (Cl. 71—9.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A complete manure comprising two separate portions, one of said portions containing a preponderating proportion of the elements carbon, oxygen, nitrogen, hydrogen, and phosphorus in a form available as plant food, such portion adapted to be placed at a substantial depth in the soil; and the other of said portions containing a preponderating proportion of compounds of the elements potassium, sodium, calcium, magnesium, and iron in a form available as plant food, such latter portion adapted for use as a top dressing, and such two portions being adapted for application to the same body of soil, at the different levels stated.

1,397,630. AUTOMOBILE FLOW-LINE PROTECTOR. ARCHIE W. GIBBONS, Kansas City, Mo. Filed Mar. 21, 1921. Serial No. 454,326. 12 Claims. (Cl. 251—6.)

1. In a device of the kind described, the combination with the floor of an automobile, of a fuel flow line conductor having a removable section disposed above said floor, substantially as set forth.



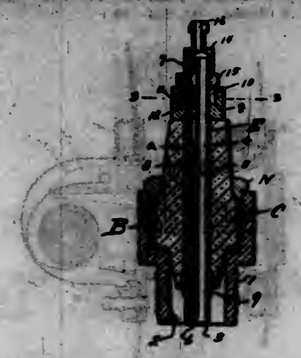
1,397,631. APPARATUS AND PROCESS FOR FILLING AND CLOSING CAPILLARY CONTAINERS. WALTER GOODCHILD, Hoboken, N. J., assignor, by mesne assignments, to Nipa, Incorporated, a Corporation of New Jersey. Filed May 15, 1919. Serial No. 297,424. 7 Claims. (Cl. 226—75.)

4. The process of introducing liquid into a tube having capillary open end sections which consists of placing one

open end of the tube in the liquid and expecting the other open end adjacent the mouth of a tube through which a suction is maintained.

1,397,632. SMOKING-PIPE. Gideon A. Highfield, Scranton, Pa. Filed Mar. 27, 1920. Serial No. 369,260. 1 Claim. (Cl. 131—12.)

In combination with a tobacco pipe having a restricted port disposed through the wall of the bowl and in communication with the bore of the stem, a sleeve snugly fitting within the chamber of the bowl and provided at its inserted end with a perforate head, the opposite end of the sleeve being defined by a flange for contact with the outer edge of the bowl, the contacting face of the flange being provided with an annular groove registering with the restricted port, the groove of the flange being in communication with a channel in the periphery of the sleeve open at the bottom of the sleeve.

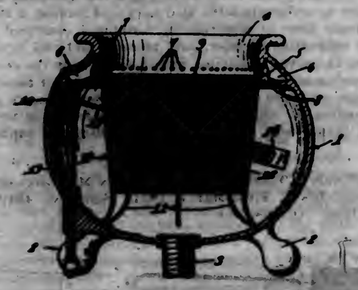


1,397,633. REEL FOR ELECTRIC-WIRE CONNECTIONS. Alva L. Hite, Pomeroy, Ohio. Filed May 23, 1919. Serial No. 299,109. 1 Claim. (Cl. 173—367.)

A reel for electric wire connections comprising a stationary casing, means for mounting said casing on a stationary support, said casing having removable caps on its opposite ends, said casing being of cylindrical form in cross section and having an aperture for the passage of a conductor leading to a translating device, a stub shaft fixed to one of the caps, a drum having one end rotatably mounted on said shaft, spring means connecting the drum and shaft, an insulating plate having a central aperture and secured in one end of said casing between the other of said caps and the adjacent end of the drum, spaced electrical conducting collars carried in said aperture, spaced contact members mounted on a stub shaft of insulating material fixed to said drum and engaging the spaced electrical conducting collars, an electric cord wound on said drum and connected to the spaced contact members, said insulating member and said casing having registering openings leading to said spaced electrical conducting collars, and electric feed wires extended through said registering openings and connected with said spaced electrical conducting collars.

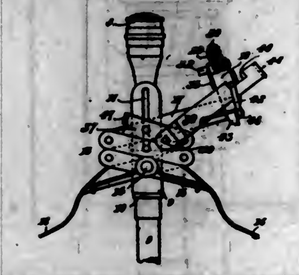
1,397,634. SPARK-PLUG. Fred A. Holmwood, Glendo, Wyo. Filed Mar. 12, 1921. Serial No. 451,759. 4 Claims. (Cl. 123—169.)

1. A spark plug including a hollow electrode having its firing end closed, and a partition extending within the bore of the electrode and terminating at a point spaced from the closed end of the electrode, said partition dividing the bore into two compartments, the outer end of one of the compartments being closed and the adjacent end



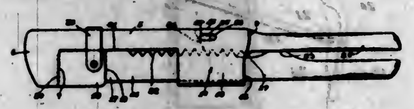
of the second compartment being open, the wall of the first compartment being provided with a port in communication with the atmosphere.

1,397,635. GARMENT-PRESS. James G. Johnson, Chicago, Ill. Filed June 28, 1919. Serial No. 307,271. 1 Claim. (Cl. 100—87.)



A press for trousers, comprising flexible top and bottom sections, rigid laterally spaced strips on the outside of the sections, one of the sections being spaced at one end from the strips on said section, and having its inner face recessed at the opposite end to accommodate a thicker portion of the garment, means for drawing the sections together, and a facing of absorbent material on the inner faces of the sections, the facing over the aforesaid recessed portion of one section extending into the recess.

1,397,636. CUSPIDOR. Thomas William Johnson, Denver, Colo. Filed Nov. 20, 1920. Serial No. 425,414. 2 Claims. (Cl. 4—40.)



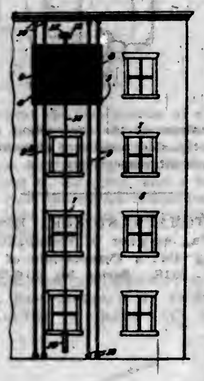
1. The combination with a body having an outlet opening in the bottom thereof, of an annular shoulder within the upper portion of the body, a basket supported in the body and having an open upper end engaging the shoulder, an annular passage within the wall of the body and adjacent the shoulder, said passage having outlet openings for directing jets of fluid downwardly into the open end of the basket and additional outlet openings for directing jets of fluid downwardly onto the outer surface of the basket, and means for directing liquid into the passage.

1,397,637. IGNITING DEVICE. Edward Jurkowski, Baltimore, Md. Filed Jan. 7, 1921. Serial No. 435,677. 8 Claims. (Cl. 67—201.)

1. In combination with a burner and an igniter therefor, means to normally support said igniter in a lowered position at one side of said burner and manually operable to raise the igniter to a point above said burner, of means automatically operable upon raising of the igniter above the burner, for actuating said igniter so as to produce sparks for igniting fuel issuing from said burner, said raising means including manually actuated lazy tongs normally spring pressed in collapsed condition, said igniter including a pivoted member normally maintained swung in one direction, and yieldably movable in the opposite direction, said automatic means including a pivoted latch normally spring pressed into engagement with said pivoted member and swinging the same from its normal position upon extension of said lazy tongs, and an upper link of said lazy tongs having a lateral lug arranged to release said catch upon complete extension of said lazy tongs.

1,397,638. WRENCH. Samuel M. Kathcart, Leadwood, Mo., assignor of one-half to William H. Cooper, Leadwood, Mo. Filed Oct. 21, 1920. Serial No. 418,383. 1 Claim. (Cl. 81—131.)

A wrench comprising a stationary shank, a jaw projecting from one side of the shank, a housing formed on the opposite end of the shank in alinement with the jaw, the ends and one side of said housing being open, a movable handle having an enlarged end portion, the extremity of said end portion forming a jaw, said handle being slidable through the housing, one end of the housing limiting movement of the handle in one direction, a guide member pivoted to said enlarged end portion and embracing the stationary shank, and a locking lever pivoted in the open side of the housing and arranged for interlocking engagement with the handle.

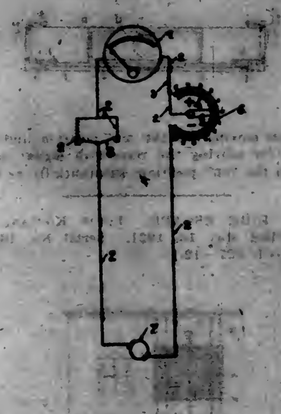


1,397,639. SIGNALING APPARATUS FOR USE ON ROAD-VEHICLES. Arthur Harold Kilday, London, England. Filed Dec. 18, 1917. Serial No. 207,671. 2 Claims. (Cl. 116—45.)

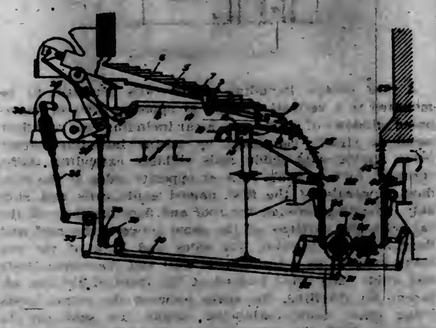
1. A signaling device for use on road vehicles, comprising a casing, an aperture in the said casing at which a signal light is constantly exposed, two signal arms adapted to indicate direction and inclosed and mounted in the said casing in such position as to intercept the signal

light on their moving into the "on" position, and independent means for moving the respective signal arms from the "off" to the "on" position, substantially as described.

1,397,640. FIRE-ESCAPE. Louis Kocjan, Calumet, Mich. Filed May 16, 1921. Serial No. 469,876. 1 Claim. (Cl. 227—12.)



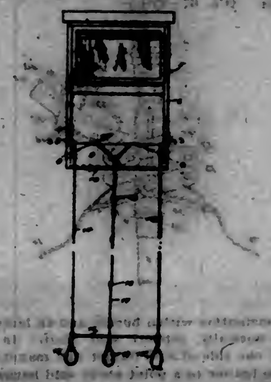
A fire escape including guide rails adapted to be mounted in a vertical position at opposite sides of superposed windows of a dwelling, a car including roof and floor members rigidly connected by means including corner posts having said guide rails slidably extending therethrough, further guide rails at opposite sides of the windows inwardly of the first named guide rails and slidably extending through the roof and floor members of the car with the portions of the same between the roof and floor members exposed, the sides and back of the car being inclosed by a foraminous wall and the corner posts and guide rails being located at the front of the car adjacent the dwelling, the space between the corner posts being open, counterbalancing means for said car to normally hold the latter in an elevated position, said counterbalancing means including a flexible member weighted at one end and having its other end attached to the roof of the car substantially centrally between the sides of the latter, and a pulley over which said flexible member passes, said pulley being adapted to be mounted upon the wall of the dwelling substantially midway between said guide rails.



1,397,641. MEANS FOR DETECTING CHANGES OF RESISTANCE IN ELECTRIC CIRCUITS. Petrus van Santen Kolff, Philadelphia, Pa. Filed Dec. 9, 1916. Serial No. 136,060. 7 Claims. (Cl. 175—183.)

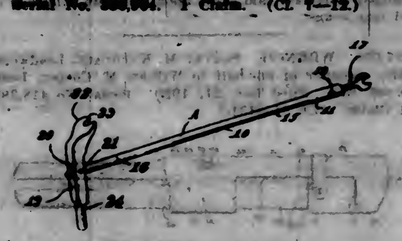
1. The mode of testing a circuit containing an indicating instrument the correctness of the indications of which depend on the constancy of the resistance of the circuit as initially determined upon, which consists in

temporarily interfering with the electric conditions obtaining when the said resistance element is in the circuit and out of the circuit respectively.



1,397,642. AUTOMATIC STOKER. EDWIN LUNDGREN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Feb. 9, 1916. Serial No. 216,389. 7 Claims. (Cl. 110—44.)

1. A furnace comprising an underfeed section, an air delivery stationary fuel supporting section, a reciprocating air delivery overfeed section supported on the fuel supporting section and adapted to receive fuel from the underfeed section, said stationary and overfeed sections having intercommunicating air passages, and means for delivering regulable amounts of air to one of the last-named sections.

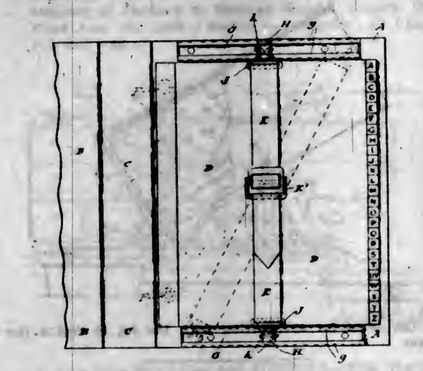


7. An ash discharge mechanism for mechanical stokers, comprising at least one retort discharging roll located at the bottom of a receptacle formed between the bridge wall and the fuel supporting elements of the furnace, in combination with a pair of pivotally mounted air-delivering spouts located in the front and in the rear of said mechanism, stationary air delivering sections located above and forming with said spouts front and rear walls of the receptacle, means actuated from the front of the furnace for adjusting the free edges of said spouts in different vertical combinations and for swinging said spouts toward and away from said combinations.

1,397,643. FIRE-ESCAPE. SARAH M. LYLE, Bridgeport, Ohio. Filed Jan. 5, 1921. Serial No. 435,197. 1 Claim. (Cl. 227—11.)

A device of the character described comprising a window casing having a compartment in the sill portion thereof, a pair of spaced pulleys disposed in said compartment, a cable engaged with said pulleys, a rod extended between and connecting the ends of the cable to each other, the intermediate portion of the cable and the rod being adapted to alternate in floating movement of the cable.

1,397,644. TRACKWALKER'S KIT. DAVID MCCARRON, Westwood, Guthrie, Canada. Filed Nov. 10, 1919. Serial No. 336,904. 1 Claim. (Cl. 7—12.)



A track-walker's kit, comprising the combination with a pinch-bar having a reduced tip at one end and a socket at the opposite end, of a claw-hammer provided with an orifice adapted to frictionally engage with the tip end of the pinch-bar, means for mounting the claw-hammer to the tip end of the pinch-bar, and the claw-hammer having a reduced end designed to be inserted in the socket, as and for the purpose specified.

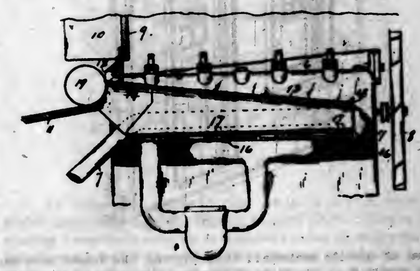
1,397,645. BINDER-CASE FOR DOCUMENT AND LIKE FILES. ALAN MACKENZIE MCNEILL and WILLIAM JOHN ABBOTT, Auckland, New Zealand. Filed Oct. 25, 1920. Serial No. 419,277. 2 Claims. (Cl. 129—14.)

1. A binder case for document and like sheets of book cover form, having means for the attachment of a file to the inside of its bottom cover and having side pieces each to extend laterally and detain both of the upper and lower edges of the said bottom cover, a slide

plate mounted in each of such guides and adapted to move to and fro along it, a loop pivoted to each of such plates,

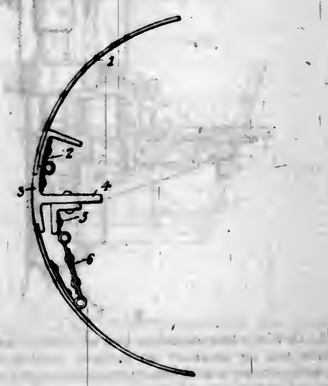
and a band or strap passed through both of such loops and having means for securing its ends together.

1,397,646. BATTERY-HANDLAMP. LORENZ MAISEL, Madison, Wis., assignor to Burgess Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed May 14, 1920. Serial No. 381,271. Renewed Oct. 5, 1921. Serial No. 505,566. 15 Claims. (Cl. 240—8.5.)



3. In a battery hand lamp, the combination of a casing by which the hand lamp is carried, a battery abutment at the front end thereof, a battery of dry cells placed end to end in said casing, a spring in said casing pressing said battery against said abutment, a conductor on said abutment, a lamp, means yieldingly mounting said lamp on said abutment and in circuit with said conductor, and a switch between said battery and said conductor, substantially as described.

1,397,647. PROCESS OF ELECTROLYSIS OF COPPER-BEARING SOLUTIONS. PERCY R. MIDDLETON, Los Angeles, Calif., assignor of one-half to John C. Lalor, New York, N. Y. Filed Feb. 16, 1920. Serial No. 359,110. 3 Claims. (Cl. 204—15.)

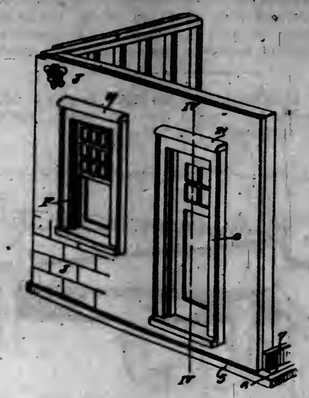


1. Process of treating metallurgical solutions containing a copper salt and a salt of a metal electropositive to copper, comprising passing an electric current through such solution while circulating the same through the cathode compartment of an electrolytic cell provided with a diaphragm and with an anode of the electropositive metal of which the salt is present in the copper-bearing solution, thereby depositing copper from the solution.

1,397,648. AUTOMOBILE-HEATER. LESLIE C. MILNER, Indianapolis, Ind. Filed Dec. 13, 1920. Serial No. 430,396. 6 Claims. (Cl. 237—12.3.)

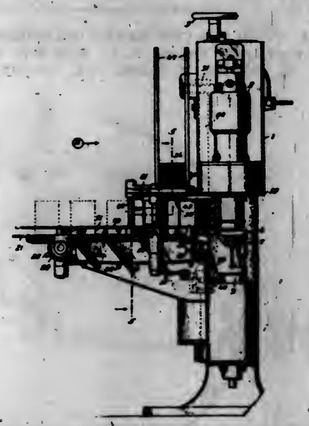
4. In an auto-car the combination of a body, an internal combustion engine in a compartment in front of the body, a plate closure between the body and engine compartment, a heat distributing receptacle within the body removably secured to the plate, and a hood discharging the heated air from the engine compartment into the receptacle, said hood being in a plurality of parts connected by telescopic joints.

1,397,649. FORM FOR CONCRETE-PIPE MOLDS. JOHN C. MITCHELL, East Orange, N. J. Filed Sept. 21, 1920. Serial No. 411,722. 2 Claims. (Cl. 25—118.)



1. An inner form for a concrete pipe mold, comprising, in combination, a longitudinally split cylinder, a curved plate constituting a section of the complete cylinder hinged to one edge of the same, a bar or plate extending inwardly from such plate and a toggle connecting the said bar to a point near the adjacent edge of the cylinder.

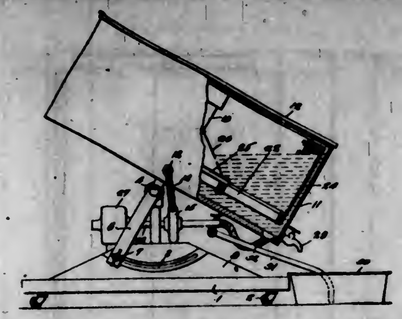
1,397,650. BUILDING CONSTRUCTION. WALDEMAR J. PEDERSEN, Floral Park, N. Y. Filed June 21, 1919. Serial No. 305,878. 5 Claims. (Cl. 72—36.)



3. The method of building described, which consists in making frame sections, covering such sections on one side

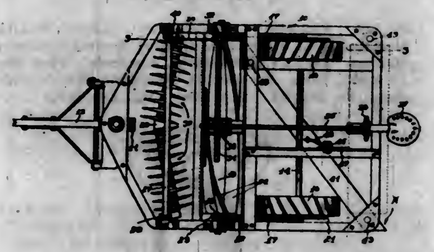
with a wire netting; then forming a bed of plastic material; then forcing the wire netting and frame into the

bed of plastic material; then placing the frame sections in position at the time of forming the walls of the building.



1,397,651. HEADING-MACHINE. JOSEPH PEYSER, Mount Vernon, N. Y., assignor, by mesne assignments, to Ackermann Manufacturing Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Aug. 21, 1918. Serial No. 250,764. 18 Claims. (Cl. 113—14.)

1. In a heading machine, two adjacent plungers, one of which has an aperture, an upright member carrying one of said plungers, a sleeve surrounding said member carrying the other of said plungers, means for actuating the member and the sleeve independently one of the other, a rotatable member located in the plane of the aperture, a conveyer passing around said rotatable member for carrying can bodies to the plunger having the aperture, and means for conveying can bodies from said last-mentioned plunger to the other plunger.

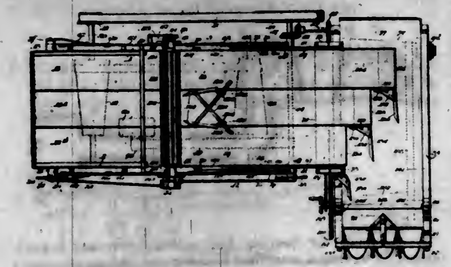


1,397,652. WASHING-MACHINE. JEFFERSON F. PIERCE, Tampa, Fla. Filed Jan. 3, 1921. Serial No. 434,615. 6 Claims. (Cl. 68—18.)

1. In a washing machine an angularly adjustable casing, a drum mounted for rotation therein and adjustable therewith, said drum having a foraminous wall, a nozzle projecting into the casing, means for forcing a jet of water through the nozzle and into the casing, and means carried

by the drum for coöperating with the jet to rotate the drum.

1,397,653. EARTHWORKING-MACHINE. THOMAS AUGUSTUS PRENDERGAST, Milbank, S. D. Filed Mar. 18, 1920. Serial No. 366,806. 3 Claims. (Cl. 37—11.)

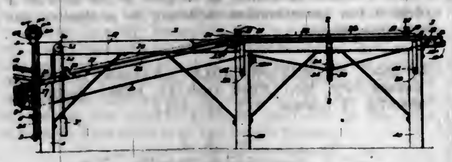


1. In a machine of the class described, a wheeled frame, a pair of earth working devices adapted to be lifted from operative positions, winding drums on the frame, mechanism for turning said drums in opposite directions, connecting means between said drums and earth working implements, the rotation of said drums in one direction being adapted to lift said earth working implements simultaneously, while the rotation of said drums in the opposite direction is adapted to lift one, only, of said implements from operative position.

1,397,654. ARTIFICIAL LIMB. ALEXANDER PRINGLE and THOMAS SINCLAIR KIRK, Belfast, Ireland. Filed Aug. 6, 1920. Serial No. 401,606. 12 Claims. (Cl. 3—12.)

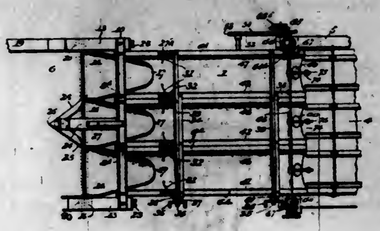
2. An artificial limb joint comprising a plurality of frames, oppositely disposed toggles pivotally connected therewith and means for locking said frames against relative movement.

1,397,655. AUTOMATICALLY-OPERATING CAKE RECEIVING, SEPARATING, DIVIDING, AND CENTRALIZING MACHINE. PETER RASMUSSEN, Denver, Colo., assignor of one-half to Stephen Knight, Denver, Colo. Filed Aug. 30, 1920. Serial No. 406,928. 22 Claims. (Cl. 107—45.)



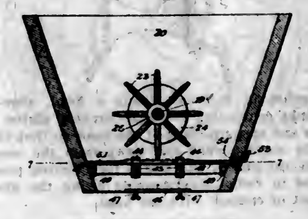
1. In a cake separating and dividing machine, the combination of the frame and the table mounted thereon, with a plurality of cake carrying, endless belt conveyers, arranged to run close to and over the surface of said table; projecting ribs on said table between said belt conveyers; and means for rotating said endless belt conveyer.

17. A drum for the purpose specified, comprising a circular series of spaced bars and head plates secured upon the ends of said bars, spaced gravity pins slidably mounted in each bar, and an axial shaft in said drum.



22. In a device of the character described, the combination with an endless conveyer comprising three separated belts which move in unison, and terminate at their discharge ends in stepped order, a stepped receiving plate under and adjacent the discharge ends of the conveyer, operating means for imparting an intermittent movement to said conveyer, reciprocating means connected with the operating means for moving the receiving plate beyond the end of the conveyer; and means for quickly retracting the plate to dislodge the goods thereon; of an endless conveyer for receiving said goods, and means at the discharge end of each belt of the first conveyer for alining the goods deposited on the second conveyer.

1,397,656. MULTIPLE-GUIDE-ROW STACKED-CAKE RECEIVING AND ASSEMBLING MACHINE. PETER RASMUSSEN, Denver, Colo., assignor of one-half to Stephen Knight, Denver, Colo. Filed Aug. 30, 1920. Serial No. 406,929. 8 Claims. (Cl. 107—45.)

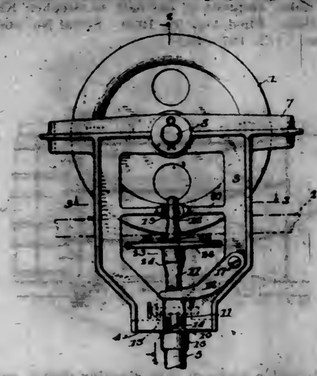


1. A multiple guide row stacked cake receiving and assembling machine, comprising a supporting frame and an endless, traveling, stacked cake conveying belt mounted therein, having an upwardly inclined portion, and a horizontal portion; means for raising or lowering the inclined portion and for counterbalancing the weight of said inclined portion; said inclined portion of said endless traveling belt being pivotally connected to said horizontal portion; said endless, traveling, stacked cake conveying belt being provided with a plurality of independently adjustable cake guideways.

1,397,657. TRANSVERSELY-ADJUSTABLE CHUTE FOR CAKE-STACKING MACHINES. PETER RASMUSSEN, Denver, Colo., assignor of one-half to Stephen Knight, Denver, Colo. Filed Aug. 30, 1920. Serial No. 406,930. 16 Claims. (Cl. 107—45.)

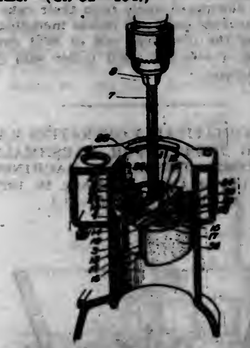
1. An adjustable group of cake stacking chutes, each of which comprises a semi-circular shaped chute; means including cross-bars secured to opposite sides of said chutes in alternate order for adjustably opening or closing said chute to receive cakes of different sizes; and means including a gravity device for assembling said cakes in rows at the discharge end of each chute; said chutes being supported at a downward angle from their cake receiving end to their discharge end; and means including threaded rods for raising the discharge end of said chutes; and means including a rotating shaft under said chutes for agitating said chutes.

1,397,658. AUTOMATICALLY-OPERATING MATERIAL-SPRINKLING HOPPER FOR MARSHMALLOW OR OTHER MATERIAL DEPOSITING MACHINES. PETER RASMUSSEN, Denver, Colo. Filed Aug. 16, 1921. Serial No. 492,729. 10 Claims. (Cl. 107—1.)



1. In a device of the character described, the combination with an endless conveyer adapted to receive spaced rows of cakes and move them forward by intermittent stages, of a hopper supported above said conveyer having a screened outlet, a rotatable agitator in said hopper, and means for partially rotating said agitator coincident with each pause in the movement of the conveyer, thereby to sprinkle material in said hopper upon the rows of cakes in successive order.

1,397,659. CABLE-GUARD FOR CARRIER PULLEYS OR TROLLEYS. EMIL A. ROESELER, Juneau, Wis. Filed May 24, 1920. Serial No. 383,788. 9 Claims. (Cl. 105—151.)

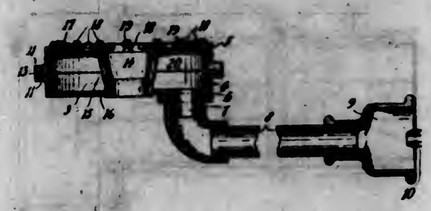


1. The combination with a carrier pulley and its harp, of a rotatable member connected with the harp and normally supported to rotate in a substantially horizontal

plane about an axis offset from the pulley, one side portion of said rotatable member projecting underneath the

pulley and in sufficient proximity thereto to prevent a release of the pulley from the track upon which it runs.

1,397,660. POLISHING-TOOL. ARDRA L. ROUSE, Kansas City, Kans. Filed Apr. 22, 1921. Serial No. 463,586. 10 Claims. (Cl. 51—194.)



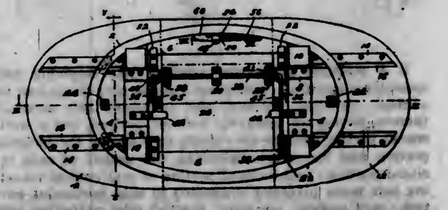
1. A polishing tool comprising a head, shoe-carrying plates, links connecting the shoe-carrying plates to opposite sides and opposite ends of the head so that the plates can bodily move toward and away from the head, shoes carried by the plates, and means for effecting pressure on the plates in radial directions to swing the plates outwardly out of contact with the head.

1,397,661. SHIELD OR PROTECTOR FOR PHOTOGRAPHIC CAMERAS. ELMER J. SARR, Bartlesville, Okla. Filed Jan. 22, 1921. Serial No. 439,219. 4 Claims. (Cl. 95—11.)

1. In a camera having an expanding bellows, means disposed within the bellows for preventing the deflection or collapse of the bellows, said means being rigid against longitudinal pressure.

1,397,662. GAS-BURNER FOR HEATING, COOKING, AND OTHER PURPOSES. WILLIAM L. SHAND and ALEXANDER McDONALD SHAND, Caulfield, near Melbourne, Victoria, Australia, assignors of one-half to Charles Columbine Jackson, Melbourne, Victoria, Australia. Filed Apr. 12, 1920. Serial No. 373,363. 2 Claims. (Cl. 158—99.)

1. A burner for heating and cooking purposes characterized by having a combined heating and mixing chamber; said chamber comprising an upper casing, a lower casing, mating flanges on said casings; means detachably clamping said flanges together, packing inserted between said flanges, a gauze partition in said chamber; a central air passageway through said chamber; means for the partial admixture of gas and air; means for conducting such partially admixed fuel to said chamber, nipples formed on the upper surface of said chamber and surrounding said air passageway, and holes in said nipples arranged so that those adjacent to the central air passageway are inclined toward the latter.

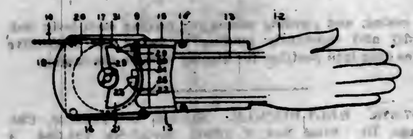


1,397,663. TREATMENT OF BUTTER-FATS. ALBERT F. STEVENSON, Ridgewood, N. J., assignor to Albert W. Johnston, New York, N. Y. Filed Feb. 4, 1920. Serial No. 356,197. 1 Claim. (Cl. 99—13.)

In the manufacture of pure anhydrous butter fat from milk, cream or butter, the process of removing from the fat any objectionable flavor when it exists, which consists in washing the separated butter fat with an alkaline solution, and rewashing the resulting product with an acidulated solution of a strength which is capable of removing the impurities dissolved by the alkaline solution.

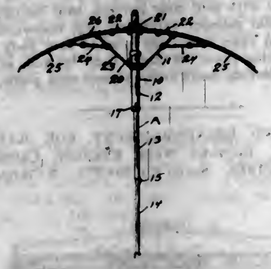
1,397,664. MANUFACTURE OF MILK-FAT. ALBERT F. STEVENSON, Ridgewood, N. J., assignor to Albert W. Johnston, New York, N. Y. Filed Apr. 27, 1920. Serial No. 376,986. 2 Claims. (Cl. 99—13.)

1. In the process of recovering pure milk fat from sour cream, the initial step in the treatment of the cream, which consists in diluting the same with acidulated water of such a degree of acidity as to give to the mixture a hydrogen ion concentration sufficient to re-dissolve the precipitated casein.



1,397,665. EXTENSION-TABLE. ANDREW H. STONE, Kansas City, Mo. Filed June 12, 1920. Serial No. 388,574. 4 Claims. (Cl. 45—112.)

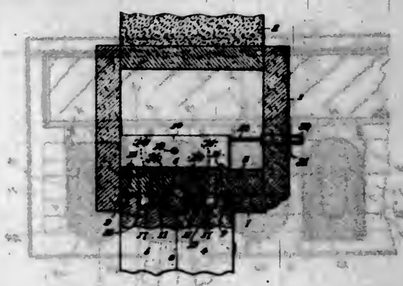
1. In a table of the character described, a frame, slidable leaves mounted on said frame to slide apart or abut



each other, foldable leaves operably connected and arranged to fold beneath said slidable leaves when the same abut or be extended between said slidable leaves when the same are slid apart, stops on the slidable leaves, and a rod rockably mounted on the frame and provided with means for engaging certain of the stops to lock said slidable leaves in abutting position and engage the other stops to lock the slidable leaves in extended position.

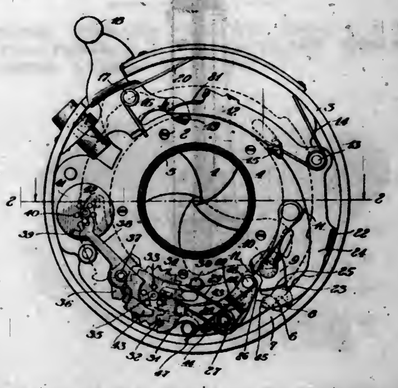
1,397,666. DIRECTION-INDICATOR FOR AUTOMOBILES. MICHAEL EDWARD WILSON, Detroit, Mich. Filed Aug. 4, 1921. Serial No. 489,770. 7 Claims. (Cl. 116—62.)

1. In an automobile signal, a semaphore arm having an arm-carrier with divided extensions upon which the display signal is borne, and a base piece upon which the semaphore arm is pivoted having a stop post projecting between the extensions of the arm-carrier.



1,397,667. UMBRELLA OR PARASOL. WILLIAM SAMUEL WILSON, Cascades, Quebec, Canada. Filed July 29, 1919. Serial No. 314,047. 1 Claim. (Cl. 135—25.)

An article of the class described comprising a sectional stick, a collar on the end of the stick, a sleeve slidably mounted on the stick, ribs pivotally attached to the collar, stretchers pivotally connected to the ribs intermediate of the length thereof and attached to the sleeve, rods pivotally mounted intermediate of their length to the ends of the ribs, the arms of the rods being of unequal length, the longer arms forming continuations of the ribs, and links connecting the shorter arms of the rods to the said stretchers intermediate of the length thereof.

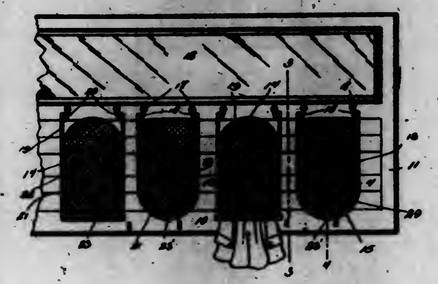


1,397,668. SASH-FASTENER. STEFAN WOJCIK, Detroit, Mich., assignor of one-half to Jacob Lewandowski, Detroit, Mich. Filed Nov. 30, 1920. Serial No. 427,435. 1 Claim. (Cl. 292—35.)

A sash fastener of the type described comprising in combination with window sashes provided with vertically alined sockets therein, a latch casing, a pair of sliding bolts mounted therein, a pin extending transversely of the casing between the bolts, a pair of independently operable spring arms supported on said pin and engaging at their ends one side wall of the casing and said bolts to normally hold the bolts projected into sash sockets, a bell crank pivotally mounted within the casing for each bolt and having a loose connection therewith, and independ-

ently operable devices for operating the bell cranks to shift the bolts against the tension thereon to remove the same from the sash sockets.

1,397,669. PHOTOGRAPHIC SHUTTER. ANDREW WOLLENSAK and FRIEDRICH A. GUSTAV PIRWITZ, Rochester, N. Y., assignors to Wollensak Optical Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 12, 1921. Serial No. 436,753. 5 Claims. (Cl. 95—63.)



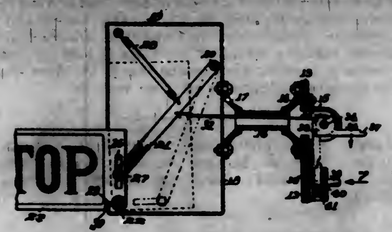
3. In a photographic shutter, the combination with blade mechanism, a master member for actuating the same and means for operating the master member, of a retarding device embodying an escapement wheel, a swinging segment geared to said wheel, an anchor coöperating with the wheel, a balance wheel and means for driving the latter from the anchor.

1,397,670. GARMENT-HOLDER. DAVID W. YORK, North Abington, Mass. Filed Aug. 23, 1920. Serial No. 405,503. 1 Claim. (Cl. 45—13.)

A device of the class described comprising a base having a plurality of openings formed therein, a plurality of inverted substantially U-shaped wire frames secured to the lower end of said base, a plurality of substantially U-shaped wire frames having the ends thereof terminating in coil springs secured to the upper ends of said base,

spring means carried by said frame and engaging said inverted U-shaped frame, dished covers carried by said frames, locks secured to said base adjacent to said open-

ings and a plurality of notched tongues carried by said frames extending into said openings and engaging said locks.

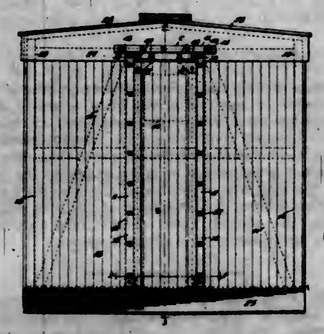


1,397,671. WINDOW. WILFRID H. BARRIERE, Worcester, Mass. Filed Sept. 27, 1920. Serial No. 413,048. 3 Claims. (Cl. 20—52.1.)

1. A window sash comprising a sheet of metal bent around to constitute pivot bearings, a movable strip extending across the window sash below and having two ends projecting into said pivot bearings, yielding means for holding said strip back near the window sash normally, and means for engaging the back of the strip and forcing it outwardly to permit it to project over the window sill.

1,397,672. DIRECTION-INDICATOR FOR AUTOMOBILES. WILFRID H. BARRIERE, Worcester, Mass. Filed June 13, 1921. Serial No. 477,230. 6 Claims. (Cl. 116—53.)

1. In an automobile signal device, the combination of a casing, a plurality of signal plates pivotally mounted in said casing on an axis near the outer edge thereof and at the bottom, each of said plates having a slot therethrough at the end located in vertical position when the plate is turned to horizontal position for displaying purposes, a lever connected with each of said plates through said slot and extending upwardly in the casing all of said levers being pivoted on a horizontal axis near the top and rear of



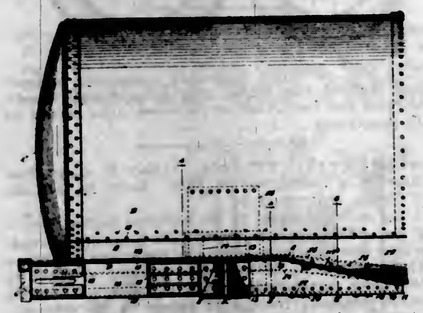
the casing, and yielding means for forcing each lever outwardly and constantly tending to swing the respective plates over into position for display outside the casing.

1,397,673. BELT-BUCKLE. SAMUEL BUCHSBAUM, Chicago, Ill. Filed Nov. 1, 1920. Serial No. 421,064. 4 Claims. (Cl. 24—186.)

1. A buckle comprising a one piece sheet metal body portion provided with a central opening, said body portion comprising side members and end members, the major portion of said side members lying in a plane, and holding means integral with said body portion, said holding means comprising a flat member extending first rearwardly from said plane and then forwardly toward said body portion to form a holding prong having a bend therein, said holding prong projecting rearwardly beyond said plane.

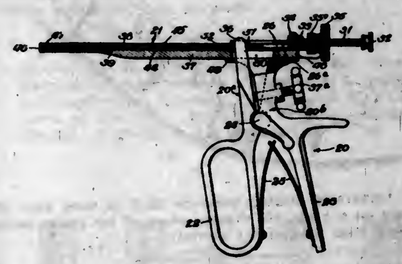
1,397,674. END REINFORCEMENT FOR RAILROAD BOX-CARS. RICHARD WEBB BURNETT, Chicago, Ill. Filed July 3, 1919. Serial No. 308,373. 5 Claims. (Cl. 105—411.)

1. In car construction, the combination with a box car having an end wall including intermediate end posts, outer wood sheathing, end sill, and end plate; of means for reinforcing said end wall comprising, Z-bars applied to the outside of said sheathing and extending between the end sill and the end fascia board, means for anchoring the lower end of each Z-bar individually to the end sill, and a relatively short cross member of Z-shape in cross section secured to and connecting the tops of said Z-bars, one flange



of said cross member being rigidly united with the outer flanges of the Z-bars and the other flange of said cross member being secured to the outer side of said fascia board.

1,397,675. JUMPER-SEAT. FREDERICK H. BUSKE, Toledo, Ohio. Filed May 21, 1921. Serial No. 471,396. 1 Claim. (Cl. 155—12.)



The combination with an automobile floor having an opening therein, of a cylinder projecting down through the floor opening and having an open top and a partially closed bottom, a ring flange carrying the cylinder at its upper end and secured to the top of the floor, a compression spring in the cylinder, a plunger in the cylinder resting on the spring, a pedestal standard removably mounted at its lower end in the cylinder in engagement with the plunger, a seat, a socket member centrally carried by the under side of the seat and removably and pivotally resting on the upper end of the standard, and a back hinged to the seat for folding thereover.

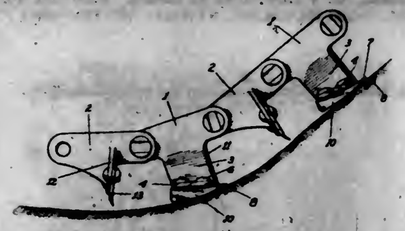
1,397,676. TANK-CAR CONSTRUCTION. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 10, 1921. Serial No. 451,410. 17 Claims. (Cl. 105—362.)

15. In a tank car, the combination with the underframe construction including draft and center sills; of a tank proper of generally cylindrical form; and anchor plates of convex cylindrical form secured to the tank proper at points above the center line of draft and to the draft sills inside of the bolster at points below the center line of draft.

1,397,677. TONSILLOTOME. HERBERT H. CARSTENS, Chicago, Ill., assignor to H. Carstens Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 10, 1921. Serial No. 436,038. 9 Claims. (Cl. 128—309.)

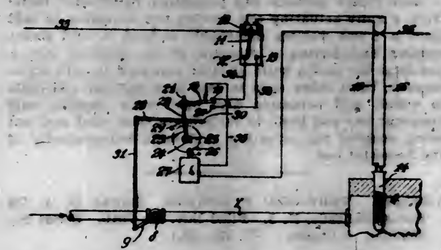
1. A tonsillotome comprising a pair of pivoted together handles, one handle member of which is provided with an actuating arm, and the other handle member with a socket member, a screw threaded stem stationarily secured to said socket member and projecting rearwardly therefrom, a knife actuating and locking nut, threaded on said stem, a frame member detachably secured in said socket member and having a fenestra at its forward end, a hemostat bar and a knife slidably mounted on said frame member, there being slots in said hemostat bar and knife in which said actuating arm operatively engages said hemostat bar and knife to reciprocate them, and said nut being adapted for actuating said knife independently of the hemostat bar.

1,397,678. TERRAZZO FLOORING. BRUNO O. A. DE PAOLI, Palisade, N. J. Filed Nov. 22, 1919. Serial No. 339,920. 5 Claims. (Cl. 72—63.)



1. In a terrazzo floor structure, the combination with a terrazzo flooring composition and a base composition upon which the terrazzo flooring composition is spread, of a metal plate or strip vertically disposed and embedded in and anchored at its lower portion by said base composition, having its upper edge extending to and flush with the wearing surface of the terrazzo flooring composition, said strip or plate forming a retaining and protecting wall for the terrazzo flooring composition.

1,397,679. DIGGER-CHAIN FOR DITCH-DIGGING MACHINES. LESTER G. DUNLAP, Stockton, Calif. Filed Aug. 9, 1920. Serial No. 402,391. 3 Claims. (Cl. 37—23.)

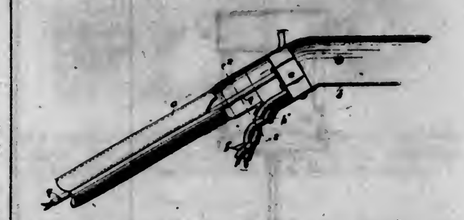


1. A digger chain for ditch digging machines comprising rigid arms projecting from the side plates of the links of the chain and flaring apart from front to rear, rigid and opposed flanges formed with said arms at the outer ter-

mination thereof, said flanges being positioned in a plane angularly disposed to the longitudinal plane of the links,

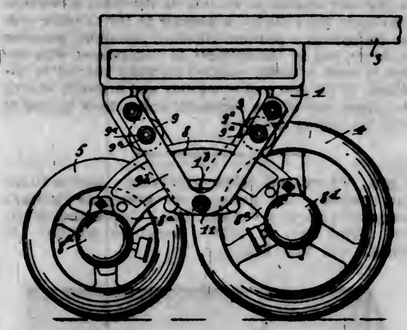
and transverse digging members fixed to each pair of flanges on a plate, the digging edges of the plates being farthest from the plane of the links.

1,397,680. AUTOMATIC VALVE-REGULATOR. LORENTZ B. EGAN and NIELS C. L. WILHJELM, Brooklyn, N. Y., assignors to Automatic Temperature Control Co., a Corporation of New York. Filed Nov. 29, 1919. Serial No. 341,365. 3 Claims. (Cl. 236—69.)



3. In combination, a furnace, a valve for controlling the fuel supply thereto, an electric circuit including a device responsive to temperature changes in said furnace, an element for operating the said valve, means for adjusting the extent of operation of said element and additional means for adjusting the throw of said valve, a motor for actuating said element, connections in said circuit between the said device and the motor for starting the latter when the temperature in the furnace varies from a predetermined constant, a switch for controlling the direction of current in said connections and means actuated by said motor for operating said switch to automatically break the said connections between the said device and the motor after the latter has operated the valve.

1,397,681. SHANK-STIFFENER. WALLACE H. FOSS, Cambridge, Mass., assignor to W. H. Foss Co. Inc., Boston, Mass., a Corporation of Massachusetts. Filed June 29, 1921. Serial No. 481,252. 5 Claims. (Cl. 36—76.)



1. A shank stiffener comprising a flexible body portion of suitable material curved longitudinally and provided on its convex upper surface with a longitudinally extending groove, a stiff resilient longitudinally curved metal reinforce comprising a relatively wide web flat on its upper surface with a relatively narrow rib on its lower surface, and means for securing the reinforce to the body portion with the rib embedded in the groove and with the flat surface of the web conforming to the upper surface of the body portion.

1,397,682. HANDLE MEMBER. PHILIP A. GRIER and FRANK A. ROBERTSON, Cleveland, Ohio, assignors to The P. A. Geier Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 17, 1916. Serial No. 104,255. 6 Claims. (Cl. 15—257.)

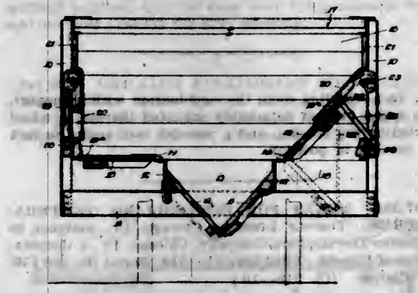
1. A handle member, comprising two hollow symmetrical metallic shells, a reinforcing strip terminally bent to form an attaching portion secured interiorly of one of said shells, and assembling screws adapted to enter tapped openings therein and removably unite the symmetrical shells, substantially as set forth.

1,397,683. SOIL-PULVERIZER IMPLEMENT. RICHARD H. GAINSMITH, Bellevue, Ohio, assignor to The Ohio Cultivator Company, Bellevue, Ohio, a Corporation of Ohio. Filed Jan. 8, 1921. Serial No. 435,952. 15 Claims. (Cl. 55—77.)

1. A soil pulverizer implement, comprising a draft frame provided with guides, gang yokes slidable therein, and front and rear gangs of pulverizer disks carried by said gang yokes.

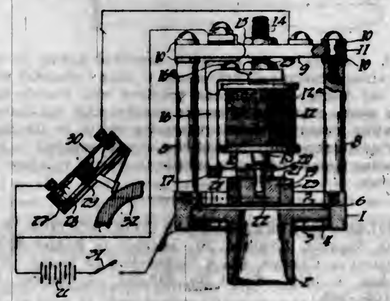
1,397,684. CYANID PROCESS. ALBERT W. HAHN, New York, N. Y. Filed Dec. 24, 1919. Serial No. 347,133. 3 Claims. (Cl. 75—185.)

1. As an improvement in the described method involving the addition of zinc dust to the pregnant solution, the step which comprises adding to the pregnant solution (before the zinc is added and in quantity sufficient to bring about the desired precipitation of precious metal without consuming free cyanid present in the solution), a chemical that will be acted upon by the zinc to liberate hydrogen and precipitate the precious metal.



1,397,685. VALVE MECHANISM. HARRY W. HAGGOOD, Seattle, Wash. Filed June 11, 1921. Serial No. 476,660. 1 Claim. (Cl. (Cl. 188—179.)

A valve mechanism for a pneumatic spring cushion, having a closed compartment with an opening formed in the wall thereof, said valve mechanism comprising a resilient tubular valve member adapted to be superposed in concentric relation on said opening, a check valve adapted to close said tubular valve member and said opening, and re-

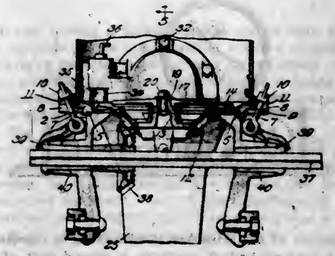


silient means adapted to normally hold said check valve in an open position, said resilient means being adapted to permit said check valve to close in response to the outward passage of an excess quantity of air through said tubular valve member and said opening.

1,397,686. CONVERTIBLE-CAR CONSTRUCTION. HARRY S. HART, Chicago, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed Aug. 9, 1919. Serial No. 316,356. 10 Claims. (Cl. 105—243.)

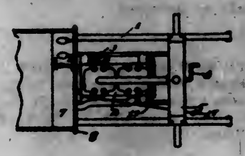
1. In a car of the class described, a central longitudinally disposed stationary hopper portion, and doors hinged along the upper outer edges of said hopper portion arranged to form in one position a part of the horizontal floor of the car and span the distance between said hopper edges and the sides of the car and to be swung upwardly from the horizontal position to form a portion of a hopper side.

1,397,687. TRANSMITTER AND CIRCUITS THEREFOR. NEWMAN H. HOLLAND, West Orange, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Sept. 26, 1917. Serial No. 193,232. 25 Claims. (Cl. 179—100.1.)



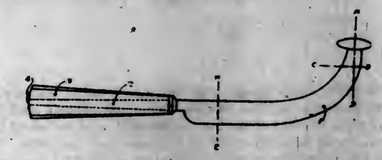
1. In a device of the character described, a circuit, granular conductive material subject to variations in resistance permanently included in said circuit and the sensitiveness of which in respect of such variations is affected by its temperature, and means acting momentarily upon the closing of the circuit to cause said material to reach its maximum sensitiveness in respect of such variations substantially as described.

1,397,688. FIFTH-WHEEL CONSTRUCTION. CLYDE C. KESSLER and FRED A. CLOCK, Canastota, N. Y., assignors to Watson Wagon Company, Canastota, N. Y., a Corporation of New York. Filed Mar. 23, 1918. Serial No. 224,215. 3 Claims. (Cl. 280—33.1.)



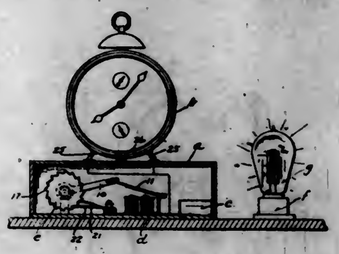
1. A fifth wheel comprising inner and outer sections, a locking member carried within the inner section and coacting with the outer section, to prevent separation of the sections in an axial direction, and means for operating the locking member comprising a rock shaft carried by the inner section and having means coacting with the locking member, the locking member extending lengthwise of the axis of the fifth wheel, and the rock shaft extending transversely of said axis, substantially as and for the purpose set forth.

1,397,689. PLANTING-MACHINE. ALVARO S. KROTZ, Janesville, Wis., assignor to The Janesville Machine Company, Janesville, Wis., a Corporation of Wisconsin. Filed Jan. 14, 1918. Serial No. 211,754. 22 Claims. (Cl. 221—125.)



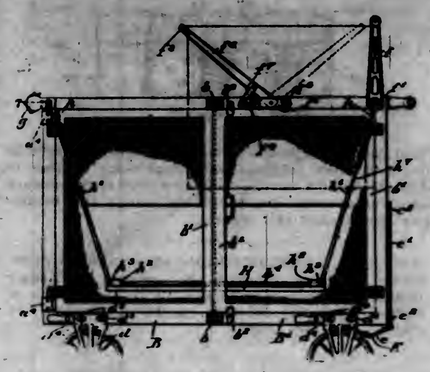
1. A planting machine having a seed dropping device comprising a receptacle for the seed, a base for said receptacle, supporting means for said base, seed dropping mechanism on said base, a stationary center post having means for removably retaining said mechanism and base in position, means outside of the receptacle to detachably retain said base in position on said supporting means, whereby said receptacle and base and mechanism can be readily lifted from the machine, and a bevel gear on said post to operate said mechanism.

1,397,690. AUXILIARY STARTER-CONTROL DEVICE. William Lawrench, Chicago, Ill. Filed Feb. 28, 1921. Serial No. 448,506. 7 Claims. (Cl. 74—89.)



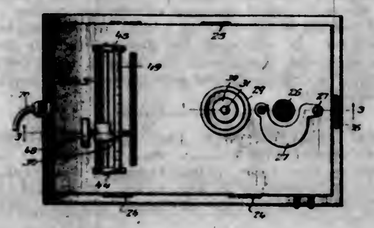
5. In a motor vehicle the combination with a starter control pedal, of pivotally mounted means for depressing the same, and a connection from said pivotally mounted means to the front of the motor vehicle.

1,397,691. PARTING-KNIFE. Ross Lawrence, Tupper Lake, N. Y. Filed Apr. 30, 1921. Serial No. 465,663. 2 Claims. (Cl. 30—9.)



1. In a parting knife, a blade having an edged straight portion, a double-edged curved portion, and a guide formed integral with the end of the curved portion.

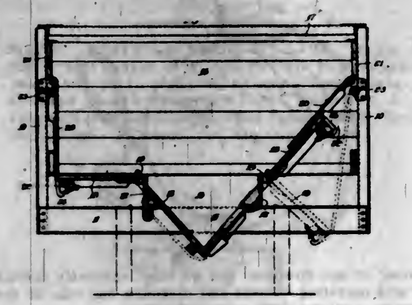
1,397,692. TIME-CONTROLLED ELECTRIC DEVICE. Charles F. Lehman, Minneapolis, Minn. Filed Nov. 1, 1920. Serial No. 420,904. 9 Claims. (Cl. 161—1.)



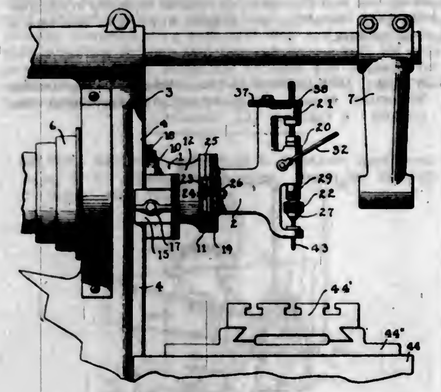
1. A device of the class described having in combination a pair of time-controlled contacts, a second pair of time-controlled contacts, a switch member, an electro-magnetic means for operating said switch member, an electrical circuit connected to said pairs of contacts and said switch and connected to said electro-magnetic means through a transformer, a second electrical circuit for controlling an electrical apparatus, said circuit also connected to said switch member, said switch member being constructed and arranged to be actuated to close the last mentioned electrical circuit when the first pair of time-controlled contacts are closed and to be so set by such actuation that it will be again actuated to open the last mentioned circuit when the second pair of time-controlled contacts are closed.

1,397,693. WHEELING-COOP. Charles D. Leonard and Henry J. Hansen, Rochester, N. Y. Filed Dec. 10, 1919. Serial No. 344,063. 6 Claims. (Cl. 280—36.)

1. In a wheeling coop, the combination with a support, of a wheel bracket detachably mounted thereon, a wheel carried by the bracket, and a movable cam acting to lock the bracket in position.



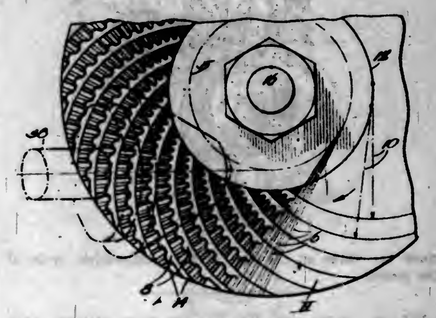
1,397,694. MEANS FOR CONTROLLING TEMPERATURES. Teodolf Lidbeck, Chicago, Ill., assignor to Electro-Thermophore Company, Chicago, Ill., a Corporation of Illinois. Filed May 21, 1919. Serial No. 298,759. 7 Claims. (Cl. 219—19.)



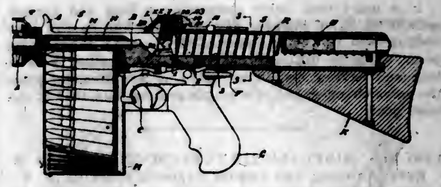
1. A device of the character described having in combination a casing; electric means to heat a chamber within the casing; an applicator provided with electric heating means connected in circuit relation with the chamber heating means; a thermo-responsive switch in the chamber to automatically control the current supplied to both heating means and means outside the casing to adjust the switch.

1,397,695. CONVERTIBLE-CAR CONSTRUCTION. John O. Neikirk, Lombard, Ill., assignor to Rodger Ballast Car Co., Chicago, Ill., a Corporation of Maine. Filed Aug. 9, 1919. Serial No. 316,811. 7 Claims. (Cl. 105—243.)

3. A car of the class described, including a body having a side wall door and a floor door which may be moved into an inclined position to form a hopper side wall, the side wall door being supported by the floor door in said inclined position, and the floor door being movable from said inclined position for side dumping.



1,397,696. DRILLING ATTACHMENT FOR MILLING-MACHINES. John Victor Nelson, Maywood, Ill., assignor to Frans K. Krag, Chicago, Ill. Filed Mar. 26, 1920. Serial No. 369,081. 5 Claims. (Cl. 77—5.)

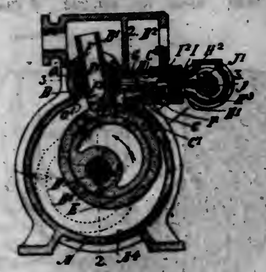


1. A tool holder for drills and the like, adapted for attachment to a milling machine, which attachment comprises a bracket, a pair of relatively adjustable jaws on said bracket constructed and arranged to clamp the vertical ways of said milling machine and to center the attachment horizontally, vertically acting threaded means for adjusting the height of said attachment on variously formed machines so as to secure said bracket in axial alinement with the spindle of the milling machine when said jaws are set, a head shiftably mounted on said bracket, a tool holder shiftably and rotatably mounted on said head at right angles to the axis of said spindle, and gearing adapted to connect said spindle with said tool holder.

1,397,697. HOB FOR GENERATING BEVEL-GEARS. Carl G. Olson, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Nov. 24, 1920. Serial No. 426,292. 7 Claims. (Cl. 29—103.)

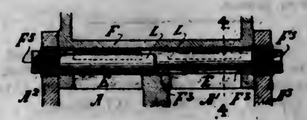
1. A hob having the general configuration of a skew bevel gear, the hob teeth being separated, lengthwise, by cross flutes or gashes.

1,397,698. GUN. Oscar V. Payne, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 20, 1919. Serial No. 346,406. 12 Claims. (Cl. 42—8.)



1. A gun having a firing chamber and a bolt chamber, a bolt movable in the bolt chamber along a straight path substantially parallel with the axis of the firing chamber, the bolt and bolt chamber having opposed recesses extending substantially across one side of the bolt, and a lock movable between a position in the recesses where it engages the bolt recess along its forward side and the chamber recess along its rearward side, in which position it locks the bolt closed, and a position substantially within one recess, in which position the bolt is free to be retracted along said path, the lock abutting faces of the bolt and receiver being substantially opposite along a line inclined to the line of breech pressure.

1,397,699. ROTARY PUMP. Gustav B. Petsche, Yonkers, N. Y. Filed Oct. 6, 1920. Serial No. 415,142. 6 Claims. (Cl. 230—30.)



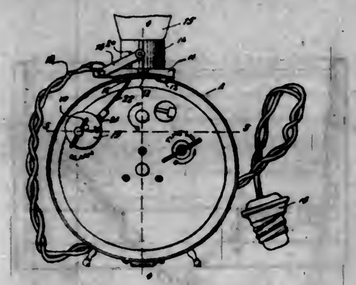
1. In combination with a rotary compressor having a rotary eccentric ring piston provided with an extension forming a partition between the admission and delivery ports, a valve seat in the delivery port, a delivery valve operating with said seat to open and close the port, a cylinder and piston for actuating said valve to open it, said cylinder being connected to the delivery side of the compressor and operating to open the valve when the pressure in the compressor attains a definite ratio to the pres-

sure in the receiver, and a cam operating synchronously with the driving shaft of the compressor and formed to

close the valve at the end of the compression cycle of the piston.

1,397,700. NON-RETURN VALVE FOR PUMPS AND SIMILAR USES. Gustav B. Petsche, Yonkers, N. Y. Filed Nov. 2, 1920. Serial No. 421,273. 3 Claims. (Cl. 252—114.)

1. A non-return valve comprising a long and narrow cylindrical valve chamber having a long and narrow port leading into it, and a plurality of long and narrow exit ports lying in different planes, in combination with a long and narrow cylindrical valve of less diameter than the valve chamber and of a length greater than that of the inlet port.

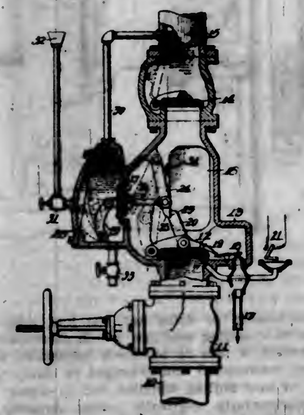


1,397,701. AIRPLANE-RIB CONSTRUCTION. John W. Rapp, Flushing, and Joseph Vanorio, Brooklyn, N. Y.; said Vanorio assignor to said Rapp. Filed Nov. 19, 1917. Serial No. 202,847. 6 Claims. (Cl. 244—31.)

1. A truss frame constituting a rib for airplane wings and air plane parts, made of wholly thin sheet metal channel members, the open sides of the channel shaped members forming the upper and lower chords of the truss frame being opposed to each other, in combination with like channel members forming the struts and ties of the said truss frame adapted to be fitted into and suitably secured to the upper and lower chords, said upper and lower chords being curved toward each other and secured to the front and back frame members of the wing structure.

1,397,702. ALARM-CLOCK ATTACHMENT. Carl L. Rasmussen, Butte, Mont. Filed July 30, 1920. Serial No. 400,019. 3 Claims. (Cl. 58—19.)

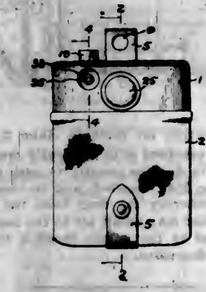
1. An alarm clock attachment comprising a base, means carried by the base for securing it to the clock, a lamp socket supported by the base, a switch including a fixed contact carried by the base, a movable contact pivoted on said base, an operating element associated with and actuated by the alarm winding stem incident to rotation



thereof in one direction, and an offset extremity carried by said operating element and overlying one edge of the movable contact for the purpose specified.

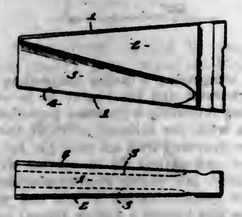
1,397,703. CONCENTRATION OF ORES. Hallet Eich Robbins, Washington, D. C., assignor to Metals Recovery Company, New York, N. Y., a Corporation of Maine. Filed Aug. 30, 1917. Serial No. 188,943. 4 Claims. (Cl. 82—85.)

1. In a process of concentrating ores containing a sulfid of copper, the operations of forming a freely flowing pulp of such ore reduced to a floatable size, adding a non-alkaline salt to said pulp without organic frothing agent, producing fine air bubbles in the pulp, causing the air bubbles so formed to collect at the surface of the pulp with sulfid of copper adhering thereto, and separating said bubbles and the adhering mineral from the remainder of the pulp containing the gangue which does not adhere to the bubbles.



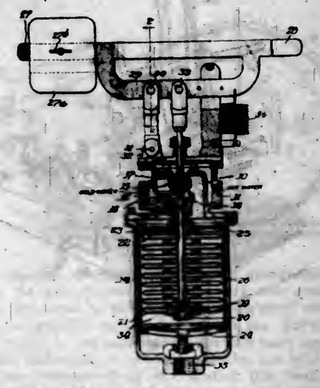
1,397,704. DRY-PIPE VALVE. George I. Rockwood, Worcester, Mass. Filed July 2, 1917. Serial No. 178,100. 6 Claims. (Cl. 169—21.)

2. In a fire extinguisher system, the combination of a supply pipe for water and an air pipe, of a valve for closing the supply pipe, a casing surrounding said valve and connecting said pipes, a valve for closing the air pipe, a toggle joint construction having two coöperating members connected with one of the valves, said two members engaging each other, independent means for preventing



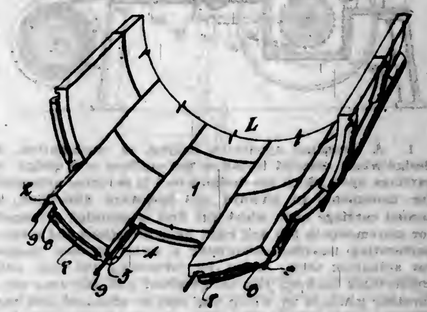
the toggle joint from passing into a position to entirely straighten out to full length, and means on the other side of the toggle joint whereby when the pressure in said air pipe is reduced the joint will be broken, whereby the two parts will become effectively disassociated.

1,397,705. PORTABLE ELECTRIC LAMP. Louis E. Shaw, East Orange, N. J., and Francis M. Rosenfeld, New York, N. Y., assignors, by mesne assignments, to Diamond Electric Specialties Corp., Newark, N. J., a Corporation of New Jersey. Filed Jan. 17, 1918. Serial No. 212,325. 7 Claims. (Cl. 240—8.5.)



7. A portable electric lamp comprising a casing having opposed peripheral recesses, a lamp supported by the casing, a battery and a contact within the casing, a contact operating plunger extending through a wall of the casing, said plunger having a longitudinal slot and transverse recesses communicating with said slot, and a slidable detent extending through said slot and having both its ends projecting into the peripheral recesses and exposed for manual operation, and means on the detent to engage the transverse recesses in the plunger.

1,397,706. REAMER. Charles E. Skelton, East Onondaga, N. Y. Filed Mar. 28, 1919. Serial No. 285,735. 2 Claims. (Cl. 77—72.)

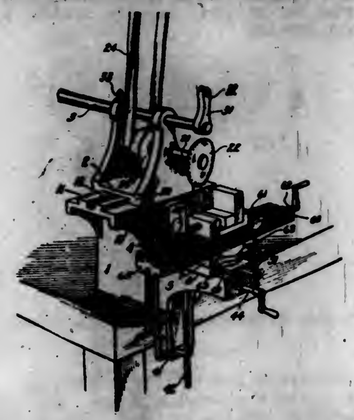


1. A reamer having a tapering side, and a tapering face meeting said side near the cutting edge of the reamer whereby the reamer is wider at one end than at the other and is thicker at its narrower end than at its wider end, said face being formed with a cylindrical groove intersecting the same to form the cutting edge, the groove decreasing in depth from its narrower and thicker end toward its wider and thinner end, the groove intersecting said face to form the cutting edge to the surface operated upon at the same angle at all points between the ends of the cutting edge, substantially as and for the purpose set forth.

1,397,707. THERMOSTATIC WATER-MIXER. Mervin O. Soubrier, Chicago, Ill., assignor to The Powers Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 28, 1917. Serial No. 209,365. 5 Claims. (Cl. 236—12.)

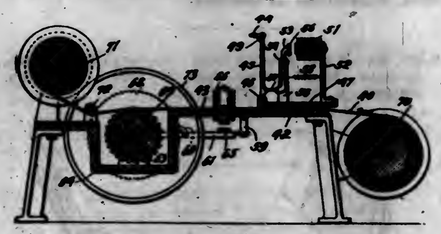
1. In a controller, the combination of a casing having inlets for hot and cold fluids, and an outlet for the tempered fluid, a valve for regulating the quantity of each fluid admitted, a stem for said valve, a fluid-pressure thermostat including a diaphragm, said stem being connected to the diaphragm, and mechanical means for selectively exerting pressure against said diaphragm in opposite directions, substantially as described.

1,397,708. WALL STRUCTURE. Augustus H. Spowers, Spokane, Wash. Filed June 7, 1920. Serial No. 386,988. 2 Claims. (Cl. 72—38.)



1. A lining structure composed of courses of longitudinally alined tiles, the tiles in each course having depending side flanges forming an upwardly extending continuous tongue and a continuous channel, and the tiles in adjacent courses having edge beads forming continuous depending tenons in said channel, and the ends of said tiles having oppositely projecting, transverse, interlocking beads and flanges and grooves located in the side flanges of adjoining tiles.

1,397,709. MILLING-MACHINE. Walter J. Tenny, Seattle, Wash. Filed Sept. 2, 1919. Serial No. 320,975. 5 Claims. (Cl. 90—15.)

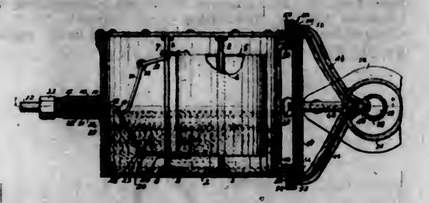


1. A milling machine comprising a frame, a milling head having a horizontal axis, a work holding table mounted for adjustment about a horizontal axis which is below

the axis of the milling head, said frame and milling head having horizontally extending engaging guideway mem-

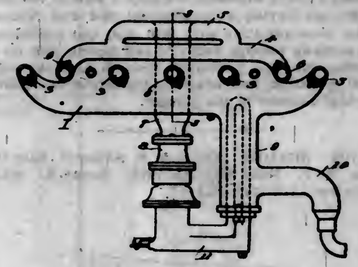
bers located between said two axes whereby the milling head may be moved bodily in a horizontal plane parallel with said axes.

1,397,710. RECORDING APPARATUS. EUGÈNE VIOLLET, Limoges, France. Filed May 5, 1919. Serial No. 294,917. 15 Claims. (Cl. 164—34.)



1. A recording apparatus having, in combination, a design-wheel adapted to follow the outlines of a design, a carriage upon which the design-wheel is mounted arranged for movements in forward and backward directions, a second carriage upon which the first is mounted arranged for movements in left and right hand directions and a tape perforating machine comprising a series of dies, means for actuating them, means for advancing the tape and connections between the design-wheel and the tape perforating machine by which the tape is advanced and the dies actuated according to the movements of the design wheel.

1,397,711. CARBURETER. JOHN E. ALPINE, Green Bay, Wis. Filed June 5, 1918. Serial No. 238,272. 5 Claims. (Cl. 261—70.)

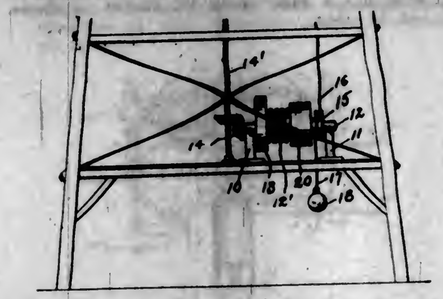


1. In a carbureter, the combination with a mixing chamber provided with a fuel inlet nozzle, of a float chamber connected at top and bottom with the nozzle, and provided with a fuel inlet, a valve controlling fuel deliveries to the float chamber through said inlet, connections for operating the valve from the float when the float chamber is in one position of adjustment, and other connections adapted to operate the valve from the float when the float chamber is inverted from its first mentioned position.

2. In a carbureter, the combination of a float chamber, a mixing chamber, a nozzle located substantially in the central horizontal plane of the float chamber, and adapted for fuel delivery to the mixing chamber, fuel supply connections leading from the top and bottom of the float chamber to the nozzle, a float within the float chamber, fuel supply connections for the float chamber, and means for utilizing the float to regulate the flow of fuel to the float chamber when the float has moved a predetermined distance toward either the top or bottom wall of said chamber.

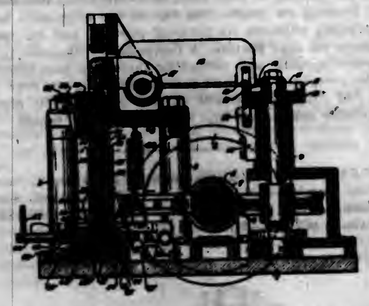
4. The combination set forth in claim 3, in which the nozzle ducts are provided with vertically movable air inlet valves arranged to drop by gravity to open position at the upper side of the float chamber, and to closed position at the lower side, whereby the duct from the upper portion of the float chamber may admit air to the nozzle to atomize the fuel delivered to the nozzle through the lower duct, substantially as described.

1,397,712. MANIFOLD. HERBERT WILLIAM ALLEN, Sugar Pine, Calif. Filed July 24, 1919. Serial No. 312,955. 1 Claim. (Cl. 123—122.)



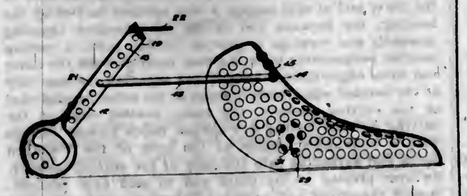
A manifold comprising a casing adapted to be arranged between a carbureter and the engine to be supplied with fuel, said casing including a chamber provided with inlets for connection with the exhaust ports of the engine and also a chamber provided with an inlet for connection with said carbureter, and outlets for connection with the cylinders of the engine, said casing further provided with a tubular extension communicating at one end with the first named chamber and having a hollow lateral outlet for discharging exhaust gases, and an inverted substantially U-shaped vaporising tube loosely mounted at its lower ends by a disk within the first named extension adapted for connection with the carbureter, and a washer fitting closely within the extension and supported on said disk.

1,397,713. SPEED-REGULATOR FOR WINDMILLS. ANTON G. H. ANDERSON, Springfield, Ill. Filed Oct. 8, 1918. Serial No. 257,859. 3 Claims. (Cl. 170—75.)



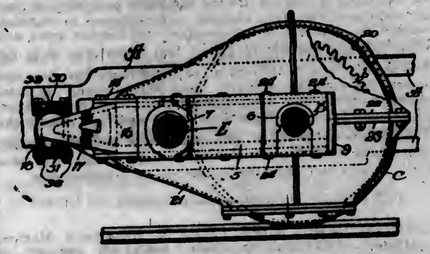
1. In a windmill speed regulator, a wind wheel driven shaft, a member driven therefrom and with respect to which the shaft is capable of limited independent motion,

means for connection with a windwheel for throwing it out of operation and means operable upon movement of the



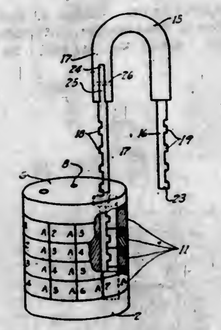
windwheel driven shaft with respect to the driven member, for rendering the windwheel throwing mechanism active.

1,397,714. TYPE-MAKING MACHINE. WALTER ARMSTRONG, Chicopee, Mass. Filed Apr. 14, 1921. Serial No. 461,355. 11 Claims. (Cl. 101—401.5.)



1. In a type forming machine, the combination with a holder for a blank, of a matrix cooperating with the blank, means for exerting direct pressure on the matrix and including a rockable member having teeth on its opposite edges, and means for rocking said member.

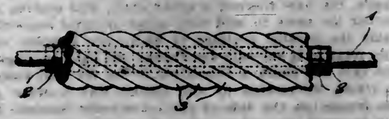
1,397,715. SHOE-FORM. LOUIS V. ARONSON, Newark, N. J. Filed June 11, 1921. Serial No. 476,753. 3 Claims. (Cl. 12—128.1.)



1. A ventilated shoe form comprising, in combination, a sheet metal foot member perforated throughout substantially its entire area, a skeleton link member, a heel member comprising a perforated channel-like portion into the perforations of which the ends of the link member are adapted to take to secure said parts in desired adjusted relation, and a hollow perforated substantially spherical extremity secured thereto.

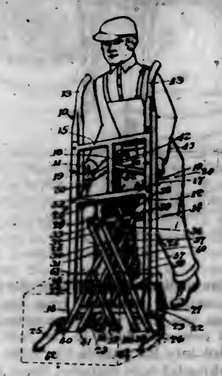
1,397,716. GEARED LOCOMOTIVE. ELMER F. BACKER, Davenport, Iowa, assignor to Davenport Locomotive Works, Davenport, Iowa, a Corporation of Iowa. Filed July 12, 1920. Serial No. 395,469. 9 Claims. (Cl. 105—108.)

1. A geared locomotive comprising side-frames, drive-wheels, the axle thereof, a crank-shaft, and gearing connecting the same to said axle, of an integral supporting-frame the parallel portions of which are movable vertically relative to the said side-frames and have bearings for said axle and shaft, a journaling device for said supporting-frame intersected by the medial line between said side frames on the side of the crank-shaft opposite said axle, bearings for said device, and a housing for said gearing associated with said supporting-frame.



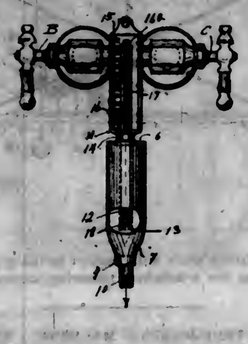
1,397,717. PERMUTATION PADLOCK. EDWARD W. BELLAMY, Torrington, Conn. Filed Jan. 29, 1920. Serial No. 354,917. 2 Claims. (Cl. 70—113.)

1. A permutation padlock comprising a circular base; a cylindrical core centrally extended from the base; two channels cut along the core, upon diametrically opposite sides thereof and perpendicularly to the base, said channels being extended into the base in the form of enlarged cups; a central, threaded bore extended down into the top of said core; a circular cap, corresponding to the base; a threaded bolt centrally extended from the cap, and adapted to screw into the threaded bore of the core; two shackle holes pierced through said cap, upon diametrically opposite sides thereof, and adapted to register with the channels cut along said core, one of said holes being countersunk at its under side; a set screw mounted through the cap and seated in the core as means for locking the cap in place; a U-shaped shackle, having its arms adapted to enter the shackle holes formed through the cap and to travel the channels formed along the core, the lower end of one arm having an extended foot adapted to engage the countersunk shackle hole in the cap, as means for linking the shackle to the lock, and the lower ends of both arms



being adapted to seat into the cups formed in the base as aforesaid; a plurality of outstanding lock-lugs formed along each shackle arm; a plurality of shifter, interchangeable permutation rings, rotatively mounted over the core, so as to fill the space between the cap and base; an annular channel cut around the inner periphery of each permutation ring, each channel being adapted to slidingly engage the opposite lock-lugs upon the shackle arms and thus lock the shackle in place; two transverse slots cut across the inner periphery of each permutation ring and across its annular channel, upon diametrically opposite sides, the respective slots of the several rings being adapted to register as the rings are rotated and thus release the lock-lugs of the shackle; and guide lines and permutation characters formed upon the outer faces of the cap, base and rings to facilitate the formation of combinations.

1,397,718. WIRE ROPE. JOHN N. BELLWALD, Mexico, Mexico. Filed Mar. 18, 1920. Serial No. 366,917. 5 Claims. (Cl. 28—5.)



4. A wire rope comprising a flexible core composed of a plurality of axially alined separate independently movable elements arranged in abutting relationship, and a plurality of strands of wire wound in a helical manner around the core.

1,397,719. HAND-TRUCK. EDGAR J. BRYAN, Riverside, Calif., assignor to Fred Stebler, Riverside, Calif. Filed Jan. 27, 1917. Serial No. 144,982. 29 Claims. (Cl. 214—65.5.)

1. A hand truck comprising a truck frame, clamping members adapted to be moved toward and away from one another, means bodily adjustably mounted in front of the frame and spaced therefrom to support and move the clamping members toward and away from one another, spring means operatively associated with the clamping members, and means coöperating with the first named operating means to move the clamping members into clamping position whereby they will support the weight of a load against the action of the spring means and automatically move out of clamping position when the weight of the load is removed from the clamping members.

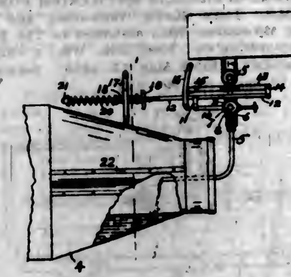
1,397,720. THERMOMETER ATTACHMENT FOR FAUCETS. ARCHIE S. CAMPBELL, St. Johnsbury, Vt. Filed May 1, 1920. Serial No. 378,284. 2 Claims. (Cl. 73—184.)

1. As an article of manufacture, an attachment for faucets comprising a receptacle including a top and bottom, the bottom of said receptacle extending downwardly and forming an outlet, the top of the receptacle having an opening adjacent its forward portion, and an opening adjacent its rear portion, a thermometer disposed in said forward opening and extending interiorly and exteriorly of the receptacle, an inlet pipe disposed in the rear opening, and connecting means carried by said inlet pipe for detachably connecting said receptacle to the faucet.

1,397,721. HAIR-CLIPPER. AUGUST J. CARLSON, Tacoma, Wash., assignor of one-half to Andrew Niland, Seattle, Wash. Filed Mar. 3, 1919. Serial No. 280,485. 1 Claim. (Cl. 30—1.)

Apparatus of the class described comprising a motor embodying a casing having an enlarged upper end and a cylindrical bearing at its lower end, a housing secured to the lower end of said casing, a base member carried by the housing, the forward end of the base member tapering upwardly and serrated to provide cutting teeth, a cutting member reciprocable upon the base member with the inner and outer edges thereof beveled and engaging the base only at the beveled edges, teeth formed at the outer beveled edge of the cutting member, the inner beveled edge of the cutting member having a V-shaped notch formed therein with a rectangular socket at the apex of the V-shaped notch and extending into the body of the cutting member, an arm pivoted at its inner end to said base member, spaced therefrom and having a tapering end terminating in a rectangular projection entering the V-shaped and rectangular socket notch and of less dimensions than said notch, said arm having a longitudinal slot therein adjacent the swinging end thereof, a main shaft extending into the cylindrical bearing of the casing, and an eccentric shaft carried by the main shaft extending into the arm slot for shifting the arm, the sides of the V-shaped notch adapted to be engaged by the sides of the pointed end of the arm to limit reciprocable movements of the blade.

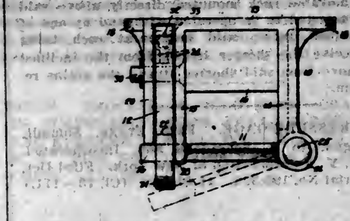
1,397,722. IMPLEMENT FOR MAKING IRRIGATING-CHANNELS. EUGENE F. CHRISTMAN, San Dimas, Calif., assignor of one-half to Will G. Fields, San Dimas, Calif. Filed Nov. 24, 1920. Serial No. 425,290. 9 Claims. (Cl. 97—12.)



4. In an implement of the character described, the combination with the beam of a cultivator, of arms pivotally connected with said beam, other arms pivoted to the first arms, operating members connected with the second arms and extending rearwardly beyond the rear ends of the arms, channel-engaging members carried by the first arms, means to connect the first arms to the operating members at will, and a channel-forming blade carried by the second arms.

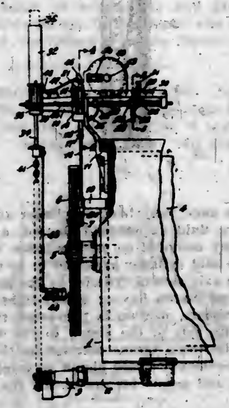
1,397,723. FOOD COMPOUND. BRUCE E. CLARKE, Kansas City, Mo. Filed Jan. 15, 1921. Serial No. 437,586. 3 Claims. (Cl. 99—11.)

1. A food compound comprising milk, malt and vegetable fat, emulsified within a range of temperature, the minimum being that at which the enzyme become active and the maximum less than that which renders them inert.



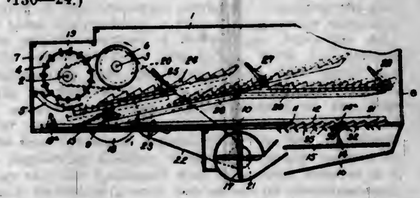
1,397,724. ATTACHMENT FOR SULFUR-BURNERS. JOSEPH R. CRANDON, Portland, Me., assignor to J. R. Crandon Company, Portland, Me., a Corporation of Maine. Filed Jan. 9, 1920. Serial No. 350,484. 8 Claims. (Cl. 23—1.)

1. In a rotary sulfur burner for burning melted sulfur, the combination of a feed pipe for feeding the melted sulfur thereto, a valve for said pipe and means actuated by the rotating burner mechanism for intermittently opening said valve wider than its normal opening to clear possible obstructions.



1,397,725. STAKE-POCKET. JOHN L. DAHL, Teaneck, N. J. Filed Jan. 18, 1921. Serial No. 438,101. 5 Claims. (Cl. 105—383.)

1. In a stake pocket, the combination with a receptacle and a gate movable toward the receptacle into closed position, of a latch engageable over a portion of the gate to hold it in closed position, said latch being pivoted on a horizontal pivot to the receptacle and having a tail piece



projecting rearward from the pivot, said tail piece serving to control the movement of the latch around its pivot.

1,397,726. WASHER-TIMING DEVICE. JAMES E. DANN, Brooklyn, N. Y., assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Jan. 25, 1917, Serial No. 144,426. Renewed Jan. 28, 1921. Serial No. 440,804. 20 Claims. (Cl. 116—73.)

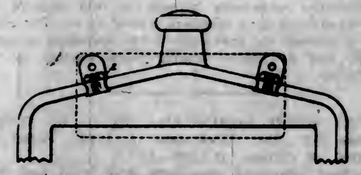
13. A washing machine provided with an operating member and a drain valve, a normally concealed signal device visible at a distance from the machine when exposed thereon, means actuated by said operating member and adapted at the conclusion of the washing operation to open said valve and expose said signal device to indicate to the operator the conclusion of the washing operation, and means actuated simultaneously with said signal device for indicating to the operator the character of the next washing operation to be performed.

1,397,727. THRESHING-MACHINE. AMÉDÉE DION and BRUNO DION, Ste-Thérèse de Blainville, Quebec, Canada. Filed May 10, 1920. Serial No. 380,185. 3 Claims. (Cl. 130—24.)

2. In a threshing machine, the combination of a frame; a beater; two inclined and overlapping straw racks

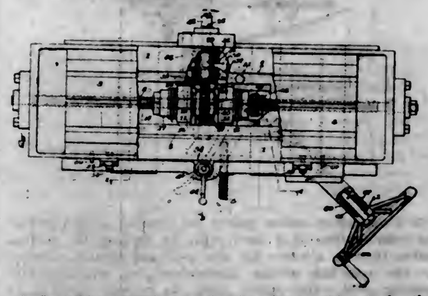
mounted in said frame for reciprocatory movement; a chaffer mounted at the discharge side of said frame; and a horizontal movable rack mounted directly above said chaffer and connected to be operated with and by one of said two inclined racks, said horizontal rack being adapted to receive the shorter straws from the inclined racks and remove from said shorter straws the grains remaining therein.

1,397,728. PRESSURE-GAGE. FRED EVANS, Summit, N. J., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 8, 1917. Serial No. 195,322. 11 Claims. (Cl. 73—111.)



1. A pressure gage comprising a cylinder adapted to receive a pressure fluid at one end thereof, an indicating member rotatably mounted on said cylinder, a spring-resisted piston in said cylinder arranged to be moved longitudinally to the axis of said cylinder by the pressure fluid, said cylinder and piston having a leak-tight connection, whereby the pressure medium is prevented from passing from the pressure side of the piston to the opposite side thereof, means having a torque reaction on the piston for utilizing the movement of said piston to rotate said indicating member, and means for preventing the rotation of said piston.

1,397,729. GARMENT-POCKET. JACOB MORRIS FRANKLIN, Brooklyn, N. Y., assignor of one-third to Emanuel Deitz and one-third to Abraham Deitz, New York, N. Y. Filed Sept. 12, 1919. Serial No. 323,294. 1 Claim. (Cl. 2—15.)

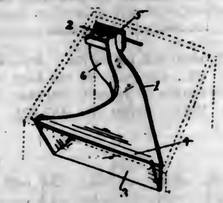


A pocket construction for a garment having a slit formed therein, comprising inner and outer walls attached at margins thereof to the garment adjacent the slit therein, a partition wall having its margin attached to said inner and outer walls, said partition wall being disposed intermediate said inner and outer walls and forming therewith inner and outer pocket compartments, a flap on the inner wall adapted to extend over the edge of the intermediate wall at the inside of the outer wall and also adapted to extend over the exposed edge of the outer wall to the outside thereof so as to occupy either an inner or an outer position as may be desired, the margin of the intermediate wall having a button-hole therein, a button on the inner wall coöperative with said button-hole to close the inner compartment, and a button on the outside of the outer pocket wall, the margin of said flap being provided with a button-hole coöperative with the one or the other of said buttons according to whether the flap is in its inner or its outer position and whereby in either case double security will be provided for the inner pocket compartment.

1,397,730. LICENSE-TAG HOLDER. JOHN FRIND, Peoria, Ill. Filed Dec. 8, 1919. Serial No. 343,247. 2 Claims. (Cl. 40—125.)

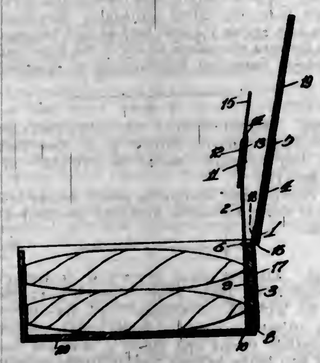
1. In a license tag holder the combination of a pressed sheet metal body portion provided with a rear hook for engagement with the rear edge of the shell of a radiator and an up-turned license tag carrying portion, a clamping member coöperating with the forward part of the body portion and for engaging with the shell of the radiator, and a clamping bolt passing through the body portion and the clamping member and at an angle to both whereby the clamping member may be drawn to clamping position.

1,397,731. TABLE-OPERATING MECHANISM FOR MACHINE-TOOLS. JOHN GOETZ, Wauwatosa, and FRED A. PARSONS, Milwaukee, Wis., assignors to The Kempsmith Manufacturing Co., West Allis, Wis., a Corporation of Wisconsin. Filed May 17, 1919. Serial No. 297,921. 9 Claims. (Cl. 90—21.)



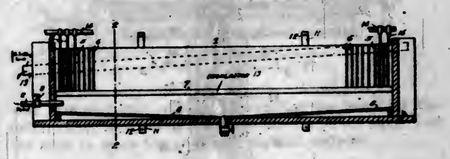
1. In table operating mechanism for machine tools, the combination with the table and a support therefor, of a non-rotatable translating screw fastened to the table, a non-translating rotatable nut mounted on said support in engagement with the screw, a worm gear fixed on the nut, a worm mounted in a fixed bearing on the table support in constant engagement with the worm gear, a rotary power driving member, and transmission mechanism comprising a clutch for operatively connecting and disconnecting the worm and driving member.

1,397,732. SURGICAL INSTRUMENT. AARRIEL E. GOODLOE, Chattanooga, Tenn. Filed Apr. 13, 1920. Serial No. 373,520. 17 Claims. (Cl. 128—7.)



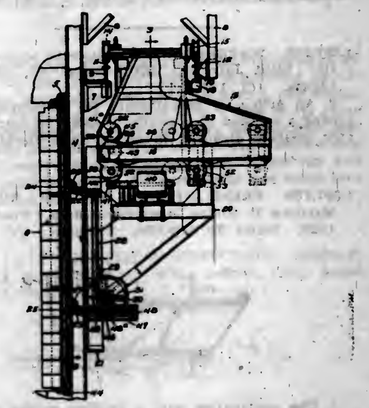
1. In a surgical instrument of the class described, a barrel having a handle upon its inner end, a finger piece slidable upon said barrel within reach of the fingers of a person's hand gripping said handle, a jaw at the outer end of said barrel and coöperating with the latter to grasp objects, a friction controlled sliding piece carried by the barrel and having said jaw hinged thereto, and a controlling rod for swinging said jaw connected to said finger piece whereby, when the finger piece is slid forwardly the jaw is caused to first swing upwardly and then move forwardly relative to the barrel.

1,397,733. RESONATOR. JOHN HEARSOG, Saginaw, Mich., assignor to Sonora Phonograph Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 26, 1919. Serial No. 279,367. 1 Claim. (Cl. 181—27.)



A horn for sound-reproducing instruments comprising a tapered body and an elongated neck, each of the side walls and top and bottom walls of said body and neck formed of a single piece of material bent to the contour of said body, the neck portion of each of said walls twisted and turned upwardly, said walls forming a sound-carrying channel in which successive cross sections are in slightly rotated positions with relation to each other.

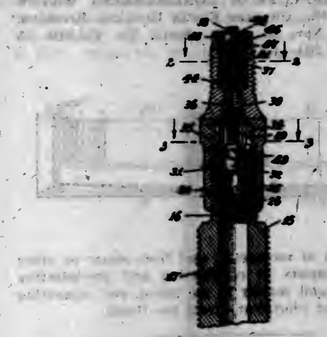
1,397,734. COMBINED TICKET-HOLDER AND LID-SUSTAINER. EDWIN W. HOELSCHER, St. Louis, Mo. Filed Apr. 22, 1920. Serial No. 375,727. 4 Claims. (Cl. 217—61.)



1. A device for sustaining the lid of a box in an open position, comprising a member having a loop formed intermediate of its ends, and a second member coöperable with said loop of said first mentioned member for preventing said looped member from becoming disengaged from the box lid, said second member bearing a pair of lapping portions for the introduction of a price card.

1,397,735. PROCESS OF RECOVERING COAL, HELD IN SUSPENSION, FROM COAL-BEARING WATER AND STREAMS. CHARLES EDWIN HOLLAND, Brooklyn, N. Y. Filed Nov. 13, 1920. Serial No. 423,810. 5 Claims. (Cl. 204—1.)

1. The process of recovering coal from water or other liquid which consists in coagulating and precipitating the coal and organic matter in the liquid, and separating the coagulum and precipitate from the liquid.



1,397,736. COKE-OVEN-DOOR MACHINE. JOHN KRIPPNER, Chicago, Ill., assignor to American Coke & Chemical Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 16, 1920. Serial No. 359,121. 10 Claims. (Cl. 254—84.)

1. The combination with a bench of coke ovens having a plurality of door openings in one side and a door for each opening, of a trackway extending along the upper portion of the bench adjacent to said openings, a carriage traveling on said trackway, means for propelling the carriage along the trackway, a pair of transversely extending tracks on the carriage, a downwardly depending door carrier suspended from said tracks, racks and pinions in conjunction with the carriage and door carrier for moving the door carrier back and forth on said tracks, a door supporting member rigidly secured to the door carrier, another door supporting member movably mounted in the door carrier at a point below the first mentioned door supporting member, a spring normally tending to project the last mentioned door supporting member to a position limited by a stop, and means for simultaneously raising and lowering both of the door supporting members, the tracks aforesaid having their inner end portions curved substantially on the arc of a circle drawn about the

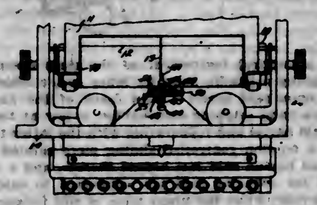
lower end of the door openings as a center, and the rear portions of said tracks extending upwardly, substantially as described.

1,397,737. VALVE. Irvo Littman, New York, N. Y., assignor to Littman Loxair Valve Corporation, a Corporation of Delaware. Filed July 12, 1920. Serial No. 395,725. 12 Claims. (Cl. 152—12.)

1. A valve structure having two spaced valve-seats, constituting the ends of a valve chamber between them, and two valve members for the respective seats connected together for bodily movement as one within the valve chamber and between the valve-seats, and for movement of separation or approach relatively to each other.

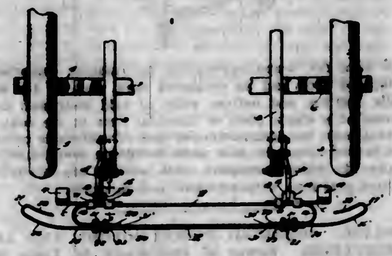
1,397,738. WATERPROOFING. Arnold Mohn, Chicago, Ill. Filed July 24, 1920. Serial No. 398,687. 3 Claims. (Cl. 134—11.)

2. An article of manufacture for waterproofing comprising a solution of a relatively small amount of aluminum stearate dissolved in carbon tetrachlorid.



1,397,739. FRESH-AIR VALVE FOR BUILDINGS. Malcolm B. Moyer, Montevideo, Minn. Filed June 14, 1920. Serial No. 388,964. 2 Claims. (Cl. 98—27.)

1. The combination with a building having a foul air outlet and provided with fresh air inlet passages in its sides; of a self-closing damper in each of said inlet passages movable inwardly to open position under the action of incoming air currents, said damper being movable farther inwardly temporarily under stronger currents, and a wall in the passage coacting with said damper in its temporary position for preventing the entrance of air, said damper being self-closable outwardly when the air is calm and also outwardly closable under the action of air currents seeking egress, whereby to compel such currents to travel through said foul air outlet.

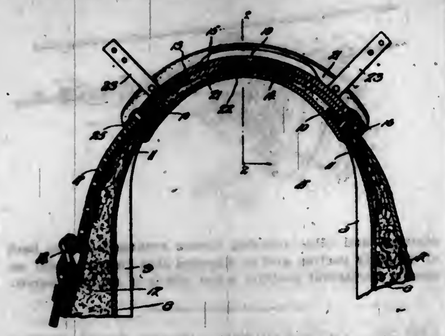


1,397,740. LINE-MAKING ATTACHMENT FOR TYPEWRITING-MACHINES. Ricardo Guzzanno Pimenta, Valparaiso, Chile. Filed Mar. 27, 1920. Serial No. 369,397. 4 Claims. (Cl. 197—113.)

1. A line-making attachment for typewriting machines comprising a supporting member having a portion adapted to be attached to the stationary type bar guide of a typewriting machine, and a channel shaped portion extending transversely of the machine, a slide mounted on the supporting member through the medium of said channel shaped portion and conforming thereto, means for adjusting the slide longitudinally of the transverse portion parallel to the platen of the machine and securing it in adjusted position, a writing implement holder carried by

and movable with the guide, a stylus-like implement carried by the holder and extending in juxtaposition to the platen and a spring yieldably pressing the writing implement outwardly to normally maintain the same out of contact with the work and adapted to permit movement thereof manually into engagement with the work, substantially in the manner as and for the purposes specified.

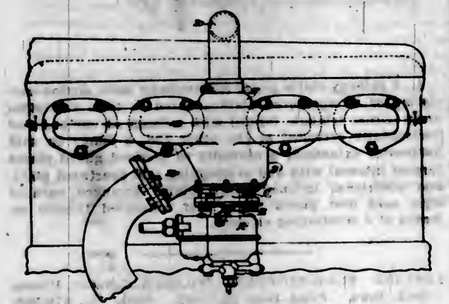
1,397,741. AUTOMOBILE-BUMPER. Frank R. Procunier, Chicago, Ill., assignor of one-half to Louis N. Turner and one-fourth to Jesse C. Stryker, Chicago, Ill. Filed Jan. 14, 1921. Serial No. 437,331. 11 Claims. (Cl. 293—55:)



4. In combination with a pair of supporting brackets, a bumper secured thereto, and comprising forward and rearward bars, the latter adjustably connected to the brackets and having its ends bent around through 180° to provide forward extensions to which the front bumper bar is adjustably connected, substantially as described.

1,397,742. CHEWING-GUM OR CHEWING-GUM SUBSTITUTES. Adolph Philip Rapp, New York, N. Y. Filed July 12, 1919. Serial No. 310,453. 16 Claims. (Cl. 99—11.)

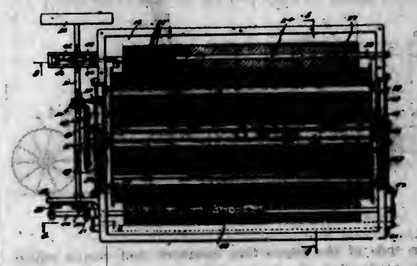
1. A chewing gum containing plastic rubber of different degrees of depolymerization uniformly distributed through said gum.



1,397,743. ADJUSTABLE OPEN-TOP HORSE-COLLAR. Charles Ross, Blair, Nebr. Filed Oct. 12, 1920. Serial No. 416,548. 3 Claims. (Cl. 54—19.)

1. An adjustable open top horse collar, comprising integral flexible throat and sides, a laminate connecting plate of firm heavy harness leather stitched together flatwise attached to the top of one collar side to bend flatwise to form a substantially rigid arch across the open top and to overlap the opposite collar side, narrow laminæ added to form an upstanding ledge on the front edge of said connecting plate, a long billet on the free end toward

the back edge of said connecting plate, and a buckle on the outside of the after-wale of the adjacent collar side to engage said billet.



1,397,744. CARBURETING AIR FOR INTERNAL-COMBUSTION ENGINES. Joseph M. Schutz, Chicago, Ill., assignor to Schutz Hawley Company, Chicago, Ill., a Corporation of Illinois. Filed May 6, 1918. Serial No. 232,765. 1 Claim. (Cl. 48—180.)

The improvement herein described comprising an internal combustion engine, in combination with an intake passage leading to the engine and an exhaust passage leading from the engine, means at the far end of the intake passage for supplying a stream of mixture of air and liquid fuel under the suction of the engine; such intake passage having an opening intermediate its ends, and constructed to deflect or turn the stream of mixture from its course at that point, whereby to eject unvaporized particles of liquid and dust, a closed chamber surrounding said opening in the intake passage, in position to receive the particles ejected from the stream of mixture but presenting walls so far removed from the flowing stream of mixture as to be wholly out of contact therewith, and a heating jacket surrounding said walls of the chamber and connected with said exhaust passage, substantially as described.

1,397,745. PLUME-WASHING MACHINE. Iacopo Testa, Brooklyn, N. Y. Filed Feb. 11, 1920. Serial No. 357,881. 4 Claims. (Cl. 141—1.)

2. A device as set forth in claim 2 in which the means for rotating the carrier includes a power shaft and a power transmitting member splined thereto and the means for rotating and reciprocating the tool includes a slide connected to the tool, a gear member on the power shaft, a gear member carried by the tool and adapted to co-act

with said first gear member for rotating the tool from the power shaft, and connections between the power shaft and the slide to move the slide and the tool endwise.

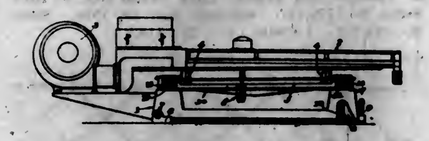
1,397,746. METAL FRAME CONSTRUCTION. William M. Thomas, Los Angeles, Calif. Filed Nov. 4, 1913. Serial No. 799,147. Renewed Apr. 19, 1920. Serial No. 375,161. 1 Claim. (Cl. 72—114.)

The combination with a bar and a rod extending at an angle to said bar, of a joint member comprising an angular plate having legs and provided with a perforation in one of its legs and provided with a hole in its other leg, the leg having the hole extending substantially parallel to the bar and said brace rod passing through said hole and being bent over the end of the other leg, and said bar passing through the perforation and being bent toward the parallel leg.

1,397,747. VEHICLE CONSTRUCTION. Henry F. Towner, Santa Ana, Calif. Filed Jan. 10, 1921. Serial No. 436,136. 4 Claims. (Cl. 280—96.1.)

1. In vehicle construction, the combination with an axle having a knuckle-pivot bearing, of an axle extension provided with a bore to register with the bore of the bearing, and having a curved portion fitting one side of the knuckle-pivot bearing, fastening means passing through the registering bores, and a knuckle-pivot bearing on the extension adapted to receive the pivot of a steering knuckle.

1,397,748. DEPTH-REGULATING DRAFT DEVICE FOR GROUND-WORKING TOOLS. Henry F. Towner, Santa Ana, Calif. Filed Apr. 19, 1921. Serial No. 462,525. 5 Claims. (Cl. 97—50.)



1. In a depth-regulating draft device, supporting members adapted at their forward ends for pivoted connection with the frame of a tractor, draft arms adapted at their forward ends for pivotal connection with the tractor

frame, a frame connected with said arms, ground-working tools carried by the frame, a caster wheel to support the

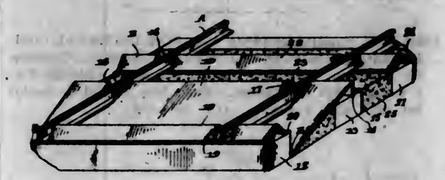
rear ends of the supporting members, and means adjustably connecting the tool-carrying frame to the supporting members.

1,397,749. CONCENTRATOR. ALVA W. TYLER, Los Angeles, Calif., assignor, by mesne assignments, to Walter Young, Los Angeles, Calif. Filed Dec. 29, 1917. Serial No. 209,404. 34 Claims. (Cl. 83—88.)

1. In a dry ore concentrator, a table having a perforated ore-supporting surface, means to blow air upwardly through the perforations, and means to move a portion of the table in an elliptical path.

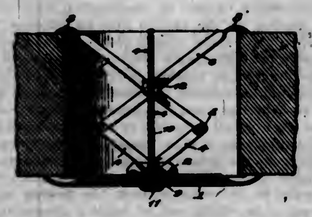
1,397,750. BELT CONNECTION. WILLIAM WENDERHOLD and CHARLES UEBELMESSER, New York, N. Y., assignors to Cru Patents Corporation, a Corporation of New York. Filed Dec. 13, 1917. Serial No. 206,882. 2 Claims. (Cl. 24—37.)

2. A belt coupling comprising a pair of convex members, a central block member of concave contour to form a snug fit with said convex members and adapted to receive the belt ends between the same and said convex members, said central block member having a concave face corresponding to the convexity of a pulley with which said block member coöperates, and a screw passing through said members and said belt ends to clamp the same together.



1,397,751. ROCK OR DIRT DRAG. JOHN L. ALLINGTON, Joplin, Mo., assignor of one-third to Oscar M. Bilhars, Baxter Springs, Kans., and one-third to Frederick H. Gartung, Miami, Okla. Filed Nov. 11, 1920. Serial No. 423,297. 4 Claims. (Cl. 37—19.)

1. In a device of the character described a drag, comprising a curved body portion, a yoke secured thereto, means for securing a cable to the free end of the yoke, said end being arranged at an angle, whereby power applied will maintain the body portion in a substantially vertical

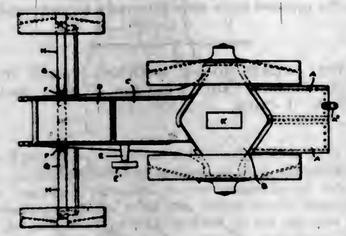


position, and cable securing means arranged on the back of the body portion and so disposed that the drag will assume a horizontal position when power is applied thereto.

1,397,752. CATTLE-GUARD. GEORGE HENRY BISHOP, Calgary, Alberta, Canada. Filed Jan. 3, 1921. Serial No. 434,628. 3 Claims. (Cl. 256—14.)

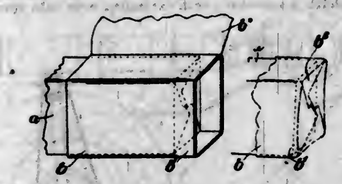
1. A railway cattle guard comprising a main section consisting of an apertured plate adapted to form two sides of an obtuse triangle formed with a flange at one end and horizontally extended at the other end, a flange on said horizontal extension, a plurality of inclined guard plates formed integral with and overlapping said apertured plate, and additional inclined guard plates arranged parallel with said first guard plates and connected thereto by means of a reinforcing element.

1,397,753. FLUE-STOPPER. WILBUR R. CARROLL, Bloomfield, Iowa. Filed June 22, 1921. Serial No. 479,508. 13 Claims. (Cl. 126—319.)



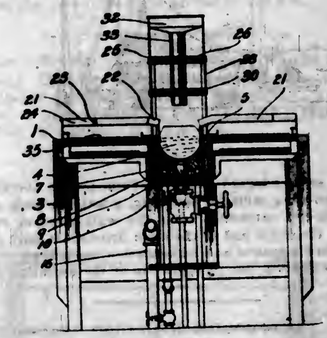
1. In a flue-stopper, the combination with a cover-plate for the flue opening in a wall, of diverging links hinged at one end to the cover-plate, crossed levers pivoted together at their intersection and hinged at their inner ends to the free ends of said links respectively and adapted to engage the wall in which the flue opening is formed to secure the flue-stopper in place, and means for actuating the jointed links and levers to engage the levers with said wall to hold the cover-plate in place with relation to the flue opening.

1,397,754. DIRIGIBLE HEADLIGHT. GEORGE COX, Black Earth, Wis. Filed June 12, 1919. Serial No. 303,758. 1 Claim. (Cl. 240—62.)



In a dirigible headlight, the combination with the frame of a motor driven vehicle and a steering rod for the wheels thereof, of rotatable headlight supporting standards and brackets, a plate secured at its rear and under each of the said brackets and extending forward therefrom, hangers depending from the underside of said plates and secured to said brackets, said hangers extending downward a distance and turned forward at approximately 90 degrees, annular apertures located approximately the center line of the horizontal lower portions of said hangers, shafts threaded at their upper ends and bifurcated at their lower ends and vertically disposed through the annular apertures aforesaid, sleeves secured to the lower portion of lamp supporting standards, resilient means disposed between said plates and said sleeves, arms pivotally disposed within the bifurcated portions of shafts aforesaid and extending backward and downward between the front axle and spring of a motor vehicle, elongated apertures located at the lower end of said arms, rods having their inner ends adapted to engage said apertures and their outer ends connected to the transverse steering rod of the vehicle, links the outer ends of which are adapted to engage the said apertures, a spring disposed between the arms aforesaid and engaging the links as described.

1,397,755. TRACTOR. VIRGIL F. DECKERT, Minneapolis, Minn. Filed Oct. 2, 1917. Serial No. 194,318. 1 Claim. (Cl. 180—54.)



A complete tractor frame in the form of an integral casting comprising a section adapted to be used as a portion of the differential and rear axle housing, a section comprising an operating platform at the rear of said section, a section adapted to be used as a portion of the transmission casing in front of the first mentioned section and a section adapted to form a part of the engine casing in front of said last mentioned section, said frame also comprising guide members formed near the front thereof, and a shaft hanger formed therewith adjacent the transmission casing, said section forming the engine casing transmission casing and the rear axle housing being formed as closed chambers adapted to receive a lubricant.

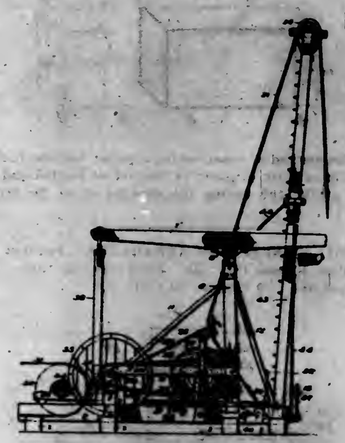
1,397,756. PAPER CONTAINER. HENRY DREDGALE, London, England. Filed Nov. 20, 1918. Serial No. 263,330. 5 Claims. (Cl. 93—36.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

5. The method of constructing a paper container, wherein a strip or sheet of paper is concurrent plaited and overlapped at the end during the winding on of the strip or sheet.

1,397,757. CONFECTION APPARATUS. THOMAS ALVA EDAUGH, Kansas City, Mo. Filed Nov. 25, 1919. Serial No. 340,584. 19 Claims. (Cl. 91—2.)

1. In a confection machine, a frame, a chocolate trough-shaped container longitudinally supported by the frame and extending from end to end of the frame, dip trays carried by the frame and along the edge of the container, and a conveyer running past the dip trays.

7. In a confection machine, a frame, a trough-shaped chocolate container, carried by the frame, a delivery hopper at one end of the container, a water jacket about the container, dipping pans along the edge of the container and extending over the same, candy center-carrying supports adjacent to the dipping pans, and a conveyer movable longitudinally of the frame and past the dipping pans.



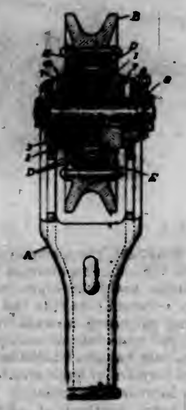
9. In a confection machine, a frame, a chocolate container longitudinally supported by the frame, dip trays adjacent to the chocolate container, an endless belt moving longitudinally of the frame and adjacent to the trays, a superposed frame carried by the first named frame, and oppositely movable conveyers carried by the superposed frame.

11. In a confection machine, a frame, a chocolate container carried by the frame, dip trays adjacent to the chocolate container, a conveyer having an exposed surface adjacent to the trays, a tunnel carried by the frame through which the conveyer passes, means for directing cooling air into the tunnel, and means for controlling the volume of air passing into the tunnel.

1,397,758. WELL-DRILLING MACHINE. LEVI B. EKAS, Williamstown, W. Va. Filed Aug. 12, 1919. Serial No. 316,934. 3 Claims. (Cl. 255—11.)

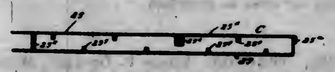
1. The combination with a base and a mast, of a bull-wheel shaft, a cable secured to and wound thereon, a main

drive-shaft having cranks on each end thereof, a drive-wheel secured thereon between the cranks, a sprocket-wheel loosely mounted thereon, means for clutching said sprocket-wheel to the shaft, a sprocket-wheel on the bull wheel shaft, a sprocket chain extending over said sprocket-



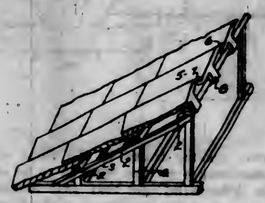
wheel, a cable adapted to extend from one of the cranks to the operating cable for spudding, a walking-beam and a connecting-rod extending from the walking-beam to the crank on the other end of the main drive-shaft, said drive-shaft with its cranks and transmission mechanism extending in the general line of operation of the operating cable.

1,397,759. AUTOMOBILE-HOOD CLIP. FREDERICK W. FRANKLIN, Syracuse, N. Y. Filed Dec. 26, 1919. Serial No. 347,374. 2 Claims. (Cl. 292—114.)



1. A hood clip comprising a tubular body, a rod extending into the tubular body through the lower end thereof and having a nut thereon, a spring seat located in the lower end of the body and having means for interlocking with the body, the body being formed with a non-circular opening at its lower end, a spring seat conforming to said opening, the body and the spring seat having means for interlocking when the spring seat is passed through said opening and given a partial turn, and a spring encircling the rod and interposed between the nut and the spring seat, substantially as and for the purpose set forth.

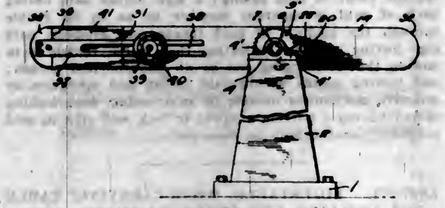
1,397,760. TROLLEY. JOSEPH L. GUTWILLER and FRANCIS W. KOELLE, St. Louis, Mo. Filed May 20, 1921. Serial No. 471,109. 16 Claims. (Cl. 191—59.1.)



1. A trolley, comprising a supporting member, and a wheel mounted in said member in such a manner that it normally has a sliding contact with a trolley wire or electrical conductor over which it is traveling forwardly but is capable of revolving and continuing to revolve about its axis when the trolley wire exerts and maintains an abnormal pressure on said wheel.

1,397,761. FLYING-MACHINE. HARRIS G. HOOPER, Los Angeles, Calif. Filed Aug. 28, 1917. Serial No. 188,623. 6 Claims. (Cl. 244—12.)

6. A flying machine including a supporting plane having independent upper and lower surfaces formed of sheet metal, said surfaces presenting smooth exterior faces, while the opposed faces have integrally formed reinforcing ribs.



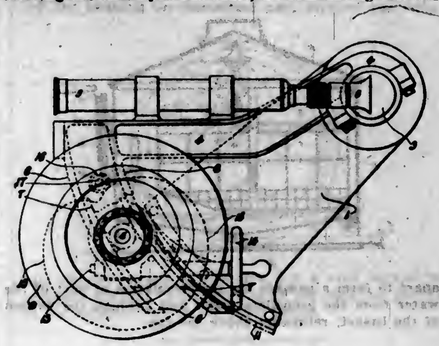
1,397,762. GLASS-HOUSE ROOFING. PAUL W. JANNOCH, Pasadena, Calif. Filed Jan. 2, 1920. Serial No. 348,998. 1 Claim. (Cl. 108—10.)

The herein described roof, composed of a plurality of assembled plates, each of which comprises a substantially rectangular flat body portion, flanges projecting from the sides of said body portion, which flanges are equal in width and arranged in parallel planes that are inclined with respect to the plane occupied by the body of the plate, said flanges overlapping throughout their entire widths, the corresponding flanges of the adjacent roof members

when the latter are properly assembled, and which overlapping flange arrangement causes the body portions of the members to occupy inclined planes when properly assembled, and thereby providing a roof structure having a plurality of parallel shallow channels.

1,397,763. ADJUSTABLE BANDING-BOARD. JOHN FRANCIS KENNEDY, Baltimore, Md., assignor to Delion Tire and Rubber Company, Baltimore, Md., a Corporation of Maryland. Filed Sept. 21, 1921. Serial No. 502,302. 7 Claims. (Cl. 18—1.)

1. A device of the character described comprising a supporting shaft and supplemental supporting rods cooperating therewith, an extensible sleeve board stationarily mounted thereon, a frame in which the other end of the shaft is journaled, and means which will permit the rotation of the shaft and board.



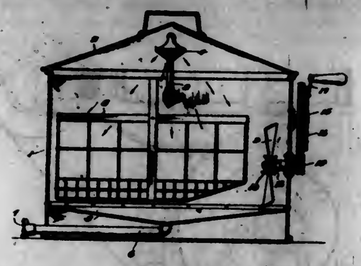
1,397,764. TAKEDOWN TABLE. KEISHIRO KUNISHIGE, Los Angeles, Calif. Filed Nov. 23, 1920. Serial No. 425,939. 3 Claims. (Cl. 45—31.)

1. In a take-down table, the combination with a top having an integral depending flange on the underside, of angular brace-bars disposed on the underside of the top and extending radially from the center to the depending flange, the said brace-bars being fixed to the top and having elongated openings on the bottom, detachable legs, mortise ends on the legs engaging with said elongated openings, braces connecting the legs in pairs, a center plate, and bolts passing through the leg braces and screwing into the top brace-bars and into the center-plate.

1,397,765. SIGHTING-GEAR FOR GUNS. HUGH WARREN LEE and ROBERT MORRISON, Newcastle-upon-Tyne, England, assignors to Sir W. G. Armstrong, Whitworth and Company, Limited, Newcastle-upon-Tyne, England. Filed Mar. 23, 1920. Serial No. 368,182. 4 Claims. (Cl. 33—46.)

1. In gun sighting gear, the combination of a gun trunnion, a transverse shaft, means for moving the shaft around the trunnion axis, a cam upon the shaft, means for rotating the cam upon the shaft, an arm having one end

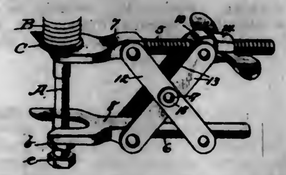
pivoted about the trunnion axis and the other end supported by the cam and a sight carried by the arm.



1,397,766. CONSTANT-TEMPERATURE WATER-BATH. TIODOLF LIDBERG, Chicago, Ill., assignor to Chicago Surgical & Electrical Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 23, 1918. Serial No. 218,741. 2 Claims. (Cl. 219—38.)

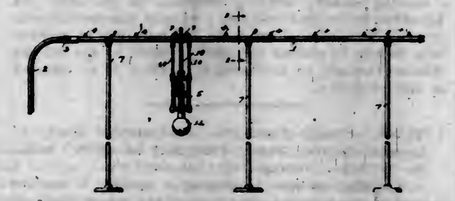
1. A device of the character described comprising a receptacle having oppositely positioned vertical walls; a plurality of water tight tubes extending across said receptacle and supported at their respective ends by the walls and each tube open at one end outside of said receptacle; a heating element carrying terminals on its outer end insertible in one said tube and a thermal-responsive device carrying terminals on its outer end insertible in another tube thereby to control the heat produced by the heating element through an intermediate medium to be inserted in said receptacle.

1,397,767. DISH-WASHING MACHINE. CURT F. LOCHOW, Seattle, Wash. Filed May 21, 1920. Serial No. 383,163. 1 Claim. (Cl. 141—9.)



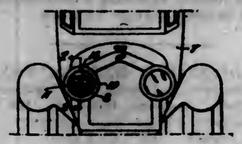
A washing machine comprising a casing, a concave bottom inclined downwardly toward the center from all sides, an article receptacle carried in the casing above the bottom and having one end spaced from the end wall of the casing and formed with a beveled bottom portion at this end, a pair of intermeshing oppositely rotating propellers adjacently mounted in the end wall within the casing, the sweep of the propellers embracing sub-

stantially the width of the casing, the beveled bottom of the article receptacle and the concave bottom being spaced



apart to form a passage for the circulation of part of the water from the propellers under and through the bottom of the basket, returning above the top.

1,397,768. VALVE REMOVER AND LIFTER FOR INTERNAL-COMBUSTION ENGINES, &c. LEO JAMES MCKONE, Kansas City, Mo., assignor to William A. Casey, Kansas City, Mo. Filed July 30, 1920. Serial No. 400,074. 2 Claims. (Cl. 29—86.3.)



1. A device for lifting and removing stem-valves comprising two spreaders the free ends of which are bifurcated and adapted to straddle the stem of the valve, bars secured to and projecting from said spreaders opposite their free ends, crossed links pivotally connected to said spreaders at one end and slidably connected to said bars at the other for separating said spreaders and bars apart and maintaining them parallel to each other, a transverse bolt connecting said links at their points of intersection, the diameters of the ends of said bolt being reduced where they pass through said links, and the outer extremities of said ends being still further reduced, and washers mounted on said extremities and retained thereon by riveting the said extremities.

1,397,769. IRRIGATING OR SPRINKLING SYSTEM. GEORGE E. MARCH, Muskegon, Mich. Filed Apr. 23, 1920. Serial No. 375,962. 15 Claims. (Cl. 299—66.)

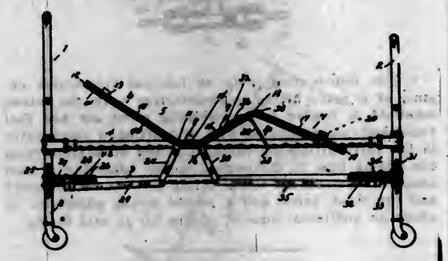
1. In an organisation of the character described; a support having a horizontally disposed upper surface; a horizontally disposed pipe supported on and adapted to roll during the irrigating operation along said surface and having a lateral irrigating vent; means for rolling the pipe.

1,397,770. TRESPASS-SIGN FOR AUTOMOBILES. MARK W. MARSDEN, Philadelphia, Pa. Filed July 1, 1920. Serial No. 393,228. 7 Claims. (Cl. 40—15.)

1. A device of the character described including a vehicle lamp casing; a transparent member forming a closure for the front of said casing; a sign within said casing back of said transparent member so as to be visible through the medium of said transparent member, said sign having portions indicating that if the vehicle is in motion that it is being run by an unauthorized person; and locking means within said casing and operative by selective mechanism outside of said casing, said locking means having a portion adapted to lock said sign in said position; substantially as described.

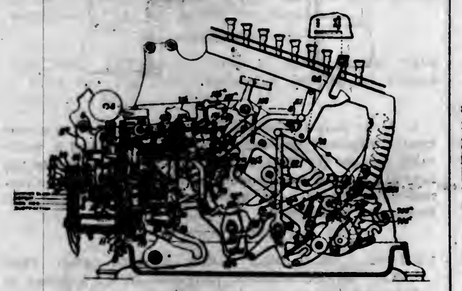
1,397,771. ADJUSTABLE WORK-CARRYING TABLE FOR DRILLING AND OTHER MACHINES. GEORGE FREDERICK MORT, deceased, by John Chester Mort, executor, Ealing, England. Filed Jan. 24, 1920. Serial No. 353,900. 2 Claims. (Cl. 77—63.)

1. In an adjustable work-carrying table for drilling and other machines having a stationary base and a table movable relatively thereto; the combination of a one-piece cruciform member comprising a lower base guide bar adapted to enter and slide in a slot of said stationary base to permit said movable table to have a sliding movement together with said cruciform member in one direction upon said stationary base, and an upper table guide bar extending at right angles to said base guide constructed to slidably fit an under-cut groove of said movable table, to permit said movable table to have a sliding movement on said cruciform member at right angles to and upon said stationary base, and means for clamping the movable table and the cruciform member to the stationary base.



1,397,772. ADJUSTABLE INTERNAL BRAKE-SHOE. HENRY W. MUHLBIGER and CLEMMEN LUND, Los Angeles, Calif., assignors to W. S. Rush & Co., Los Angeles, Calif., a Partnership composed of W. S. Rush, E. S. Rush, and B. C. Graves. Filed Feb. 24, 1919. Serial No. 278,818. 1 Claim. (Cl. 188—196.)

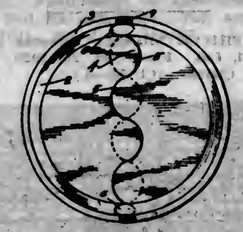
A brake support; a brake drum adjacent the brake support; two brake shoes fitting within the brake drum and adapted to tighten upon the drum by expansion; an operating cam between adjacent ends of the shoes for setting the brake; heads upon the opposite ends of the brake



shoes; an elongated cam between the heads; a shaft extending from the cam and screw seated through the brake support; a jam nut upon the shaft; and an operating head extending from the shaft beyond the jam nut, so that the operating head may be engaged by a tool to rotate the shaft to adjust the cam to expand the shoe, and then the jam nut tightened to hold the cam in its adjused position.

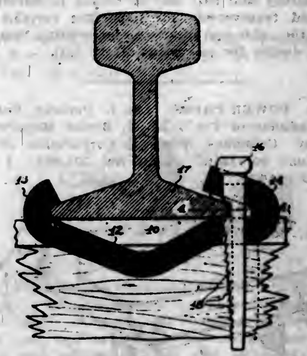
1,397,773. BED. WILLIAM HOWIE MUIR, Detroit, Mich., assignor to Jenks & Muir Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 29, 1918. Serial No. 264,536. 2 Claims. (Cl. 5—12.)

1. In an invalid bed structure, the combination with a frame including side bars, of a head section supported on said frame, a foot section, an intermediate section having its inner end pivoted to the frame and its outer end pivoted to the foot section, the outer end of the foot section having sliding engagements with the side bars of the frame, downwardly extending arms rigidly secured to the intermediate section adjacent the inner end thereof, and operating means pivotally connected to the arms for tilting said intermediate and foot sections.



1,397,774. ADDING-MACHINE. ROBERT L. MULLER, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 23, 1918. Serial No. 268,065. 10 Claims. (Cl. 235—60.)

2. In a machine of the character described, the combination with settable controlling elements thereof, and its tabulating paper carriage; of members adapted to be brought into action upon said controlling elements through the tabulating shifts of said paper carriage, and means for varying the alinement between said members and said elements to conform with differing requirements of the accounting work in hand.



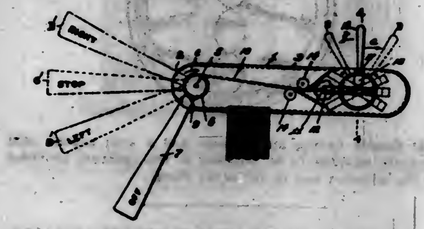
1,397,775. SECTIONAL PIE-PAN. MAY BELLE NEUMEISTER, Los Angeles, Calif. Filed Aug. 17, 1920. Serial No. 404,115. 1 Claim. (Cl. 53—6.)

A pan comprising separate sections, each having an annular flange, the meeting edges of said sections each having a plurality of projecting surfaces, said surfaces and the meeting ends of said flanges being arranged to overlap for forming the assembled pan, each of the ends of

said flanges having an aperture and a stud beyond said aperture adapted to be received in the aperture provided in the adjacent end of the other flange.

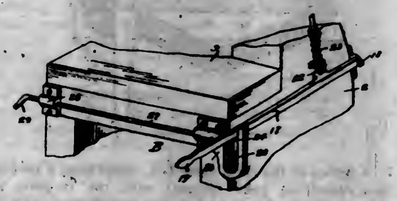
1,397,776. COMBINATION TIE-PLATE AND ANTI-CREEPER FOR RAILS. MELVIN OVESTRUD, Stillwater, Minn., assignor to Twin City Forge & Foundry Company, Stillwater, Minn., a Corporation of Minnesota. Filed Aug. 12, 1921. Serial No. 491,811. 8 Claims. (Cl. 238—315.)

7. A device of the class described, comprising a tie-plate, a base-embracing yoke integral with the tie-plate and forming a tie-abutment and a pin coöperating with the yoke and the base of a rail to cause the yoke to grip the rail.



1,397,777. ELECTRIC SWITCH. CHAUNCEY R. PELTON and JAY A. HAND, Detroit, Mich., assignors to The Pelton & Crane Company, Detroit, Mich., a Corporation of Michigan. Filed July 31, 1920. Serial No. 400,349. 8 Claims. (Cl. 200—138.)

1. A thermal cut-out, having in combination, a bridge for a switch, a pair of toggle arms coupled up with the bridge and when in substantially straight line position holding the bridge against a tendency to move into open position, and a thermostat arranged to apply movement

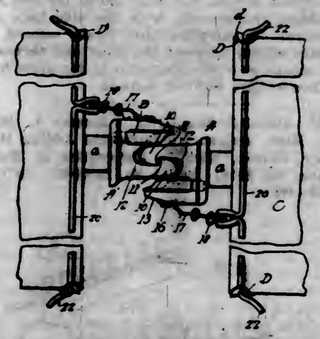


at the knee of the toggle solely to break the same and allow the bridge independently of the energy of the thermostat to move into open position.

1,397,778. VEHICLE-SIGNAL. CHESTER A. PERKINS, South Bend, Ind. Filed Nov. 29, 1920. Serial No. 427,118. 4 Claims. (Cl. 74—5.)

4. An actuating device for imparting variable movements to a cable, said device comprising a casing, a ball mounted in said casing, a screw threaded through said ball and having one of its ends connected to the cable, means whereby said ball may be rocked forwardly, rearwardly and transversely for imparting variable movements to the cable and means for preventing rotation of the screw during the movement of the ball.

1,397,779. POWER-PRESS. LEO L. PFEIFER, Columbus, Ohio, assignor to The John W. Brown Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed June 20, 1919. Serial No. 305,691. 1 Claim. (Cl. 192—116.)

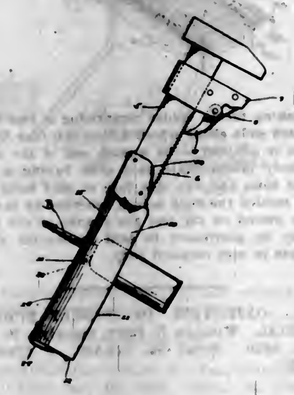


In a power press, a rotatably mounted actuating shaft, a power delivering element capable of rotating independently of said shaft, a manually operated clutch structure for connecting said shaft and element for rotation in unison, a pivoted stop member coöperative with said clutch structure and normally serving to retain the shaft and power delivering element out of driving relation, a manually operated arm pivoted to the side of the press including a forwardly extending handle, a link between said arm and stop member, a spring coöperative with said link and normally serving to maintain said arm in an elevated position and to retain said stop member in engagement with said clutch structure, a spring pressed latch carried by the front of said press and normally disposed to underlie said arm to prevent oscillation of the latter, said latch including a bevel nose portion and a substantially flat upper surface, and a slidably mounted actuating rod connected with said latch disposed to extend transversely of said press, said rod terminating in a handle portion disposed in spaced relationship from the handle portion of said pivoted arm whereby both hands of the operator will be required in effecting the operation of the clutch operating controlling mechanism.

1,397,780. FUEL-FEEDING SYSTEM. CHARLES POST, Los Angeles, Calif., assignor to John O. King, Los Angeles, Calif. Filed Feb. 26, 1920. Serial No. 360,861. 2 Claims. (Cl. 48—180.)

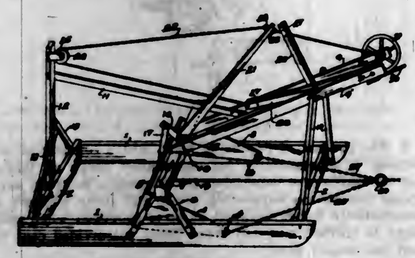
2. The combination, with an internal combustion engine, of a valve fitting communicating with the intake manifold, a mixing tube combining moist air and fuel vapor and communicating with said fitting, a check valve in the valve fitting controlling the flow of mixture from the mixing tube to the engine, means admitting a fixed amount of outside air to the fitting between the manifold and the check valve, and a second means adjustable to admit an additional amount of free air to said fitting.

1,397,781. CAR-COUPLING. JOSEPH REIF, Hebron, Ind., assignor of forty-five per cent. to Francis E. Ling, Hebron, Ind. Filed June 1, 1920. Serial No. 385,485. 6 Claims. (Cl. 213—17.)



1. A car coupler comprising a draw head having a vertically disposed, forwardly projecting hook and a vertically slidable gravitating latch substantially opposite the face of the hook to act upon the opposite side of the corresponding hook on an opposing coupler from the first mentioned hook.

1,397,782. STOP FOR DESK-SLIDES AND THE LIKE. ERNEST RHODES, Herkimer, N. Y., assignor to Standard Furniture Company, Herkimer, N. Y., a Corporation of New York. Filed July 7, 1921. Serial No. 482,970. 3 Claims. (Cl. 45—6.)



1. In combination with a desk having an opening therein for the reception of a slide; a slide mounted in said opening, said slide having a bore formed therein; a gravitating stop loosely mounted in said bore and adapted, when the slide is positioned in the opening, to drop downwardly and prevent withdrawal of the slide; and means carried by the stop for limiting the downward movement of the stop, said stop being free of any mechanical connection with the slide and readily removable therefrom.

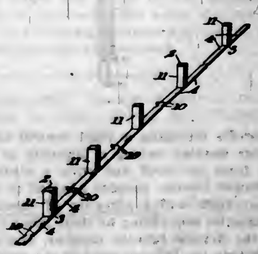
1,397,783. TOOL-HANDLE. CLINTON W. RIEFF, West Fork, Ark. Filed Sept. 1, 1920. Serial No. 407,390. 3 Claims. (Cl. 145—62.)

1. A device of the character described comprising a body member having a chamber therein, said body member having an opening in one of its sides and a slot in the opposite side communicating with said chamber, and an oil can pivoted in said chamber, the body of said can being movable through the opening of the chamber, the spout of the can being movable through the slot upon pivotal movement of the can within the chamber.

1,397,784. LEVELER. JOHN F. ROPP, Blythe, Calif. Filed May 11, 1920. Serial No. 380,563. 3 Claims. (Cl. 37—42.)

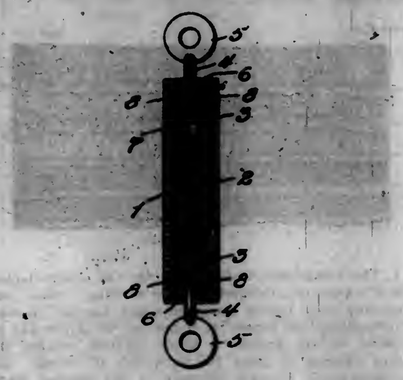
1. A leveler comprising a frame, a scraper pivoted on said frame, a cross support, a derrick projecting forwardly from and supported upon said support, a bell crank mounted on said support, a link connecting one arm of said crank with said scraper, a pulley support positioned on the rear of said frame, pulleys mounted on the latter support and on the forward end of said derrick, a flexible member passed around said pulleys and fastened to the other arm of said crank, and means for actuating one of said pulleys so as to raise or lower said scraper.

1,397,785. ELECTROTYPE MATERIAL AND METHOD OF FORMING SAME. GUSTAV U. BOSE, Jr., Washington, D. C. Continuation of application Serial No. 366,463, filed Mar. 17, 1920. This application filed Mar. 2, 1921. Serial No. 449,273. 12 Claims. (Cl. 204—13.)



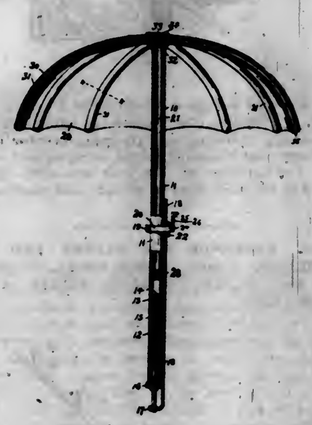
1. The herein described method for the electro-deposition of copper to a thickness usually forming "trees" and producing little tensile strength, which consists in electro-depositing the copper in a number of layers and in breaking up the growth of upper crystals between the layers whereby to check the formation of "trees" and correspondingly increase strength of the finished plate.

1,397,786. BORING-TOOL HOLDER. JOSEPH C. SAXTON, Worcester, Mass. Filed Apr. 19, 1919. Serial No. 291,342. 19 Claims. (Cl. 29—99.)



1. A device as described consisting of a cylindrical hollow body, a cylindrical body rotatably adjustable therein, a rectilinearly traveling tool clamping member arranged in said body, and actuating means engaging said clamping member and adapted to lock said rotatably adjustably body and at the same time to actuate said clamping member.

1,397,787. FASTENER FOR PAPERS AND OTHER MATERIALS. CEDRIC PUTNAM SIBLEY, Detroit, Mich. Filed Nov. 10, 1920. Serial No. 423,143. 4 Claims. (Cl. 24—153.)

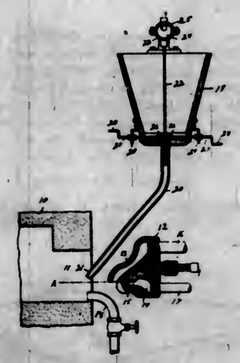


3. A paper fastener, in strip form, having a closed end barrel adapted to be driven through the material to be fastened, and bottom flanges, severed from the strip in the act of setting.

1,397,788. INTENSIFIER. CHARLES SMITH, St. Louis, Mo., assignor, by mesne assignments, of one-half to Clyde M. Mettler, St. Louis, Mo. Filed May 17, 1920. Serial No. 381,851. 3 Claims. (Cl. 175—183.)

1. In an intensifier, a non-conducting receptacle having closures of conductive material; and a mass of comminuted conductive material held in place within said receptacle.

1,397,789. UMBRELLA. CLARENCE G. STONESTREET, Akron, Ohio. Filed July 2, 1920. Serial No. 393,599. 1 Claim. (Cl. 135—20.)

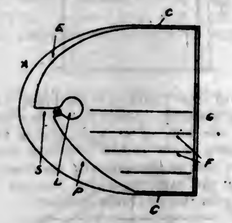


An umbrella including a rigid central tubular staff, a fabric cover member having a plurality of tubular seats radiating from the staff and with a central opening, a central flexible tubular member adapted to be disposed in the tubular staff, and a plurality of tubular ribs of inflatable material converging at their inner ends and merging into the flexible tubular member, and adapted to be disposed within the tubular seats of the cover, said flexible central member and indeflatable ribs insertible in and removable from the staff and seats through the central opening of the cover member, and means for introducing air under pressure into the flexible central tubular member and inflatable ribs.

1,397,790. FISHING-TACKLE HOLDER. FOLKE W. TROEDE, Rockford, Ill. Filed Mar. 14, 1921. Serial No. 452,276. 4 Claims. (Cl. 43—31.)

1. A fishing tackle holder comprising a reel body having recessed ends about which a line carrying hook snells and hooks is adapted to be wound, one of the side edges of said body intermediate said ends having a series of transverse slots and one side face of said body being recessed to receive the hook points, whereby as the line and snells are wound on the reel the shanks of the respective hooks may be positioned in said transverse slots with their points in said recessed body.

1,397,791. OXIDATION OF FINELY-SUBDIVIDED MATERIAL. WILLIAM N. BEST, Brooklyn, N. Y. Filed Feb. 8, 1919. Serial No. 275,682. 3 Claims. (Cl. 110—22.)

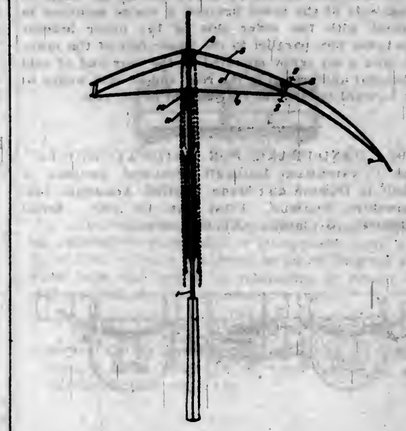


2. The process of producing heat, which consists in delivering a substantially flat fan-shaped spray of liquid fuel by means of a vaporizing jet of gaseous medium, supplying combustion supporting air to the spray whereby a substantially flat fan-shaped flame is produced when said spray is ignited, and delivering finely sub-divided coal to said fan-shaped flame.

1,397,792. APPARATUS FOR OXIDATION OF FINELY-SUBDIVIDED MATERIAL. WILLIAM N. BEST, Brooklyn, N. Y. Original application filed Feb. 8, 1919, Serial No. 275,682. Divided and this application filed June 4, 1920. Serial No. 386,646. 3 Claims. (Cl. 110—22.)

1. An apparatus of the character described, including a burner or atomiser for delivering a substantially flat fan-shaped spray of liquid fuel in substantially horizontal

direction, means for delivering combustion supporting air beneath said spray, and means for delivering a finely subdivided solid material above said spray and permitting it to drop substantially vertically into the flame.



1,397,793. HEADLIGHT. OLIN W. BLACKETT, Brookline, Mass. Filed Jan. 10, 1921. Serial No. 436,383. 1 Claim. (Cl. 240—48.4.)

In a headlight, the combination of a casing, a parabolic reflector, an elliptical reflector, a cylindrical reflector, a source of light, said reflector being adapted to throw the light ahead, a series of semi-cylindrical, non-reflecting, parallel laminæ in the lower portion of the headlight, a series of radio laminæ, supporting the semi-cylindrical laminæ, and a glass front, the upper major portion of which is translucent, all substantially as described.

1,397,794. UMBRELLA. EDWIN ROMEYN CHASE, Sacramento, Calif. Filed Oct. 15, 1920. Serial No. 417,121. 1 Claim. (Cl. 136—27.)

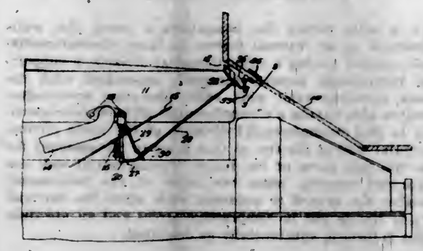
An umbrella including a stationary sleeve, rods arranged in pairs and radiating from the sleeve, the rods of each pair being pivotally connected at their inner ends to the respective ends of the sleeve, the outer end of one of the rods being pivoted to the second rod of the pair at a point spaced in from the outer end of said second rod, spreading links pivotally connected to the intermediate portions of the rods of each pair, a movable sleeve, stretchers connecting the movable sleeve to the spreading links, and a rod fixedly connected to the stationary sleeve and slidably engaged by the movable sleeve.

1,397,795. RUBBER TIRE. WALTER THOMAS CLIFFORD-EARP, Barnes, England. Filed Apr. 26, 1920. Serial No. 376,736. 3 Claims. (Cl. 152—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A solid rubber tire comprising a tread, side walls separated by an internal recess, an inner circumferential wall member having a circumferential division, a supporting inextensible member integrally associated with the inner circumferential wall, said supporting inextensible member also having a circumferential division corresponding to the circumferential division of the inner circumferential wall of the tire so that prior to the assembly for use the two parts of the inner circumferential wall are separated whereby when two parts of the inextensible member are caused to approach each other the material of the tire is put in compressive stress and an air tight joint is formed, substantially as described.

1,397,796. TOOL-HOLDER. GEORGE R. COULS, Detroit, Mich. Filed Nov. 8, 1920. Serial No. 422,486. 4 Claims. (Cl. 29—96.)

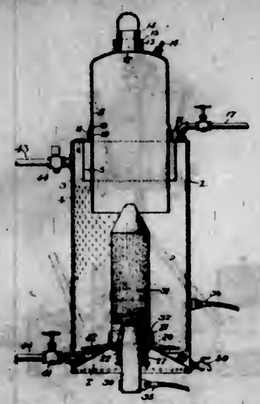
1. A tool holder comprising a shank and a tool supporting bracket on one side of the shank provided with a



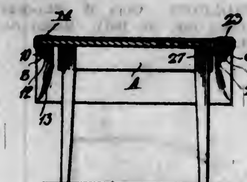
groove into which the tool may fit with its cutting end projecting from the end of the holder, a second bracket above the first and having its lower side at an angle to the upper side of the lower bracket, a wedge mounted in engagement with the lower side of the upper bracket with its lower face parallel to the upper face of the lower bracket, and a set screw mounted in the rear end of said upper bracket and engaging the rear end of said wedge to force it forward toward the cutting end of the tool.

1,397,797. HAND-BRAKE FOR RAILWAY-VEHICLES. JAMES CUNNINGHAM, Bathgate, Scotland, assignor of one-half to Dickson and Mann Limited, Armadale, Linlithgowshire, Scotland. Filed Mar. 15, 1920. Serial No. 365,915. 5 Claims. (Cl. 188—202.)

5. A railway vehicle brake comprising a short hand lever at each side of the vehicle, a rocking shaft, connections to said shaft from said levers, a crank on said shaft, a pair of toggle links connected to the brakes, a member pivotally connected at one end to said crank and having a slotted pivotal connection at the other end to said toggle links, a compression spring mounted upon said member between said crank and links and a stop on said member for limiting the movement apart of said crank and toggle links under the action of said spring.



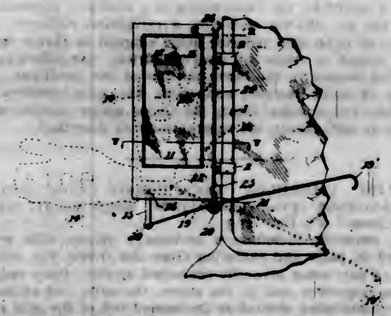
1,397,798. SAFETY FOOT-THROTTLE FOR AUTOMOBILES. EARL J. CURRIER, Ottumwa, Iowa. Filed Aug. 25, 1920. Serial No. 405,878. 6 Claims. (Cl. 74—39.)



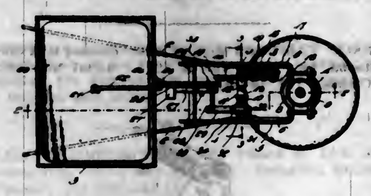
5. The combination with a hand control throttle rod and throttle actuating rod sections leading from said throttle rod, of a coupling member of angular form connected to and extending between said rod sections and moving relatively to one of the sections in one direction, and a foot control including a horizontally shiftable foot lever operatively connected to said coupling member for actuating the latter.

1,397,799. ELECTROLYTIC CELL. ELISHA BARTON CUTTEN, Minneapolis, Minn. Filed June 25, 1920. Serial No. 391,614. 7 Claims. (Cl. 204—58.)

1. An electrolytic cell comprising a tank constituting a cathode, an anode therein, a receiver supported from the top of the tank and immersed in the electrolyte surrounding the anode, and a perforated liner spaced from the inner wall of the tank.

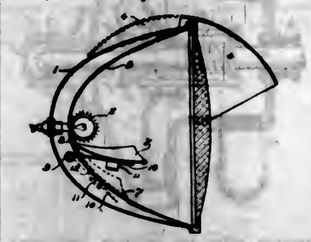


1,397,800. MEANS FOR SUPPLYING TEMPORARY TABLE-COVERS. WALTER DE MATTOS, Ottawa, Ontario, Canada. Filed June 24, 1921. Serial No. 480,122. 3 Claims. (Cl. 45—75.)



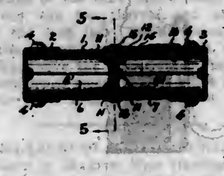
1. A device of the character described comprising a roll of covering material, means for supporting the same in position on one side of a table, means for normally preventing turning of the roll, a retaining member adapted to retain one end of the covering material against the opposite side of the table to which the roll is attached, and a cut-off bar on the retaining member.

1,397,801. DIRECTION-INDICATOR FOR AUTOMOBILES. JOHN DROTAR, Washington, D. C. Filed July 18, 1921. Serial No. 485,472. 8 Claims. (Cl. 116—52.)



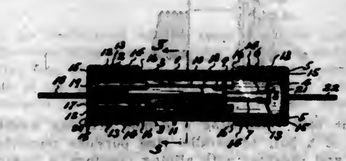
1. A direction indicator for automobiles comprising a casing having an open side and bottom, means for securing the closed side of the casing to the windshield of an automobile, indicator hands pivotally supported in said casing with the lower ends extending downwardly of the casing, said indicator hands being normally housed within the casing and adapted to be projected through the open side thereof, pull rods pivotally connected with the lower ends of said indicator hands, guide rollers for the pull rods carried by said casing, and means for adjusting the angularity of the casing relative to its supporting means.

1,397,802. CONTROLLING DEVICE FOR WINDMILLS. ALFRED EGE, Sioux Falls, S. D. Filed Jan. 4, 1921. Serial No. 434,972. 6 Claims. (Cl. 103—105.)



1. In a pump operating structure, a water tank, a float in said tank, a slidably mounted rack connected with said float and moving with the float, a rotatably and slidably mounted drum having a clutch element at one end, a rotatably mounted driving element having a clutch element for engagement by the clutch element of said drum, a gear rotatably mounted and meshing with said rack, means to be actuated from a pump operating mechanism, operatively associated with the driving element for imparting rotary movement to the same when the pump is in operation, a flexible control element for the pump operating mechanism wound upon said drum, and means to slide the drum longitudinally comprising a rocker sleeve, forks extending from the sleeve and engaging the drum, a lever arm extending from the sleeve, a striker bar pivotally mounted and having one end portion weighted and extending for engaging the lever arm, and a pin extending from said gear for engaging the unweighted end portion of said striker bar.

1,397,803. HEADLIGHT. HAROLD EDWARD ENSOR, Canterbury, and JOHN SAMPSON, Sydenham, Christchurch, New Zealand. Filed Feb. 28, 1921. Serial No. 447,079. 1 Claim. (Cl. 240—45.)



Means for the purpose indicated comprising the combination with a lamp-body, a reflector and lamp contained therein, of a hood pivotally mounted upon the exterior of said lamp-body and adapted when turned in a forwardly direction to intercept and throw down the light issuing from the upper portion of the lamp-front, a flap hingeably attached within said lamp-body and adapted to overlie the portion of said reflector beneath said lamp, such flap being adapted when turned upon its said hinge in a forwardly direction to extend at an angle with said reflector and to throw upward within the lamp-body the rays of light beneath said lamp, and means whereby said hood and said flap may be caused to turn in unison into their said respective forward or rearward positions.

1,397,804. DUPLEX FUSE CARTRIDGE. FREDERICK A. FELDKAMP, Newark, N. J. Filed May 12, 1920. Serial No. 380,768. 6 Claims. (Cl. 200—125.)

1. A multiplex fuse cartridge comprising a casing having external terminal caps on its opposite ends, a plurality of fuse elements connected in series between said terminal caps, and means for connecting in circuit between said caps but one fuse element at a time.

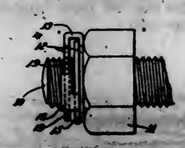
1,397,805. FUSE-CARTRIDGE. FREDERICK A. FELDKAMP, Newark, N. J. Filed Oct. 29, 1920. Serial No. 420,447. 10 Claims. (Cl. 200—125.)

1. The combination with a multiple fuse cartridge having a casing including a plurality of fuse elements and contact means for each fuse element at one end of said casing, of an exterior contact element having means for selective engagement with any one of said contact means, a shell adapted to fit upon said casing and to occupy different positions thereon in a rotative direction, said shell having means at its outer end for engaging and holding said contact element in operative position.

1,397,806. COMBINED SHADE-ROLLER AND CURTAIN-SUPPORTING BRACKET. JOHN N. GAUZENHUBER, Altoona, Pa. Filed Feb. 16, 1920. Serial No. 359,118. 2 Claims. (Cl. 156—28.)

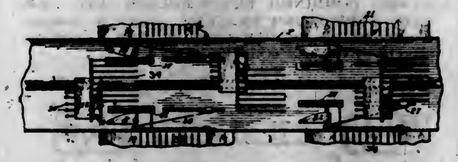
1. A device of the class described including a support, a curtain supporting bracket consisting of a body having one end thereof formed into a clamp for engaging a part of said support, and the said body being also provided with a pocket, a curtain rod supporting member adapted to be detachably fitted in the pocket, and rod engaging and carrying projections extending from the face of said supporting member.

1,397,807. BRUSH-HANGER. CHARLES E. HECHT, Irvington, N. J. Filed Mar. 5, 1921. Serial No. 449,719. 12 Claims. (Cl. 248—60.)



2. In a brush hanger, a headed member secured to the brush, and a hook member having a part adapted to extend over the rim of a pot and a part adapted to extend

on the inner side of the pot wall and said last named part being provided with a key hole slot to detachably and sep-



arately engage said headed member, whereby the hook member may be secured to the brush or completely detached therefrom at will.

1,397,808. NUT-LOCK. WILLIAM HOWARTH, Devon, Conn. Filed Dec. 15, 1920. Serial No. 431,027. 4 Claims. (Cl. 151—27.)

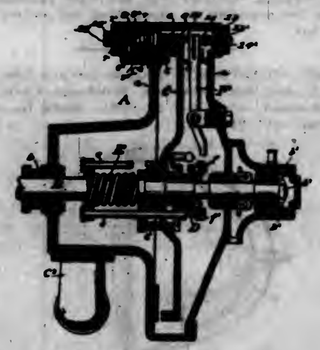
1. A nut lock comprising a double gripping washer consisting of a pair of parallel ring portions connected by a web and provided with alining openings, a locking washer consisting of a disk having an opening, said disk and gripping washer having independent rotary movements and said disk adapted to be arranged between said ring portions so that all of said openings are in alinement, and coöperating means carried by said gripping washer and disk whereby they can be locked to each other.

1,397,809. RESTAURANT SERVICE DEVICE. JOSEPH HUTCHINSON, Montreal, Quebec, Canada. Filed Feb. 12, 1920, Serial No. 358,048. Renewed Oct. 4, 1921. Serial No. 506,031. 30 Claims. (Cl. 186—1.)

2. In a device of the character described the combination with a dish tray carrier and a plurality of receiving platforms for receiving the dishes carried by said trays, means for automatically moving said trays whereby they will be caused to be positioned upon said receiving platforms, and means for releasing said trays whereby the dishes will be deposited upon said tables.

1,397,810. TURNBUCKLE-WRENCH. CARTER J. JOHNSON, Green Bay, Wis. Filed Jan. 8, 1921. Serial No. 435,812. 4 Claims. (Cl. 81—90.)

2. A turnbuckle wrench including a shell having its opposite ends bifurcated with resultant pairs of longitudinally extending legs, a stationary plug in one end of the shell, a second plug movable longitudinally within the other end of the shell, a pin carried by the stationary plug axially of the shell and lying with turnbuckle engaging end between the legs of the corresponding end of the shell and a pin carried by the movable plug and



projecting therefrom and movable therewith into and out of position to lie with one end between the legs of the corresponding end of the shell.

1,397,811. CAR-DOOR MOUNTING. GEORGE E. KNEPPER, Altoona, Pa. Filed Apr. 6, 1921. Serial No. 459,112. 6 Claims. (Cl. 16—97.)

4. A car door hanger including a supporting bracket secured to the door, a cylindrical roller in the bracket, spiral grooves cut in the surface of the cylinder forming the roller and means for positioning the axis of the roller at an angle with the plane of the door.

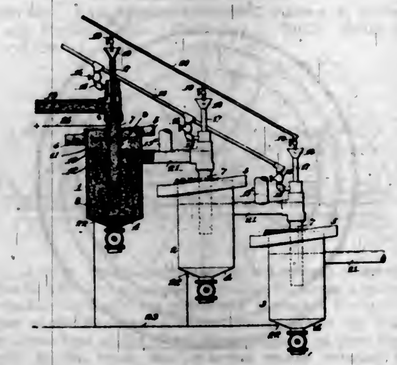
1,397,812. TURBINE GOVERNOR-VALVE. BENJAMIN B. LACY, Houston, Tex. Filed Sept. 13, 1919. Serial No. 323,565. 10 Claims. (Cl. 137—158.)

1. A governor valve for turbines, embodying in its construction a plunger adapted to control the effective port area of the turbine inlet, and means independent of said plunger adapted to automatically regulate the effective port area of said inlet should said plunger fail to function.

1,397,813. WHEEL-RIM-CLAMPING DEVICE FOR AUTOMOBILE-TIRES. UPTON S. LANDERS, Bakersfield, Calif. Filed Sept. 2, 1920. Serial No. 407,742. 1 Claim. (Cl. 152—21.)

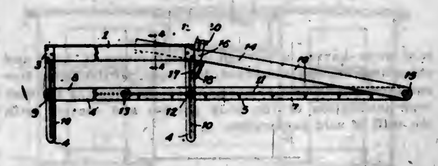
A rim clamping device for automobile wheels, including a main rim member, a demountable rim member fitting one edge of the main rim member, clamping members

secured to the inner periphery of the main rim member and each comprising a tubular bearing having arms spaced apart and overlapping the outer edge of the main



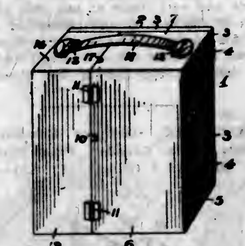
rim member, and clamping bolts having flanges abutting against the ends of the tubular bearings for engaging and disengaging the demountable rim member, opposite the space between said arms.

1,397,814. BLOWTORCH-VALVE. FRANK K. LOW, Milwaukee, Wis. Filed May 17, 1920. Serial No. 382,088. 4 Claims. (Cl. 251—45.)



3. A device of the class described comprising a casing having a valve seat, a valve stem threaded into said casing and having a head adapted to engage said valve seat, the rear end portion of said valve stem being screw threaded, a handle threaded on said stem at the rear portion of the same, a nut secured on the rear portion of said valve stem rearwardly of said handle and adapted for limiting the rearward movement of the handle, and a contractile coil spring surrounding said valve stem and having its end portions anchored to said valve stem and said handle for yieldably connecting the handle to said valve stem.

1,397,815. APPARATUS FOR CONCENTRATING ORE. ROYNS LUCKENBACH, Philadelphia, Pa., assignor to Luckenbach Processes Co. (Inc.), San Francisco, Calif., a Corporation of Nevada. Filed Dec. 10, 1917. Serial No. 206,410. 8 Claims. (Cl. 83—85.)



1. An apparatus for concentrating ores, which comprises a tank, a vertically arranged feed tube extending into the tank, means for supplying ore pulp, air and a frothing material to the tube, a conical deflector in the lower portion of the tank and below the tube, whereby the agitation of the pulp issuing from the tube will form bubbles to which mineral values will adhere, the said cone deflecting the heavier ingredients of the pulp outward toward the walls of the tank, there being an outlet from the tank below the top thereof and above the lower extremity of the feed tube, means above the outlet for preventing the heavier ingredients of the pulp from directly rising above the outlet, there being an opening in the last mentioned means whereby the mineral bearing froth may rise above said outlet.

1,397,816. MEASURING AND DESCRIBING INSTRUMENT. JOHN H. MARTIN, New Hartford, N. Y. Filed Jan. 8, 1921. Serial No. 435,965. 3 Claims. (Cl. 33—27.)

3. An instrument of the class described including a body comprising spaced angular members, slotted arms having one of their ends connected to the vertical portions of the angular members and disposed beneath the horizontal portions thereof, a bar arranged transversely across the arms and adjustable longitudinally thereof, a pivoted arm connected to one end of the bar and normally resting between the spaced angular members at one end thereof, means for retaining the end of the pivoted arm in its adjusted position, and a marking instrument carried by the pivoted arm adjacent to one end of the body as and for the purpose set forth.

1,397,817. CAMERA BOX OR CABINET FOR COMBINED MOVING-PICTURE CAMERAS AND PROJECTORS. FRANK MLADINICH, New York, N. Y., assignor of fifteen one-hundredths to Elmer Pontin, Elizabeth, N. J., and forty-two and one-half one-hundredths to Augustus R. de Tartas, Rockwell Center, Long Island, N. Y. Filed May 1, 1920. Serial No. 378,203. 8 Claims. (Cl. 88—17.)

1. A camera box or cabinet for a combined moving picture camera and projector, comprising a main-member, a box-shaped member hinged at one edge to said member, and a second box-shaped member hinged at one edge to said first-mentioned box-shaped member.

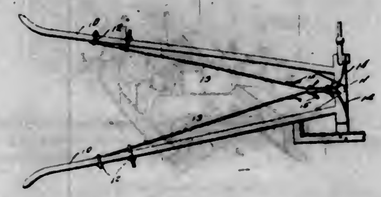
1,397,818. PEN OR PENCIL CLIP. RICHARD MOORE, Ossining, N. Y. Filed Dec. 29, 1920. Serial No. 433,912. 2 Claims. (Cl. 24—11.)

1. A securing clip comprising a split sleeve like body portion having a perforation therethrough opposite the

split, and a securing portion integral with said body portion in alinement with said perforation, said securing portion comprising a stem reversely bent with respect to the body portion and extending obliquely therefrom,

said stem having a portion thereof reversely bent and extending angularly toward the body portion, the free end thereof arranged to normally extend into and through said perforation of the body portion and contact with the wall of said perforation.

1,397,819. DRIVER FOR WHEELS, SHAFTS, AND THE LIKE. ANDERS JOHAN ERICSSON MUNTERS, Stockholm, Sweden, assignor to Aktiebolaget Pump-Separator, Stockholm, Sweden, a Corporation of Sweden. Filed Dec. 21, 1918. Serial No. 267,877. 4 Claims. (Cl. 192—44.)

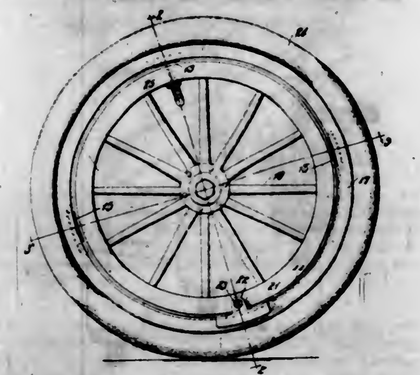


1. A coupling device, comprising a cylindrical member and an approximately triangular member rotatable within the cylindrical member, a pair of disks secured to said triangular member, a plurality of rollers disposed between said disks and each having a floating movement between one side of the triangular member and the inner surface of the cylindrical member, and a pin passing through each of said rollers and said disks at one side of the center of the length of the side of the triangular member for limiting the floating movement of the rollers thereby to cause the same to engage the cylindrical and triangular members for rotation together in one direction.

1,397,820. NUT-LOCK. DELANCY ELWOOD NEWCOMB, Sydney, Nova Scotia, Canada. Filed Sept. 26, 1918. Serial No. 255,792. 1 Claim. (Cl. 151—36.)

A nut lock comprising a washer having a central perforation for a bolt and a radial cut whereby both edges of the cut portion may be bent in opposite directions, the washer being formed integral with a wing member designed to engage the member against which the nut is adapted to bind and to prevent turning of the washer, and a lock projection extending from the washer and designed to be bent against the face of the nut.

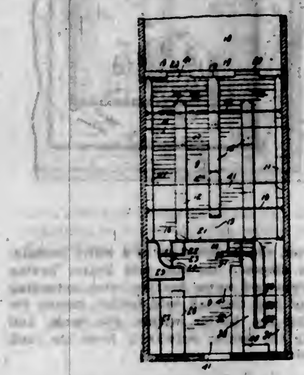
1,397,821. BINDER ATTACHMENT. FRANCIS M. PERRIN, Loco, Okla., assignor of one-half to H. P. Lowery, Loco, Okla. Filed Jan. 17, 1920. Serial No. 352,094. 1 Claim. (Cl. 56—102.)



A weed and grass excluding attachment for a harvester comprising forwardly extending resilient arms, means for adjustably connecting the resilient arms to the gathering arms of the harvester, said resilient arms having their rear portions yieldably contacting and laterally directed away from each other, and downwardly and rearwardly and laterally extending weed and grass deflecting elements carried by the resilient arms.

1,397,822. HEADLIGHT DIFFRACTION-LENS. CHAUNCEY G. PERRIN, Washington, D. C. Filed Oct. 14, 1920. Serial No. 416,869. 4 Claims. (Cl. 240—48.4.)

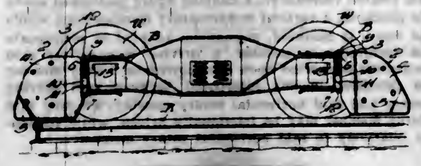
4. A diffraction lens for a vehicle head light comprising a glass plate having approximately one half of its surface on both sides ruled to form minute alternating grooves and ridges in substantially parallel lines and the other half of one surface coated with silver or other reflecting material.



1,397,823. DEMOUNTABLE RIM. EDMUND ROGOWSKI, Chicago, Ill., assignor of one-half to Bernard Freud, Chicago, Ill. Filed June 29, 1920. Serial No. 392,611. 4 Claims. (Cl. 301—11.)

1. A device of the character described including an inner rim band having spaced lugs projecting from its periphery, an outer rim band surrounding the inner band

and having a hollow base, the bottom wall of said base being pressed inwardly to provide a socket receiving one of said lugs and said wall being cut away to provide a slot opening through one side edge of the base and receiving the other of said lugs, and means binding the outer band upon the inner band.

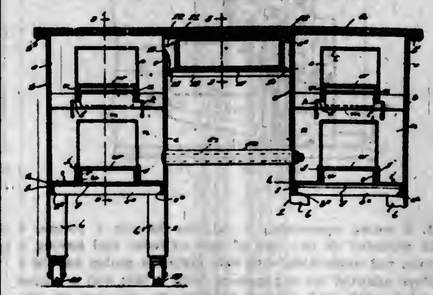


1,397,824. SELF-SERVING STORE. CLARENCE SAUNDERS, Memphis, Tenn., assignor to Piggly Wiggly Corporation, Memphis, Tenn., a Corporation of Delaware. Filed June 20, 1917. Serial No. 175,942. 5 Claims. (Cl. 211—8.)

1. In a store for vending merchandise, a plurality of display units normally freely movable and adapted to be arranged to form a single circuitous path for customers, the outer units having blank outer faces, all the units of the store being adapted for arrangement in contact with each other to form a store unit closed on all sides, and bars extending across the ends of said closed unit for locking the whole together.

4. An apparatus for the vending of merchandise having a series of freely movable display units arranged parallel to each other and with spaces between them to form aisles and with the ends of alternate cabinets spaced from the wall or partition of the store, whereby a circuitous path is provided for the passage of customers from the entrance to the exit, one-way turnstiles at the entrance and exit of said passage, and supporting frames for the turnstiles freely movable on the floor, substantially as set forth.

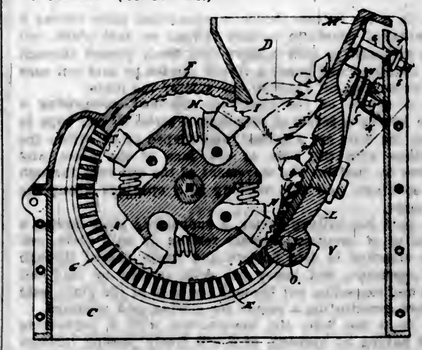
1,397,825. CAR-WHEEL FENDER. JOSEPH F. THOMPSON, Marietta, Ohio. Filed July 11, 1921. Serial No. 483,929. 2 Claims. (Cl. 293—58.)



1. A wheel fender comprising an attaching bracket and a fender pivotally connected therewith, including a portion extending alongside the wheel and a portion directed in front of the wheel tread and extending across the track, the lower edge of the fender being disposed in close proximity to the track, and co-acting means between the bracket and fender for automatically lifting the latter when it is swung to inoperative position, whereby it will clear the track sufficiently far to enable free access to the wheel to be had.

1,397,826. EXPLOSIVE. GUILLAUME WIRTH, Hayange, France, assignor to Societe les Petits Fils de Francois De Wendel et Cie., Paris, France. Filed Sept. 27, 1919. Serial No. 326,972. 2 Claims. (Cl. 52—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

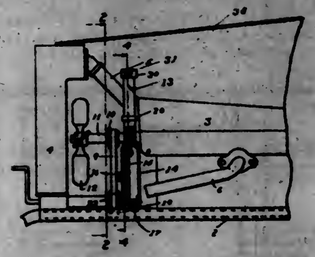
1. An explosive composed of a mixture of a combustible organic substance capable of absorbing liquid air with a combustible metallic powder in the proportion of less than 150 grams of combustible metallic powder per liter of composition, said mixture being impregnated with liquid air.



1,397,827. METAL DESK. FRANK P. WILLIAMS and ALLAN MCINTYRE, Detroit, Mich. Filed Nov. 13, 1920. Serial No. 423,856. 11 Claims. (Cl. 45—6.)

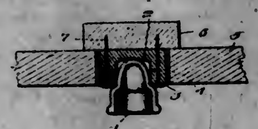
1. In a metal desk, the combination of a pair of drawer cabinets of sheet metal having inside walls provided at their tops with lock-seam folds, and a central tie plate provided at its sides with lock-seam folds adapted to lock in the said folds of the inner walls of the cabinets to tie the two cabinets together, said tie plate provided with front and rear flanges, the former provided with an opening, a floor supported on said front and rear flanges, and a drawer running into the opening formed in the front flange.

10. In a sheet metal desk, the combination of drawer cabinets provided along one of the top edges with turned-out lock-seam folds, and a strip of sheet metal having a turned-over lock-seam fold adapted to slide endwise into the folds of the cabinets for locking and assembling the cabinets together, substantially as described.



1,397,828. CRUSHER AND PULVERIZER. MILTON F. WILLIAMS, St. Louis, Mo., assignor to Williams Patent Crusher & Pulverizer Co., St. Louis, Mo., a Corporation of Missouri. Filed Aug. 7, 1919. Serial No. 315,893. 9 Claims. (Cl. 83—11.)

1. A machine of the character described comprising a casing having radial slots in its side walls, a rotor, a

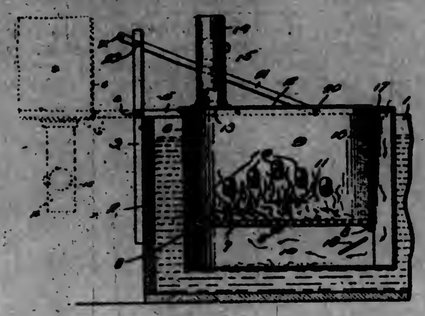


cage, a cushioned breaker plate abutting an edge of said cage, a pivot shaft passing through the lower end of said plate and guided in said radial slots in the casing, means to adjust said shaft radially and secure it in adjusted position, and resilient means for cushioning the upper end of said breaker plate.

1,397,629. AIR-PUMP FOR AUTOMOBILES. William A. Wilson, Minneapolis, Minn. Filed Feb. 25, 1920. Serial No. 361,365. 2 Claims. (Cl. 230—27.)

1. A pump comprising a cylinder having a piston, a gear mounted on one end of said cylinder and having a pitman rod connection with said piston, a pulley having a surface adapted for engagement with a belt and a pinion to mesh with said gear, a support for one end of said cylinder adapted for adjustment for moving said cylinder and pulley transversely of its longitudinal axis, said cylinder having an air intake and valve and a hose coupling and means near the opposite end of said cylinder from said gear and pinion for holding said cylinder in its working position and permitting oscillation thereof.

1,397,830. QUEEN-BEE-REARING DEVICE. William Benjamin Yates, Ventura, Calif. Filed Aug. 30, 1920. Serial No. 406,846. 4 Claims. (Cl. 6—9.)



1. In a bee culture device, a supporting plate having a plurality of openings, holders resting on said plate, cell cups attached to said holders and freely passed through said openings, and honey bee cells carried by said cell cups and extending out through one side of the plate.

2. A device of the character specified, comprising a plate having a series of openings, a series of cell cups to which the cells are attached, and shaped to fit within the openings with the cells at one face of the plate, and holders for limiting the movement of the cell cups through the openings, and for covering said openings about the cell cups.

3. In a bee culture device, a supporting plate having a plurality of openings, holders resting on said plate, cell cups attached to said holders and freely passed through said openings, and honey bee cells carried by said cell cups and extending out through one side of the plate, said holders constituting a means for closing said openings.

4. In a bee hive, the combination with a supporting plate having an opening, of a cell freely passing through said opening, and a holder resting upon said plate for supporting the cell and closing said opening.

1,397,831. TANK-HEATER. James H. Arrowsmith, Hastings, Nebr. Filed Mar. 6, 1920. Serial No. 363,389. 5 Claims. (Cl. 126—367.)

2. In a tank heater, the combination of a water containing tank, a heater disposed therein, said heater having heating means therein and water heating tubes extending from side to side of and through said heater, means for pivotally supporting the heater within the tank, and means for swinging the heater outwardly from the tank to an inverted position.

1,397,832. AMUSEMENT APPARATUS. Walter H. Balcom, Winchester, and William A. Ready, Brighton, Mass., assignors to National Company, Boston, Mass., a Corporation of Massachusetts. Filed May 1, 1920. Serial No. 378,118. 14 Claims. (Cl. 46—40.)

1. In combination a horizontal rotary member, a platform located thereabove, a dancing figure positioned above said platform, a vertical reciprocatory member upon which said figure is mounted, mechanism adapted to reciprocate said reciprocatory member, a driving member for said mechanism supported upon said horizontal rotary member and frictional means interposed between said driving member and said horizontal rotary member, whereby said driving member may be frictionally driven, while stationary relatively to said horizontal rotary member.

1,397,833. CATTLE-STANCHION. Daniel B. Coates, Payette, Idaho. Filed June 20, 1921. Serial No. 478,699. 4 Claims. (Cl. 199—140.)

1. A cattle stanchion comprising end members, a side member rigidly connecting the end members, and a second side member pivotally connected to one of the end members to occupy contracted and expanded positions, and means for locking the side member in contracted position comprising a link movable through the side member and pivotally connected to the end member, said link being provided with a flattened portion and said side member with a slot for receiving the flat portion, and a locking

lever pivotally connected to the link at the flat portion and operating to retain the link within the slot and to effect the removal thereof when lifted.

1,397,834. DETACHABLE RUBBER HEEL FOR SHOES. Sam Dow, Boston, Mass. Filed May 26, 1920. Serial No. 384,209. 1 Claim. (Cl. 36—36.)

A heel for boots and shoes having, in combination, a body portion having an uninterrupted flat surface, a dovetailed slide plate with parallel sides fast to the bottom of said body portion, a rubber tread for said heel and an imperforate plate embedded in said tread and locked therein, said rubber forming shoulders at the opposite ends of said imperforate plate and said imperforate plate having a pair of parallel flanges inclined toward each other and adapted to slide upon said slide plate and engage said parallel sides, the upper edges of said flanges being substantially flush with the upper face of said tread, said plates being prevented by the engagement of said shoulders with the opposite ends of said slide plate from relative movement longitudinally thereof when the parts are assembled.

1,397,835. STYLUS-HOLDER FOR PHONOGRAPH-REPRODUCERS. Martin Elmer, Hastings, Mich. Filed June 24, 1921. Serial No. 479,989. 3 Claims. (Cl. 274—37.)

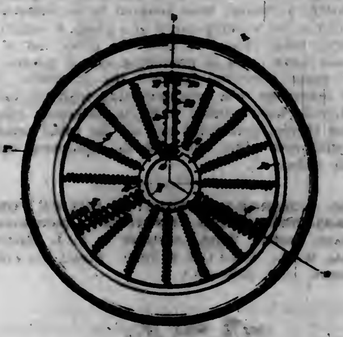
1. A stylus holder comprising a body member with jaws at one side thereof spaced from the body to provide a neck adapted to receive a clamping yoke, a shank adapted to be engaged with a sound box socket, a block of resilient material embedding said shank clamped within said body, a stylus supporting block of resilient material clamped within said jaws, and a clamp having a cam slot therein slidably engaged with the neck of said jaws.

1,397,836. SAND-SETTLER. Ira Anthey Karns, Tulsa, Okla. Filed Apr. 7, 1921. Serial No. 459,498. 3 Claims. (Cl. 103—64.)

1. A sand settler of the class described, comprising in combination, a tubular head adapted to be connected at its one end to the working barrel of a pump, a plurality of telescoping tubes extending from the other end of said head, said tubes being in graduated spaced relation, the greatest space occurring between the outermost tubes, and the innermost tube communicating with the interior of the tubular hood member while the outermost tube has a portion thereof perforated and all the tubes communicating with each other and with the innermost tube at alternate ends.

1,397,837. CHARGE-HUMIDIFYING DEVICE FOR INTERNAL-COMBUSTION ENGINES. Archibald S. Kincaid, Seattle, Wash., assignor to L. L. Patterson, Seattle, Wash. Filed Oct. 6, 1920. Serial No. 415,012. 6 Claims. (Cl. 123—25.)

1. A means for automatically supplying water vapor to internal combustion engines comprising a float chamber, a float therein, a supply valve for said chamber controlled by said float, a vaporising chamber integral with said float chamber and projecting laterally therefrom at an elevation such that a portion only of said vaporizing chamber will be filled with water, said vaporizing chamber having an inlet port from the float chamber below the normal water level, and the vaporising chamber having a discharge port connecting with its top and a



relief port connecting said discharge port and the float chamber above the water level therein, and said float chamber having a vent to the atmosphere above said water level.

1,397,838. OIL-CUP. WILLIAM HENRY LINDENFIELD, Lexington, Tenn. Filed Sept. 30, 1920. Serial No. 413,773. 5 Claims. (Cl. 184—58.)

1. An oil cup having in the top thereof oppositely arranged openings for permitting the insertion of lubricant, and a cover mounted to rotate in the cup and having radial extensions fitting over the openings for closing the same, and releasable locking means between the cup and the cover released by flexible turning of the cover, a valve in connection with the cup for controlling the flow therefrom, said valve passing through the top of the cup and through the cover, a cup shaped member in connection with the outer end of the valve, a spring arranged between the said cup shaped member and the cover and normally pressing the cover to its seat, the valve having a head engaging outside of the cup shaped member, and releasable locking mechanism between the member and the head.

1,397,839. SPRING-WHEEL. JAMES ARTHUR LIVINGS, Spring, Tex. Filed July 31, 1920. Serial No. 400,415. 1 Claim. (Cl. 152—52.)

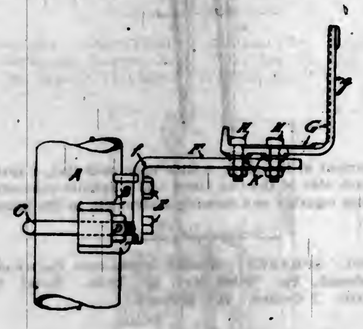
A wheel comprising, a rim, a hub, coiled springs connecting said rim and hub at regular spaced intervals throughout the circumference of the two, said springs being arranged in pairs and extending radially from the hub, extensible spokes pivotally connecting said rim and hub at intervals of 120° in a manner to prevent lateral movement of the hub with respect to the rim and to permit radial movement of said hub, and coiled springs surrounding said spokes and interposed between said rim and hub.

1,397,840. TEAT-CUP. ARTHUR C. MACARTHUR, Syracuse, N. Y. Filed May 24, 1919. Serial No. 299,440. 2 Claims. (Cl. 31—102.)

1. A teat cup including a casing having an opening in its lower wall, a lining within the casing and a branch pipe connected to the lining and embodying a resilient portion normally of greater diameter than the opening in said casing, said portion seated in said opening and

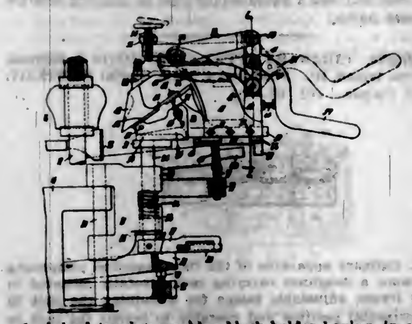
having a part contracted thereby to form a tight joint between the branch pipe and the casing.

1,397,841. PLOW. VERNICE M. MAYS, Ketchum, Okla. Filed Jan. 3, 1919. Serial No. 269,403. 2 Claims. (Cl. 97—37.)



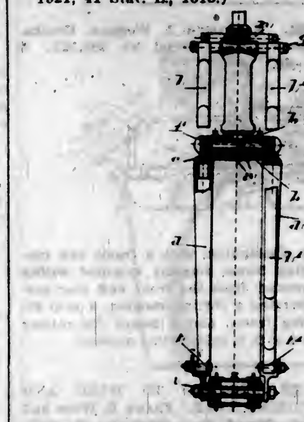
2. A disk plow including shafts arranged at the opposite sides of the center of the plow and at diverging angles with respect thereto, each of said shafts having its inner end arranged at an angle to the body portion thereof, and a series of disks mounted on each shaft, one disk of each series being mounted on the angular end of the shaft in reversed relation with respect to the other of said disk.

1,397,842. METHOD OF MAKING TIRE-CASING FILLERS. FRANK M. NETZEL, Chicago, Ill., assignor to Velvet Rubber Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 21, 1921. Serial No. 453,894. 3 Claims. (Cl. 18—53.)



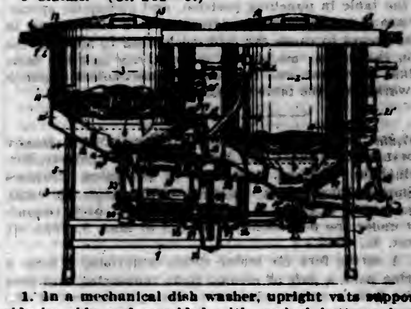
1. The method of making a tire casing filler, composed of a center strip of relatively hard solid rubber and two side strips of more resilient rubber, consisting in, first, making the strips separate, from relatively soft solid rubber and of a shape making the sides of the filler somewhat dished, when the strips are placed together, second, placing the strips together, third, bending the strips while together into annular form and incasing the same in a fabric wrapping, and, fourth, placing the filler in a mold to provide spaces between the sides of the filler and the mold to allow the side strips to expand when the strips are vulcanized together.

1,397,843. SUPPORT FOR SIGNAL-LAMP BRACKETS. FRED RAPP, West Albany, N. Y. Filed July 23, 1921. Serial No. 486,969. 2 Claims. (Cl. 248—20.)



1. In a support for signal lamp brackets, a supporting member one end thereof adapted to be fastened to a standard; bolt holes in said member countersunk as with a spherical reamer; washers shaped as spherical segments and adapted to seat in and project beyond said countersunk holes; and bolts adapted to bind said supporting member and washers firmly to a signal lamp bracket.

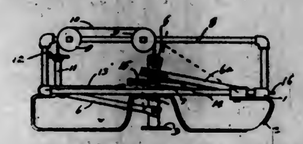
1,397,844. HEEL-TURNING-MACHINE BLOCK-HOLDER. JOHN H. VINTON, Keene, N. H., assignor to Baxter D. Whitney & Son, Inc., Winchendon, Mass., a Corporation of Massachusetts. Filed May 20, 1920. Serial No. 382,848. 9 Claims. (Cl. 12—87.)



1. A heel turning machine block holder having, in combination, a support for a block, a primary clamping member adapted to engage said block, a pivot for said primary clamping member, and a lever constituting a secondary clamping member and adapted to engage said primary clamping member and cause the same to engage said block and force it against said support, and a toggle device connected to said secondary clamping member and adapted to cause the same to engage said primary clamping member and lock said primary and said secondary clamping members in position with said block clamped against said support.

1,397,845. COMPENSATING-SPRING FOR THE FRONT FORK OF MOTORCYCLES. MARCEL NARCISSE VIRATELLE, Villeurbanne, Rhône, France. Filed Aug. 24, 1921. Serial No. 496,081. 1 Claim. (Cl. 280—97.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

An arrangement of compensating springs for the forks of motor cycles comprising two multiple laminated springs mounted in front of the front wheel of the motor cycle, one corresponding to each of the members of the fork, the lower ends of the springs being affixed to the lower ends of the corresponding members of the fork and the upper ends pivoting, by means of a pair of side cheeks, about a shaft rotating about a collar affixed to the steering column, the springs being connected also, between the two points of attachment, to the ends of intermediate articulation levers rigidly connected together, and connected to the head of the fork carrying the fork members and pivoting about the shaft at the end of the steering column, the attachment of the springs to these intermediate articulation levers dividing the springs into two parts of unequal length, a longer lower part and a shorter upper part, the whole being arranged in such a manner that if the front wheel of the motor cycle is lifted suddenly by any obstacle, the fork will be projected frontward, causing the short part of the springs to be straightened, and the longer lower part to be compressed on account of the play of the intermediate articulation so that the springs, under the double action of their deformation, will cause the whole arrangement to return to its normal position of equilibrium, substantially as described.



1,397,846. DISH-WASHING MACHINE. WILLARD R. WALKER, Syracuse, N. Y., assignor to The Walker Brothers Company, Syracuse, N. Y., a Corporation of New York. Filed Aug. 13, 1918. Serial No. 249,845. 6 Claims. (Cl. 141—9.)

1. In a mechanical dish washer, upright vats supported side by side and provided with conical bottoms having

their apexes disposed in planes one above the other, a drainage conduit leading from the higher apex into the conical bottom of the other vat, and an overflow pipe leading from the vat having the higher conical bottom into said drainage conduit.

1,397,847. WEEDER. ELSWORTH J. WONSER, Eureka, Wash. Filed June 1, 1920. Serial No. 385,523. 3 Claims. (Cl. 55—60.)

1. In a weeder, in combination with a frame and runners thereof, a cutting frame hingedly mounted within said frame and suspended from the front and rear portions thereof, and carrying a cutting member, a stop attached to said cutting frame, and a means for raising said cutting frame and with it said cutting member.

1,397,848. ARTICLES SECURED TO WIRE AND METHOD OF SECURING SAME. FRANK E. WOOD and CLARENCE G. WOOD, Girard, Pa. Filed Oct. 1, 1919. Serial No. 327,656. 7 Claims. (Cl. 29—148.)

1. An article of manufacture comprising a wire; and a plate secured on the wire, the portion of the wire within the plate having a distorted cross section, and portions of the wire being swaged out and against the sides of the plate.

1,397,849. SHEET SPACING AND PUNCHING MACHINE. NORMAN E. WOODS, Paterson, N. J., assignor to Walter H. Foster, New York, N. Y. Filed Feb. 28, 1920. Serial No. 361,915. 31 Claims. (Cl. 164—117.)

1. In a spacing and punching machine, a traveling table to support the work, punching mechanism, feed mechanism for advancing the table by a step by step motion to successive punching positions, a locking mechanism for locking the table in punching position, and automatic operating means for successively actuating said mechanisms in timed accord to cause the feed mechanism to advance the table, the locking mechanism to positively lock the table against movement, and the punching mechanism to punch the work while the table is held locked.

1,397,850. SPRING-FORK FOR MOTORCYCLES. HENRY SMALLWOOD YOXALL and JOHN JAMES RICHARDSON, Birmingham, England, assignors to Brampton Brothers Limited, Birmingham, England. Filed Sept. 30, 1920. Serial No. 413,878. 9 Claims. (Cl. 208—97.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A spring fork for motor cycles comprising a fork, a steering post, a pair of pivoted links connecting said post to the fork, a spring adapted to resist movement of the links about their pivots, a pair of resilient links connecting said post to the fork, each link of said pair having means for attaching it to the steering post upon one end and

an abutment at the other, a slide upon each link, a spring upon each side of the two slides and a spindle connecting the slides together and forming a pivot pin in the linkage system.

1,397,851. SPRAYER. ROBERT ALEXANDER BACHMANN, Pittsburgh, Pa. Filed Nov. 29, 1920. Serial No. 427,040. 7 Claims. (Cl. 299—88.)

1. A sheet metal sprayer comprising a triangular reservoir an air pump whose ends are formed by the ends of the reservoir and a liquid supply pipe in spraying relation to said pump.

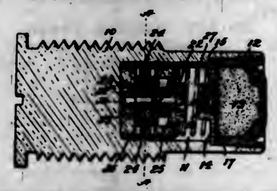
1,397,852. CULINARY APPARATUS. DAVID G. BENDER, Blue Island, Ill. Filed Dec. 4, 1919. Serial No. 342,517. 13 Claims. (Cl. 53—7.)

2. Culinary apparatus of the class described comprising a frame, a doughnut carrying rack pivotally mounted in said frame, adjustable means for sustaining the rack in a horizontal position and operable to permit the rack to swing about its axis, and turning means connected to the rack for rotating the same.

1,397,853. BINDER ATTACHMENT FOR SEWING-MACHINES. JOHN F. BENDER and JACOB MARCUS, Brooklyn, N. Y. Filed Mar. 4, 1920. Serial No. 363,259. 19 Claims. (Cl. 112—188.)

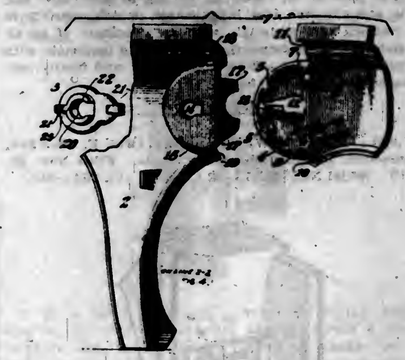
1. In combination a folding plate; and a removable guide member free of attachment to other structure and constructed and positioned to be loosely held on said plate

in operative holding position by material passing between the plate and guide member.



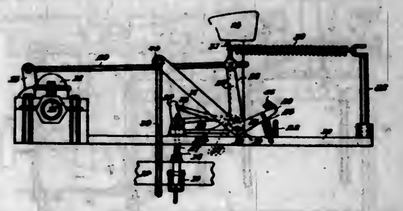
9. In combination, a folding plate formed with a flat receiving face, an axial rib merging into said face, and side flanges provided with inwardly folded lips extending to near the rib; and a guide-tongue conforming to the shape of the rib and held near thereto by said lips.

1,397,854. REGISTERING APPARATUS. WILLIAM H. BYWATER, Trenton, N. J. Filed Jan. 15, 1920. Serial No. 351,524. 3 Claims. (Cl. 235—93.)



1. Register operating apparatus comprising a turnstile positioned to block and open two passageways, and supplementary means for blocking said passageways alternately at will for converting said apparatus into either an entrance or exit registering apparatus.

1,397,855. PERCUSSION-FUSE. ROBERT RAYMOND CAREY, Phillipsburg, N. J., and WILLIAM L. LUKENS and LEIGHTON N. D. MIXSELL, Bethlehem, Pa., assignors to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Aug. 19, 1918. Serial No. 250,566. 7 Claims. (Cl. 102—39.)

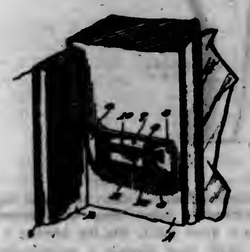


1. In a fuse for projectiles, a hammer comprising a cylindrical body, a centrally arranged firing pin fixed to the body and an annular guard surrounding the forward end of the firing pin and movable in a cavity in the hammer body to protect or expose the point of the pin, in combination with a bolt operating in a radial opening in the hammer body and normally arranged in the rear of the guard to hold it in protecting position, a fixed closure movable with said body for the outer end of said opening, said bolt being movable under the influence of centrifugal force to free the guard and permit it to expose the point of the pin.

1,397,856. STOVE OR RANGE. CHARLES D. CARTER, New York, N. Y., assignor to The Floyd-Wells Co., Boyertsford, Pa., a Corporation of Pennsylvania. Filed June 25, 1920. Serial No. 391,703. 3 Claims. (Cl. 126—304.)

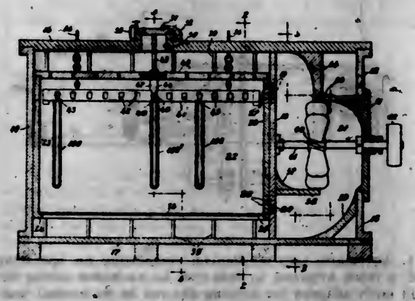
1. The combination with a skirt base and leg having interlocking portions to aline them with respect to each other, to form a flush joint, the leg having a key-shaped aperture, the skirt base having a rearwardly extending post terminating in a key-shaped lug to pass through said aperture, of a locking member having a key-shaped aperture to adapt it to pass over the lug of the post and provided with a cam face to engage said lug, whereby when said locking member is turned the skirt base and leg will be locked together.

1,397,857. AUTOMATIC TRIP MECHANISM. ELMER A. CLARK, Joliet, Ill. Filed Jan. 30, 1919. Serial No. 274,138. 4 Claims. (Cl. 137—139.)



1. Automatic trip mechanism comprising an operating rod, a latch attached to said rod, an anchored spring for said latch adapted for holding the rod in its normal position, a hook lever adapted for restrainingly engaging said latch when the rod is in a shifted position with the spring under tension, a weight actuated trip lever operatively associated with said hook lever, means adapted for engaging said trip lever at a predetermined time whereby the trip lever is over-balanced for shifting and releasing the hook lever for the return of the operating rod to its normal inoperative position, a pivoted set lever, a pull member attached to one end of the set lever, an off-set at the other end of the set lever adapted for engaging and shifting the trip lever and latch to their set positions upon the movement of the set lever and means adapted to automatically return the set lever to its normal position when released.

1,397,858. FIREPROOFING OF TEXTILE FABRICS AND OTHER POROUS ARTICLES. THOMAS JOHN IRELAND CRAIG, Manchester, England, assignor of one-half to Whipp Bros. & Tod, Limited, Manchester, England. Filed Oct. 30, 1917. Serial No. 199,260. 18 Claims. (Cl. 23—5.)

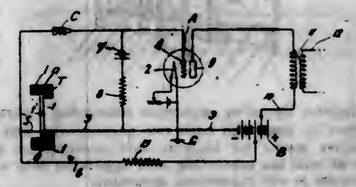


1. The process of rendering fibrous or absorbent materials and the like less inflammable, which consists in first treating said materials with an aluminate of an alkali metal, then subsequently treating said materials with a solution containing sodium bicarbonate, and finally subjecting said materials to heat.

1,397,859. WINDOW-WEDGE. BENJAMIN F. DICKENS, Vancouver, British Columbia, Canada. Filed Nov. 25, 1919. Serial No. 340,513. 2 Claims. (Cl. 292—342.)

1. In a window wedge, the combination of an attaching plate, and a wedge plate slidably carried by said attaching plate and being bent near one end oppositely from its attaching plate and then bent forwardly and toward the plane of the attaching plate to form an inclined wedge surface.

1,397,860. DYEING-MACHINE. HOWARD M. DUDLEY, Philadelphia, Pa. Filed Nov. 21, 1919. Serial No. 339,659. 3 Claims. (Cl. 8—19.)



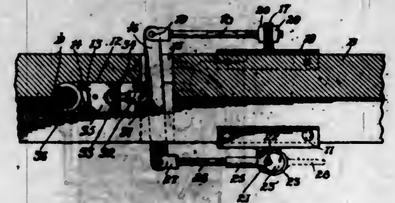
1. In a dyeing machine, in combination, a closed receptacle, a dyeing chamber within the receptacle and spaced therefrom, the dyeing chamber having a foraminous top and a foraminous bottom, a propeller chamber connecting the upper and lower chambers formed by the tops and bottoms of the receptacle and the dyeing chamber, a revolvable propeller within the propeller chamber, a series of openings connecting the side chambers formed by the sides of the dyeing chamber and the receptacle with the lower portion of the propeller chamber and a series of openings connecting the side chambers formed by the sides of the dyeing chamber and the receptacle with the upper portion of the propeller chamber.

1,397,861. IGNITION APPARATUS FOR INTERNAL-COMBUSTION ENGINES. AUGUSTE DUBREUIL, Paris, France, assignor to Societe Anonyme pour L'Equipment Electrique des Vehicules, Issy les Moulineaux, France, a Corporation of France. Filed Apr. 16, 1919. Serial No. 290,548. 4 Claims. (Cl. 294—16.)

1. In a combined coupling and speed governing mechanism for magneto shafts and the like, comprising a driving shaft, a driven shaft, complementary disks carried by each shaft, resilient connections between said disks and weighted means carried by said resilient connections adapted to form a centrifugal governor for controlling the relative positions of said shafts.

1,397,862. TRANSMISSION SYSTEM. ALBERT L. FITCH, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1917. Serial No. 203,949. Renewed Dec. 26, 1918. Serial No. 268,420. 17 Claims. (Cl. 179—171.)

2. In combination, a condenser transmitter with an electron discharge device, one terminal of the transmitter being permanently at ground potential and a source of electromotive force common to a circuit through the condenser transmitter and the output circuit of said device.

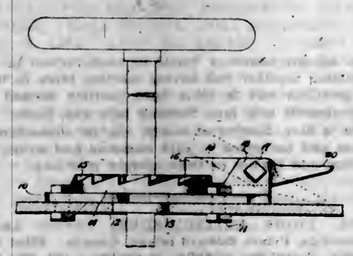


1,397,863. TRUSS. LOUIS D. GANDON, San Francisco, Calif. Filed Aug. 4, 1920. Serial No. 401,227. 3 Claims. (Cl. 128—121.)

1. In a truss, the combination with a pad carrying block having a belt secured thereto of means for detachably connecting the other extremity of the belt with the block, comprising, a cut-away portion therein leaving an exposed side wall; and an engaging member adapted to parallel and frictionally contact with said side wall.

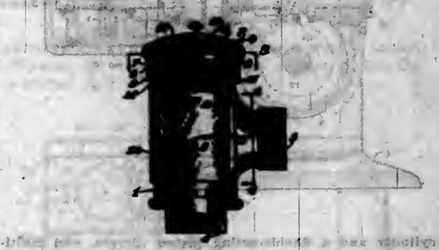
1,397,864. SAFETY-KEY FOR DRILLING-RIGS. EVAN J. GRIFFITH, Riverton, Wyo. Filed June 1, 1920. Serial No. 385,727. 5 Claims. (Cl. 287—93.)

1. The combination with an engine drive shaft including a crank pin, of a pitman rod having a longitudinally extending slot therein arranged to receive the crank pin, a block slidably mounted in the longitudinally extending slot, a cross lever pivotally connected to said block,



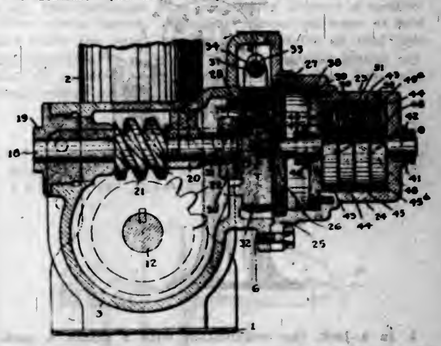
bearing brackets secured to the opposite sides of the pitman, means adjustably connecting the cross lever with the bearing brackets, and an operating lever for swinging said cross lever toward and away from said pin.

1,397,865. MEASURING APPARATUS FOR CORSETS. LENA C. HILLIARD, Boston, Mass. Filed May 27, 1918. Serial No. 236,668. 5 Claims. (Cl. 33—15.)



1. A measuring apparatus for corsets comprising a skeleton corset having, in combination, a series of vertical, flexible, resilient members and a series of horizontal, flexible, non-resilient members connecting said vertical members together.

1,397,866. BRAKE-HOLDING DEVICE. ROBERT L. JAMES, Birmingham, Ala. Filed Mar. 9, 1921. Serial No. 450,904. 5 Claims. (Cl. 74—118.)

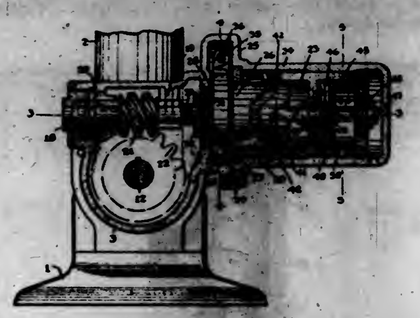


1. A brake locking device comprising a rotatable pinion, a pivoted dog adapted to seat itself by gravity in the successive notches of the ratchet pinion, said dog being located substantially radial to the axis of rotation of said ratchet pinion, the said dog being located between a pair of stationary lugs, the one of said lugs which receives the thrust of the dog being of sufficient length to reach nearly into contact with the periphery of said ratchet pinion.

1,397,867. VALVE. THOMAS G. JONES, Philadelphia, Pa. Filed May 28, 1920. Serial No. 384,446. 6 Claims. (Cl. 251—62.)

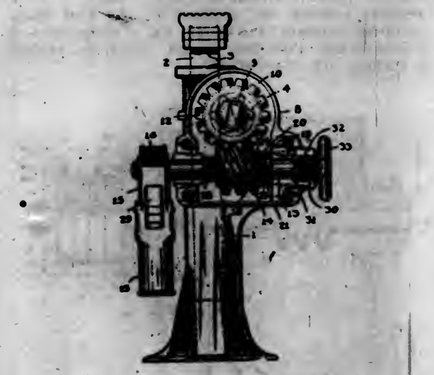
3. In a valve, a casing, a rotatable hollow member therein, the side of the latter having therein a port of variable size, a cup on said casing, a washer on said cup, a bolt in said washer adapted to pass through said cup and the top of said casing and connectible with said member, and an adjusting device on said bolt adapted to be seated on said washer.

1,397,868. SELF-LOWERING JACK. JOHN C. KOFF, Bellevue borough, Pa., assignor to The Duff Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 4, 1921. Serial No. 442,866. 7 Claims. (Cl. 254—103.)



1. In a self-lowering jack, a base and a vertically movable load member, vertical screw means for lifting comprising a screw which is rotated in one direction to effect lifting and in the opposite direction by the action of the load in lowering, manually releasable means automatically operative to hold the load member, and a closed rotary liquid-retarding device operatively connected with the screw.

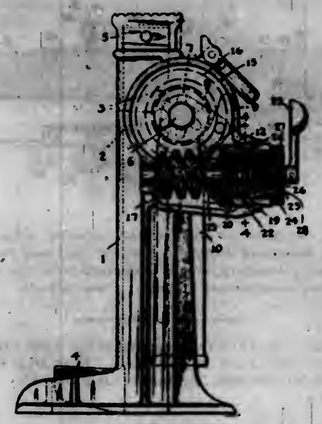
1,397,869. SELF-LOWERING JACK. JOHN C. KOFF, Bellevue borough, Pa., assignor to The Duff Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 4, 1921. Serial No. 442,867. 9 Claims. (Cl. 254—103.)



1. A self-lowering jack, having a base and a vertically movable load member, vertical screw means for lifting comprising a screw which is rotated in one direction to effect lifting and in the opposite direction by the action

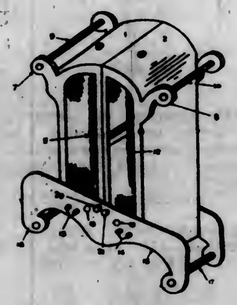
of the load in lowering, and a holding device, in combination with a fluid-retarding device comprising a closed

cylinder and a double-acting piston therein, and multiplying connections effective in lowering from the screw to said device.



1,397,870. LIFTING-JACK. JOHN C. KOPP, Bellevue borough, Pa., assignor to The Duff Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 4, 1921. Serial No. 442,568. 2 Claims. (Cl. 254—97.)

1. In a jack, the combination with a frame, a rack-bar, a pinion meshing with the rack-bar, a worm-wheel on the axis of the pinion, an operting shaft, and a worm on the operating shaft meshing the worm-wheel, said worm and worm-wheel of steep pitch, of means for actuating said worm shaft to lift the load, a friction-holding device actuated by the end-thrust of the worm, and means for relieving the end-thrust pressure in said holding device to let the rack-bar run down by gravity.



1,397,871. JACK. JOHN C. KOPP, Bellevue borough, Pa., assignor to The Duff Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 18, 1921. Serial No. 445,981. 3 Claims. (Cl. 254—97.)

1. A jack comprising the combination of a stand, a rack-toothed jack-bar, an operating shaft journaled in the stand bearing a pinion meshing the teeth of the jack-bar, ratchet-lever operating means on the outer end of said shaft, a worm-wheel also on the shaft, a worm meshing with the worm-wheel and adapted to be driven

thereby, a frictional holding device applied by the end-thrust of said worm, and means for releasing the holding device.

1,397,872. ELECTRIC HEATER. JOSEPH LAVOIE, Montreal, Quebec, Canada. Filed Nov. 26, 1919. Serial No. 340,959. 1 Claim. (Cl. 219—34.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In an electric heater, a frame or shell formed in two parts folding together and having meeting faces in their closed positions and in their open position formed for cooking utensils and lugs forming legs and fender rail supports, a base, heating elements, electric connectors in said base and connected to said elements and means for supporting said frames in their upright positions.

1,397,873. LIGHT-EXTINGUISHER. DENTON LEARD, Summerside, Prince Edward Island, Canada. Filed Apr. 2, 1920. Serial No. 370,873. 2 Claims. (Cl. 67—78.)

1. A light extinguisher comprising a base, an arm pivotally connected to the base, means for raising the arm, a light extinguishing member connected to the arm, means engaging said light extinguishing member for holding the same in raised position, and a spring bale secured to the base beneath the arm so as to act as a buffer

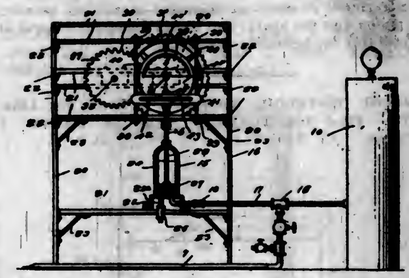
for engaging the arm before extinguishing member engages the light to be extinguished.

1,397,874. METHOD OF MAKING BAG-TOPS. SAHATIEL G. MANDALIAN, North Attleboro, Mass. Filed Jan. 3, 1921. Serial No. 434,773. 1 Claim. (Cl. 29—148.)

A method of making ornamental bag tops of the character described consisting of impressing an ornament upon the major portion of the width of one face of an oblong blank, forming a longitudinal groove in an intermediate portion of the opposite face of the blank, next bending the blank along the groove to form longitudinal sections disposed angularly to each other, next cutting transverse grooves in one section each side its center and cutting away angular portions of the other section in alinement with the last mentioned grooves, next bending the blank along the transverse grooves, and finally pivotally connecting two such bent blanks.

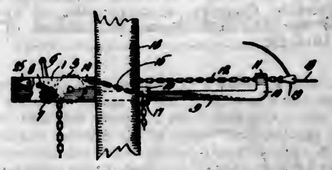
1,397,875. PROCESS FOR DEGUMMING TEXTILE FIBERS. JACOB MEISTER, Basel, Switzerland. Filed Aug. 3, 1914. Serial No. 854,862. 2 Claims. (Cl. 8—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. Process for degumming textile fibers through the action of enzymotic substances which comprises preliminarily treating the fibrous material in a diluted alkaline bath containing borax and ammonia, and then treating said material in a second bath at a moderate temperature with an ammoniacal enzymotic solution which contains borax and sodium chlorid, the material finally rinsed.



1,397,876. NUT, BOLT, SCREW, AND THE LIKE. EDWARD MELDAL, London, England. Filed Aug. 31, 1920. Serial No. 407,190. 3 Claims. (Cl. 85—32.)

1. An article of manufacture of the character described embodying therein a base of any desired contour, a central boss extending from and integral with said base and a plurality of radial projections extending from

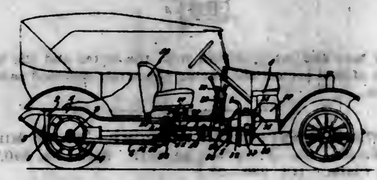


said boss and integral both with the latter and the base, each of said projections having oppositely disposed parallel faces.

1,397,877. COMPRESSED-AIR PUMP. WILLIS MILAM, Winston, Ga. Filed Nov. 26, 1919. Serial No. 340,7[illegible]. 1 Claim. (Cl. 230—27.)

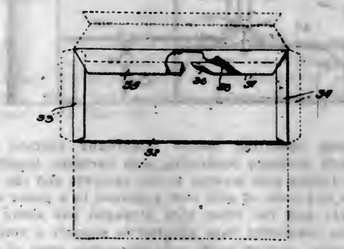
A pump operating means comprising vertical uprights, side members connecting said uprights, longitudinally extending bars secured to the uprights and the side members and some of said bars arranged in a plane with each other and the other bars arranged one above the other, the lowermost bars adapted to support a reciprocating pump, vertical guide rods connecting some of said bars above the pump, a cross head slidable on said rods and connected to the pump, and a rotatable means carried by some of said bars and adapted to impart a reciprocatory movement to the cross head.

1,397,878. WIRE-STRETCHER. JACK NIEMELA, Fort Bragg, Calif. Filed May 17, 1921. Serial No. 470,297. 4 Claims. (Cl. 254—162.)



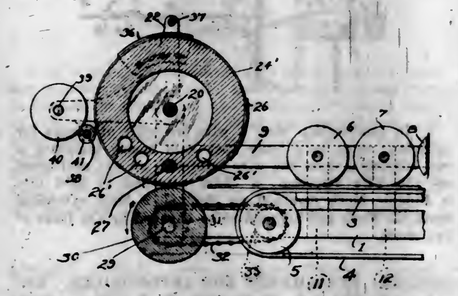
1. In combination with a wire stretcher of means for attaching same to a fence post, said means including a rod extending from the wire stretcher, an eye positioned on the wire stretcher, a chain attached to said eye, a slidable block mounted on the rod, a hook extending from the block and adapted to be engaged by the links of the chain.

1,397,879. ATTACHMENT FOR AUTOMOBILES. WILLIAM F. PILLMORE, Westernville, N. Y. Filed Apr. 6, 1921. Serial No. 459,126. 3 Claims. (Cl. 180—54.)



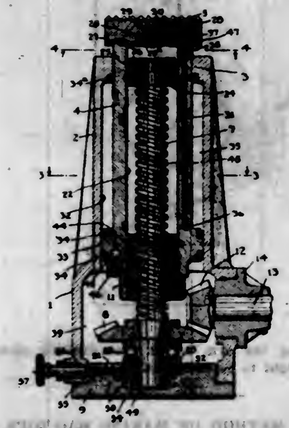
3. In a device of the class described, a vehicle body mounted for vertical movement; a running gear; a lever fulcrumed on the running gear; means for connecting the lever with the vehicle body; a guide on the vehicle body; a slide mounted to reciprocate in the guide and

provided with a rack; means for connecting the slide with the lever; a shaft journaled for rotation in the guide; a pinion loose on the shaft and meshing into the rack



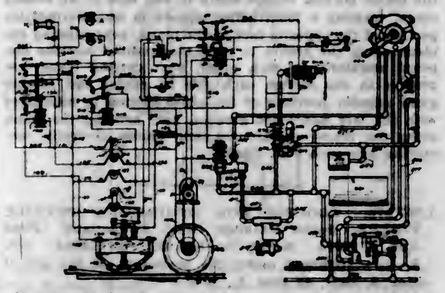
bar; a clutch forming an operative connection between the pinion and the shaft; and means under the control of an operator for actuating the clutch.

1,397,880. ENVELOP. GEORGE A. SANBORN, Fox Lake, Wis. Filed Jan. 31, 1921. Serial No. 441,374. 3 Claims. (Cl. 229—73.)



1. An envelop comprising, in combination, a pocket, a flap formed of two thicknesses of material integral at the free edge of the flap, and adhesive on each of the surfaces of said material which face toward the body when the flap is in operative position.

1,397,881. BOX-PRINTING MACHINE. MAX A. SCHMIDT, San Francisco, Calif., assignor to Schmidt Lithograph Company, a Corporation of California. Filed Apr. 14, 1920. Serial No. 373,772. 6 Claims. (Cl. 101—232.)



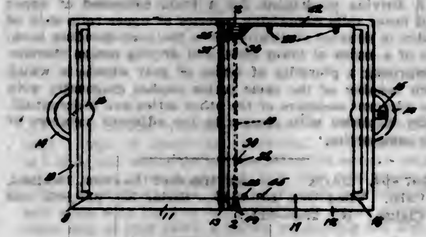
1. A box printing machine comprising a support, a freely swinging printing roll, a printing plate thereon, means to ink the printing plate, means to feed independent sheets to the printing roll and a driven roll below the printing roll to pass the boxes under the printing roll.

1,397,882. SELF-LOWERING JACK. FRANK H. SCHWARTZ, Westview borough, Pa., assignor to The Duff Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 4, 1921. Serial No. 442,361. 13 Claims. (Cl. 254—103.)

1. A self-lowering pack having closed base and load members, steep-pitch screw mechanism acting between said members to effect lifting, a hydraulic holding cylinder having its relatively movable parts on the respective jack members, and means for opening and closing an outlet from said cylinder chamber to effect lowering and holding of the load, in combination with means comprising relatively movable pump cylinder parts also on the respective jacket members for supplying the holding cylinder chamber with liquid.

1,397,883. SIGNAL SYSTEM FOR RAILWAYS. CLINTON F. SHADLE, Indianapolis, Ind., assignor to Shadle Automatic Train Signal Company. Filed Oct. 8, 1919. Serial No. 329,364. 30 Claims. (Cl. 246—45.)

13. In a system of the character described, the combination, with air brake mechanism of automatic control means for automatic graduated air reduction from the equalizing reservoir of the air brake system to cause the equalizing piston in the engineer's automatic brake valve to raise and unseat its valve allowing brake pipe air to flow to the atmosphere gradually to cause a service application of the brakes on locomotive and train.



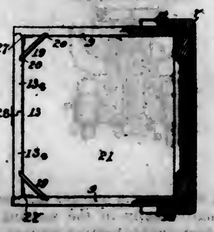
1,397,884. WRENCH. NELSON K. SMITH, Dallas, Tex. Filed Dec. 27, 1920. Serial No. 433,207. 8 Claims. (Cl. 81—94.)

8. In a wrench, a shank having a fixed jaw at one end, a sliding jaw adjustable longitudinally of the shank, said sliding jaw being fulcrumed intermediate its forward and rear ends on one edge of the shank, and means engaging the sliding jaw at a point off-set longitudinally of

the shank from the fulcrum point of said jaw for displacing the jaw from the shank and swinging it on its fulcrum toward the fixed jaw and positively holding the sliding jaw in the adjusted position.

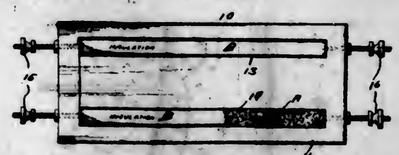
1,397,885. MUSIC TURNER AND CARRIER. WILLIAM L. STEVENS, Minneapolis, Minn. Filed Jan. 31, 1920. Serial No. 355,906. 3 Claims. (Cl. 84—487.)

1. In a music turner, a tubular spindle housing, a shaft rotatable therein and provided with a worm thread, a releasable pin engaging the groove of said thread, a cross pin at the upper end of the spindle, a series of turning arms having hubs at different elevations and provided with grooves for successive engagement by said pin as the spindle is elevated, said spindle when turned being elevated by said thread groove, a motor with which said spindle is operatively connected and keyed for sliding movement to permit elevation thereof, means to impart intermittent rotation to the spindle in either direction, and means to return said arms after the same have been turned to one side.



1,397,886. WASHING-MACHINE. JOSEPH VINCENT, Fresno, Calif. Filed Apr. 30, 1919. Serial No. 293,807. 1 Claim. (Cl. 68—21.)

In a washing machine the combination of a rectangular box, two swinging members within the box each of said swinging members being constructed with a rigid back and two flanges along opposite edges of, and on the same side of the back and set at obtuse angles thereto one of said flanges on each swinging member being pivoted to the bottom of the box and on opposite sides, so that they can



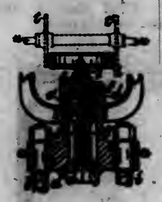
swing toward and from each other on their pivots, and weights attached to said swinging members adjacent to the edges opposite the pivots, substantially as described.

1,397,887. BIN STRUCTURE. EDWIN J. WALKER, JR., Penn Yan, N. Y. Filed Mar. 7, 1919. Serial No. 281,180. 11 Claims. (Cl. 211—6.)

4. A bin structure having a front portion, sides and back portions jointedly connected together and the side portions secured to the front portion, a bottom board fitted to the inner faces of the side portions and underlapping the back and front portions.

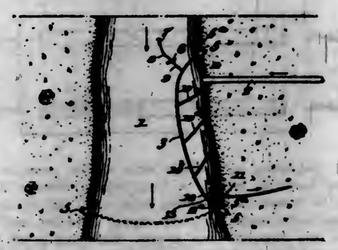
1,397,888. BELL-RINGER RESISTANCE UNIT. JACOB CHODROW, Buffalo, N. Y. Filed Feb. 4, 1921. Serial No. 442,524. 7 Claims. (Cl. 219—63.)

1. A resistance unit comprising a base member of insulating material having a longitudinal channel therein, conductor terminals extending from each end of the channel, resistance material in the space between said terminals in the channel, and means extending over the resistance material longitudinally of the channel for holding the resistance material therein.



1,397,889. CAR-CHECK HOLDER. EMIL M. HENNEKE, Springfield, Ill. Filed Dec. 31, 1920. Serial No. 434,216. 5 Claims. (Cl. 133—5.)

1. In a car check holder of the character described, having a slotted metallic discharge plunger, a metallic

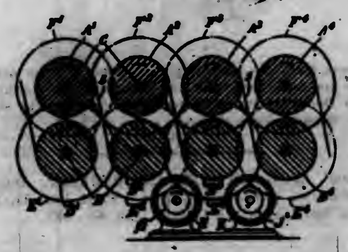


cylindrical casing and a thumb latch button, a resilient strip mounted on the outside and near the open end of a metallic cylindrical casing, said resilient strip being adapted to automatically retract said discharge plunger; means connecting said resilient strip with said discharge plunger abd means for detachably engaging said resilient strip with said casing when not in use; said resilient strip having a short longitudinal slot therein and parallel wire springs securely attached thereto near the operative end thereof and having its slotted end turned to form a hinge loop therein, as and for the purpose set forth.

1,397,890. POWER-DRIVEN PRESS. EDWARD JOHNSON, Burslem, Stoke-upon-Trent, England. Filed Jan. 4, 1921. Serial No. 435,004. 3 Claims. (Cl. 25—45.)

1. In a press, a housing, a plunger for operating a press tool slidable longitudinally in the housing and provided with a guide, a contractible bearing secured to the housing and engaging with the said guide and preventing it and the plunger from revolving, and means for sliding the said plunger in the housing.

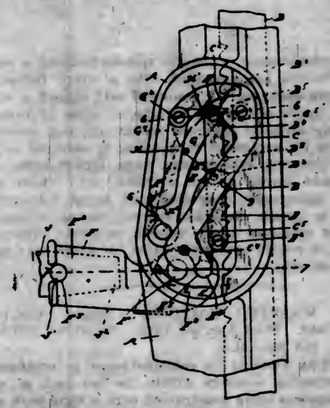
1,397,891. OIL-TRAP. ROBERT P. JONES, Port Arthur, Tex. Filed Mar. 19, 1921. Serial No. 453,686. 25 Claims. (Cl. 210—51.)



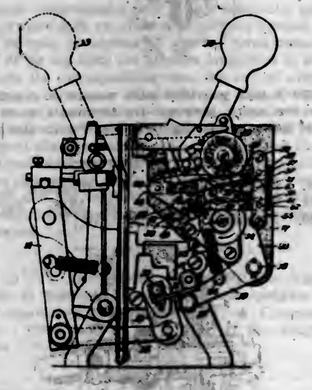
1. An oil trap comprising a plurality of float members capable of floating on water and arranged end to end, connective means securing said float members in position end to end and providing for lateral movement of said float members, and a substantially vertically extending flexible curtain substantially impervious to liquids connected to adjacent float members.

1,397,892. OIL-TRAP. ROBERT P. JONES, Port Arthur, Tex. Filed Mar. 19, 1921. Serial No. 453,689. 6 Claims. (Cl. 210—51.)

1. An oil trap comprising a plurality of elongated float members capable of floating on water and arranged end to end, connective hinge means secured to adjacent ends of said float members and permitting angular movement of said members with respect to each other and preventing relative rotation, and a flexible curtain connected to adjacent float members and extending therebetween and substantially vertically.



1,397,893. DRIVING-GEAR ESPECIALLY FOR GROUPS OF ROLLS. HARRY KAY, Bury, England. Filed Oct. 12, 1920. Serial No. 416,363. 8 Claims. (Cl. 74—7.)

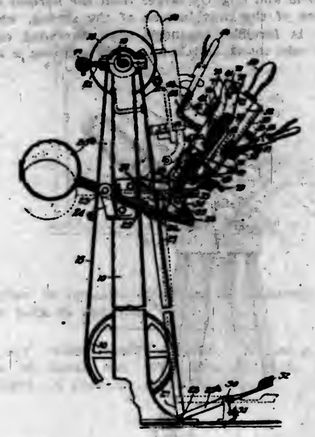


1. Driving mechanism for a train composed of upper and lower rolls comprising a series of upper rolls each of which is situated vertically above the corresponding member of a series of lower rolls, and driving means therefor comprising a plurality of series of gear wheels in which each member of the same series meshes diagonally with the adjacent members of the other series and is longitudinally displaced with respect to the adjacent members of the same series.

1,397,894. JACK. SAMUEL HERBERT LANYON, Oakland, Calif. Filed Oct. 15, 1919. Serial No. 330,891. 10 Claims. (Cl. 254—111.)

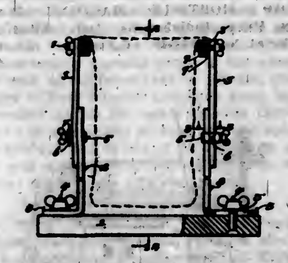
1. In a jack, the combination with a notched lifting bar, of holding and moving pawls, engageable with the notches in said bar, springs normally forcing said pawls into engagement with the notches, and means dependent upon the position of said moving pawl for reversing the action of said springs to eject said pawls out of engagement with the notches.

1,397,895. RIBBON-REVERSING MECHANISM FOR TIME-RECORDING REGISTERS. HORACE B. MCCABE, Madison, Wis., assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed Oct. 1, 1920. Serial No. 414,073. 6 Claims. (Cl. 197—160.)



1. In a ribbon reversing mechanism, the combination with a pair of spools and actuating ratchets therefor, of a slide and means for reciprocating the same, a ratchet-driving pawl pivoted on said slide and engageable with either of said ratchets, a pawl-shifting arm pivoted on said slide with its free end adapted to swing across the pivot axis of said pawl, a spring connecting the free end of said arm to said pawl, and means controlled by the rolls of ribbon on said spools for swinging said arm.

1,397,896. BLOOD-COAGULATION MEDIUM. CLARENCE A. MILLS, Cincinnati, Ohio. Filed May 6, 1920. Serial No. 379,404. 5 Claims. (Cl. 167—7.)

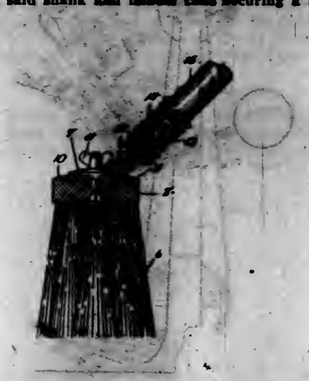


1. A blood coagulant which comprises a protein, phospho-lipin compound having the distinctive quality over related globulins of precipitating from solution upon making of the same weakly acid.

1,397,897. HEEL-BREASTING MACHINE. HOWARD B. MUNSON, St. Louis, Mo., assignor of one-half to Wilder and Company, Chicago, Ill., a Corporation of Illinois. Filed June 1, 1920. Serial No. 385,695. 18 Claims. (Cl. 12—47.)

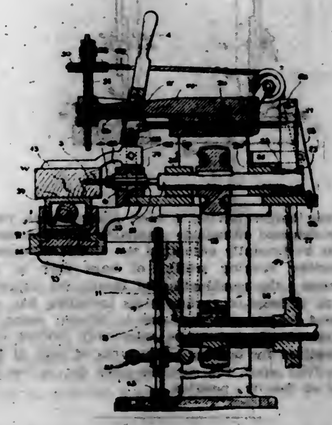
1. In a heel-breasting machine, the combination of a cutter, a holder for a heel-blank to be breasted disassembled from the remainder of a shoe and supported to be movable in a direction to move that portion of the heel-blank which is to be breasted, into contact with, and across, said cutter, and means for causing said holder, in said movement, to travel in a predetermined path comprising guide means adjustable to vary the shape of the breast of the heel in the direction of its height produced by the breasting operation.

1,397,898. BAG-HOLDER. JAMES BENNETT O'BRIEN, Hartford, Wis. Filed Apr. 19, 1920. Serial No. 374,950. 1 Claim. (Cl. 83—26.)



In a bag holder having a base, a companion pair of vertically disposed adjustable standards mounted thereon, means for horizontally adjusting the standards upon the base whereby varying widths of bags may be fitted therebetween; the combination of means for supporting the mouth of bags of various sizes including like series of different length spreader-arms in pivotal union with each standard adapted to be selectively shifted to operative position for holding the mouths of bags of different sizes fully open, the spreader-arms not in use being swung to an inactive position.

1,397,899. BRUSH-HANDLE CONNECTION. JOHN FREDERICK PALMER, Milwaukee, Wis. Filed Nov. 11, 1919. Serial No. 337,135. 1 Claim. (Cl. 306—20.)



A brush handle connection comprising an attaching head, a shank extended therefrom and provided with a series of screw threads, a helical coil spring having its convolutions at one end portion engaged with the threads

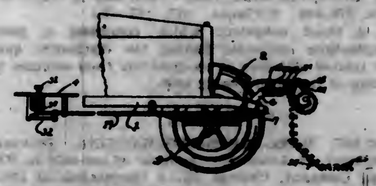
of the shank, a handle having its inner end portion provided with screw threads and found into the other end of the coil spring with threaded movement, the radius of curvature of the threads on said shank and handle being uniform and slightly larger than the normal radius of curvature of the convolutions of the spring, whereby the latter is forcibly expanded upon threaded engagement with said shank and handle thus securing a strong

and uniform frictional grip thereon, the ends of the shank and handle beyond the threaded portion being tapered to permit ready insertion thereof in the spring and having flat extremities which are nearly in contact when the device is assembled, whereby an initial flexure of the handle causes only a lateral tension of the spring but a continued flexure of the same causes the spring to be stretched longitudinally.

1,397,900. MORTISING-MACHINE. WILLIAM T. SHERMAN PATE, Indianapolis, Ind. Filed Nov. 18, 1920. Serial No. 424,948. 6 Claims. (Cl. 144—69.)

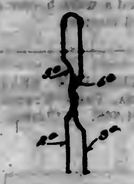
1. A mortising machine, comprising mortise and chain cutters, one telescoping on the other; and means for alternately projecting and retracting said cutters to and from an operative position by simultaneous opposite movements.

1,397,901. SPARK-PLUG. CLARENCE G. PRICE, Jersey City, N. J. Filed Apr. 26, 1921. Serial No. 465,659. 7 Claims. (Cl. 123—169.)



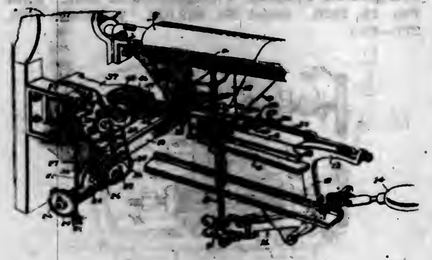
1. A spark plug provided with means to automatically lengthen the spark between its terminals upon an explosion of gases occurring in contact with the plug.

1,397,902. FRICTION-CLUTCH. WILLIAM G. PRICE, Yakima, Wash. Filed Apr. 4, 1921. Serial No. 226,560. 7 Claims. (Cl. 192—110.)



1. In a friction clutch, a driving-shaft, a driven-shaft, driving and driven disks secured to said shafts, respectively, said disks having annular friction faces, means for bringing said disks into frictional face contact with each other, and means for permitting one of said disks to oscillate on its bearing about any line radial of its axis to adjust itself angularly with respect to its normal axis.

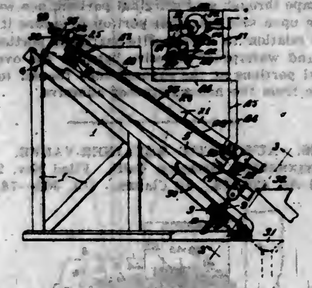
1,397,903. FENDER ATTACHMENT FOR AUTOMOBILES. PETER J. QUARTANA, Milwaukee, Wis. Filed Aug. 24, 1921. Serial No. 494,926. 8 Claims. (Cl. 293—41.)



1. A safety fender attachment including a flexible frame member formed of a plurality of units adapted to be freely telescoped for one way hinge movement, a sheet of fabric supported from said frame member, and means for uniting said fabric to each of said units, said uniting means being also adapted to unite said units together.

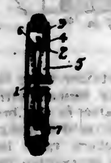
1,397,904. RETAINING MEANS FOR HAIRPINS, CORDS, AND THE LIKE. EDGAR F. HARDY and RANDOLPH A. ERICKSON, Two Rivers, Wis. Filed Mar. 30, 1915. Serial No. 18,669. 1 Claim. (Cl. 132—50.)

A hairpin comprising a pair of legs resiliently connected together at one end, an arcuate projection formed on each leg, the arcuate projection of one leg being closer to the free end of its leg than the arcuate projection of the other leg is from its corresponding end, the arc of said projections being struck on a relatively long radius, the middle portion of each projection being bent laterally away from the longitudinal center of the pin, the inner end portion of the curve of the first mentioned projection and the lateral bend thereof being engaged with, or in close proximity to, the outer end portion of the curve of the second mentioned projection and the lateral bend thereof to provide a relatively long entrance throat and a tortuous passageway therebetween.



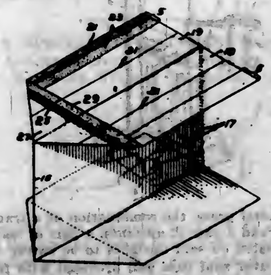
1,397,905. SPINNING OR WINDING MACHINE. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 11, 1921. Serial No. 436,542. 18 Claims. (Cl. 242—43.6.)

1. In a machine of the class described, the combination of yarn guiding means for guiding yarn to yarn receivers, a builder arm, a builder cam for operating the builder arm, a let-back mechanism mounted on the builder arm, connections between the builder arm and yarn guiding means including two flexible portions both of which are connected to the let-back mechanism, a deflector movable synchronously with the let-back mechanism and about which one of the flexible portions passes between its connections with the let-back mechanism and yarn guiding means, and means for operating the let-back mechanism and deflector.



1,397,906. SCREENING APPARATUS. FRANK D. RUTHERFORD, Midway, Fla. Filed June 5, 1919. Serial No. 301,961. 20 Claims. (Cl. 92—36.)

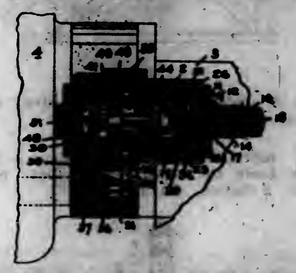
1. In apparatus of the character set forth, the combination of a supporting structure, a screen, springs disposed transversely of the screen and constituted in spaced relation to each other by the supporting structure, bearing elements through which the screen is supported from the springs, and means for deflecting first one spring and then



the other in opposite directions to positively move the screen both to and fro.

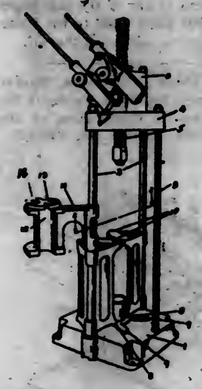
1,397,907. RESILIENT WHEEL. HERMAN A. SCHNITTKER, St. Louis, Mo. Filed Feb. 20, 1919. Serial No. 278,242. 2 Claims. (Cl. 188—37.)

1. A resilient wheel comprising a hub, an inner rim, an outer rim spaced from the inner rim, and a plurality of normally straight springs of a length to extend substantially half way around the wheel and fixed into a substantially semi-circular form to place the said springs under tension to arrange their terminal at approximately diametrically opposite points in the wheel, the terminals of each spring being bent in opposite directions at right angles to form integral attaching arms, said springs being arranged within the space between the inner and outer rims and alternately secured at their inner ends to the inner rim adjacent to one of the side edges of the said inner rim and at their outer ends to the inner face of the outer rim at the opposite side edge thereof.



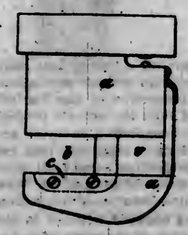
1,397,908. CONTAINER. JOSEPH V. R. SHEPHERD, Hollis-ton, Mass., assignor to Paper Products Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 7, 1919. Serial No. 315,823. 5 Claims. (Cl. 229—53.)

1. A moisture proof container formed of a blank comprising outer and inner paper layers with a waterproof layer and reinforcing filaments between the outer and



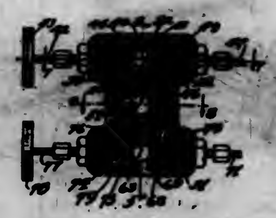
inner paper layers, one of said paper layers having a lateral edge extending beyond the layers secured thereto to form a marginal portion which is free from the waterproof layer, that the moisture of non-waterproof adhesive may escape through said marginal portion, non-waterproof adhesive upon said marginal portion to secure it in overlapping relation to an opposite marginal portion of the blank, and waterproof adhesive between the overlapping marginal portions at the exposed edge thereof to exclude moisture from the non-waterproof adhesive.

1,397,909. AUTOMATIC RETAINER-VALVE. THOMAS J. STEINKELLER, Berkeley, Calif. Filed Nov. 22, 1920. Serial No. 426,073. 10 Claims. (Cl. 303—78.)



1. An automatic retainer valve for air brake apparatus comprising a housing formed with a passage for connecting the triple valve to the brake cylinder, a check valve in said passage, said housing being formed with a by-pass about said check valve including a cylindrical chamber, a valve for controlling the flow of air through said by-pass, a piston having a passage therethrough arranged in said chamber and operatively connected to said valve for closing it, and means for opening said valve when the pressure in the auxiliary reservoir exceeds a predetermined amount.

1,397,910. MANDREL-PRESS. ROBERT W. TAYLOR, Sr., Kalamazoo, Mich., assignor to Evansville Arbor Press Company, Evansville, Ind. Filed June 19, 1920. Serial No. 390,276. 4 Claims. (Cl. 29—85.)

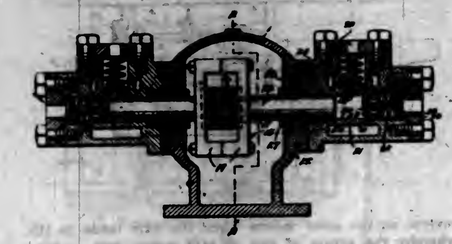


1. In a mandrel press, the combination of a frame comprising a base and a pair of uprights, a pair of main table members journaled on said uprights to be swung to operative position over said base and provided with foot portions resting on the base when in operative position and with coacting top portions eccentric relative to their axes and spaced from said base so that the spaces between them may be varied by swinging the members, an auxiliary table member pivotally mounted on one of said uprights to be swung over and rest upon the top portions of said main table members, said auxiliary table member being provided with a vertical work channel adapted to be alined with the space between the top portions of said main table members, and a work holder rotatably mounted on said auxiliary table member.

1,397,911. APPARATUS FOR SEVERING CABLES. CONSTANTIN TOSSIZZA, Paris, France. Filed Nov. 30, 1918. Serial No. 264,268. 8 Claims. (Cl. 164—56.)

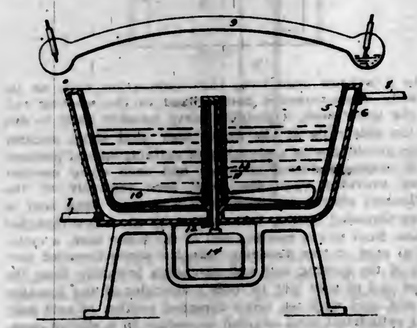
1. An apparatus for severing cables or the like, consisting of a portable self-contained explosion-operated shear adapted to receive the cable between shear blades, and having means for instituting the explosion by which to operate the shear.

1,397,912. VALVE-MANIFOLD. WILLIAM WISHART and ALBERT H. MORRELL, Clinton, Iowa, assignors to Clinton Refrigerating Company, a Corporation of Iowa. Filed Feb. 16, 1920. Serial No. 359,082. 7 Claims. (Cl. 277—53.)



1. A valve manifold comprising a passaged block, a plurality of main valves in said block adapted to be opened to permit a refrigerating fluid to flow through the manifold in one direction, and a plurality of by-pass valves in said block adapted to be opened when the main valves are closed to permit a reversal of flow of the fluid through the manifold.

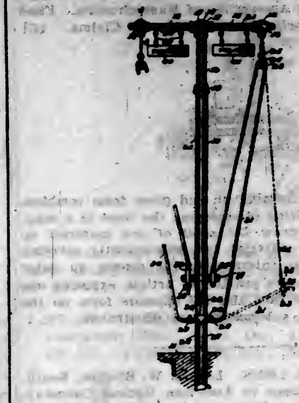
1,397,913. BENZOIC-ACID ESTERS OF TRIBROMO-TERTIARY BUTYL ALCOHOL. THOMAS B. ALDRICH, Detroit, Mich., assignor to Parke, Davis & Company, Detroit, Mich., a Corporation of Michigan. Filed May 18, 1918. Serial No. 235,244. 2 Claims. (Cl. 22—24.)



1. A new body forming one of a series, which may be designated as benzoic acid ester of tribromotertiary-butyl-alcohol, and characterized by the combination of tribromotertiary-butyl-alcohol and a substance containing the acyl benzoyl group and having the following characteristics: relative stability, insolubility in water and extreme solubility in organic solvents.

1,397,914. AMMONIA-COMPRESSOR. EDWIN J. AUGUSTIN, Wauwatosa, and GEORGE RAUBS, Milwaukee, Wis. Filed June 29, 1920. Serial No. 392,689. 1 Claim. (Cl. 230—27.)

A device of the character described, comprising a crank case, a pair of opposed cylinders extending in opposite directions therefrom, a pair of pistons reciprocably mounted in said cylinders, a bore in each cylinder casting, in alinement with but larger than the cylinder bore and beyond the path of the piston, and forming with said cylinder bore an annular shoulder, a valve cage fitted into said larger bore and seated on said shoulder and having an inner diameter substantially equal to that of the cylinder, a cap removably securing said cage in position and having an inlet port therein, an inlet valve seated in the inner end of said cage, and a valved outlet port in the side wall of the cylinder.



1,397,915. PROCESS OF TREATING NITROCELLULOSE AND TO A VALUABLE NITROCELLULOSE PRODUCT RESULTING THEREFROM. GILBERT C. BACON and WILLIAM C. WILSON, Tamaqua, Pa., assignors to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 7, 1921. Serial No. 443,175. 6 Claims. (Cl. 134—79.)

1. The herein described process for making highly concentrated solutions of nitrocellulose which consists of treating nitrocellulose with artificial ultra-violet light.

1,397,916. AIR-SERVICE STATION FOR AUTOMOBILES. JENNINGS B. BECK, Covington, Ky., assignor, by mesne assignments, to Standard Oil Company, a Corporation of Indiana. Filed Oct. 16, 1919. Serial No. 331,229. 1 Claim. (Cl. 298—77.)

A device of the character described including a tubular post, a lateral hollow arm extending therefrom, a cable extending through the arm and equipped at its inner end with a weight freely movable within the post, a ring carried by the outer end of the cable, a yoke swiveled to said ring, a pulley mounted on said yoke, a supply pipe disposed within the lower portion of the post, a supply hose connected with the pipe outside the post and trained

over the pulley whereby the hose will normally be retracted by the weight, and restraining means on the post to be engaged by the free end of the hose.

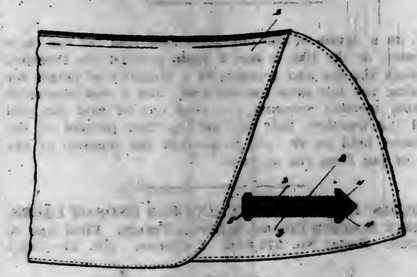
1,397,917. LOCK-TAG. MARCUS B. BEHAMAN, New York, N. Y., assignor to The Lox Seal Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 23, 1920. Serial No. 368,000. 7 Claims. (Cl. 40—20.)

1. In a device of the character described for use on a garment or the like, a tag, a plain pointed pin threaded through the tag and garment at a plurality of points for pinning the tag onto the garment, and a non-removable locking member securing the head end of said pin and said tag together, thereby enabling that portion of the garment held on the pin to prevent the removal of the pin or tag from the garment.

1,397,918. SPECIAL FASTENING FOR ENDS OF LACES. RENÉ AUGUSTE BIRARD, Bellevue, France. Filed Apr. 3, 1920. Serial No. 371,048. 2 Claims. (Cl. 24—143.)

2. Means of the character set forth in claim 1 hereof wherein the binding thread is doubled before being passed through the lace to form a loop, and wherein the free end of the coiled binding thread is held within the coil, passed through the loop which is pulled tight to secure said end.

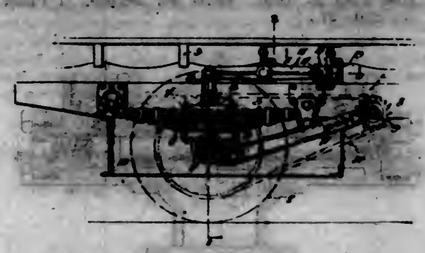
1,397,919. PROCESS OF FORMING SHAPED END PIECES. William H. Bugbee, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 2, 1918. Serial No. 209,892. 4 Claims. (Cl. 29—20.)



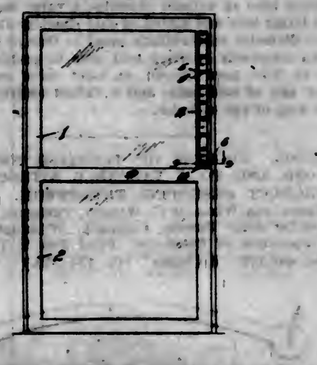
1. The process of forming an end piece from combination materials, consisting in stamping the form in a shaping die which will draw the shell of one material up around the opposite material and subsequently severing the parts on a plane intersecting the drawn up outer material on both sides to provide an article, exposing one form of metal on one face and the opposite form on the other face and sides, substantially as illustrated.

1,397,920. BIFOCAL LENS. Luchan W. Buchan, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 24, 1917. Serial No. 203,833. 2 Claims. (Cl. 88—54.)

1. A bifocal lens comprising a major portion of low refractive index and high relative dispersion, having a countersink formed therein and a segment secured within the countersink and having a high refractive index and a low relative dispersion.



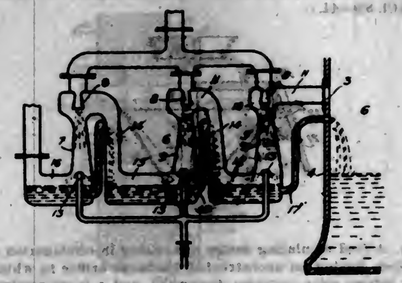
1,397,921. COLLAR, &c. Sanford L. Cluett, Troy, N. Y., assignor to Cluett, Peabody & Co., Inc., Troy, N. Y., a Corporation of New York. Filed Oct. 29, 1919. Serial No. 334,358. 2 Claims. (Cl. 2—67.)



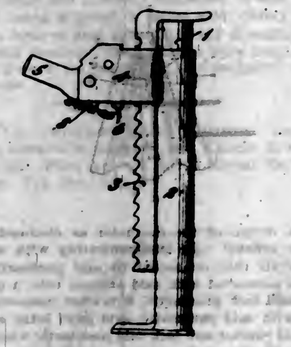
1. A buttonhole article having adjacent to an end of the buttonhole, bar-stitches extending divergently on opposite sides of the buttonhole, said bar-stitches being interlocked with each other at their apex.

1,397,922. VEHICLE SUSPENSION MEANS. Floyd Cornelison, Milwaukee, Wis. Filed Aug. 30, 1920. Serial No. 406,914. 3 Claims. (Cl. 280—124.)

1. In a vehicle, in combination, a stub axle, a cushioned suspension means for the axle, a wheel mounted on the outer end of said axle, a compensating means on the side of each side of the wheel, one of said means being operated in a manner the reverse of the other means when the axle tends to tilt, whereby the action of one of said means will counterbalance the other.



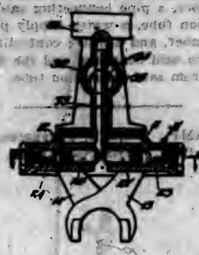
1,397,923. WINDOW-SASH FASTENER. John P. Crosby, St. Louis, Mo. Filed Dec. 8, 1919. Serial No. 343,337. 1 Claim. (Cl. 292—86.)



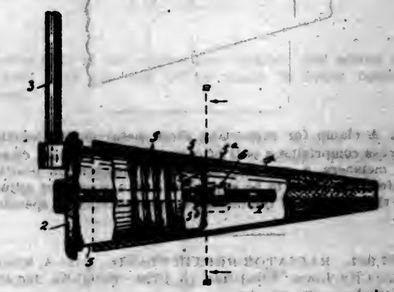
In a window sash lock, the combination with an interiorly screw-threaded holder fixed to the meeting rail of the lower sash, a metallic strap member fixed to one of the side rails of the upper sash, said strap member being provided with a plurality of suitably spaced horizontally disposed slotted openings and each strap member being provided upon its outer face centrally of the horizontal slotted openings with a counter sunk seat, a screw-threaded locking bolt carried by the screw-threaded holder fixed to the meeting rail of the lower sash, a cylindrical stud of less diameter than the screw-threaded portion of the locking bolt and extending inwardly from the inner end of said bolt to form a shoulder at the junction of said stud with the screw-threaded portion of said bolt, said cylindrical stud adapted to engage in a slotted opening of the strap member and the shoulder of said bolt adapted to frictionally engage the counter sunk seat of the strap member for forcing the window sash into vertical alinement and said stud and shoulder both acting to lock the sash together and prevent movement of either sash in either direction.

1,397,924. MULTIPLE-STAGE EJECTOR. Raymond N. Ehrhart, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Oct. 18, 1917. Serial No. 197,362. 8 Claims. (Cl. 230—12.)

7. In combination in an apparatus of the character described, an ejector, a condenser communicating with the outlet thereof, a second ejector communicating with said condenser, a second condenser communicating with the outlet of the second ejector, and a automatic connection between the second condenser and the communicating passage between the first mentioned condenser and the second ejector for delivering liquid from the second condenser to the said passage.



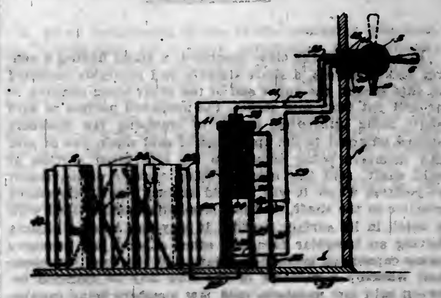
1,397,925. LIFTING-JACK. William C. Engel, St. Louis, Mo., assignor of one-third to Edward L. Hohenstein and one-third to Frederick Schott, St. Louis, Mo. Filed May 14, 1921. Serial No. 469,831. 5 Claims. (Cl. 254—111.)



1. A lifting jack comprising a hollow standard having a closed bottom, a hollow lifting post mounted to telescope therein and having its bottom open to communicate with the interior of said standard, both said standard and lifting post being adapted to contain a liquid, a valve for the bottom of said lifting post arranged to control the communication between said lifting post and standard, said lifting post being provided with a small weep hole constituting a permanently open passageway between the interior of said lifting post and the interior of said standard.

1,397,926. TRANSMISSION-LOCK. Stephen I. Fekete, Detroit, Mich., assignor to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed July 29, 1918. Serial No. 247,149. 6 Claims. (Cl. 70—126.)

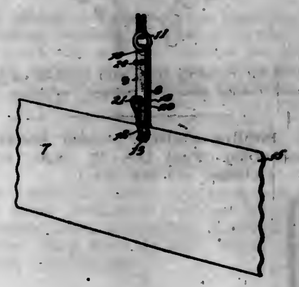
1. The combination with two sliding transmission rods having a pair of alined notches in their proximate faces, a plurality of alined locking members freely movable between said transmission rods and of a combined length equal to the distance between the rods plus the depth of one of the notches, means coacting with the locking members to separate them and a bolt for said means, said members adapted for receding from said notches on the movement of said locking means to released position.



1,397,927. BOBBIN-HOLDER. Albert Henry Fleck, Lakewood, Ohio. Filed Dec. 17, 1920. Serial No. 431,457. 4 Claims. (Cl. 242—130.)

3. In a cop-tube support, a supporting arm, a supporting base thereon, a spindle on said base, a threaded cone-shaped support provided with a supporting head having a threaded opening surrounding said spindle, and a sleeve clamping screw surrounding said spindle in said threaded opening in coöperative relation to said threaded cop-tube support.

1,397,928. [WITHDRAWN.]

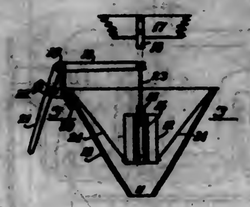


1,397,929. CARBONATOR AND DRAFT-ARM FOR SODA-WATER. Charles A. Geddes, Philadelphia, Pa., assignor to Explorer Manufacturing Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 20, 1920. Serial No. 411,516. 3 Claims. (Cl. 225—21.)

1. In a dispensing apparatus, the combination of an absorption tube, a volume tube divided into upper and lower

chambers, a check valve between said chambers, a gas pipe leading into the upper chamber, a gas pipe leading into the lower chamber, a pipe connecting said lower chamber to said absorption tube, a water supply pipe leading into said upper chamber, and a valve controlling both the admission of gas to said chambers and the discharge of carbonated water from said absorption tube.

1,397,930. CLAMP. JOHN L. JEFFERIES, St. Louis, Mo. Filed Apr. 14, 1921. Serial No. 461,444. 4 Claims. (Cl. 24—250.)

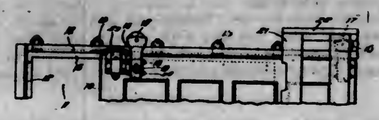


1. A clamp for supporting sheet metal during hoisting process comprising a pair of comparatively parallel clamping members, a cam for locking the members in position against the sheet to be supported and a screw for adjusting the position of the members, substantially as specified.

1,397,931. RADIATOR-REPAIR STAND. CARL A. KURTZ, Sac City, Iowa. Filed Mar. 16, 1920. Serial No. 366,407. 1 Claim. (Cl. 29—89.)

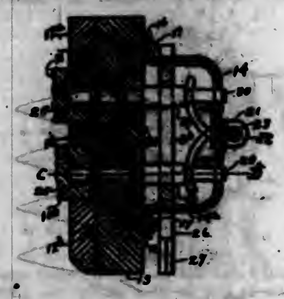
In a device of the class described, a stand having a center socket therein, a shaft slidably and rotatably mounted in said socket, the upper end of the shaft being adapted to project out from said socket, the projected portion of said shaft being bifurcated, a pair of clamping jaw members spaced adjacent to the upper end of said shaft, one of said jaw members being pivoted in the bifurcated portion of said shaft, said jaw member being capable of movement to position where it will be held against pivotal movement relative to the shaft, said jaw member being provided with a notch in its surface, so that it may rest against objects having an irregular face, the other of said jaw members being capable of movement relative to the first jaw member, whereby a radiator or the like may be clamped between said jaw members, said jaw members being capable of pivotal movement in two different planes on said shaft, as and for the purposes stated.

1,397,932. FEEDING APPARATUS FOR WEIGHING-MACHINES AND THE LIKE. JOSEPH B. MOCKRIDGE, Newark, N. J., assignor to Automatic Weighing Machine Company, Newark, N. J., a Corporation of New York. Filed Apr. 17, 1916. Serial No. 91,831. 3 Claims. (Cl. 83—44.)



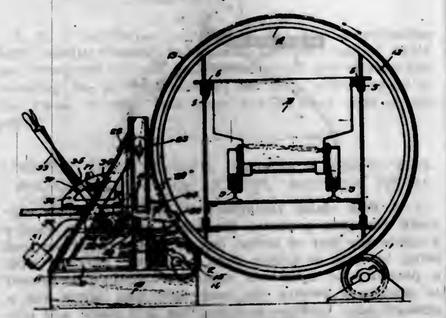
1. A feed regulating device comprising in combination a hopper, having an unobstructed discharge orifice to which the hopper sides converge downward, and a large vertical sided tube arranged within the hopper, in normal operation standing at a fixed elevation above said orifice, said tube being open at top and bottom in cross sectional area substantially equaling the horizontal-plane projection of the tube whereby the flow of hopper contents to the orifice is made regular.

1,397,933. AUTOMATIC PNEUMATIC LOCK. HARRY FRENCH, Oakland, Calif., assignor of one-half to Frank A. Briggs, Oakland, Calif. Filed Jan. 5, 1918. Serial No. 210,480. 3 Claims. (Cl. 84—48.)



1. In a device of the character as disclosed, a pneumatic, an exhaust tube communicating with said pneumatic, an air tube connected to said pneumatic, a lock pneumatic connected with said exhaust tube, a pawl actuated by said lock pneumatic, a ratchet connected to and movable with said pneumatic, said pawl being adapted to engage said ratchet and lock said pneumatic when the lock pneumatic is expanded.

1,397,934. DOOR-FASTENER FOR RAILWAY-CARS. EDWARD POSSON, Chicago, Ill. Filed Dec. 5, 1919. Serial No. 342,629. 3 Claims. (Cl. 292—175.)



1. The combination in a railway car of a sliding door, a plate mounted adjacent the upper edge of said door, said plate having a central notch in its upper side with inclined guideways leading upwardly thereto from the ends of the plate, and a resiliently mounted latch member carried by the door and having a transversely projecting part adapted to engage one of said guideways and to pass into said notch.

1,397,935. MEANS FOR LOCKING WINDOW-SASHES IN POSITION. HENRY RABINOWITZ, New York, N. Y. Filed Aug. 19, 1919. Serial No. 318,554. 2 Claims. (Cl. 292—97.)

1. In a means for locking window sashes in position the combination of a window sash having one or more openings therein, the jamb of a window frame having a passage formed therein, a two-piece bracket secured to said jamb and forming an inclosure at the rear thereof, a sliding member in said inclosure, said member having a locking pin adapted to extend through said passage and to engage said openings when the latter are brought into registration with said pin, a spring connected to said bracket and adapted to keep said pin normally in engagement with said openings, and a one piece crank located in said inclosure and pivotally connected to said bracket, said crank being adapted to move said sliding member against the force of said spring, thereby disengaging said pin from said openings, and said two piece bracket being adapted to permit the placing of said one piece crank in said inclosure.

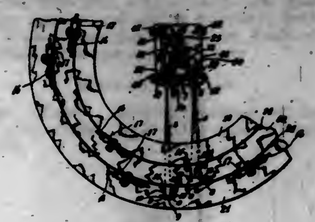
1,397,936. ROTARY CAR-DUMPER. GEORGE N. SIMPSON, ARTHUR M. SIMPSON, and WALTER H. SIMPSON, Chicago, Ill. Filed Apr. 21, 1920. Serial No. 375,570. 7 Claims. (Cl. 188—68.)

1. In combination with a rotating cage normally partially supported by a continuously rotating roller, means for lifting such cage from contact with such roller.

1,397,937. WINDLASS CLAMP FOR SUCKER-RODS AND TUBE-HOISTS. WARREN W. C. SPENCER, Brookline, Mass. Filed Mar. 3, 1920. Serial No. 362,932. 10 Claims. (Cl. 254—162.)

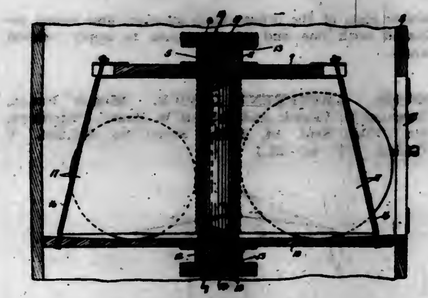
1. A clamp of the character described, including independent opposite clamp members and a chain having its intermediate portion engaged with one of the clamp members and its end portions associated with the respective ends of the other clamp member, and means associated with one end of the chain to apply tension thereto.

1,397,938. AMUSEMENT DEVICE. MORRIS UNGER, BERNARD S. VEAZIE, and JOSEPH W. ZARRO, Pittsburgh, Pa. Filed Sept. 14, 1920. Serial No. 410,236. 6 Claims. (Cl. 46—27.)



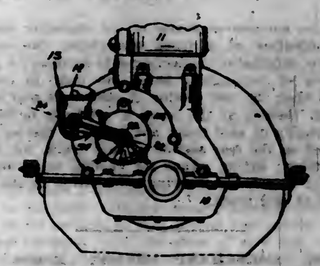
3. In an amusement device of the character described, the combination of a truck comprising two sections; means for detachably connecting said sections; a pyramidal tower of rectangular base, and built in one unit, mounted upon the rear section of said truck and hingedly connected thereon at the base; a rotatable member carried vertically by said tower and centrally thereof; means positioned on the rear section of said truck, for rotating said member; lifting means for raising said tower and means for detachably securing said lifting means to the rear end of said truck.

1,397,939. AMUSEMENT DEVICE. MORRIS UNGER, Pittsburgh, Pa. Filed July 11, 1921. Serial No. 483,707. 8 Claims. (Cl. 104—60.)



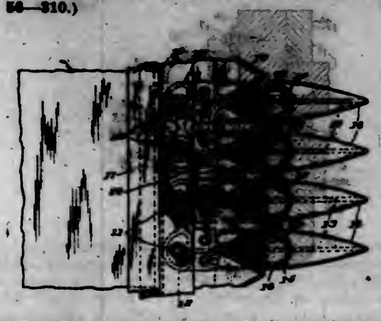
1. In an amusement device of the character described, a plurality of groups of bicycles; means for selectively

operating each group by motive power and means for selectively operating each of said groups independently of



the other groups by the personal exertion of the occupants of said bicycles.

1,397,940. PHONOGRAPH-RECORD CABINET. CHARLES A. VASTOLA, Waterbury, Conn. Filed May 14, 1921. Serial No. 469,594. 1 Claim. (Cl. 211—16.)



A phonograph record cabinet, comprising a vertically mounted rotatable post, a top plate and a bottom plate of larger diameter than the top plate rotatably mounted on said post, a series of stay-rods connecting the edges of the said plates, and a strip of flexible material successively folded around the stay-rods, forming a series of vertically-arranged radially-opening pockets around said post.

1,397,941. OILING DEVICE FOR INTERNAL-COMBUSTION-ENGINE TIMERS. HARRY J. WRIGHT, Des Moines, Iowa. Filed Oct. 24, 1919. Serial No. 333,080. 6 Claims. (Cl. 123—196.)

1. In combination with a timer shell, and retaining spring therefor, an oil tube having an end portion bent and passing through the retaining spring and timer shell.

1,397,942. GUARD-FINGER FOR HARVESTING-MACHINES. JOHN E. SWEARINGEN, Oak Park, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Apr. 9, 1917. Serial No. 160,693. 9 Claims. (Cl. 56—210.)

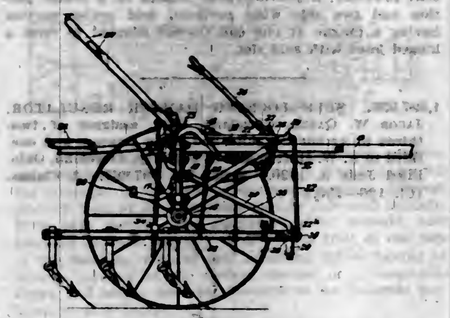
1. In a harvester, a finger bar having forwardly projecting spaced apart guard fingers, and rearwardly and downwardly inclined means carried by said guard fingers for catching shelled grain falling thereon and directing the grain rearwardly.

2. A finger bar for harvesters provided with spaced apart forwardly projecting guard fingers, said fingers having rearwardly and downwardly inclined means for catching and retaining shelled grain.

1,397,943. HOSE-CLAMP. FRANK J. COSTELLO, Baltimore, Md., assignor to Federal Tin Company, Inc., Baltimore, Md., a Corporation of New York. Filed July 8, 1921. Serial No. 483,132. 3 Claims. (Cl. 24—19.)

1. A hose clamp comprising a body portion and opposed clamping portions, the latter adapted to receive a tightening bolt or screw, one of said opposed portions being in strip or ribbon form and being provided with a plurality of apertures spaced longitudinally thereof to selectively receive the said tightening screw and a strengthening member receiving the said screw and providing a bearing therefor and adapted for selective insertion in the apertures in said strip portion.

1,397,944. CALCULATING DEVICE. THOMAS J. DALEMLL, Wakefield, Mass. Filed Apr. 22, 1920. Serial No. 375,024. 5 Claims. (Cl. 235—73.)

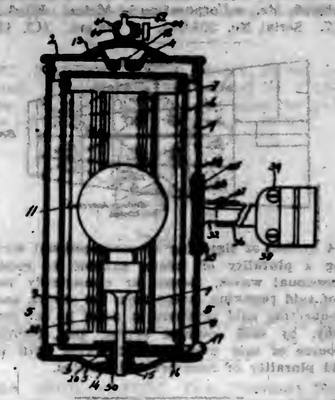


1. A calculating device comprising three superposed disks, pivotal means connecting said disks for relative rotation, the lower disk having an exposed scale and the middle disk also having a scale, said upper disk overlapping the scale of the middle disk and having a

narrow radial slot forming a window for exposing a limited portion of the middle disk, and a tab projecting

integrally from the edge of the upper disk and having a reading edge aligning with an edge of said slot.

1,397,945. CULTIVATOR. SAMUEL K. DENNIS, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Mar. 4, 1919. Serial No. 281,052. 5 Claims. (Cl. 97—35.)

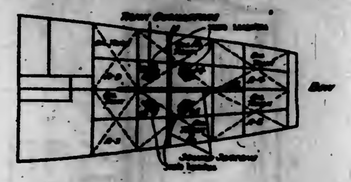


1. In a cultivator, a frame, longitudinally extending balls carried thereby, gangs, the forward ends of which are connected to said balls, and means for raising and lowering the forward ends of the balls with respect to the frame to raise and lower the forward ends of the gangs.

1,397,946. TOBACCO-PIPE. CHARLES G. DOSSIN, Meriden, Conn. Filed June 12, 1920. Serial No. 388,464. 1 Claim. (Cl. 131—12.)

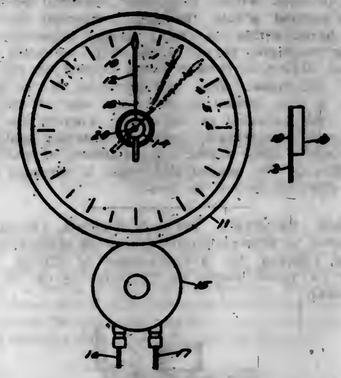
The combination with a tobacco-pipe including the bowl and mouth-piece, said bowl formed with an opening and said mouth-piece formed with a longitudinal channel and with an opening intersecting the said channel, of a two-part passage member telescopically connected together, one member adapted to be turned into engagement with the bowl, and the other into engagement with the mouth-piece, and intersecting said channel.

1,397,947. AUTOMOBILE-SIGNAL. CHARLES DURNING, Philadelphia, Pa. Filed Sept. 29, 1919. Serial No. 326,540. 8 Claims. (Cl. 116—44.)



1. An automobile signal comprising a cylindrical casing having a sight opening therein, a transparent strip disposed across said opening, a head secured in each end of said casing, each head having a spherical section formed therewith and projecting outwardly, a bearing socket secured within the lower spherical section, a bridge secured within the upper spherical section, a signal barrel within the casing, flanges formed from the body of the signal barrel, signal strips or members held by said flanges, a flanged sleeve carried by the lower end of the signal barrel and journaled in the bearing socket, a stud carried by the upper end of the signal barrel and journaled in the bridge, whereby the signal barrel will be rotatable, means for rotating said signal barrel and a lamp support, the standard of which projects through the flanged sleeve and is threaded in the lower spherical section, as shown.

1,397,948. BEARING. PETER S. EARLSON, Chicago, Ill., assignor to Brown Portable Conveying Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1919. Serial No. 297,360. 18 Claims. (Cl. 64—54.)

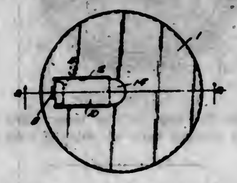


6. A shaft bearing comprising an outer integral socket member, an inner integral ball member having a central opening for a shaft, and fitting within the socket member, said socket member cut away at one end to permit the entrance of the ball member and provided with circumferentially spaced uncut portions, the ball member having similarly spaced longitudinal flutes in its outer surface adapted to register with said uncut portions to permit the ball to enter the socket, and means for retaining the ball member rotated within the socket member to a position where the flutes are not in register with said uncut portions.

1,397,949. METHOD AND APPARATUS FOR SUBMARINE SIGNALING. REGINALD A. FESSENDEN, Brookline, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Dec. 31, 1917. Serial No. 209,682. 8 Claims. (Cl. 181—26.)

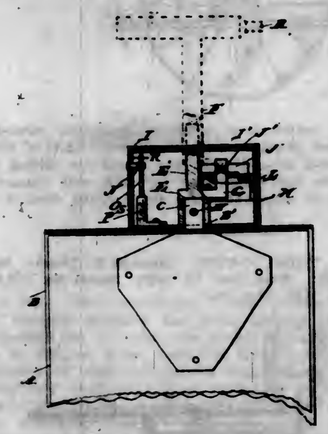
1. A system of signaling by compressional waves comprising a plurality of means adapted to receive said compressional waves, means for acoustically insulating each of said receiving means from the others, and means for connecting said receivers in pairs to act conjointly, whereby, by said conjoint action, the orientation of the source of said compressional waves with reference to said plurality of receivers is indicated.

1,397,950. STOP-CLOCK. REGINALD A. FESSENDEN, Chestnut Hill, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Aug. 10, 1920. Serial No. 402,661. 2 Claims. (Cl. 58—126.)



2. In an apparatus for measuring small intervals of time, a driving shaft, an indicating hand, an elastic connection between said driving shaft and said hand, and a dampening mechanism attached to said hand.

1,397,951. UNIVERSAL JOINT. FERDINAND FISCHER, Berlin, Germany. Filed Jan. 10, 1921. Serial No. 436,186. 6 Claims. (Cl. 64—91.)

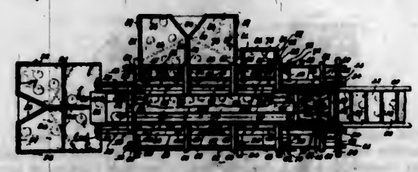


6. A universal joint comprising two joint members having each a body portion, carrying two oppositely arranged truncated cones having a common axis passing through and normal with the axis of the body portion and a spherical base, a cone-connecting rib and spherically recessed spaces intermediate the said truncated cones, the truncated cones of one joint member peripherally contacting with the truncated cones of the other joint member and entering with their base portions into the recessed spaces thereof and intercrossed pins passing through the axes of the respective truncated cones and connecting the two joint members for universal movement.

1,397,952. POURING-SPOUT. ALBIN L. FORSBERG, Chicago, Ill., assignor to Thomson and Taylor Spice Company, a Corporation of Illinois. Filed July 30, 1919. Serial No. 314,804. 5 Claims. (Cl. 221—11.)

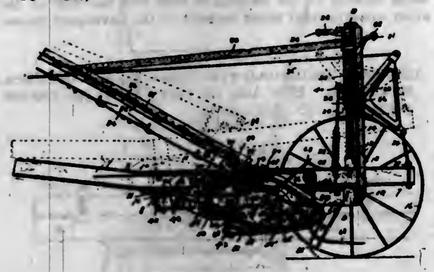
1. In combination with a container having an opening with a slot at or near one edge of said opening, the lip or edge of said slot farther from said opening being bent inwardly, a pouring-spout formed of a center portion and two side wing portions, said center portion having a tongue at one end thereof adapted to form a hinged joint with said slot.

1,397,953. SELF-LOCKING DAMPER-REGULATOR. JACOB W. GABLE, Cleveland, Ohio, assignor of two-thirds to Arthur Coughlin and Blain Duncan, and one-third to A. W. Hutton and P. D. Astry, Cleveland, Ohio. Filed June 9, 1920. Serial No. 387,667. 3 Claims. (Cl. 126—295.)



1. The combination of a pipe and a damper revoluble therein, the damper having a stem projecting through the side of the pipe and adapted to be engaged by a key, a casing projecting from the side of the pipe and surrounding the stem, a rack fixed within the casing, an arm projecting from the stem, and an elongated pawl pivoted to the arm with one end in operative relation to the rack and the other end adjacent the stem in such a position that the key in engaging the stem will move the pawl to inoperative position.

1,397,954. REEL FOR STRIP MATERIAL. EDWIN B. GAMBS, Jr., Derby, Conn., assignor to The Derby Textile Co., Derby, Conn., a Corporation. Filed Mar. 11, 1921. Serial No. 451,456. 2 Claims. (Cl. 242—105.)



1. A reel for strip material comprising a box, a spool mounted therein and connected thereto on opposite sides by metal collars, said spool formed with a central opening and with sockets on opposite sides of the opening, combined with a wire handle having inwardly-offsetting ends and outwardly-extending tips adapted to enter said sockets.

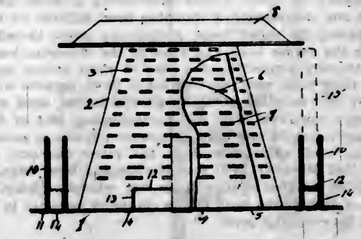
1,397,955. ASSORTING-MACHINE. BERT L. GIFFORD and EDGAR B. GIFFORD, Barker, N. Y., assignors, by mesne assignments, to The Rex Company, Rochester, N. Y., a Corporation of Nebraska. Filed Feb. 17, 1919 Serial No. 277,606. 31 Claims. (Cl. 130—32.)

1. An assorting machine of the kind described, comprising a carrier traveling in one direction, a plurality of grading passages of different sizes through which different sizes of fruit or other produce may be delivered laterally from said carrier, and receiving tables beneath said passages inclined laterally to direct the fruit to one side of the machine, each of said receiving tables having at least a portion of its surface formed of a removable frame and textile material fastened at its marginal portions to said frame.

1,397,956. LOADER. OZRA L. GILLILAND, Minneapolis, Minn., assignor to National Shock Loader Co., Minneapolis, Minn., a Corporation of South Dakota. Filed Nov. 2, 1917. Serial No. 199,955. 10 Claims. (Cl. 56—358.)

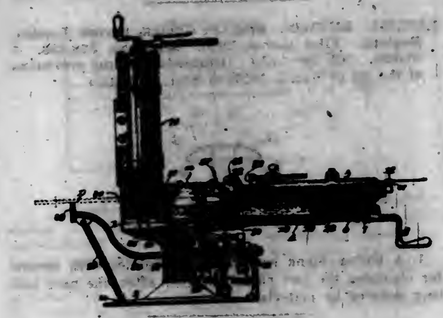
1. In a loader of the kind described, the combination with a truck, of a pair of endless chains mounted on the truck and means for driving the same, a pickup device including a pair of carrying arms, connections attaching one end of the carrying arms to the chains, upper and lower tracks vertically spaced to afford channels in which the other or free ends of the carrying arms extend for travel on the tracks, upper and lower track surfaces on which said connections travel, and vertical passageways in the channels through which the connections move from the upper track surfaces to the lower track surfaces.

1,397,957. BUTTON. SHELLEY GULICK, Barnes, London, England. Filed May 3, 1920. Serial No. 378,636. 7 Claims. (Cl. 24—113.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A button blank comprising two plates with means for clamping the two plates together after one part has been covered by material.

1,397,958. SMOKING-PIPE. CARL FRANKLIN HANABLE, Negley, Ohio, assignor of one-half to Joseph K. Bishop, Beaver Falls, Pa. Filed July 20, 1920. Serial No. 397,715. 2 Claims. (Cl. 131—12.)



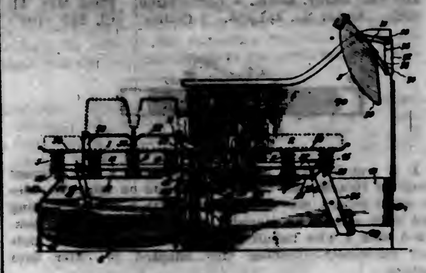
1. A tobacco pipe comprising a bowl having a stem composed of spaced sections arranged in longitudinal alinement, a substantially cylindrical casing forming a chamber fitted to the opposed ends of the stem sections, said casing being provided with corrugations to increase its exterior surface and form interior channels, and longitudinal tubes fitted into the bores of the opposed stem sections and having their inner ends bent laterally in opposite directions, and a bit carried by one of the stem sections.

1,397,959. BREAD-TOASTER. SAMUEL HEATH, Philadelphia, Pa. Filed Oct. 6, 1919. Serial No. 328,625. 1 Claim. (Cl. 53—5.)

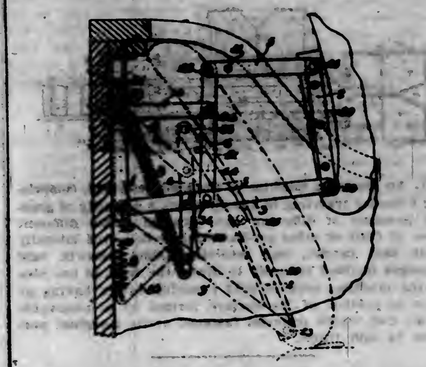
In combination with a toaster including a base, a plurality of clips each comprising a U-shaped holder having sections bent upon itself and projecting downward below the holder and attached to the base and supports coacting with the clips, said supports extending between the walls of the clips and having legs for attachment to the base, and a frusto-pyramidal body spaced from said clips and having a plurality of concaved surfaces, one of said surfaces being disposed opposite each of said clips.

1,397,060. ROCK-DRILL-SHARPENING DEVICE. Jessurn H. Hanna, Auburn, Calif. Filed Mar. 26, 1919. Serial No. 285,262. 20 Claims. (Cl. 76—6.)

1. A rock drill sharpening machine, comprising supporting means, drill gripping means removably mounted thereon, means for acting on the end of the drill, and means mutually embodied in both the supporting and gripping means for preventing the gripping means from riding up during the operation of the aforesaid acting means.



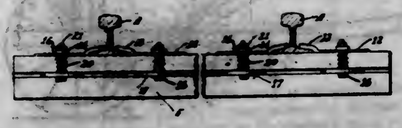
1,397,961. CABINET-MAKER'S CLAMP. Sven A. Holmquist, Tacoma, Wash. Filed Apr. 11, 1921. Serial No. 460,305. 4 Claims. (Cl. 144—303.)



1. A clamp of the character described comprising cooperating, upper and lower clamping bars having notched outer edges; the lower of said bars having a thrust head fixed at one end thereof, a clamping head slidable on the bar adjacent the thrust head, a clamping screw threaded through the thrust head and fixed to the clamping head, links pivotally connecting the bars in rigid spaced relation at their outer ends, another set of links, parallel with the first set, mounted pivotally on the thrust head and detachably connected with the corresponding end of the upper bar to retain said bars in parallel relation, a second clamping head adjustable along the lower bar and an anchor link pivotally fixed to said clamping head engageable within notches of the upper bar whereby clamping pressure against the head effects clamping pressure to be exerted between the bars.

1,397,962. FOLDING DAVENPORT-BED. Orman A. Hostetter, Tacoma, Wash. Filed Nov. 3, 1919. Serial No. 335,241. 8 Claims. (Cl. 5—51.)

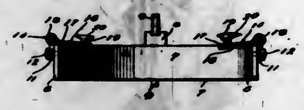
1. Hinge structure for a swinging seat comprising a bar having a fixed pivot support at one end, a lower pivotal thereto intermediate its ends and outward of the fixed pivot of said bar, one end of said lever being adapted for pivotal connection to the seat frame, a control lever pivoted, by one end to the opposite end of said lever, the other end of said control lever being fixedly pivoted, and a link adapted to pivotally connect the outer end of said bar and the seat frame.



1,397,963. DAVENPORT-BACK. Orman A. Honsinger, Tacoma, Wash. Filed June 7, 1920. Serial No. 388,868. 15 Claims. (Cl. 5—55.)

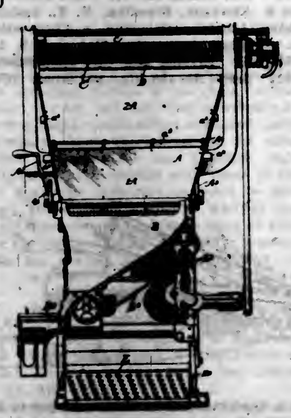
2. A support for davenport backs comprising a plurality of links forming, in positions between their upper and lower positions, two quadrilaterals having one link forming a side common to both, one side of one quadrilateral being secured to the davenport back and one side of the other quadrilateral being secured to the davenport frame.

1,397,964. RAILROAD-TIE. John George Horniack, Hawley, Pa. Filed Aug. 15, 1921. Serial No. 492,399. 4 Claims. (Cl. 238—281.)



1. A device of the character described embodying a railway tie having slots in the upper and side faces, rail clamps adjustably mounted in said upper slot, clamping means slidably mounted in said side slots, and means operatively connecting said clamping means with the rail clamps for binding said rail clamps and clamping means within the slots.

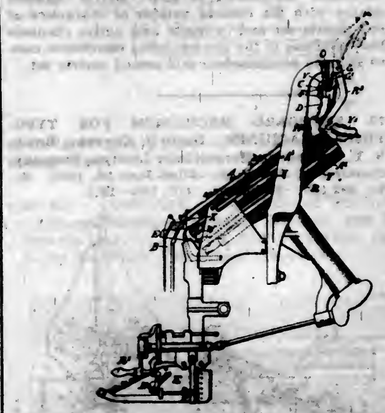
1,397,965. EXHIBITION-CAR. Rosaa Jovar and Robert de Steurs, Zurich, Switzerland, assignors to the Firm of Jovar, de Steurs & Meyer, Zurich, Switzerland. Filed June 29, 1920. Serial No. 392,806. 7 Claims. (Cl. 105—238.)



1. In an exhibition car, a plurality of vertical partition walls arranged to divide the car into separate exhibition compartments and forming a continuous interior passage along one side of the car, means for detachably mounting the partitions to permit the formation of exhibition compartments of different sizes and a bed provided in each compartment.

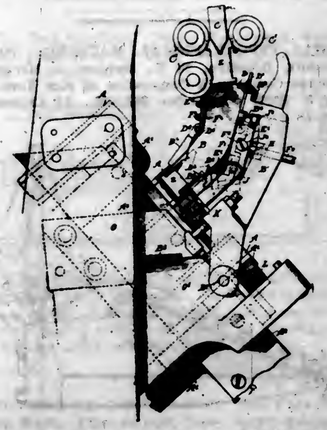
1,397,966. SPUR. Pascal M. Kelly, Dalhart, Tex. Filed Mar. 23, 1921. Serial No. 454,688. 2 Claims. (Cl. 54—83.)

1. A spur comprising a band, a U-shaped bracket having arms secured flatly in contact with the outer side of the band and having a bite portion arranged above the upper edge of the band, an arm inclusive of a pair of limbs, and a bearing member receiving the bite portion of said bracket, and a button having a shank connecting the terminal portions of said limbs, one of said limbs being adapted to lie flush with the inner side of the said band.



1,397,967. TYPOGRAPHICAL MACHINE. David S. Kennedy, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Oct. 8, 1919. Serial No. 329,339. 81 Claims. (Cl. 199—34.)

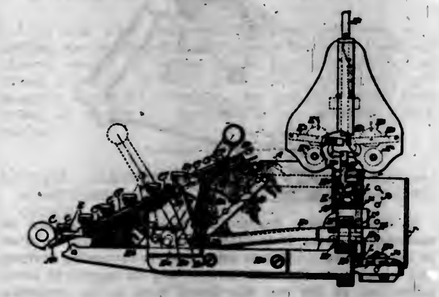
10. In a typographical machine equipped with matrices formed with projecting ears located in different outwise positions thereon, the combination of a magazine formed with grooved channels wherein the projecting ears of the



matrices engage, a distributer, and an intermediate magazine entrance having partitions dividing it into matrix channels, the said channels being arranged in varying relations to the appropriate grooved channels of the magazine in accordance with the different outwise positions of the projecting ears on the respective matrices.

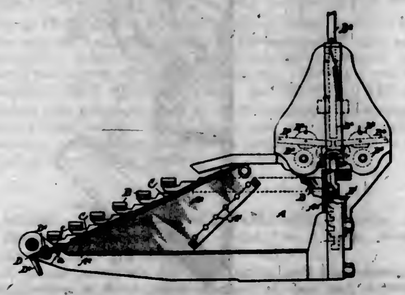
1,397,968. TYPOGRAPHICAL DISTRIBUTING-MACHINE. David S. Kennedy, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Nov. 18, 1919. Serial No. 338,867. 27 Claims. (Cl. 199—39.)

2. Typographical distributing mechanism including, in combination, two distributer bars permanently mounted in the machine, a common set of matrix conveying devices, and means whereby said devices may be caused to serve either one of the two distributer bars to the exclusion of the other as required.



1,397,969. TYPOGRAPHICAL MACHINE. David S. Kennedy, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed June 15, 1920. Serial No. 389,259. 26 Claims. (Cl. 199—39.)

2. In a typographical distributing machine adapted to be equipped with a set of matrices having tooth-combina-

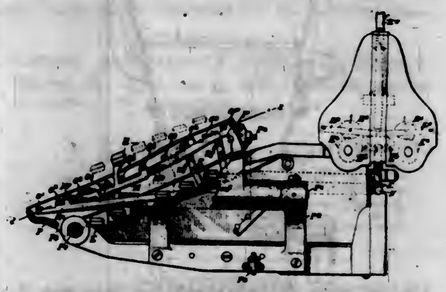


tions arranged thereon in the same setwise position throughout the set, or with a set of matrices comprising fewer characters and having tooth-combinations arranged thereon in different setwise positions throughout the set, the combination of a distributer having combinations to coöperate with those of the matrices, a magazine entrance provided with a series of partitions normally dividing it into as many matrix channels as there are distributer combinations and which channels occupy the same relation to the corresponding distributer combinations so as to accommodate the first matrix set, and means for adjusting certain of said partitions sidewise from their normal positions to reduce the number of active matrix channels in accordance with the reduced number of characters of the second matrix set and to locate said active channels in different relations to the corresponding distributer combinations so as to accommodate said second matrix set.

1,397,970. KEYBOARD MECHANISM FOR TYPOGRAPHICAL MACHINES. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed June 28, 1920. Serial No. 392,159. 30 Claims. (Cl. 199—19.)

2. In a keyboard mechanism for typographical machines, the combination of a series of escapement actuating devices, a series of finger keys, intermediate adjustable means through which the finger keys operate the escapement actuating devices in one location or another according to the adjustment of said means, and automatic means for locking the finger keys against actuation except when the parts are in properly adjusted condition.

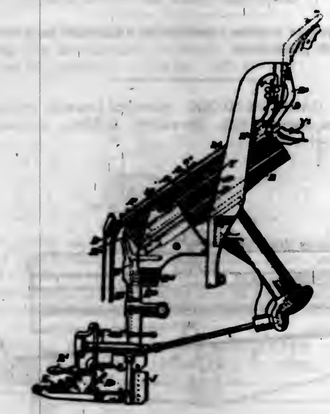
1,397,971. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed July 3, 1920. Serial No. 393,856. 11 Claims. (Cl. 199—18.)



1. A keyboard for typographical machines including, in combination, a supporting frame, a series of finger-keys movably mounted therein and disposed at different levels, and locking means adjustable to active and inactive position independently of the actuation of the finger-keys and arranged to be engaged with and disengaged from the finger-keys directly so as to prevent or permit their actuation according to the adjustment of said locking means.

1,397,972. TYPOGRAPHICAL DISTRIBUTING-MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Original application filed Oct. 8, 1919, Serial No. 329,339. Divided and this application filed Jan. 15, 1921. Serial No. 438,061. 11 Claims. (Cl. 199—33.)

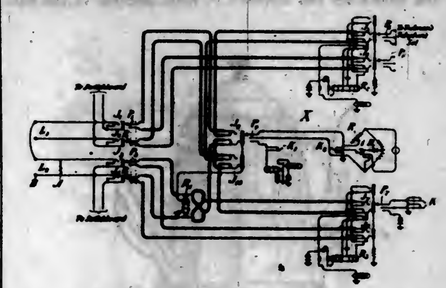
2. In a typographical distributing machine, the combination of a magazine entrance permanently located in the machine and pivotally mounted therein so as to be movable into and out of operative position, and a substitute magazine entrance also permanently located in the machine and provided with a pair of supporting arms spanning the other entrance and pivotally and slidably arranged so as to permit the interchange of the two entrances without interference.



1,397,973. TYPOGRAPHICAL COMPOSING-MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Original application filed Oct. 8, 1919, Serial No. 329,339. Divided and this application filed Jan. 15, 1921. Serial No. 438,062. 10 Claims. (Cl. 199—19.)

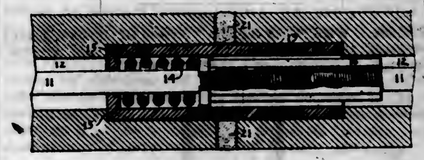
2. In a typographical machine adapted to be equipped with a magazine containing a set of matrices arranged in one order as to character or a set of matrices having a less number of characters and arranged in a different order as to character, the combination of a main keyboard having as many finger keys as there are characters in the

first set of matrices and arranged in the same order as to character, and means whereby said finger keys may be operatively connected to the appropriate channels of the magazine containing such matrix set, with a supplemental keyboard having only as many finger keys as there are characters in the other set of matrices and arranged in a different order as to character from that of the matrices of said set, and means whereby the finger keys of said supplemental keyboard may be operatively connected to the appropriate channels of the magazine containing such other matrix set.



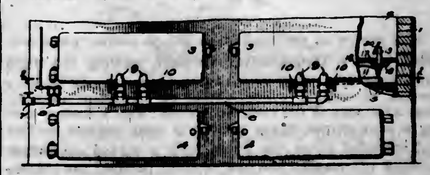
1,397,974. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Original application filed Oct. 8, 1919, Serial No. 329,339. Divided and this application filed Apr. 21, 1921. Serial No. 463,436. 36 Claims. (Cl. 199—39.)

1. In a typographical machine, the combination of two magazines, one containing a set of matrices having tooth-combinations arranged thereon in the same setwise position throughout the set, and the other containing a set of matrices having tooth-combinations arranged thereon in different setwise positions throughout the set, means for selecting either magazine for use, a single distributer having combinations to coöperate with those of the matrices, and a channeled magazine entrance to carry the matrices from the distributer to the selected magazine and having its channels arranged in varying or unvarying relations to the corresponding distributer combinations according to the set of matrices contained in said magazine.



1,397,975. ELECTRICAL TESTING SYSTEM. GEORGE W. KUHN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 19, 1920. Serial No. 359,985. 4 Claims. (Cl. 179—175.)

4. In a testing system the combination of a plurality of line circuits, a jack individual to each conductor of each circuit for terminating the same, a cord circuit having a plurality of plugs adapted to coöperate with the said jacks, a testing circuit adapted for connection with the said cord circuit and switching means associated with said cord circuit and controlled by the connection of the said testing circuit with the said cord circuit, for the selection



of the line conductors desired for connection with the said testing circuit.

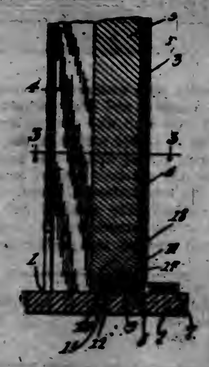
1,397,976. PORTABLE BUILDING OR STRUCTURE. CHARLES FREDERICK MCAVOY, Brooklyn, and DANIEL EDWARD MCAVOY, New York, N. Y. Filed Nov. 14, 1917. Serial No. 202,041. 3 Claims. (Cl. 20—2.)

3. In combination with wall and roof units of a portable or knock-down building, and with horizontal tie-rods extending through said wall and roof units; an internally flanged metal cup or socket seated in the upper end of a wall unit; a spring placed within said socket and resting at one end upon the internal flange; sectional eye-bolts threaded upon the longitudinal tie-rods, one of said sections passing through the spring; and an internally threaded sleeve or nut connecting the proximate ends of the alined eye-bolt sections and resting upon said spring.

1,397,977. GAS-BURNER. IRA G. MARQUETTE, Wheeling, W. Va. Filed Nov. 17, 1920. Serial No. 424,787. 4 Claims. (Cl. 158—7.)

1. In a furnace, a fire-box, a grate arranged therein, a shield arranged above said grate, feed pipes disposed on said grate, burners connected to said feed pipes and projecting through said shield, and means for introducing air to said burners below said shield.

1,397,978. TEA OR COFFEE POT. BEN FRED OLSEN, Marcus, Wash. Filed July 22, 1920. Serial No. 398,061. 1 Claim. (Cl. 53—3.)



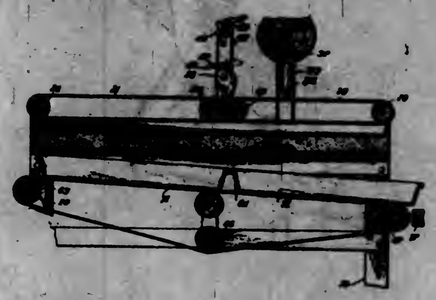
A tea or coffee pot comprising a receptacle body having a cover, a pair of diametrically opposed handles on the

body, and a corresponding pair of diametrically opposed spouts leading from the interior of the body, upwardly and outwardly and disposed in juxta-position to the han-

dles and in horizontal alinement therewith, corresponding handles and spouts being arranged at an angle of substantially 180° from each other.

1,397,979. WEATHER-STRIP. James H. Greene, Mount Vernon, Ill. Filed Jan. 19, 1920. Serial No. 352,260. 1 Claim. (Cl. 20—65.)

In a device of the class described, a carrier plate provided with a trough-shaped receiver portion, the plate being bent upon itself at one of the edges of said receiver portion to form a double-walled lip extended inwardly from said edge of the receiver portion; and a closure having a hook-shaped flange located in said receiver portion and extended about the lip to form a hinged connection between the closure and the receiver portion, the closure having bendable end wings located at right angles to the flange and cooperating with the receiver portion to limit endwise movement of the closure and to maintain the closure hingedly mounted on the receiver portion.

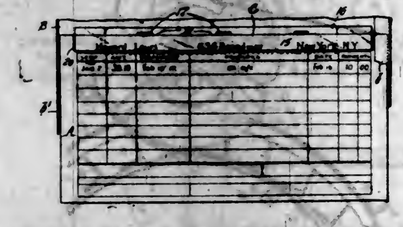


1,397,980. BENDING ATTACHMENT FOR VISES. John B. Ouellette, New Bedford, Mass. Filed July 1, 1921. Serial No. 482,200. 3 Claims. (Cl. 81—23.)

1. A detachable bending attachment for a vise comprising a pair of complemental sections, means on each section whereby the sections may be secured to the jaw of a vise, a projection on one of said sections, and the other section having a recess adapted to receive said projection when the jaws of a vise are moved together, said recess

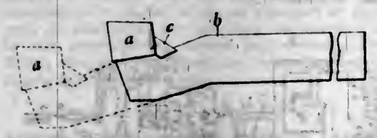
being adapted to receive a portion of an article bent thereinto by said projection.

1,397,981. CAKE-MACHINE. Walter Peters, Chicago, Ill. Filed Apr. 6, 1921. Serial No. 459,849. 9 Claims. (Cl. 107—1.)



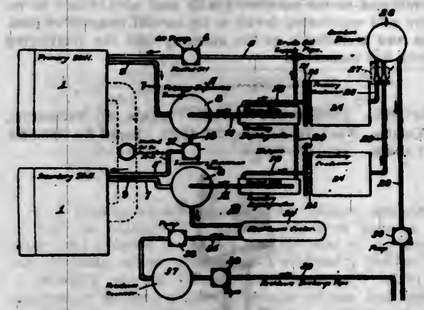
1. A machine of the character described, comprising a traveling feed member, a traveling discharge member, both arranged substantially in alinement with each other, an open sided cylindrical shell disposed transversely of the members at a point in proximity to the adjacent ends of said members, the cylindrical shell being so arranged that one of its longitudinal edges of the open side will be disposed substantially in alinement with the first mentioned feed member when said shell is in one position, while the other longitudinal edge of the open side of said shell will be substantially in alinement with the second mentioned member when said shell is in a second position, means whereby said shell will be oscillated a predetermined degree, and power-imparting means whereby said last mentioned means is actuated.

1,397,982. CARD-INDEX SYSTEM. James H. Rand, Jr., Tonawanda, N. Y. Filed May 21, 1917. Serial No. 169,923. 21 Claims. (Cl. 129—16.)



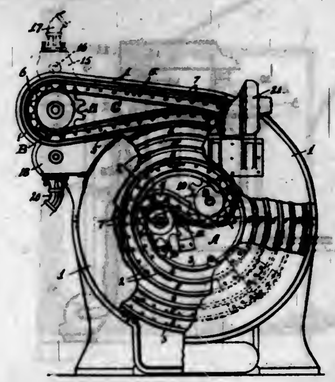
1. In a card system, a series of cards, a sheath connected to each card adjacent to one margin thereof for protecting an inlaid member for the card, said cards being assembled with the sheath of each card nested between the sheath and the body of the next card in the series, whereby said cards are interlocked and spaced with their sheaths projecting one beyond another.

17. In a card system, a series of units, each unit having a substantially rectangular card portion of relatively large area and adapted to bear reference matter, and a relatively narrow tongue in front of said card portion, each unit being arranged with one margin thereof nested



between the tongue and card portion of the next unit and with each tongue only partially overlapping the next tongue, whereby said units are interlocked and said tongues provide exposed index portions in front of said card portions located one above another.

1,397,983. METAL-CUTTING TOOL. John Barrack Renwis, Manchester, England. Filed Oct. 27, 1919. Serial No. 333,637. 1 Claim. (Cl. 29—95.)



In metal cutting tools, the combination consisting of a bent and recessed shank or holder, a cutter seating upon and welded to the bent portion of said holder, and a strut integral with the said cutter and in dovetailed connection with the recessed portion of the holder, as set forth.

1,397,984. OIL-DISTILLING APPARATUS. Thomas J. Ryan, Tulsa, Okla. Filed July 21, 1921. Serial No. 486,359. 2 Claims. (Cl. 196—3.)

1. In an oil distilling apparatus, the combination of a pair of stills, a crude oil supply pipe connected with the inlet of one still, a pair of expansion tanks, one for each still, pipes leading from the outlets of the respective stills to the respective expansion tanks, a pipe for conducting the unvolatilised oil from the expansion tank associated with the first-named still to the inlet of the second still, vapor outlet pipes leading from the expansion tanks, condensers connected with said vapor outlet pipes, dephlegmators located in said pipes between the expansion tanks and the condensers, and means for conveying the oil separated from the vapors in the dephlegmators and conveying the same to the inlet of the first still for retreatment.

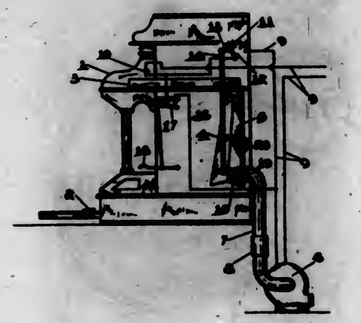
1,397,985. COOKER. John Benjamin, Jr., Philadelphia, Pa., assignor of one-third to Albert E. Thompson, San Jose, Calif. Filed Feb. 28, 1921. Serial No. 447,194. 4 Claims. (Cl. 126—272.)

1. A cooker comprising a shell; can-rails in said shell directed to form a plurality of can paths occupying successive cross sectional areas of the shell, and each path having an involute section leading from the periphery of the shell to its axial region and there reversed in direction to form an involute section leading outwardly between the coils of the inleading section to the periphery of the shell; means for directing the cans from one can path to the next successively; means for feeding the cans to the inleading section of the first can path; means for discharging them from the outleading section of the last can path; and means for advancing the cans through said paths.

1,397,986. CELLULOSE-ESTER SOLVENT AND RESULTING CELLULOSIC COMPOSITION. Max Y. Seaton, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Jan. 16, 1920. Serial No. 351,916. 10 Claims. (Cl. 134—79.)

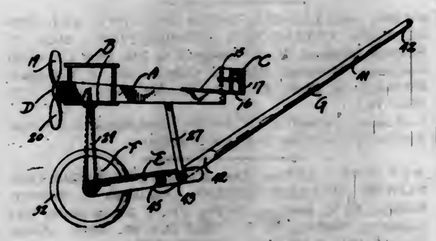
1. A new composition of matter, comprising a solution of a cellulose ester in chlorpropyl acetate.

1,397,987. ACTUATING MEANS FOR THROTTLE-VALVES OF CARBURETERS. Charles L. Sheffy, Buffalo, N. Y., assignor to The Pierce Arrow Motor Car Company, Buffalo, N. Y. Filed Dec. 29, 1919. Serial No. 347,940. 8 Claims. (Cl. 137—139.)



1. The combination with a carbureter having a pivoted throttle valve, of a separate actuating device therefor which is movable relatively to the throttle valve, and operative connections between said actuating device and the throttle valve constructed to produce a varying rate of motion of the throttle valve which increases as the opening movement of the actuating device continues.

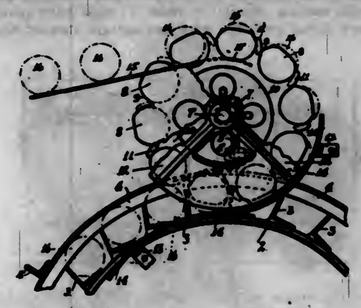
1,397,988. ORGAN-BLOWER. Rowland Henry Smith, Brantford, Ontario, Canada. Filed Sept. 18, 1920. Serial No. 411,228. 1 Claim. (Cl. 84—385.)



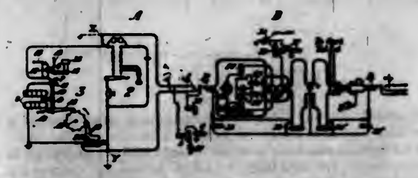
The combination with an organ provided with bellows having a movable side, an electrically-operated blower communicating with the bellows, an electric circuit for the blower, a rheostat in said circuit, operating connections be-

tween the movable side and the rheostat, whereby movement of the side decreases the resistance as the bellows collapses, of a normally open shunt circuit adapted when

closed to short-circuit the rheostat, a switch adapted to close the shunt circuit, a full organ pedal, and connections whereby the operation of said pedal closes the switch.



1,397,989. TOY AEROPLANE. HARRY McBRIDE SMURR, Armona, Calif. Filed July 15, 1920. Serial No. 396,334. 6 Claims. (Cl. 86—48.)



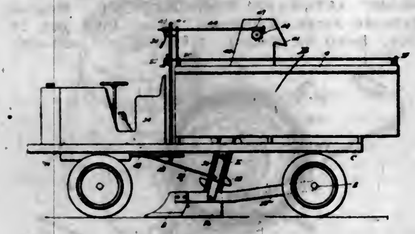
1. In a toy, the combination of wings, a fuselage connected to said wings, a propeller rotatably carried by said fuselage, a landing gear including an under frame, a wheel detachably mounted upon said frame, means disposed upon one side of said wheel for simulating the explosions of an internal combustion engine, means disposed upon the opposite side of the wheel for driving said propeller, and a handle structure detachably and adjustably connected to said landing gear for propelling said toy.

1,397,990. CAN-EXTRACTOR. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Oct. 13, 1920. Serial No. 416,733. 4 Claims. (Cl 214—17.)

1. A can-extractor comprising a pair of rotatable, parallel, spaced disks associated with the path of travel of a can; a fixed member lying beyond and rising above said can path, adapted to receive the forward end of the can projected from the path and tilt said can to cramp it between and against the spaced disks; and a rotatable turret disk to engage the cramped can and lift it in conjunction with the pair of disks, from the can path and elevate it to its discharge.

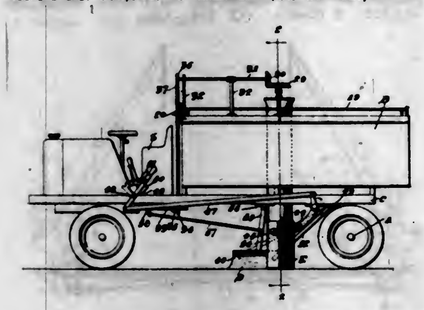
1,397,991. MESSAGE-REGISTERING SYSTEM. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 9, 1919. Serial No. 329,423. 4 Claims. (Cl. 179—7.)

1. In a message registering system, the combination of a subscriber's line circuit having a telephone set and a message registering device associated therewith, a cord circuit adapted for connection with said subscriber's line circuit and means associated with said cord circuit to restore said registering device to its normal unoperated position and to indicate to the operator that the registering device has registered.



1,397,992. HOSE-SUPPORTER. ANNIE S. TRUMBULL, Yakima, Wash. Filed May 29, 1920. Serial No. 385,350. 1 Claim. (Cl. 24—245.)

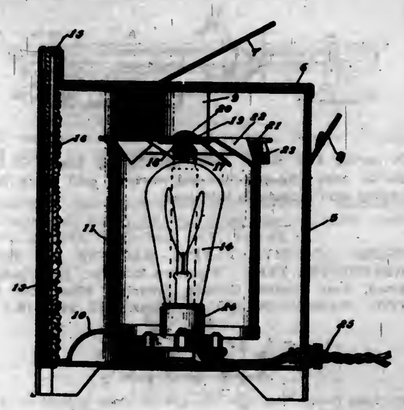
In a hose supporter, the combination of a rigid oblong body plate having a medial longitudinally directed eye, a supporting strap engaged at one end with said plate, a rigid oblong button having a medial longitudinally directed bar, and a supporting strap depending from the first strap and engaged with said bar normally supporting the button



with its length disposed transversely of said eye, the button being of a length greater than the length of the eye and of a width greater than the width of the eye whereby the button can be retracted through the eye only by twisting the latter strap and moving the button endwise with its width disposed longitudinally of the eye.

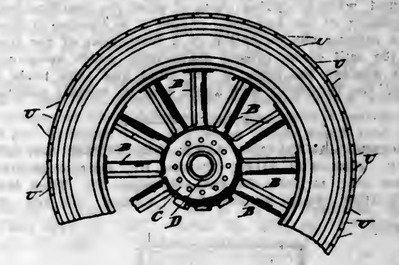
1,397,993. SELF-LOADING VEHICLE. JAMES BOBBIT VON CANON, West End, N. C. Filed Mar. 12, 1920. Serial No. 365,285. 11 Claims. (Cl. 37—32.)

1. A loading apparatus for motor vehicles comprising, a body, a delivery chute supported on the body, a concentrating device comprising divergently arranged wings supported beneath the body and adapted to collect the material to be loaded, a hopper arranged at the meeting ends of said wings for receiving the material collected by the concentrating device, and elevating means for lifting the material from the hopper and introducing it into said delivery chute.



1,397,994. SELF-LOADING VEHICLE. JAMES BOBBIT VON CANON, West End, N. C. Filed May 4, 1920. Serial No. 378,744. 5 Claims. (Cl. 37—32.)

1. A loading apparatus for motor vehicles comprising, a body, a concentrating device supported beneath the body and adapted to collect the material to be loaded, an elevating casing, comprising a stationary section and a movable section telescopically associated with the stationary section, a spiral conveyer within said casing, a shaft for actuating said conveyer comprising a stationary section and a movable section telescopically associated with the stationary section, means for driving the stationary section, and manually operable means for elevating the movable section of the casing and said concentrating device for the purpose described.



1,397,995. ELECTRIC SIGN. DAVID KINNE WADE, Portland, Oreg. Filed June 27, 1921. Serial No. 480,777. 2 Claims. (Cl. 40—132.)

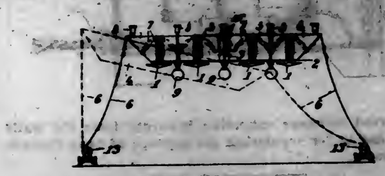
1. A sign including a casing, said casing having a transparent front wall, a revoluble cylinder formed of transparent material of varying colors positioned within the casing, means for causing the cylinder to revolve,

and curved members extending inwardly from the walls of the casing for regulating the passage of heat through the cylinder.

1,397,996. AUTOMOBILE-WHEEL RIM AND TIRE. ROBERT WRIGHT, Cleveland, Ohio. Filed Jan. 15, 1917. Serial No. 142,429. 2 Claims. (Cl. 301—17.)

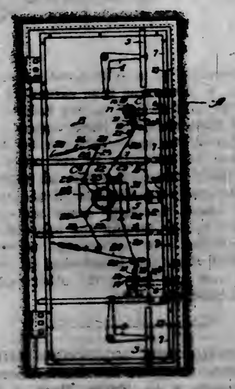
1. The combination of a felly band provided with depending flanges, a transverse tube extending between and supported by the said flanges, a tire holding rim sleeved on and spaced from the felly band, opposed interlocking wedges arranged in the space between the band and the rim and secured at intervals to the outer face of the band and the inner face of the rim, an adjustable wedge extending transversely of the rim in the band substantially entirely across the said space and engaging one of the said wedges for forcing the opposed wedges into interlocked relation, an adjusting screw extending through the said tube and interlocked at one end with the felly band and provided at the other end with a nut engaging the adjustable wedge.

1,397,997. DEVICE FOR MOUNTING THE SPRINGS IN VEHICLES. RODOLFO ZEPPEGNO, Turin, Italy, assignor to Lancia & C., Turin, Italy, a Company of Italy. Filed Sept. 17, 1920. Serial No. 410,938. 5 Claims. (Cl. 267—54.)



4. The combination with a vehicle frame and an axle, of yieldable means interposed between said parts, comprising a leaf spring connected to said frame, a collar

connected to said axle, said spring and collar being provided each with a split socket, a wire rope connecting

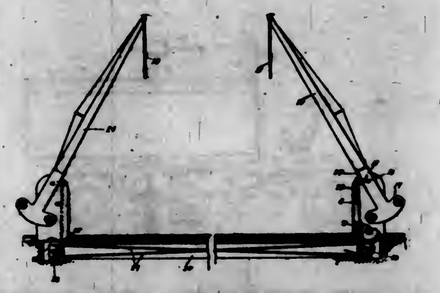


said spring and collar, said rope having hooks at its opposite ends engaged in said sockets, and belts for clamping said sockets to said hooks.

1,397,998. CAPTIVE FLYING-MACHINE OF THE HELICOPTER TYPE. WILHELM ZURBEC, Jr., Fischamend, near Vienna, German-Austria. Filed Mar. 9, 1920. Serial No. 364,695. 9 Claims. (Cl. 244—19.)

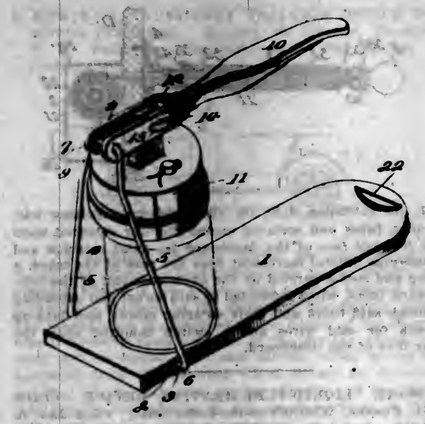
1. A captive flying machine of the helicopter type, comprising screw-raising mechanism acting on the air, and a plurality of securing ropes applied to the framework of the said helicopter at points apart from one another, the said securing ropes diverging toward the ground, whereby during gusts of wind the resulting mass movement of the helicopter causes it to become inclined, thus causing the formation of a component of the force of the said screw raising mechanism, which component acts against the force of the wind and thus tends to bring the helicopter back again into its normal position.

1,397,999. AUXILIARY LOCK FOR SAFES, VAULTS, &c. ADRIAN S. ALLEN, Chicago, Ill., assignor of sixty per cent. to John H. Taft, Chicago, Ill. Filed Mar. 27, 1920. Serial No. 368,350. 7 Claims. (Cl. 109—8.)



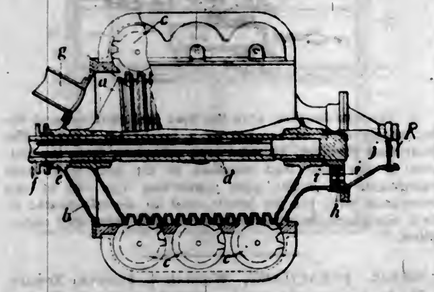
1. In combination, a safe provided with a door having a main locking mechanism, a normally inactive auxiliary locking device mounted on the door and arranged to lock the same closed independently of the main locking mechanism, a flexible connection controlling the auxiliary locking device and extending across the main locking mechanism and adapted to release the auxiliary lock when force is exerted upon said flexible member by abnormal movement of the main locking mechanism, a spring adapted to effect release of the auxiliary locking device, and a flexible connection normally holding said spring against operation and extending across the main locking mechanism, whereby when said last-named flexible member is severed the auxiliary locking device will be released and thrown to the locking position.

1,398,000. AUTOMATIC TIMING DEVICE. WILLIAM RAYMOND ALLEN, Hutchinson, Kans. Filed Dec. 13, 1920. Serial No. 430,361. 7 Claims. (Cl. 200—25.)



1. A timer including a shaft, a supporting member carried thereby, a counterweighted lever pivotally mounted on said supporting member and movable in a plane perpendicularly to the axis of said shaft, a roller support operatively connected with and actuated in one direction by said counterweight lever, a contact roller carried by the roller support, and means for moving the roller support in a direction opposite to that in which it is moved by said counterweight lever.

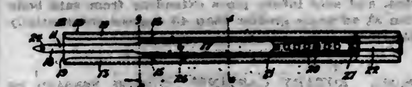
1,398,001. RAILROAD-GATE. ERET E. BARTHOLOMEW, Algona, Iowa. Filed Sept. 20, 1920. Serial No. 411,522. 2 Claims. (Cl. 246—128.)



1. The combination with a railroad gate, of a motor, gearing connecting the motor with the gate, vertically spaced stationary electric contacts adjacent the gate, a movable contact between said stationary contacts and normally engaging one of them, an electromagnet, an armature therefor constituting a latch to engage the gate to hold it in closed position, a circuit including the motor, the movable contact and the stationary contact normally engaged by the movable contact whereby the motor may be energized to close the gate, a second circuit including the electromagnet, the movable contact and the stationary contact normally free of the movable contact whereby the electromagnet may be energized to draw the latch into engagement with the gate and hold the gate closed, a rocking arm arranged to shift the movable contact between the stationary contacts, and a presser finger movable with the gate to rock said arm whereby to break the first-mentioned circuit and close the second-mentioned circuit.

1,398,002. JAR-CAPPING MACHINE. JOHN J. BAUER, Baltimore, Md., assignor to Thrift Jar Company, Baltimore, Md., a Corporation of Maryland. Filed Mar. 2, 1921. Serial No. 448,980. 5 Claims. (Cl. 226—64.)

1. In a capping machine, in combination, a suitable base, a standard pivotally secured to the base, a pressure applying lever pivoted to the standard, and a capper carried by the lever.



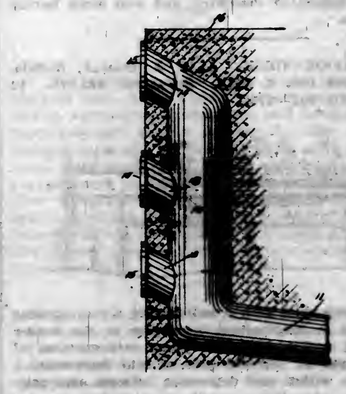
1,398,003. MANUFACTURE OF BUTTER SUBSTITUTES, EDIBLE FATS, AND THE LIKE. WILLIAM CLAYTON, Liverpool, and GERARD NOORMS, Wallasey, England. Filed Mar. 26, 1920. Serial No. 369,062. 4 Claims. (Cl. 99—12.)

2. In the manufacture of edible fats such as margarin, lard substitutes and the like, the process comprising thoroughly emulsifying the mixture containing all the required ingredients in the proportion desired in the finished product, then forcing the mixture under pressure through a cooler while simultaneously keeping the ingredients mixed and after the mixture is cooled utilising the pressure to force the mixture through an additional homogenising action as described.

1,398,004. EMBROIDERY-NEEDLE. CHESTER C. CLEVY, San Francisco, Calif. Filed Jan. 7, 1920. Serial No. 349,252. 5 Claims. (Cl. 112—69.)

1. An embroidery needle of the character described, comprising a body member having inturned edges, a needle member having a cylindrical hollow front end, and an arched rear portion with flanges entering and guided by the inturned edges of the body.

1,398,005. TROLLEY-WIRE PROTECTOR. FRANCESCO COLARUSSO, Albert, W. Va. Filed Mar. 12, 1920. Serial No. 365,279. 4 Claims. (Cl. 191—35.)



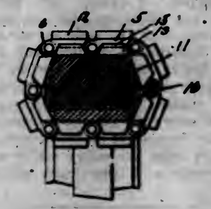
1. A trolley wire having an enlarged upper part and downwardly extending diverging wings, said wings forming exterior grooves at their point of connection with the body and a covering of insulating material surrounding the body and outer surfaces of the wings and having portions extending into the grooves.

1,398,006. PRODUCTION OF ZINC. CORNELIUS ERIK CORNELIUS, Stockholm, Sweden. Filed Mar. 17, 1921. Serial No. 453,008. 1 Claim. (Cl. 204—63.)

A process in the electro-thermic production of zinc during the treatment of the zinc ore in dust chambers or condensers, consisting in preliminarily and before the extraction step begins, of heating the ore sufficiently to drive off the water ordinarily existing in the ore or the material added thereto, but not extending the heating step to the point where the zinc extraction begins, whereby clogging of the chamber or condenser walls is prevented and the hydrogen from the water which would tend to dilute the zinc vapors is practically all eradicated as described.

1,398,007. DRAIN. SAMUEL S. DAVIS, Kentland, Ind. Filed Mar. 7, 1921. Serial No. 450,148. 2 Claims. (Cl. 61—10.)

1. A device of the character described comprising an upright tubular body portion, a substantially horizontal

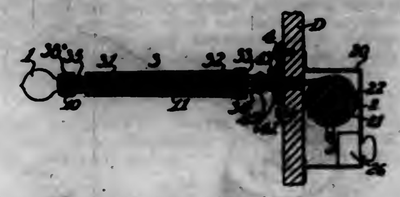


outlet portion arranged at the lower end of said body portion, a plurality of intake pipes arranged in vertically spaced relation and open to the interior of said body portion, and said intake pipes extending from said body portion at an angle greater than 45 degrees substantially as described.

1,398,008. ROTARY CASTING. DIMITRI SENSAUD DE LAVAUD, New York, N. Y. Filed Nov. 14, 1919. Serial No. 338,010. 17 Claims. (Cl. 22—209.)

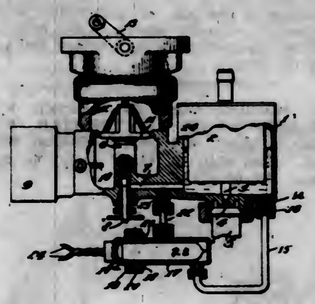
1. The process of casting an annular metallic article in a rotary mold, which consists in laying the metal in the mold in successively deposited spirally related subdivisions while guiding the flow of the metal adjacent to the mold to cause the metal to flow tangentially toward the mold only at one side thereof at an angle to the mold axis and at an angle to a plane perpendicular to the mold axis.

1,398,009. AUTO TRACTION-CHAIN. DOLPHIS DESUISSEAUX and FRANKLIN S. CAPRON, Taunton, Mass. Filed Dec. 9, 1920. Serial No. 429,510. 1 Claim. (Cl. 152—2.)



In a traction chain, a plurality of pivotally connected links, a block having opposed flanges, associated with each link, said flanges adapted to engage the side edges of the link associated therewith, and said block having inclined ends.

1,398,010. DOOR-CHECK. ADAM J. EISMAN, Buffalo, N. Y. Filed Dec. 4, 1919. Serial No. 342,378. 12 Claims. (Cl. 292—275.)



1. The combination with a wall having a door opening provided with a longitudinal depression in the header jamb thereof, and a door for closing said opening, of gripping springs at opposite ends of said depression, a slide movable within said depression between said gripping springs, and a link pivotally connected at one end to said slide and at its other end to the upper edge of said door.

1,398,011. EXTENSION-LIGHT FOR AUTOMOBILES. THOMAS ALVA EDISON SEATTLE, Seattle, Wash. Filed Mar. 14, 1921. Serial No. 452,216. 4 Claims. (Cl. 240—7.)

1. An extension light for automobiles comprising telescoping tubes and securing means therefor mounted upon the forward face of the dashboard for axial rotation and transverse pivotal movement near the base of the tubes, a lamp and socket carried by the outermost end of the telescoping tubes, wires connected to said socket and extending through said tubes and their securing means, and take-up means for said wires and a switch mounted upon the rear face of the dashboard.

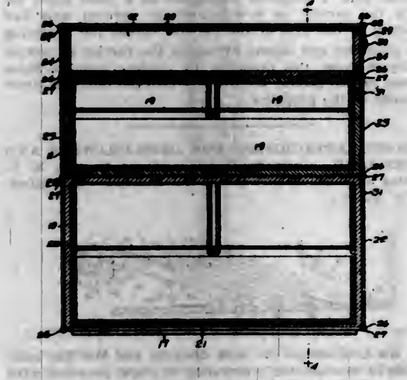
1,398,012. LIQUID-FUEL-HEATING DEVICE. CLAUD H. FOSTER, Wickliffe-on-the-Lake, Ohio. Filed Jan. 5, 1918. Serial No. 210,507. 6 Claims. (Cl. 219—38.)

1. The combination, with the float feed chamber and the jet nozzle of a carbureter, of a receptacle beneath the float feed chamber, an inlet pipe extending from the bottom of the float feed chamber to the bottom of said receptacle, an outlet pipe connecting the top of the receptacle with the jet nozzle, and an electric heater in said receptacle interposed between said inlet and outlet pipes.

1,398,013. STENCILING. WILLIAM G. FUERTH, Newark, N. J., assignor, by mesne assignments, to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed Nov. 29, 1912, Serial No. 734,027. Divided and this application filed Oct. 29, 1915. Serial No. 58,694. 1 Claim. (Cl. 41—33.6.)

A hygroscopic emollient adapted to soften a hardened stencil sheet, comprising an oil, and also having an astringent or hardener for the stencil sheet.

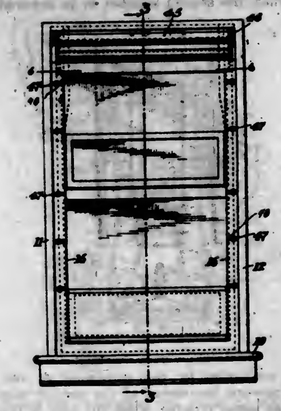
1,398,014. MANUFACTURE OF EARTHENWARE. CLARENCE E. FULTON, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed June 7, 1919. Serial No. 302,472. 4 Claims. (Cl. 106—35.)



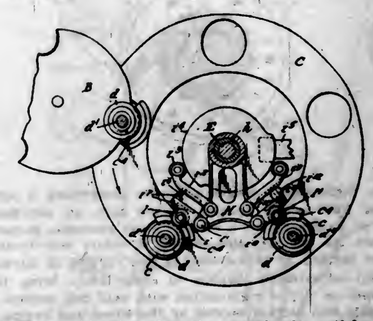
1. An improvement in the manufacture of earthenware which consists in treating a clay body material with an alkaline hydroxid, a soluble alkaline silicate, and a deflocculating agent having the modifying effect in clay characteristic of gallic acid.

1,398,015. AUXILIARY TRACTION DEVICE FOR MOTOR-VEHICLES. ALBERT H. GIBBONS, Brooklyn, N. Y. Filed Apr. 22, 1920. Serial No. 375,840. 3 Claims. (Cl. 180—7.)

1. An auxiliary traction device for motor vehicles, comprising drums secured respectively to the driving and steering wheels of the vehicle, and a cable adapted to be secured respectively to the drums of the driving wheels and wound upon and secured to the drums of the steering wheel, whereby upon rotation of the driving wheels, the cable will be wound upon said driving wheel drums and unwound from the steering wheel drums to drive the steering wheels from the driving wheels, and means for maintaining the spindles of the steering wheels in alinement and against turning movement.



1,398,016. TRUNK CONSTRUCTION. DAVID B. HART, New York, N. Y. Filed Nov. 4, 1920. Serial No. 421,664. 2 Claims. (Cl. 190—21.)

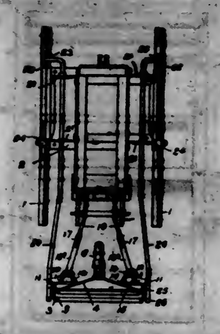


1. The combination with a trunk including a plurality of separable trunk sections, each provided with spaced ribs on the bottom walls and spaced grooves in the top walls inter-engageable with the other trunk sections to prevent lateral separation thereof when assembled, said trunk sections having centrally arranged grooves in the top and bottom walls thereof, of a band adapted to embrace said trunk sections for retaining the same against separation.

1,398,017. WINDOW-SCREEN. WILLIAM J. HEWITT, Bloomfield, N. J. Filed Jan. 18, 1919. Serial No. 271,817. 10 Claims. (Cl. 156—14.)

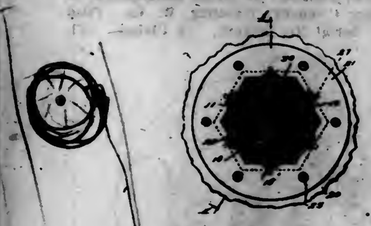
9. In an inside full length window screen and in combination, a frame, screen members mounted in the frame, an offset upper end member associated with the frame, devices coacting with the said offset upper end member for holding the frame in position in the window casing, and means associated with the frame for securing in place thereon a sheet of material in order to form a space for non-circulating air between the same and the window sashes.

1,398,018. CAN-SEAMING MACHINE. HUGH G. HILL, Wheeling, W. Va., assignor, by mesne assignments, to Whitaker-Glessner Company, Wheeling, W. Va. Filed Mar. 5, 1919. Serial No. 280,689. 16 Claims. (Cl. 113—23.)



1. The combination of a rotary carrier for articles to be operated upon, an oscillatory member movable with said carrier, a plurality of devices on said member adapted to operate on said articles to close the same, each of said devices operating on different articles while said member moves with said carrier, one of said devices performing a preliminary closing operation on an article while the other device performs a second closing operation on an article on which the preliminary operation has been performed, and means for moving said member in the reverse direction to move said devices into operative relation to other articles.

1,398,019. GLASS-DRAWING APPARATUS. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Dec. 28, 1918. Serial No. 268,715. 6 Claims. (Cl. 49—17.1.)



5. In combination in apparatus for drawing glass cylinders from a body of molten glass, a bait comprising a lower annular member having a ledge for supporting a

flange of glass, and a second member movable up and down with respect to the first member and comprising a ring member adapted to engage the flange of glass on the ledge when the second member is in lowered position,

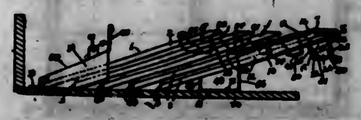
and means controlled by the movement of the bait for causing an upward movement of the second member with respect to the lower member when the bait is raised above the body of glass.

1,398,020. DEMOUNTABLE WHEEL. HENRY EASTON HOLLEY, Otisville, N. Y. Filed Dec. 29, 1919. Serial No. 347,930. 4 Claims. (Cl. 301—9.)

1. A demountable wheel structure comprising a non-circular hub section carried by the axle, an abutment flange at its inner side, a reduced axial extension projecting from the opposite side thereof, a rotary non-circular member carried by said extension and capable of circumferential adjustment thereon to respectively bring the same into or out of registration with said hub section, a removable hub section carried by the wheel and having a non-circular bore conforming to the shape of the permanent hub section, said removable hub section being capable of application to or removal from the permanent section when the rotary member is registered therewith and adapted to be retained thereon by said member when the same is out of registration with said permanent section.

1,398,021. COLLAPSIBLE SEAT FOR CHILDREN. WILLIAM V. HOLLEY, New York, N. Y., assignor to New York Bath Manufacturing, Inc., New York, N. Y., a Corporation of New York. Filed June 8, 1921. Serial No. 476,035. 2 Claims. (Cl. 155—31.)

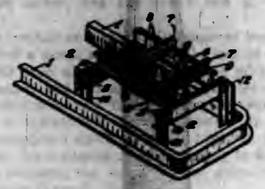
1. A seat comprising a base portion, a spacing bar extending along the lateral edges of the base portion on the under face thereof, a folding lateral leg portion or support hinged to the lower face of each spacing bar, and front and rear leg portions hinged to the under surface of the base portion at the front and rear edges thereof, said front and rear leg portions being operatively related with but disconnected from the lateral leg portion and adapted to fold up against the seat portion and the lateral leg portions adapted to fold against the front



and rear leg portions when collapsed, said front and rear supporting portions when in assembled position acting as braces for the lateral supporting portions.

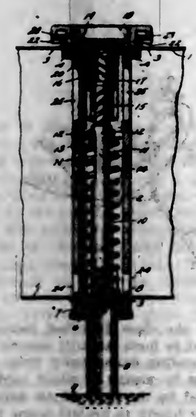
1,398,022. DISH-WASHING MACHINE. MARK A. HOPKINS, Brooklyn, N. Y. Filed Oct. 6, 1920. Serial No. 415,103. 4 Claims. (Cl. 141—9.)

1. Dish washing apparatus comprising a casing, a dish carrier rotatably supported therein on a substantially vertical axis, a propeller supported at a fixed point beneath the carrier on a substantially vertical axis and eccentric to the axis of the carrier, means for operating said propeller and means by which the carrier is rotated by liquid from the propeller to thereby bring articles stacked on the carrier successively into the range of direct influence of the propeller.



1,398,023. ATTACHMENT FOR DESK-DRAWERS AND THE LIKE. JOHN H. HOPPER, Mount Vernon, N. Y. Filed July 26, 1919. Serial No. 313,426. 15 Claims. (Cl. 45—7.)

1. An attachment for desk drawers and the like comprising in combination a plurality of trays, provided with downwardly extending projections and with sockets, the sockets of one of said trays being adapted to engage the projections of another superjacent tray and thereby removably connect the trays together, said sockets and said projections extending backward and inward toward the longitudinal middle line of the trays.

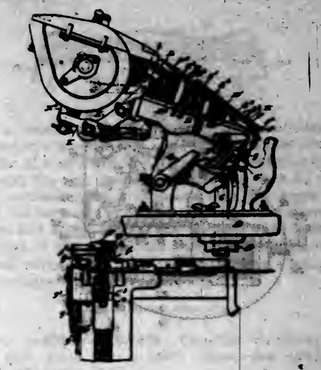


1,398,024. MEANS FOR SUSPENSION OF ENGINES IN MOTOR-VEHICLES. ISAMOR MORRISON JACOBS, Kansas City, Mo., assignor, by mesne assignments, to Truck, Tractor and Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 21, 1917. Serial No. 163,652. 1 Claim. (Cl. 180—64.)

A universal engine support whereby engines of different types and sizes can be supported on standard trucks or engine frames, comprising vertical supports engaging the frame bars of a chassis, transverse members on said supports, longitudinal bars supported on said transverse members, and transverse engine-engaging members supported

on said longitudinal bars, said longitudinal and transverse members being capable of adjustment to accommodate engines of different types and sizes.

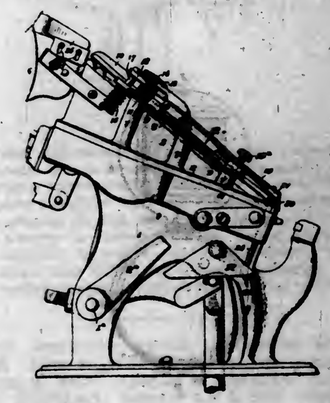
1,398,025. OIL-TANK VALVE. WILLIAM F. JAMES, Honolulu, Hawaii. Filed May 20, 1920. Serial No. 383,005. 6 Claims. (Cl. 137—21.)



1. The combination with a tank, of a tubular valve casing secured in the tank, an outlet valve at the lower portion of the tubular casing, a removable cap constituting a valve on the upper portion of the tubular casing, a stem on said first-mentioned valve having a screw threaded end, means holding the stem against rotary movement, and an internally screw threaded shank on the cap engaging the threads of the stem.

1,398,026. BUTTON-FEEDING INSTRUMENTALITY FOR BUTTON-SETTING MACHINES. JOHN KELLY, Norfolk, Va., assignor to Kelly Button Machine Company, Inc., Norfolk, Va., a Corporation of Virginia. Filed Oct. 6, 1915. Serial No. 54,365. 22 Claims. (Cl. 218—8.)

1. In a button setting machine, a button raceway, and means for varying the size of the raceway to fit different sized button heads comprising a pivoted cover plate having its axis disposed on one side of the raceway.

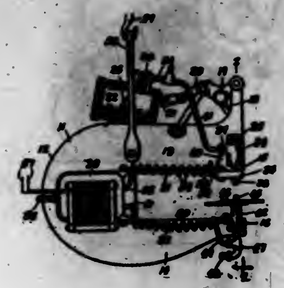


51. In a button setting machine the combination with a staple forming and driving mechanism and a wire feed,

of means for gripping a button eye to support the same to receive the staple wire and a gage carried by said sup-

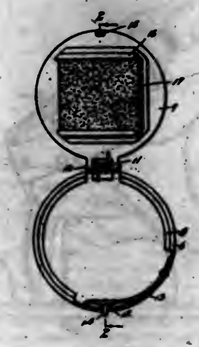
porting means for indicating the point at which the machine will attach the button to the work.

1,398,027. BUTTON-SETTING MACHINE. JOHN KELLY, Norfolk, Va., assignor to Kelly Button Machine Company, Inc., Norfolk, Va., a Corporation of Virginia. Filed Dec. 1, 1916, Serial No. 134,284. Renewed Aug. 26, 1921. Serial No. 495,717. 9 Claims. (Cl. 218—2.)



1. In a button setting machine, the combination with a raceway member, of a guard therefor, means for adjusting said guard relative to the raceway, and means for retaining said guard in its different adjusted positions comprising a spring actuated part capable of swinging movement from an operative position overlying the guard to an inoperative position at one side thereof.

1,398,028. PROCESS AND APPARATUS FOR WORKING METALS. FRANK P. KOSSUT, Amityville, N. Y., assignor to Kobert Machine Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 30, 1917. Serial No. 193,906. Renewed Feb. 24, 1921. Serial No. 447,554. 28 Claims. (Cl. 219—2.)



1. The method of working metal, which consists in suitably supporting a work piece in one electrode, moving another electrode into contact with said work piece to close

the circuit between said electrodes to heat said work piece, moving said heated work piece onto a stationary die, and

fashioning said work piece by a plunger die movable toward and from said stationary die.

1,396,029. TELEPHONE ATTACHMENT. JOHN P. LEE, Pleasantville, N. Y. Filed Apr. 20, 1920, Serial No. 375,252. Renewed Oct. 10, 1921. Serial No. 506,919. 1 Claim. (Cl. 179—185.)

A telephone attachment, including a movable cover, spaced stripe, forming a groove, attached to the inner face of said cover, said groove being adapted to receive an antiseptic wafer, and means for attaching said cover to the mouth piece of a transmitter.

1,396,030. DISPENSING APPARATUS FOR SANITARY DRINKING-CUPS. LAWRENCE W. LUELLEN, Mountain Lakes, N. J. Filed June 21, 1919. Serial No. 305,781. 5 Claims. (Cl. 206—65.)

1. A package of the character described comprising a stack of nested cups having projected edge portions, and a wrapper therefor drawn taut about said stack throughout the stack and preventing free movement of any of the cups relative to the wrapper when the end of the package is open to form therein interior indentations to individually receive the rims of all of the cups of said stack, substantially as described.

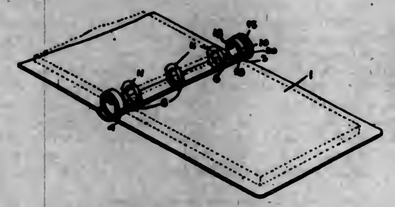
1,396,031. HOG-EATING POULTRY-PROTECTOR OR HOG-MUZZLE. THOMAS LYNCH, Jefferson, Iowa. Filed Apr. 30, 1920. Serial No. 377,835. 2 Claims. (Cl. 119—131.)

1. A device of the class described comprising a single piece of wire bent to form laterally spaced loops and also spaced arms extending downwardly from said loops, together with rings by means of which said loops may be pivotally attached to the nose of an animal, said arms being of sufficient length to project below the level of the animal's mouth when so attached, said arms being bent forwardly at obtuse angles between their ends at points substantially on the level of the lower edge of the animal's snout.

1,396,032. INCANDESCENT LAMP AND METHOD OF MAKING THE SAME. OSCAR V. MAURER, East Cleveland, Ohio. Filed Mar. 10, 1919. Serial No. 281,671. 17 Claims. (Cl. 176—36.)

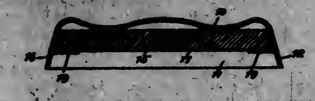
9. The combination of a globe, a tubular mount carried thereby, a tubulating tube within the mount, the upper

end of the mount being fused to the tube, a bushing within the tube and projecting above it and a filament standard carried by the bushing, there being a lateral opening from the bore of the bushing to the outside between the upper end of the mount and the lower end of the filament standard.



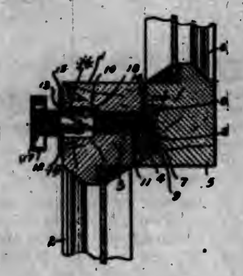
15. The method of making incandescent lamps, comprising inserting a metal bushing into the end of a glass tube, placing said tube and the leading wires within a tubular mount, heating and squeezing the upper end of the mount onto the tube to make a fused connection therewith, while the tube is maintained from collapsing by its internal bushing, securing a standard to the bushing, mounting the filament on the standard and connecting it with the leading wires, securing the mount to the globe, and exhausting the globe through the tube.

1,396,033. METHOD OF MAKING INCANDESCENT LAMPS. OSCAR V. MAURER, East Cleveland, Ohio. Filed Apr. 23, 1919. Serial No. 292,071. 6 Claims. (Cl. 176—7.)



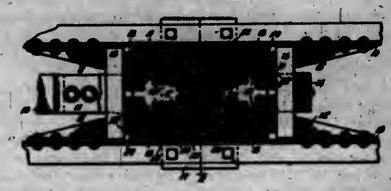
5. The method of making incandescent electric lamps comprising taking a globe having a cylindrical tube formed as part of it and extending from it and in open communication with it, forming a mount with a glass disk as its base and leading wires extending through such disk and a filament carried by the leading wires, the external diameter of the glass disk being only slightly smaller than the internal diameter of the tube, and the filament being small enough to pass through such tube, the disk having a central hole through it, inserting means carrying the mount from the exterior into the tube with the disk positioned in the tube adjacent to the globe, then heating the tube and pinching it onto the mount while externally holding the mount and while preventing the central opening therein from collapsing, then withdrawing the holding device, and then exhausting the globe through the same tube and sealing off such tube beyond the base of the mount.

1,396,034. LOOSE-LEAF BINDER. FRANK K. MIMO, Malden, Mass. Filed Mar. 19, 1921. Serial No. 453,815. 7 Claims. (Cl. 129—1.)



1. A temporary binder comprising a pair of nesting cylindrically curved plates having a plurality of pairs of cooperating segmental abutting ring sections extending from their opposite edges and means for causing relative rotation between said plates about an axis substantially concentric with the axis of their curvature.

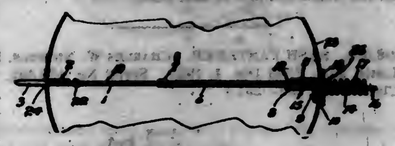
1,396,035. BRUSH-BACK. WILLIAM MORRISON, Troy, N. Y. Filed Sept. 1, 1920. Serial No. 407,810. 2 Claims. (Cl. 15—29.)



1. In a brush back, a plate of comparatively light weight material arranged in a recessed metallic plate, the plate being of a size whereby a groove is provided between its edge and the wall of the recess of the back as well as being of considerably less thickness than the depth of the recess of the back and the exposed face of the plate being roughened and strips having one of their ends secured to spaced parts of the wall of the recess of the back and the second end parts being bent over in lapping arrangement upon the roughened face of said plate.

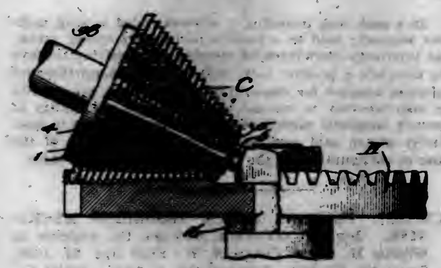
1,396,036. SASH-FASTENER. CHARLES W. NICHOLS, St. Louis, Mo. Filed Dec. 4, 1920. Serial No. 428,902. 1 Claim. (Cl. 292—251.)

In a sash lock including a screwthreaded locking member normally held in a passive position by spring action, an internally-screwthreaded member for receiving the bolt to complete a positive lock, said internally-screwthreaded member adapted for disposition in an opening provided in a sash whereby to conceal the same, and a plurality of prongs integrally formed on said member whereby to positively attach said member to a sash irrespective of the size or configuration of the recess for receiving the same.



1,396,037. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed Apr. 21, 1920, Serial No. 375,462. Renewed Oct. 3, 1921. Serial No. 505,116. 6 Claims. (Cl. 213—64.)

2. In a friction shock absorbing mechanism, the combination with a friction shell having openings in the walls thereof and interior longitudinally extending friction surfaces; of a pair of combined friction shoes and wedges slidably mounted within said friction shell, each wedge-shoe



having an outer friction surface cooperating with a fixed inner surface of the shell and also an inclined friction surface at its inner end, each wedge-shoe having also an outwardly extending flange at its inner end providing a shoulder, the flanges of the wedge-shoes extending within the wall openings of the shell and cooperating with the edges of the latter to limit the outward movements of the wedge-shoes with respect to the shell, internally movable friction shoes within the shell, said shoes having wedge shaped ends coöperable with said wedge-shoes; and spring means interposed between the internally movable shoes.

1,398,038. DAMPER CONSTRUCTION. THOMAS OLIVER, Holland Mich., assignor to Federal Stamping Company, Holland, Mich., a Corporation of Michigan. Filed Aug. 11, 1921. Serial No. 491,891. 10 Claims. (Cl. 126—292.)

1. In combination, a damper disk, a tail piece member having a pointed extension at one end connected to the disk, a handle member attached to the disk in alinement with and partly covering the tail piece member, a handle, and means for detachably connecting the handle to the outer end of the handle member.

1,398,039. CUTTER FOR GENERATING SKEW BEVEL-GEARS. CARL G. OLSON, Chicago, Ill., assignor to Illinois Tool Works, Chicago, Ill., a Corporation of Illinois. Filed Nov. 24, 1920. Serial No. 426,293. 5 Claims. (Cl. 29—104.)

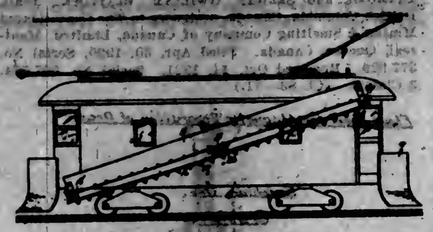
1. A cutter for generating skew bevel gears, said cutter having the general form of a cone and having teeth facing the apex of the cone.

1,398,040. RIBBON-METER. STEPHEN H. PARRISH, Grand Rapids, Mich. Filed May 17, 1917. Serial No. 169,188. 6 Claims. (Cl. 33—147.)

1. In combination, a supporting structure, a pointed prong secured to and spaced a distance from said structure, a rod slidably mounted on the structure and yieldingly bearing against the prong, there being a series of lines of indicating characters carried by said structure, means connected to the rod and operable over the indicating characters whereby on insertion of the prong under a thickness of ribbon wound on a core and engagement of the rod against the outer surface of the ribbon said means is carried to a point over the indicating characters indicative of the amount of material, and means controlled by the insertion of one thickness of ribbon between the prong

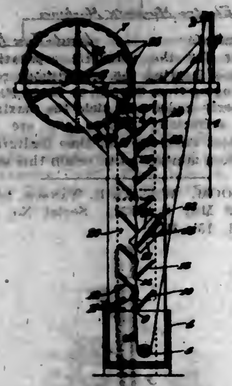
and rod for determining the selection of the line of indicating characters to which the pointer bears reference with respect to the ribbon, substantially as described.

1,398,041. POULTRY-FEEDER. CONSTANT J. PERREYE, Calicoon, N. Y. Filed Oct. 25, 1920. Serial No. 419,288. 2 Claims. (Cl. 119—52.)



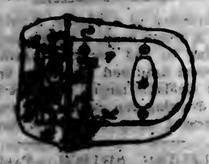
1. A poultry feeder comprising a hopper of rectangular formation in cross section and provided at its lower end with a rearwardly inclined front wall and side walls having forwardly and downwardly inclined bottom edges, said front wall terminating above the lower ends of the side walls, and a feed trough consisting of a wire mesh basket projecting from the front of said hopper at the lower end thereof and provided with a rearward extension secured to the rear wall of the hopper and at its side edges to the bottom side edges of the side walls.

1,398,042. APPARATUS FOR REMOVING SNOW. JAMES PULLAR, Hartford, Conn. Filed Apr. 16, 1920. Serial No. 374,880. 18 Claims. (Cl. 37—60.)



1. A snow remover comprising a portable base, a conveyer tube mounted on said base, an endless conveyer mounted to travel with one reach substantially parallel

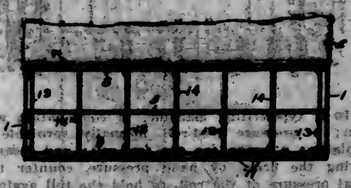
with the wall of said tube and is positively driven in proximity a combined spiral for supply of heat evenly for



the entire length of said tube, and means to supply heat to said conveyer as it travels through said tube.

1,398,043. CLOTH-HANDLING DEVICE. ALBERT RAU, Clifton, N. J., assignor to United Piece Dye Works, Inc., a Corporation of New Jersey. Filed Feb. 5, 1921. Serial No. 442,044. 14 Claims. (Cl. 8—19.)

1. The combination with means for drawing cloth upward, of means for forcing water against the cloth near the top of its path so that it may flow downward along the upwardly moving cloth, fixed edges by which the cloth is guided so that it is diverted from a straight line in both directions, and fixed deflectors extending from the edges for bringing the down-flowing water against the cloth from each side.



1,398,044. LOCK. MORRIS BERNSTEIN, New York, N. Y. Filed June 5, 1920. Serial No. 386,666. 15 Claims. (Cl. 70—46.)

1. In a lock mechanism, a striker plate, a projection carried thereby having an enlarged portion, a bolt movable in parallelism with said plate in a vertical plane and having an opening to permit of the passage of the enlarged portion of said projection, said bolt

---

1,398,045. EGG-CARRIER. JAMES B. SIRS, Pittsburgh, Pa. Filed Aug. 9, 1920. Serial No. 402,139. 4 Claims. (Cl. 217—38.)

1. In an egg carrier, the combination with an inclosing casing, of a filler adapted to be positioned in the casing, said filler including a longitudinally extending member having a base portion and a vertical partition wall, and a second member intersecting with the first member and coöperating therewith to form bins, said second member having a plurality of spaced apart, vertically and transversely extending portions and inclined bottom portions connecting the said spaced apart transversely extending portions, and having a plurality of slots by means of which the second member may straddle said first member.

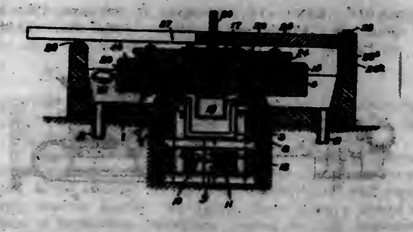
1,398,046. GLASS-ROLLING MECHANISM. JACOB SOMMARGO, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed July 21, 1919. Serial No. 312,131. 11 Claims. (Cl. 49—34.)

10. In combination in glass rolling mechanism, a table, a roll, supporting tracks extending along the sides of the table on which the roll rests, means for rotating the roll to cause it to move back and forth along the table, and means for automatically lifting the roll from the tracks when it reaches one extreme of movement, comprising a tilting cradle provided with rollers for engaging the roll and supporting it for rotation.

1,398,047. BIN-GATE. RICHARD H. STEVENS, Philadelphia, Pa. Filed Oct. 7, 1920. Serial No. 415,353. 16 Claims. (Cl. 193—48.)

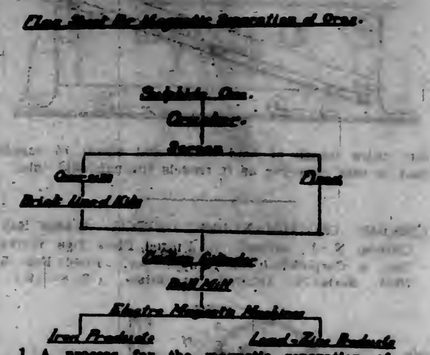
1. The combination with a hopper provided with an opening therein, of a closure therefor, comprising a member adapted to agitate by rolling contact against the material therein.

1,396,648. TYPEWRITING-MACHINE. Bowman C. Sickner, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 22, 1919. Serial No. 332,472. 22 Claims. (Cl. 197—127.)



1. In a typewriting machine, in combination with a platen; a pressure feed-roll normally revolvable with the platen; a brake for the feed-roll; and means for applying the brake by hand pressure, counter to the normal pressure of the roll, to hold the roll against rotation while the platen is moved.

1,396,649. DREDGE-FRAME BUSHING. William Wilmer Swayne, Jr., Wilmington, Del., assignor to American Manganese Steel Company, Augusta, Me., a Corporation of Maine. Filed July 30, 1921. Serial No. 488,577. 3 Claims. (Cl. 64—10.)



3. A bushing formed with end flanges, an internal integral key and outstanding spaced lugs carried at one extremity of said bushing and defining a slot therebetween.

1,396,650. METHOD FOR PRODUCING FLAT PARALLEL-SIDED GLASS SHEETS. William H. Taylor, Charleroi, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Dec. 5, 1918. Serial No. 265,441. 6 Claims. (Cl. 51—278.)

1. The process of securing a plate of glass to a flat bed which consists in applying the plate to the bed, forcing a mixture of plaster and liquid between the plate and the bed, and allowing the plaster to set.

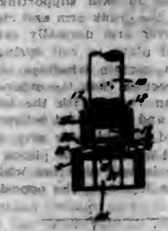
1,396,651. PROCESS FOR THE MAGNETIC SEPARATION OF ORES. Clarence Tyrrell Ralph William Dearden, and Selwyn Gwillym Blaylock, Trail, British Columbia, Canada, assignors to The Consolidated Mining & Smelting Company of Canada, Limited, Montreal, Quebec, Canada. Filed Apr. 30, 1920, Serial No. 377,929. Renewed Oct. 14, 1921. Serial No. 507,774. 3 Claims. (Cl. 29—71.)

1. A process for the magnetic separation of ores which consists of heating the ore without roasting to a temperature ranging from 600° F. to 1200° F. which when the ore is properly cooled will yield the maximum susceptibility, then artificially cooling the ore under such conditions of heat exchange and time limitations ranging from five to fifteen minutes as to retain this susceptibility.

1,396,652. BROOM. William B. Wanson, Locust Valley, N. Y. Filed May 3, 1921. Serial No. 466,574. 3 Claims. (Cl. 15—19.)

1. The combination of a handle, a thimble at the end of the handle, a broom head, a clamp consisting of flared jaws conforming to and engaging against the opposite sides of the broom head and a resistant bridge connecting said jaws, and yieldable means housed within the handle and normally drawing the clamp into the thimble to be thereby compressed upon the broom head.

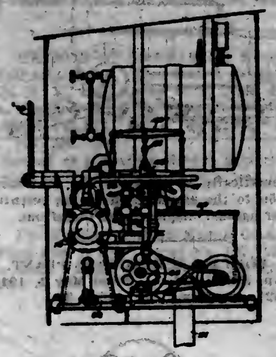
1,396,653. ELECTRIC SWITCH. Paul F. Woollenweber, Toledo, Ohio, assignor to Electric Auto-Lite Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Apr. 25, 1918. Serial No. 230,712. 6 Claims. (Cl. 200—78.)



1. In an electric switch, the combination of a casing, having a pair of contacts secured thereto, a rod slidable

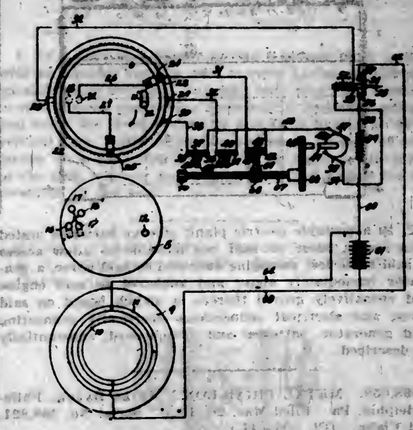
in said casing, a sleeve loosely mounted on said rod, a member carried by said sleeve and adapted in one position to bridge said contacts, a spring tending to hold said member away from said contacts, latching means carried

by said casing for holding said sleeve against movement in either direction and means on said rod for releasing said latching means when the rod is moved to a predetermined position.



1,396,654. SOCKET-WRENCH. Walter A. Asmus, Los Angeles, Calif., assignor of one-half to Baldwin Reinhold, Los Angeles, Calif. Filed July 16, 1919. Serial No. 311,187. 2 Claims. (Cl. 81—177.)

1. In a wrench of the character described, a socket having a recess, a shank having an end adapted to fit into said recess so as to rotate said socket when said shank is rotated, and means for expanding the end portion of said shank end so as to grip said socket, said means embodying a tapered hole diametrically through said end portion a slot parallel to said hole and between said hole and the end of said shank, and a taper pin in said hole and means to prevent removal of said pin from said hole.



1,396,655. GAS-MAIN CONTROLLER. Joseph Van Ackeren, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 19, 1920. Serial No. 373,000. 17 Claims. (Cl. 48—191.)

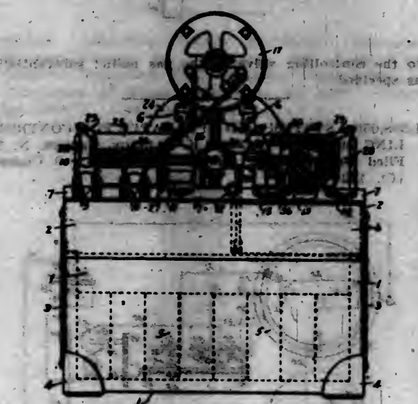
1. In a pressure regulator for gas mains, in combination: a member movable in response to fluctuations in pressure in a gas main; a pilot valve actuated by said movable member; an amplifying relay valve actuated by fluid pressure controlled by said pilot valve; a motor actuated by a fluid pressure line controlled by said relay valve; and means for transmitting power from said motor

to the controlling valve of the gas main; substantially as specified.

1,396,656. SYSTEM AND APPARATUS FOR CONTROLLING MOTORS. Albert K. Allison, Tappan, N. Y. Filed Oct. 6, 1920. Serial No. 415,665. 9 Claims. (Cl. 172—8.)

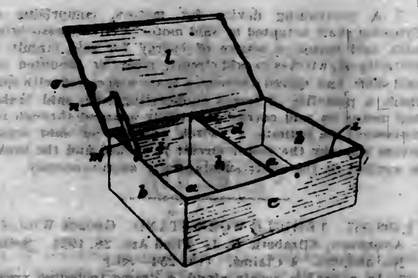
7. A controlling device for motors, comprising a threaded shaft actuated by said motor, a circuit associated with said motor, a source of energy for said circuit, a plurality of switches in said circuit, a carrier mounted on said shaft and moved thereby, a brake associated with said shaft, a plurality of levers cooperating with said brake, and means on said carrier selectively adapted through its movement to actuate a switch and one of said brake levers whereby the motor circuit is opened and the brake is applied to the shaft substantially simultaneously.

1,396,657. VEHICLE WORK-STAND. George William Anderson, Elizabeth, N. J. Filed Apr. 28, 1921. Serial No. 465,093. 4 Claims. (Cl. 254—89.)



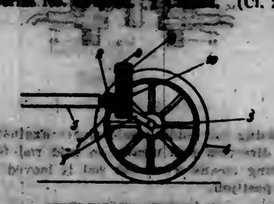
1. In a vehicle repair stand, a frame including tread rails having adjustable connection therebetween for the accommodation of vehicles having various tread widths,

adjustable and detachingagainst means for supportively supporting the frame in horizontal or inclined planes, and



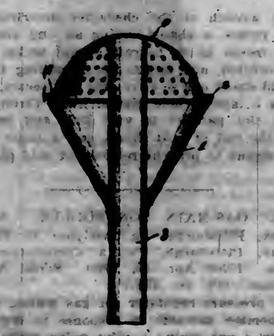
means automatically operable by the movement of the vehicle up on to the stand to effect the retention of the same thereof against displacement therefrom.

1,398,058. PORTABLE ELECTRIC PLANT. EDWARD L. AUBAND, Detroit, Mich. Filed May 1, 1918. Serial No. 231,827. 8 Claims. (Cl. 290—38.)



2. In a portable electric plant, storage batteries nested in a box, a cover on said box movable to allow access to said batteries, an engine anchored to said cover, a generator immediately above and anchored to said engine and operatively geared thereto, a switch board on said cover, and electrical connections electrically connecting said generator, batteries and switchboard, substantially as described.

1,398,059. METAL CIGAR-BOX. MEYER BATUK, Philadelphia, Pa. Filed Mar. 26, 1920. Serial No. 368,821. 1 Claim. (Cl. 206—41.)



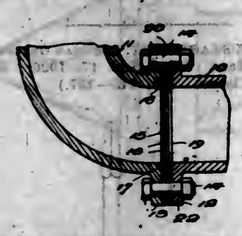
A package comprising an outer thin sheet metal box having a bottom, a front wall, a rear wall, end walls and a lid, a removable transverse sheet metal partition and straight reinforcing member extending from front to rear of the box, substantially parallel to the ends of the box, said partition having a flange at each end, the one flange extending along the front of the box, while the other extends along the back of the box, said flanges maintaining the partition in an upright position, and cigars in the box on both sides of the partition, said cigars extending parallel to the partition and maintaining the partition normal to the front and back of the box, so that said partition will be maintained in a position to exert its maximum resistance against the front and back of the box to prevent inward bending of the front and back of the box, and thereby protect the cigars against longitudinal crushing.

1,398,060. SUSPENSION FOR VEHICLES. CHARLES LÉOPOLD BECK, Lyon, France, assignor of one-half to Arthur Gebauer, Paris, France. Filed Aug. 20, 1920. Serial No. 404,201. 7 Claims. (Cl. 280—124.)

1. A motor vehicle comprising in combination a vehicle frame, a short axle carrying one wheel, a crank arm connected at one end to the said short axle and inclined in an upward and forward direction therefrom, a supporting member embodying a cylinder and secured to the vehicle frame, a spindle rigidly secured to the crank arm and pivotally supported in said supporting member, a lever arm shorter than the crank arm and rigidly secured to the spindle, said lever arm normally extending in a substantially horizontal plane, a coil spring tending to depress said lever arm, certain windings of said spring having a larger cross section than the others so that the flexibility of the spring varies with the load, a piston guided in the cylinder and interposed between the coiled spring and the free end of said lever arm, said cylinder containing a liquid, and means on the piston whereby the piston is free to move in one direction while its movement is checked by the liquid in the opposite direction.

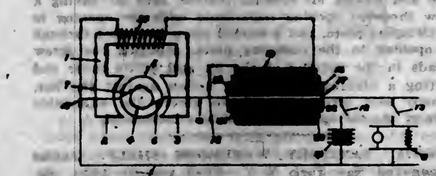
1,398,061. CLOTHES-POUNDER. CHARLES BOWMAN, Washington, D. C. Filed Apr. 7, 1921. Serial No. 459,219. 1 Claim. (Cl. 68—5.)

A clothes pounder comprising a hollow body having a circular open end, a hollow perforated semispherical mem-



ber secured to the body said having its outer portion extending beyond the body, the edges of such member extending into the open end of the body and being spaced therefrom.

1,398,062. CENTRIFUGAL PROPELLER. CHARLES D. BROOKS, Brooklyn, N. Y. Filed Jan. 21, 1921. Serial No. 438,902. 6 Claims. (Cl. 170—159.)

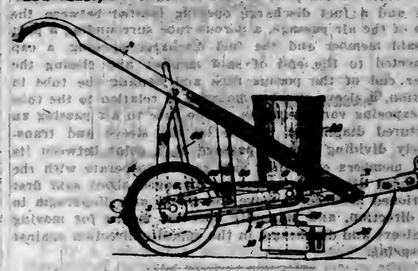


1. A propeller having a recess therein, adjacent the hub thereof, a passage leading therefrom outwardly from the hub through the propeller, a return passage communicating with the first passage and with the recess and a suitable weight disposed in the recess adapted for being centrifugally moved outwardly through the passage, thence returned to the recess, substantially as described and for the purposes set forth.

1,398,063. MIXER FOR GAS-ENGINES. CLIFFORD C. BROWN, Cartersville, Ga. Filed May 16, 1919. Serial No. 297,574. 1 Claim. (Cl. 48—180.)

A gasket as specified comprising a pair of plates and an intermediate packing sheet arranged between the plates, one of said plates having an integral perforated central portion and the other plate and packing sheet having a central opening in register with the perforated portion of the first plate, one of the plates having outstanding lugs about the central portion and the other plate having apertures for the passage of said lugs, the lugs being adapted to extend through said apertures and to be turned over against the outer face of the plate through which the lugs pass for holding the plates together with the packing sheet therebetween, said plates and sheet having registering openings for receiving clamping bolts when the gasket is disposed between a carbureter and manifold.

1,398,064. CONTROL FOR DYNAMO-ELECTRIC SYSTEMS. ALVIN E. BUCHENBERG, Toledo, Ohio, assignor to Electric Auto-Lite Corporation, Toledo, Ohio, a Corporation of Delaware. Filed May 13, 1918. Serial No. 234,206. 5 Claims. (Cl. 171—229.)



1. In a regulator, the combination of a series of contiguous carbon plates, a controlled circuit connected therewith, a metallic member for binding said plates together, a controlling circuit and means whereby the current in said controlling circuit is caused to heat said metallic member to thereby release the pressure on said plates.

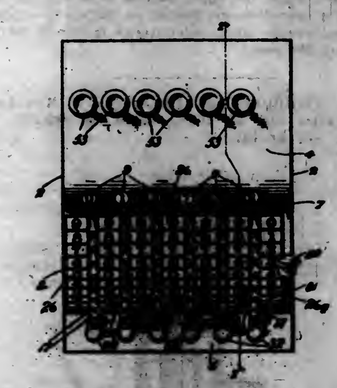
1,398,065. METHOD OF PREPARING STORAGE-BATTERY SEPARATORS. CAMPBELL C. CARPENTER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Feb. 14, 1921. Serial No. 444,736. 2 Claims. (Cl. 204—29.)

1. The method of preparing storage battery separators which consists in treating wood with a lead compound.

1,398,066. PLANTER. EUGENE MACON COBB, Charlotte, N. C. Filed Feb. 7, 1917, Serial No. 147,153. Renewed Oct. 13, 1921. Serial No. 507,566. 6 Claims. (Cl. 221—125.)

1. In a planter, a hopper having a bottom plate formed with an annular runway, said runway having a discharge opening therethrough, a flat seed ring rotatably mounted in said runway and having horizontally projecting peripheral teeth, the lower portion of said teeth having an outer vertical face, while the upper portion is beveled off uniformly on a concentric arc and at an angle to the plane of the ring, whereby an annular trough is formed for the reception of the seed.

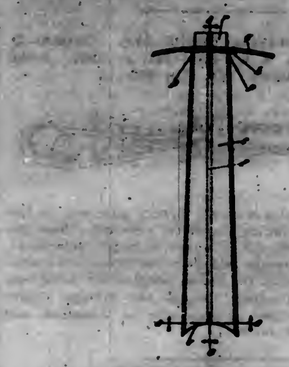
1,398,067. CARBURETER. HENRY CRAWH, New York, N. Y. Filed June 21, 1916. Serial No. 104,238. 10 Claims. (Cl. 26—51.)



1. In a carbureter, a casing having an air inlet and a charge outlet, a shiftable diaphragm adapted to separate the inlet and outlet, said diaphragm being perforated to permit communication between the inlet and outlet, a stationary element coöperating with the diaphragm to form

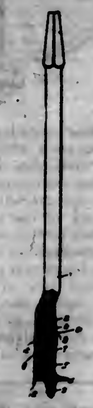
a valve device controlling such communication, a pressure-fuel sleeve within the casing and supplied with liquid fuel, and means operating in synchronism with said diaphragm for exposing said sleeve to the air passing through said diaphragm when the latter is shifted, said sleeve and diaphragm being relatively positioned so that the exposure of the sleeve varies in accordance with movement of the diaphragm.

2. In a carburetor, a casing having an air inlet and a charge outlet, a shiftable diaphragm adapted to separate the inlet and outlet, said diaphragm being perforated to permit communication between the inlet and outlet, a stationary element cooperating with the diaphragm to form a valve device controlling such communication, and means for exposing a hydrocarbon supply to the air passing through said diaphragm when the latter is shifted, said means including a hood adapted to isolate the supply when the valve device is closed.



10. In a carburetor for internal combustion engines, the combination of a body providing an air passage, a member located in the passage and provided with a fuel passage and a fuel discharge opening located between the ends of the air passage, a porous tube surrounding a part of said member and the fuel discharge opening, a cap connected to the end of said member and closing the upper end of the porous tube and holding the tube in position, a sleeve slidably mounted in relation to the tube for exposing variable areas of the tube to air passing an apertured diaphragm carried by the sleeve and transversely dividing the air passage at a point between its ends, members carried by said cap to cooperate with the apertured diaphragm, a spring arranged about said first mentioned member to move the sleeve and diaphragm in one direction, and manually operated means for moving the sleeve and diaphragm in the opposite direction against the spring.

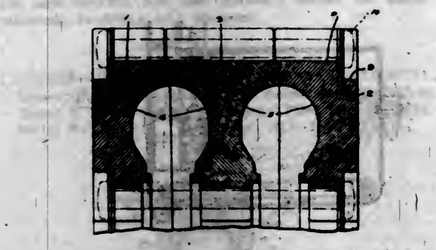
1,398,068. COMPUTING-MACHINE. Fred H. Dodds, Grand Rapids, Mich., assignor, by mesne assignments, to William D. Bleick, Newark, N. J. Filed Mar. 16, 1917. Serial No. 155,251. 14 Claims. (Cl. 235—60.)



1. In a computing machine, a casing provided with a plurality of spaced horizontal openings in the top thereof and with vertical slots below each opening, a horizontal ledge to the casing below said slots, an indicating disk rotatably mounted back of each opening in the casing, an oscillatory operating quadrant rotatably mounted inside of the casing and extending through each slot, mechanism connecting each quadrant and a disk for turning the disk on operation of the quadrant in a downward direction, means yieldingly holding each quadrant in upper position, and means for operatively engaging each quadrant at a plurality of points on its outer surface.

1,398,069. HAND-WHEEL. Horace Wallace Dodge, St. Johns, England. Filed Sept. 30, 1920. Serial No. 412,091. 5 Claims. (Cl. 74—23.)

1. An arm for a hand wheel bent from a sheet metal blank, the marginal portions of said blank being inturned and forming a diaphragm within the arm, substantially as set forth.



1,398,070. ADJUSTABLE BIT. Thomas Gregory Doyle, Fall River, Mass. Filed Nov. 17, 1920. Serial No. 424,660. 3 Claims. (Cl. 145—127.)

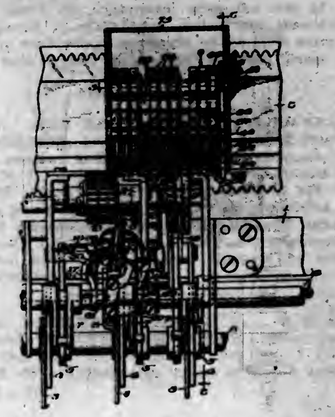
3. A bit having a longitudinal dove-tailed groove therein, a bar adjustable in said groove, a spur at one end of the bar, a laterally adjustable cutting plate having a spur at its end, a clamping plate engaging the cutting plate and having an opening therein, said bit having a screw threaded opening registering with the opening in the clamping plate, and a headed screw projected through the opening in the clamping plate, engaging the screw threads in the opening of the bit and at its inner end exerting a binding or jamming action against the bar, whereby said screw operates to secure the adjustable parts of the bit against independent movement.

1,398,071. SANITARY WARDROBE-SHELF. James Fonseca, New York, N. Y. Filed Aug. 31, 1920. Serial No. 407,079. 3 Claims. (Cl. 211—27.)

1. In a wardrobe shelf construction, the combination with a main shelf and its extension, of means to support the main shelf upon and spaced from the wardrobe walls, and means to subsequently secure the extension at one

end to a wall of the wardrobe and at its other end to the free edge of the main shelf.

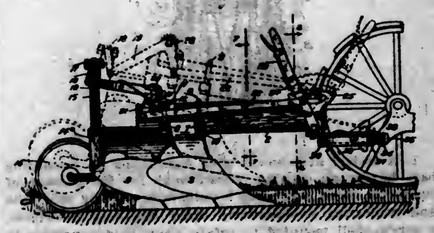
1,398,072. CAMERA. Thomas Gallo, New York, N. Y. Filed Oct. 23, 1919. Serial No. 332,653. 5 Claims. (Cl. 95—32.)



1. In a camera, the combination with the lens carrying portion thereof having at its rear open face guideways for the reception of a plate holder, of a frame having members for engaging the said guideways and provided with a ground glass, and with a cloth hood secured thereto and terminating in an oblong sight opening.

1,398,073. DUPLEX MOLD. Henry R. Gilson, New Rochelle, N. Y., assignor to The Hartford Rubber Works Company, a Corporation of Connecticut. Filed Dec. 17, 1920. Serial No. 431,374. 3 Claims. (Cl. 18—38.)

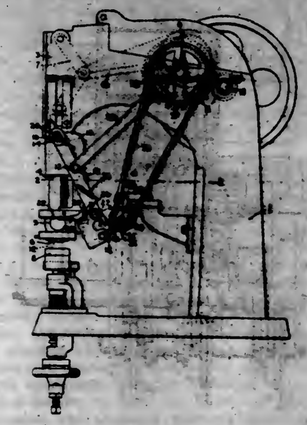
1. A portable tire mold unit having three or more sections whose contiguous faces are provided with complementary grooves shaped to define a plurality of cavities for the reception of tires, and means on the outermost sections for receiving clamping members of a length less than the distance between the outer surfaces of the outermost mold sections when assembled.



1,398,074. ALGEBRAIC-TOTAL CALCULATING-MACHINE. Hyman-Ely Goldberg, (now by judicial change of name Hyman Goldet,) Chicago, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 26, 1913, Serial No. 786,705. Renewed Sept. 24, 1921. Serial No. 503,073. 27 Claims. (Cl. 235—59.)

5. In a calculating machine, the combination of: a plurality of carrying wheels; actuating means adapted to engage said carrying wheels serially; means for giving said actuating means an added unit of movement as an incident of the passage of the highest carrying wheel through zero, said added unit of movement being given only when said carrying wheels are in a certain position relative to said actuating means.

23. In a calculating machine, the combination of a plurality of totalisers; an algebraic-total mechanism therefor, said algebraic-total mechanism being composed of two parts, the first of said parts being duplicated for each of said totalisers and being fixed relative to each of said totalisers; the other part being movable in respect to said totalisers and traveling from totaliser to totaliser.



1,398,075. PLOW. Ralph Bebee Hartsough, Minneapolis, Minn., assignor to Flour City Plow Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Apr. 4, 1919. Serial No. 287,490. 10 Claims. (Cl. 97—67.)

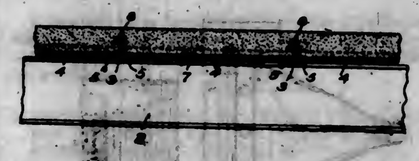
1. The combination with a cylindrical plow beam, of a saddle block having a recess in its upper surface fitting against the surface of said beam, means clamping said block against the surface of the beam, said clamping means admitting of adjustment for progressive increase of clamping tension of the block against the beam, standards

projecting downwardly from said blocks, and plows carried by said standards, said blocks constituting a right angle connecting one standard to the other and securing both to the beam.

1,398,076. MARKING-MACHINE. Chosen H. Lang and Elmer L. Lang, Boston, Mass. Filed Apr. 7, 1921. Serial No. 459,287. 5 Claims. (Cl. 101—321.)

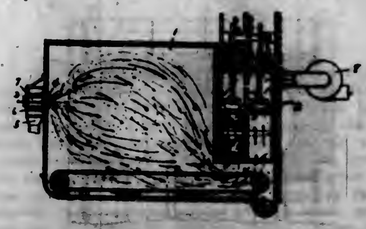
1. In a marking machine, the combination with a work support, of a vertically-movable printing head, arms rising from the printing head, an ink roll carrier pivotally connected to said arms, an ink roll mounted in said carrier, means to swing the carrier to carry the ink roll across the face of the type supported by the printing head, and means associated with the printing head to cause said ink roll to have a right line movement while it is passing over the type face.

1,398,077. SWIVEL ATTACHMENT-PLUG. Peter S. McLean, Bloomfield, N. J., assignor, by mesne assignments, to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1917. Serial No. 164,519. 19 Claims. (Cl. 173—359.)



1. A swivel attachment plug comprising an insulating base having an opening therethrough for the passage of conductor cords, electrical terminals carried by said base and projecting substantially equal distances therefrom, a screw shell mounted to rotate about said terminals in electrical engagement with one of them, an insulating spacer adapted to be inserted within the shell to rotatably hold the same in place and engaging the ends of the terminals to prevent the spacer binding the shell against rotation, and means carried by the spacer electrically connected to the other terminal for holding the parts together and forming a center contact.

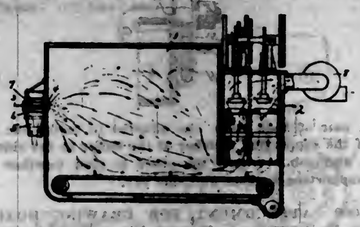
1,398,078. SANITARY CAP. Richard H. Hinrichs, Brooklyn, and Minna H. Linsen, Mount Vernon, N. Y., assignors to The Rhuloid Company, Brooklyn, N. Y., a Copartnership consisting of Edward K. Madan and Philip H. Hinrichs, Brooklyn, N. Y., and Elsie P. Lesine, Mount Vernon, N. Y. Filed Dec. 24, 1918. Serial No. 268,082. 1 Claim. (Cl. 170—135.)



A sanitary cap of the class described comprising a central convexo-convex body portion approximately hemispherical in form and provided with a central aperture, the periphery of said body portion being provided with a spring rim formed by a backwardly and inwardly curved flange.

1,398,079. ROOF STRUCTURE. Herbert E. Mabie, Sewickley, Pa. Filed Aug. 31, 1920. Serial No. 407,189. 3 Claims. (Cl. 108—6.5.)

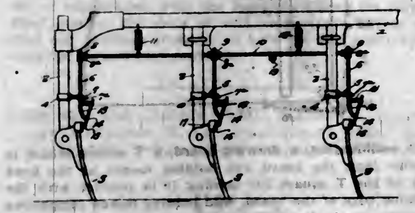
1. A roof of the character described, comprising purlins, metal angle members supported on the purlins and presenting oppositely projecting flanges, small metal angle members located intermediate the purlins and extending between the first named angle members and resting on the flanges of the latter, and also presenting oppositely projecting flanges, thin composition boards supported at their sides on the flanges of the first named angle members and at their ends on the flanges of the second named angle members, metallic reinforcement supported on the second named angle members, and a cementitious slab molded in place on the composition boards to such thickness as to project materially above the first named angle members.



1,398,080. PROCESS OF TREATING JUICE AND PRODUCT. Irving S. Mesmer, Syracuse, N. Y., assignor to Merrell-Soule Company, Syracuse, N. Y., a Corporation of New York. Filed Sept. 11, 1919. Serial No. 323,207. 4 Claims. (Cl. 99—5.)

1. A substantially dry powdered product in the form of spherical particles and comprising fruit material combined with starch.

3. The process of drying fruit juice comprising combining fruit juice with starch, atomizing the solution so formed into a current of moisture absorbing air and separating the resultant substantially dry product from the air and vapor.



1,398,081. PROCESS OF TREATING JUICE AND PRODUCT. Irving S. Mesmer, Syracuse, N. Y., assignor to Merrell-Soule Company, Syracuse, N. Y., a Corporation of New York. Filed Sept. 11, 1919. Serial No. 323,208. 6 Claims. (Cl. 99—5.)

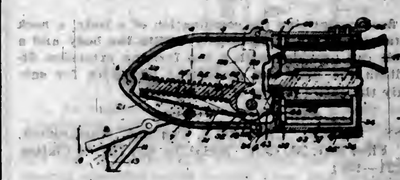
1. A substantially dry powdered product in the form of spherical particles and comprising fruit material combined with gelatinized starch.

3. The process of drying fruit juice comprising combining fruit juice with gelatinized starch, atomizing the solution so formed into a current of moisture absorbing air and separating the resultant substantially dry product from the air and vapor.

1,398,082. SHOVEL-SCRAPER. Guy E. Scott, Delhi, Minn. Filed Nov. 13, 1920. Serial No. 423,830. 1 Claim. (Cl. 97—3.)

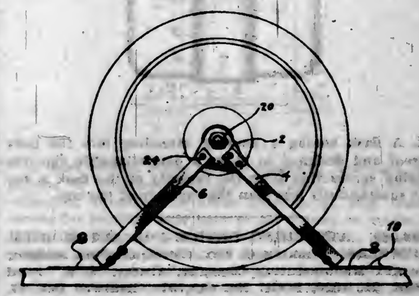
In a scraper for gang of shovel plows, vertical carrying rods, a resiliently supported, longitudinal rod connecting said carrying rods, metallic straps pivotally connected to the curved lower extremities of said carrying rods and angularly disposed toward the same, transverse substantially narrow, flat scraping elements pivotally connected to said metallic straps and embracing the face and sides of the shovels, resilient springs normally retaining said scraping elements in contact with the said shovels, and foot operated means for simultaneously actuating said scrapers.

1,398,083. PIPE-COUPLING. Frank L. Tibbetts, Somerville, Mass., assignor, by mesne assignments, to Elmer S. Stack, Somerville, Mass. Filed Dec. 15, 1919. Serial No. 344,814. 11 Claims. (Cl. 285—51.)



1. A coupling for attaching devices to plates, comprising, in combination, a neck for insertion through a hole in the plate substantially larger than said neck, a flange on said neck substantially larger than the hole in the plate and having a bead oblique to the plane of said flange for threaded engagement with the margin of the plate surrounding said hole to enable the flange to pass through said hole from one side of the plate to the other on a rotary screw motion of said flange, a sleeve threaded to said neck having an end portion adapted to fit in the hole in the plate to center the neck and flange with respect to said hole, a washer on said sleeve for engagement with the side of said plate opposite to said flange, and a nut threaded to said sleeve for holding the margin of the plate surrounding the hole therein tightly between said flange and washer.

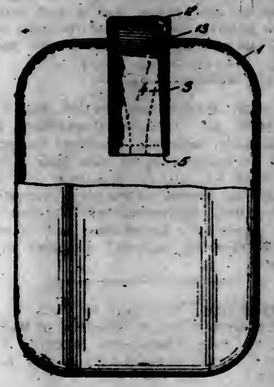
1,398,084. ACID-RESISTING PAINT OR VARNISH COMPOSITION, &c. Leonard Wickenden, Flushing, N. Y., assignor to Industrial Chemical Company, New York, N. Y., a Corporation of New York. Filed July 12, 1919. Serial No. 310,412. 5 Claims. (Cl. 134—51.)



4. The paint or varnish composition comprising substantially completely chlorinated base material including chlorinated petroleum asphaltum and incorporated chlorinated hydrocarbon material dissolved in volatile solvent therefor.

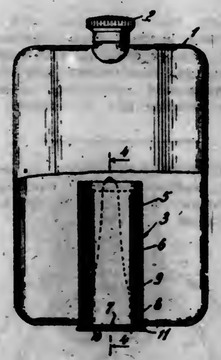
1,398,085. FIREARM. Benjamin H. Ball, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed Dec. 24, 1918. Serial No. 268,172. 7 Claims. (Cl. 42—59.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. In a firearm, the combination, with the hammer, of a combined sear, hammer driving spring support and hammer-cocking member engaging said hammer, toward the bottom of the rear edge thereof; and a trigger mechanism for moving said combination member to cock and release the hammer and to compress the hammer driving spring.



1,398,086. AUTOMOBILE-SUPPORT. Albert E. Cooney, Detroit, Mich., assignor to Dodge Brothers, a Corporation of Michigan. Filed Mar. 5, 1921. Serial No. 450,010. 5 Claims. (Cl. 188—32.)

1. An automobile support comprising, in combination, a member adapted to engage the automobile near one end of



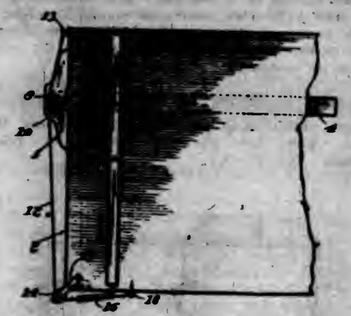
an axle thereof, and legs extending from said member to support said member in bowed relation to it and to each other, one of said legs being pivotally connected to said member.

1,398,087. FLASK. CHARLES NEWTON CORTELL, Mamaroneck, N. Y. Filed Jan. 26, 1921. Serial No. 439,991. 8 Claims. (Cl. 221—93.)

1. A flask comprising the combination of a body, a neck of substantial length lying largely within the body and a removable cap provided with a cup forming extension fitting within the neck and contacting therewith for substantially the entire length of the extension.

1,398,088. FLASK. CHARLES N. CORTELL, Mamaroneck, N. Y. Filed Mar. 23, 1921. Serial No. 454,797. 6 Claims. (Cl. 221—93.)

1. A flask having a housing extending into the body thereof and designed to house a non-collapsible cup, the housing subtracting from the capacity of the flask a volume substantially less than the capacity of the cup.

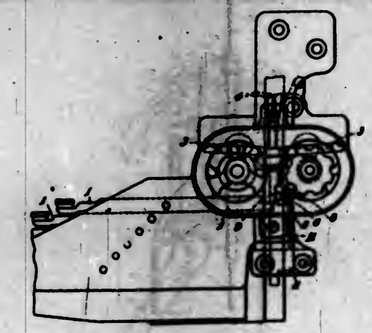


1,398,089. ATTACHING DEVICE FOR AUTOMOBILE-BUFFERS. WILLIAM G. COX, Cleveland, Ohio, assignor to Cox Manufacturing Company, Albany, N. Y. Filed Sept. 21, 1920, Serial No. 411,797. Renewed Oct. 17, 1921. Serial No. 508,394. 4 Claims. (Cl. 293—55.)

3. In a device for attaching buffers to the frame of an automobile, a clip having a hook formed at each end thereof, one of said hooks adapted to engage the supporting member of the buffer, the other having an opening through each side thereof adapted to engage the shank of a bolt;

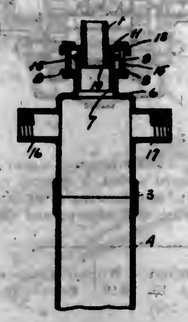
and a pair of hook bolts, one adapted to fasten the rear end of the supporting member of the buffer to the side bar of an automobile frame, the other to bind together said clip, supporting member and side bar.

1,398,090. ATTACHMENT FOR DRAWING-BOARDS. CARL F. DIECKMANN, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a Corporation of Delaware. Filed June 28, 1920. Serial No. 392,388. 1 Claim. (Cl. 33—76.)



In combination, a drawing board, a T square which is shorter than the board and holding means at the head only of the T square for holding it in contact with the working edge of the board, said holding means comprising a sheave on the head of the T square, a cord fastened to the board at one end of the working edge and training thence around the outside of said sheave, a second sheave at the opposite end of the working edge of the board, and a coiled extension spring adjacent to but approximately at right angles to the working edge and lying in the plane of the board, said spring being anchored at one end to the board and at the other end fastened to the cord for holding it trained around said second sheave.

1,398,091. CLAMP. MAX A. DOELCKNER, Louisville, Ky. Filed Aug. 5, 1920. Serial No. 401,396. 1 Claim. (Cl. 24—132.)



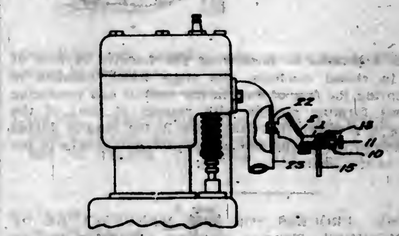
A clamp for the purpose described, consisting of two jaws pivoted together at one end thereof, a clamp lever pivoted at one end to the non-pivoted end of one of said jaws, and a link having at one end a pivotal connection with said lever eccentric of the jaw and lever connection, and at its other end a pivotal connection with the adjacent end of the other jaw, so adapted that when the jaws are forced together by said lever, any movement of the jaws tending to open the same will tend to force the jaws closer together.

1,398,092. KEYBOARD MECHANISM OF TYPOGRAPHICAL COMPOSING AND OTHER KEY-CONTROLLED MACHINES. TOM BURNS, Broadheath, England, assignor to Linotype and Machinery Limited, London, England. Filed Sept. 10, 1920. Serial No. 409,379. 4 Claims. (Cl. 199—18.)

1. In a locking device for a keyboard mechanism such as described, the combination with the members to be locked, of a longitudinally movable bar adapted to engage said members, a support on which the bar is longitudinally movable, and pin and slot connections between the support and bar serving to move the bar edgewise into and out of engagement with the members during its longitudinal motion, the slots of said connections having parallel end portions arranged to hold the bar positively in either of its terminal positions.

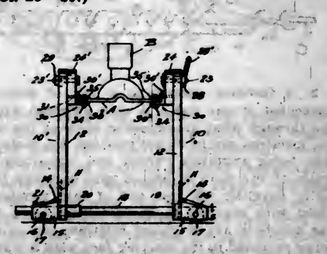
1,398,093. GAS CASING HEAD. WILLIAM J. DROPPLEMAN, McWherter, W. Va. Filed Mar. 11, 1921. Serial No. 451,457. 3 Claims. (Cl. 166—14.)

1. A casing head comprising a body formed of tubing exteriorly threaded at its lower end and having its upper portion cut to form longitudinal tongues, the base portions of said tongues being bent inward and united to form a top and the outer portions bent upward and united to form a restricted passage adapted to receive a leading off pipe.



1,398,094. LOCK AND SEAL FOR CAR-DOORS. HAYES H. DUNCAN and CLEVELAND C. WILLOUGHBY, Philadelphia, Pa. Filed Aug. 9, 1920. Serial No. 402,165. 8 Claims. (Cl. 292—89.)

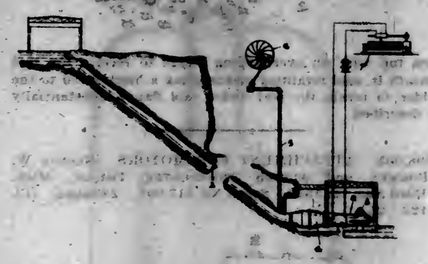
1. In combination with a car door having an opening to receive a key, a perforated holder on the inside of the door to receive a seal to obstruct the opening, means for retaining the seal within said holder, and a lock on the inside of said door operable by a key inserted through said opening after the seal is ruptured, said holder having an



open top with an overhanging flange to receive the seal beneath it, said retaining means being a block fitted to the holder to retain the seal under said flange, substantially as described.

1,398,095. ATTACHMENT FOR MOTORS. GEORGE W. FORKNER and ALFRED ARMBRUSTER, Detroit, Mich. Filed Aug. 12, 1919. Serial No. 317,093. 2 Claims. (Cl. 123—25.)

1. An engine attachment comprising a body having a longitudinal bore extending therefrom and defining an inlet opening at one end and an outlet opening at the opposite end, a needle valve controlling the inlet opening, a suction operated valve spaced from and controlling the outlet opening and a normally open drain valve communicating with the bore between the suction valve and outlet opening and adapted to be closed when the suction valve is opened.

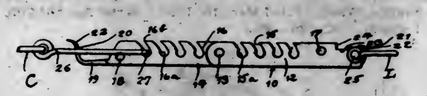


1,398,096. WORK-HOLDING STAND. CHESTER FRAIR, Seattle, Wash. Filed Mar. 10, 1920. Serial No. 364,709. 1 Claim. (Cl. 29—89.)

A work-holding stand of the character described comprising, in combination, a pair of frames, a pair of bars extending through the lower portions of said frames, means for securing said bars to the frames to retain the latter in different positions of adjustment; apertured bearing blocks rigid with the upper ends of said frames, one of said blocks being provided with recesses disposed radially of the block aperture, work-supporting blocks, means for securing work thereto, bolts extending through apertures of the bearing blocks and the supporting blocks for pivotally connecting the supporting blocks to the re-

spective frames, and a tongue provided on one of said supporting blades and engaging in selected of the aforesaid recesses for retaining the respective supporting blade in various predetermined rotary positions.

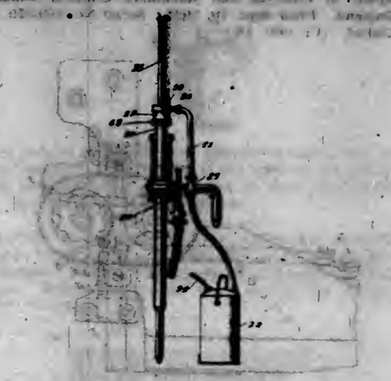
1,398,097. MEASUREMENT OF THE FLOW OF FLUIDS IN CLOSED CONDUITS. NORMAN R. GIBSON, Niagara Falls, Ontario, Canada. Filed Feb. 19, 1919. Serial No. 278,000. 2 Claims. (Cl. 324—34.)



2. In a process of measuring the velocity of flow of fluids in closed conduits, the steps which consists in interrupting the flow of fluid in the conduit and producing diagrams forming records with respect to time of the changes of pressure that take place in the conduit during the interruption of the flow at two different points in the length of the conduit.

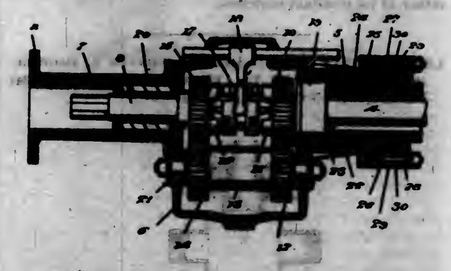
1,398,098. PROCESS FOR THE MANUFACTURE OF EXPLOSIVES. THOMAS HAWKINS, Slatington, Pa., assignor of one-half to Chauncey R. H. Rex, Slatington, Pa. Filed June 28, 1921. Serial No. 481,077. 6 Claims. (Cl. 52—7.)

1. The herein described detonating and explosive compound comprising the reaction product of picric acid, a lead oxid, and a soluble nitrate.



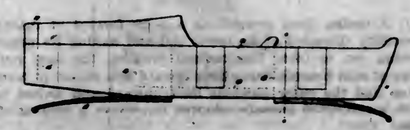
1,398,099. CHAIN-FASTENER. CHARLES F. HOLTZER, Hotchkiss, Colo. Filed Feb. 19, 1921. Serial No. 446,276. 2 Claims. (Cl. 24—68.)

2. A fastener comprising a pair of members pivotally connected at one end and each provided with slots opening through what are opposing edges of the members when the members are in closed relation, the slots of said members being arcuately curved and oppositely inclined, the walls of the slots of one of said members being substantially parallel, the free end of said members being provided with coacting faces, said faces being engaged when the members are in closed relation, one of said members being provided in its coacting face with a transverse recess permitting the insertion of a tool between the members to separate the same when the members are in closed position.



1,398,100. WATER-RIGGING FOR STOPING-DRILLS. WILLIAM HENRY JOYCE, Leadville, Colo. Filed Nov. 5, 1919. Serial No. 335,780. 1 Claim. (Cl. 255—49.)

The combination with a drill including a cylinder, of a cylindrical support telescoping and adjustably secured to the front head of said cylinder having a reduced drill shank receiving and guiding opening at its outer end and a recess adjacent to said and provided with an internally threaded inlet and an internally threaded outlet the latter inclined with respect to the longitudinal axis of the



cylinder, an axially bored nozzle plug screwing into the outlet, a delivery pipe having a nipple screwing into the inlet and fluid supply means with which the said pipe is in communication.

1,398,101. TRANSMISSION MECHANISM. DON L. KIMBALL, Portland, Oreg., assignor to Universal Transmission Co., Seattle, Wash. Filed Dec. 9, 1920. Serial No. 429,503. 4 Claims. (Cl. 74—56.)

1. In combination, a shaft housing, a gear casing having a sleeve with a tapered socket, a tapered cuff embracing and rigidly secured to said housing to fit into said socket, and means for drawing said housing and casing together.

1,398,102. AUTO-BODY. WILLIAM LINQUIST, Cleveland, Ohio. Filed July 15, 1919. Serial No. 310,882. 1 Claim. (Cl. 296—28.)

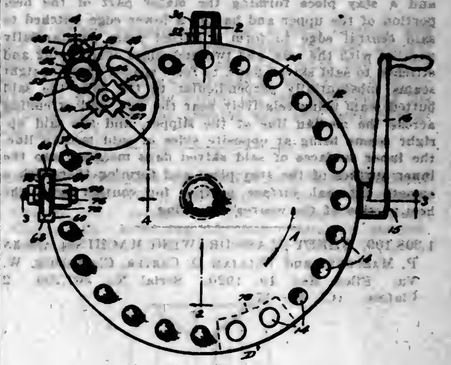
In a vehicle construction, a body including a bottom, sides and ends, spaced relatively wide U-shaped reinforcing members secured within and extending transversely across the body, angle irons secured within the corners of and connecting said members, and extending longitudinally of the body, whereby a supporting frame is provided for connection with the springs of a vehicle.

1,398,103. YARN-GUIDE MECHANISM FOR KNITTING-MACHINES. HENRY LOCKEY, Lakewood, Ohio, assignor, by direct and mesne assignments, of one-third to Henry J. Huntington and one-third to Stephen W. Lippitt. Original application filed July 12, 1917, Serial No. 180,042. Divided and this application filed June 18, 1919. Serial No. 305,003. 6 Claims. (Cl. 66—12.)

1. In a knitting machine, the combination of a needle bed, needles therein, a reciprocating cam carriage provided with cams for operating the needles, a yarn guide movable longitudinally in a path to guide the yarn to the needles, means whereby said yarn guide is operated by the cam carriage, said yarn guide being displaceable out of said path to a position where it will not be operated by the cam carriage, means independent of the cam carriage for displacing the yarn guide, and a pattern chain controlling the operation of said means.

1,398,104. SPRING SUSPENSION FOR VEHICLES. JOHN LJUNG, Alexandria, Minn. Filed Nov. 24, 1920. Serial No. 426,183. 9 Claims. (Cl. 257—39.)

7. In a spring suspension for vehicles, a body frame for receiving and sustaining the vehicle body, a chassis outside of the body frame, means connecting the chassis to the vehicle axle, levers individually connecting the axle and the body frame together, and fulcrum connections between the levers and the chassis, said connections being located at a point between the ends of the levers.

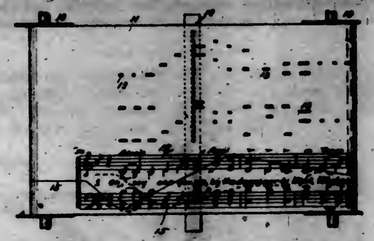


1,398,105. ANTIRATTLING DEVICE. REUBEN G. McCOMMON, Goodland, Kans. Filed Sept. 19, 1921. Serial No. 501,470. 1 Claim. (Cl. 123—90.)

The combination with a valve push rod and a valve lifter lock, of a bearing adjustably mounted on the valve push rod, and a tapered coil spring bearing at its upper end on said bearing, and at its lower end seated on the

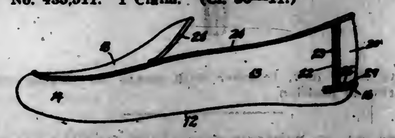
valve lifter lock, together with means for locking said bearing in position.

1,398,106. CARTRIDGE-RELOADING MACHINE. WILBUR R. McGEE, Seattle, Wash. Filed Oct. 4, 1920. Serial No. 414,628. 10 Claims. (Cl. 86—23.)



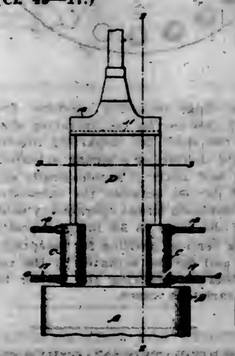
1. In a cartridge reloading machine, the combination with a rotary case-carrier, an operating shaft, and means actuated by the shaft for imparting intermittent rotary motion to said carrier, of a spring actuated case-elevator controlled by said shaft to automatically supply cartridge cases to said carrier between the successive impulses of the carrier, tensioned means operated by said case elevator for receiving the cases in an inclined position and shifting same to a vertical position for reception in the rotary case carrier, and devices actuated by the rotation of said shaft for releasably securing the carrier in positions to receive the cartridge cases.

1,398,107. PERFORATED AND OTHER SHEET MUSIC. THOMAS McKIM, Portland, Oreg. Filed May 20, 1909, Serial No. 497,150. Renewed July 29, 1920. Serial No. 399,393. 5 Claims. (Cl. 84—163.)



1. A keyboard musical instrument adapted for operation by perforated sheets, having a tracker bar and sheet-

engaging rollers, said bar and rollers being supported above the keyboard with their longitudinal axes in planes



that extend from front to rear of the instrument and from top to bottom thereof.

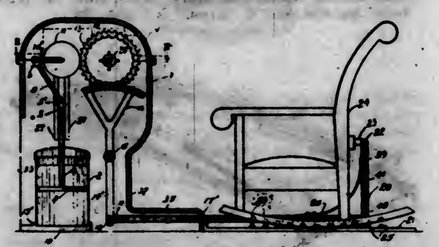
1,398,108. MOCCASIN-SLIPPER. JOHN KENNETH McQUINN, Brockton, Mass. Filed Jan. 6, 1921. Serial No. 435,511. 1 Claim. (Cl. 36—11.)

A slipper of the character stated, comprising a sole and portions of an upper, formed in a single piece, which is provided at one end with a central curved edge, and with narrow skived flaps at opposite ends of said central edge, and a stay piece forming the major part of the heel portion of the upper and having a lower edge stitched to said central edge to form a butted seam substantially parallel with the sole, and two end edges overlapping and stitched to said skived flaps, to form spaced apart upright seams substantially perpendicular to the sole, the said butted seam being relatively near the sole, and extending across the median line of the slipper, and the said upright seams being at opposite sides of said median line, the inner surfaces of said skived flaps merging into the inner surface of the stay piece and forming therewith a smooth internal surface portion for contact with the heel portion of the wearer's stocking.

1,398,109. SHEET-GLASS-DRAWING MACHINE. ORLAN P. MARCOMBE and WILLIAM O. CARTER, Clarksburg, W. Va. Filed Mar. 19, 1920. Serial No. 367,200. 2 Claims. (Cl. 49—17.)

1. In a machine for manufacturing sheet glass, a furnace, means for drawing the molten glass from the furnace, water jackets arranged immediately above the molten mass and at the opposite sides of the furnace, said jackets being designed to receive the edges of the sheet in a manner whereby the edges are cooled and hardened, and also thickened so as the sheet glass lying between the edges is afforded straightness and uniformity in width, and a water inlet and outlet for each jacket.

1,398,110. SNAP-POCKET FOR TRUCK-STAKES. TONY S. MILLER, Ryde, Calif. Filed Dec. 7, 1920. Serial No. 428,919. 8 Claims. (Cl. 296—43.)

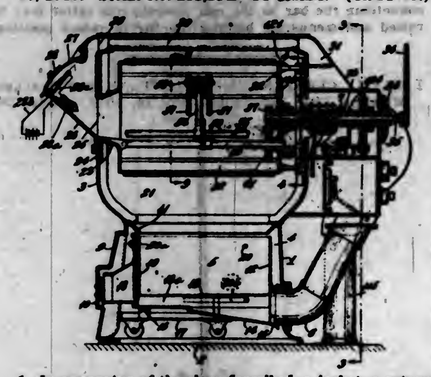


1. The combination with a truck having a stake holder pocket, of a supplemental holder disposed below said main holder and having means for locking engagement with a stake seated in the main holder, the supplemental holder being yieldable in the direction of the main holder.

1,398,111. SHEARS. EDWARD O'NEIL, Wakefield, Mich. Filed July 9, 1920. Serial No. 395,043. 2 Claims. (Cl. 7—6.)

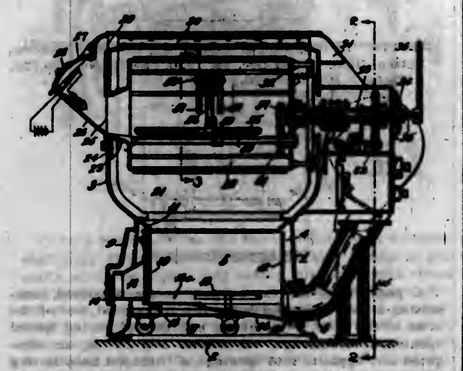
1. A support, a mount, a tracing wheel pivoted thereto, said mount including a head that has two right-angular surfaces and which has its ends provided with trunnions, a flat spring having a bifurcated end formed with hooks that engage the trunnions, a securing element for the spring, and said element being adjustable whereby to regulate the tension of the spring with respect to the engagement of the hooks thereof with the trunnions.

1,398,112. CHURN-OPERATING MECHANISM. JOSEPH PANIK and STEVE CLEMO, West Park, Ohio. Filed May 16, 1921. Serial No. 470,174. 1 Claim. (Cl. 74—14.)



In a churn operating mechanism, of a receptacle, a member to be actuated disposed within the receptacle, guide strips upon the inner side walls of the receptacle, a crank shaft journaled within the receptacle and adjacent the upper ends of the guide strips, a gear wheel keyed to said crank shaft, a segment gear pivotally mounted within the receptacle, connections between the segment gear, crank shaft gear and means externally of the receptacle for actuating said segment gear, comprising an open substantially rectangular frame rigidly attached to the receptacle, a member positioned for rocking movement upon the frame, vertical brackets centrally of the frame and adjacent one end thereof, a lever pivoted intermediate its ends to the upper ends of said brackets, said lever being pivotally mounted upon the said rocking member and a reciprocating shaft between the lower end of said segment gear and the said lever for purposes specified.

1,398,113. FERTILIZER AND METHOD OF PRODUCING THE SAME. CARL L. POTTER, North Fort Worth, Tex. Filed Jan. 7, 1921. Serial No. 435,692. 7 Claims. (Cl. 71—6.)

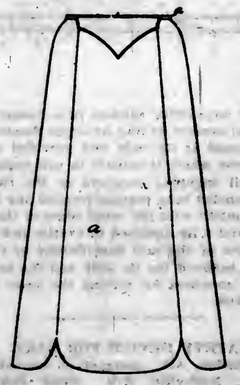


5. The method of producing a fertilizer which consists in covering fresh green vegetable growth with a layer of earth to maintain a constant temperature for a protracted period, then drying in exposure to the air, then saturating the dried material with a soured solution of fruit and vegetable products and commercial fertilizing materials, and finally drying.

1,398,114. APPARATUS FOR HEATING, ROASTING, AND COOLING FOOD PRODUCTS. HENRY PERLL, Cleveland, Ohio, assignor, by mesne assignments, to Frederick J. Kuhlemeier, Burlington, Iowa. Filed Apr. 27, 1918. Serial No. 231,234. 34 Claims. (Cl. 34—5.)

1. In apparatus of the class described, a jacket, a rotary drum located in the upper part of said jacket, a removable container located within the lower part of said jacket, said drum being adapted to discharge into said container and said container having an open top, a perforated false bottom and a lower chamber below said false bottom and provided with imperforate bottom and side walls, and means for establishing suction, one of the walls of said chamber having detachable connection with said suction-establishing means.

1,398,115. PROCESS OF ROASTING COFFEE. HENRY PERLL, Cleveland, Ohio, assignor to Frederick J. Kuhlemeier, Burlington, Iowa. Filed July 16, 1919. Serial No. 311,313. Renewed May 12, 1921. Serial No. 468,979. 5 Claims. (Cl. 34—24.)

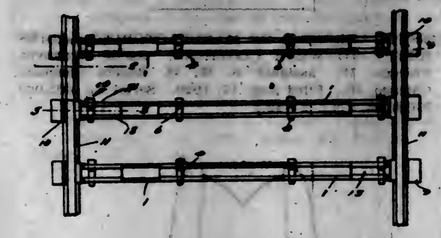


1. The process of roasting coffee, which consists in heating and agitating the berries in an inclosed chamber and establishing a slight circulation of air to remove from said chamber the major part of the moisture given off by the berries and thereafter browning the berries equally throughout the batch or mass thereof while confining the aromatic and caffein constituents of the berries within said chamber, so that the atmosphere therein becomes saturated with such constituents and will not absorb the remaining portion of them which are thus caused to remain in the berries.

1,398,116. ANGLE-WRENCH. CARLTON TITUS ROOT, Orland, Ind. Filed Oct. 9, 1920. Serial No. 415,929. 6 Claims. (Cl. 81—121.)

1. A wrench comprising a case, a shaft entering said case and having a gear thereon within the case, another shaft extending within the case for rotary and sliding movements and having a gear head to mesh with the aforesaid gear, and a spring within the case surrounding the second-named shaft for pressing said gear head against said gear.

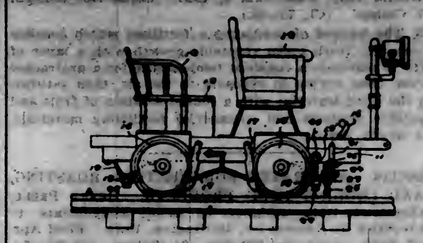
1,398,117. PROCESS OF MANUFACTURING LADIES' READY-TO-WEAR CLOTHING. JACOB SCHWARTZ, Chicago, Ill., assignor to W. H. Rogers Company, Chicago, Ill. Filed Aug. 12, 1920. Serial No. 403,069. 2 Claims. (Cl. 2—42.)



1. A ladies' ready-made nether garment having a substantially triangular reinforcement overlying the front in proximity to the waist line thereof for substantially the entire width thereof and secured thereto.

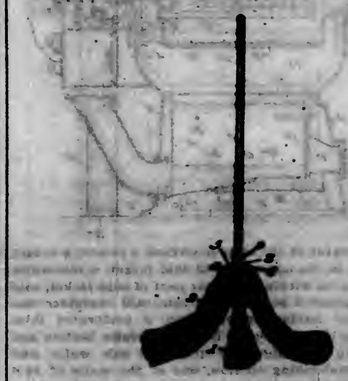
1,396,110. CUSPIDOR. Frank Green, San Francisco, Cal. Filed June 10, 1921. Serial No. 476,102. 1 Claim. (Cl. 4—40.)

A cuspidor including a basin let in an opening in a floor surface, having a central outlet, a water conducting pipe, a spray head therefor received in the basin, a valve controlling the passage between the pipe and spray head, an upstanding stem for the valve, spring means influencing the stem to hold the valve in closed position, a bowl in the basin having oppositely extending trunnions which are journaled in openings in the basin and on the bottom of the floor, spring means influencing the trunnions for holding the bowl in one position in the basin, said bowl having its rim notched to receive the neck of the spray head therein and the said bowl normally held in such position by said springs, ears on the rim of the bowl opposite the notch, segmental protector plates arranged in lapping relation on the floor over the rim of the bowl, spring means normally retaining the protector plates in such relation, and said plates designed to have their edges contacted by the eyes on the bowl when the latter is swung in the basin to emptying position to move the said plates away from each other to permit of such swinging of said bowl.



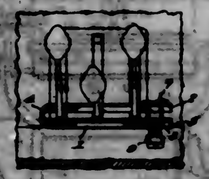
1,396,119. RAILROAD-TIE. William H. Taylor and William R. Watts, Bonner Springs, Kans. Filed June 25, 1921. Serial No. 480,296. 4 Claims. (Cl. 238—31.)

1. A tie for supporting railway rails comprising a channeled metallic member having its edges flanged outwardly, its base flattened at its ends and provided with longitudinal extensions which terminate in rail engaging flanges, removable rail engaging members in the tie body, each having a channeled body portion terminating in a shoulder designed to contact with the inner edges of the base flanges of the rails, and a lip designed to overlie and contact with the upper faces of the said base flanges of the rails, and wedge means between the tie body and the said removable rail engaging members for forcing the same in the direction of the rails.



1,396,120. SAFETY DEVICE FOR CARS. Thomas M. Wallis, Gurdon, Ark., assignor of one-half to Andrew McCormick, Nashville, Ark. Filed June 19, 1920. Serial No. 390,218. 8 Claims. (Cl. 105—316.)

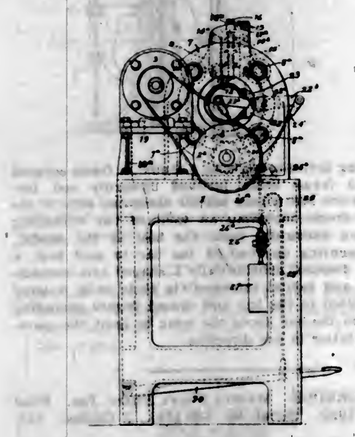
1. The combination with a railway car, of a bar disposed transversely thereof at each end of the car and normally arranged above the rails, means extending downwardly from each of the bars adjacent the side when the wheels of the car leave the track, means for pivotally



connecting the bar to the car, whereby the latter may be raised and means for holding the bar in raised position.

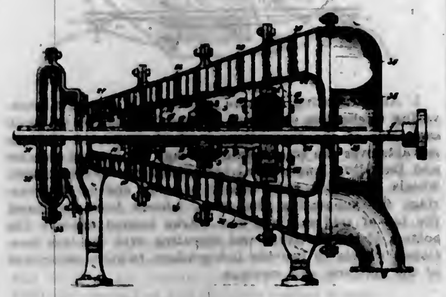
1,396,121. CLEANING IMPLEMENT. Claude M. Allen, Michigan City, Ind. Filed July 14, 1919. Serial No. 310,573. 1 Claim. (Cl. 15—20.)

Means for holding a mop to a broom comprising a pair of clamping members, each of curved formation to conform to the shape of the shoulders of the broom, for holding a portion of the mop to the shoulders of the broom, a bracket on the upper part of each member, said brackets having a curved central part and their ends flattened and provided with holes and bolts passing through the holes for clamping the two parts upon the broom.



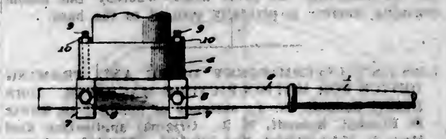
1,396,122. PEDAL-LOCK. Chas J. Benson, Gnadenhutten, Ohio. Filed Dec. 16, 1920. Serial No. 430,722. 5 Claims. (Cl. 70—126.)

A pedal lock, for the purpose herein described, comprising a pedal of angular bar-like material, one of the arms of the bar, adjacent the end thereof having spaced openings therethrough, the second arm having an elongated slot opposite said openings, a U-shaped loop having the arms slidable through the openings and designed to be



passed through the slot, a flat plate connecting the arms of the loop and designed to contact with the outer face of one of the arms of the yoke when the loop is passed through the slot in the second arm of the yoke, and said loop designed to receive the loop lock when in its last mentioned position.

1,396,123. MACHINE FOR CUTTING SECTIONS FROM TIRE-CASINGS. James W. Brundage, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 12, 1920. Serial No. 402,980. 16 Claims. (Cl. 164—60.)

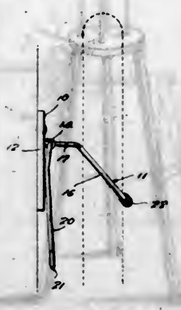


1. A machine for cutting sections from pneumatic tire casings comprising an arcuate last or mandrel adapted to support a tire, cutter means adapted to travel circumferentially around the same, and gripper means for engaging the edges of the tire.

1,396,124. TURBINE. Horace M. Cake, Philadelphia, Pa. Filed July 6, 1918. Serial No. 243,525. 7 Claims. (Cl. 60—102.)

1. In a turbine or the like the combination of a casing, stationary director blades carried by said casing, a plurality of rotors within said casing, blades on said rotors and adapted to pass between the stationary blades, a driving shaft comprising the support for said rotors, a power shaft, a pair of tubular shafts mounted on said power shaft, a differential gearing connecting said power shaft to said tubular shafts, and differential gearing connecting said tubular shafts to said rotors.

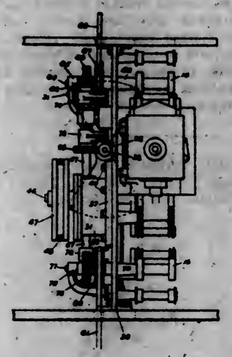
1,396,125. WRENCH. William Arthur Carleton and Clarence Erastus Yoho, Bellaire, Ohio. Filed Apr. 26, 1921. Serial No. 464,767. 1 Claim. (Cl. 81—90.)



In a wrench for engaging the flanges of a coupling, pipe or the like, a handle having a rectangular extension providing a shank and said shank having spaced openings therethrough, jaws having arcuate toothed engaging faces arranged on the shank, said jaws having reduced extensions which are slotted and which receive the shank through the slots, said slots being of a width greater than that of the shank, pivot members passing through the jaws and certain of the openings in the shanks, and means securing said pivot members on the jaws.

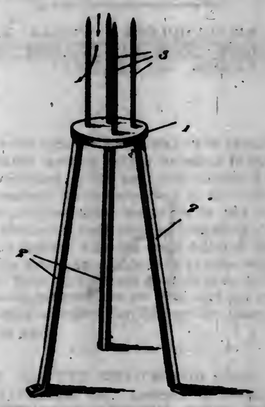
1,396,126. CLAMP. Arthur Lewis Cochrane, Toronto, Ontario, Canada. Filed Aug. 22, 1921. Serial No. 494,248. 6 Claims. (Cl. 24—170.)

1. A clamp comprising a body member formed with a forwardly extending tongue and a rearwardly facing shoulder intermediate its ends forming a bearing; a clamp member formed as an open quadrangular frame, the rear part of the body member overlying the rear transverse member of the frame and forming a journal against which the bearing shoulder lies and having its outer end adapted to coöperate with the outer end of the tongue to form clamping means; a spring plate on the body member engaging over the journal, the latter being shaped to engage one of the contacting parts to tend to hold the clamp member in clamping position.



1,396,127. BROOM-HOLDER. William H. Collins, Meriden, Conn. Filed Mar. 15, 1921. Serial No. 452,577. 2 Claims. (Cl. 24—249.)

1. A broom hanger comprising an attaching plate, a broom engaging member pivotally secured thereon, said member being formed from a single strand of wire and bent to provide a downwardly inclined broom handle engaging loop, pivot arms extending from one end of the

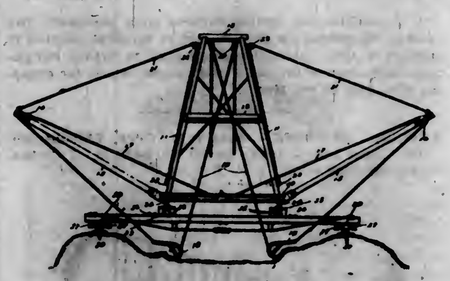


loop, a stop formed by an extension of one of the pivot arms and an operating arm formed by an extension of the other pivot arm and means carried by the attaching member for receiving the pivot arms, whereby the broom engaging member is pivotally secured to the base.

1,398,128. INTERMITTENT DRIVE AND FRAMING DEVICE FOR MOTION-PICTURE MACHINES. John Darby, Summit, N. J., assignor of one-half to Edwin F. Flindell, Summit, N. J. Original application filed Mar. 1, 1918, Serial No. 219,752. Divided and this application filed Mar. 19, 1919. Serial No. 283,558. 9 Claims. (Cl. 88—17.)

1. In a motion picture projecting machine using a film strip, continuously moving sprockets for said strip, an intermittently moving sprocket for said strip, a movement for said intermittent sprocket, a housing supporting said intermittently moving sprocket and completely inclosing said movement, and a vertical shaft passing through said housing to drive said continuously moving sprockets.

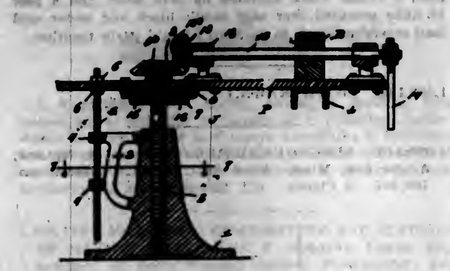
1,398,129. DEVICE FOR LOOSENING COMPRESSED MATERIAL. Joseph S. Dedrick, Racine, Wis. Filed Mar. 5, 1921. Serial No. 450,070. 1 Claim. (Cl. 19—9.)



A device for loosening compressed material comprising a stand of small outline and unobstructed on all sides thereof, so that the operator can walk around said stand and use same from any side thereof, said stand including upwardly converging legs to be secured rigidly on a floor or base, a top plate of small outline secured on said legs, and a few relatively long prongs rising from said plate and spaced apart a relatively large distance.

1,398,130. SWIMMING APPLIANCE. Bruno Debi, New York, N. Y. Filed June 18, 1921. Serial No. 477,181. 1 Claim. (Cl. 9—21.)

A swimming device comprising a sandal, a frame secured thereto, said frame being inclined upwardly and forwardly from the heel of the sandal along one side of the latter, said frame including an inclined bar extending upwardly and forwardly from the heel of the sandal, means for securing one end of the bar to said heel, a transversely disposed substantially L-shaped arm connecting the bar and sandal intermediate their ends, a wing hingedly secured to the bar and spaced fingers extending laterally from the bar above the wing to limit the movement of the latter in one direction.



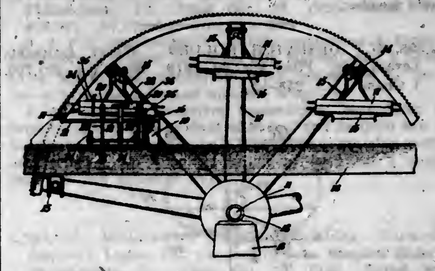
1,398,131. DREDGE. Marvin Evans, Pharr, Tex. Filed June 15, 1920. Serial No. 389,174. 2 Claims. (Cl. 37—55.)

1. An excavating machine embodying a platform, excavating mechanism supported thereby, tracks located upon each side of the excavation, a wheel supported carriage movable over the tracks, said carriage comprising a frame and including longitudinal beams and transverse beams, wheels journaled transversely of each end of the carriage for supporting the same, wheels journaled upon the top of said carriage and tracks located beneath the bottom of the platform and operating over the last mentioned wheels to provide independent relative movement of the platform and carriage.

1,398,132. JACK. Frank C. Healy, South Boston, Mass. Filed June 11, 1920. Serial No. 388,191. 1 Claim. (Cl. 254—87.)

A jack embodying a base member having a threaded bore, a screw engaging said bore, a frame secured to the screw, and including spaced longitudinal bars and a transverse connecting bar, said last mentioned bar being provided with an opening for the passage of the screw, an annular grooved flange connected to and surrounding the screw, a grooved disk connected to the transverse beam and provided with a race-way for anti-friction members, whereby the frame will be supported upon the screw in

a manner to permit of rotation of the latter and means connected to the screw and extending to one side of the frame, whereby the screw may be rotated.

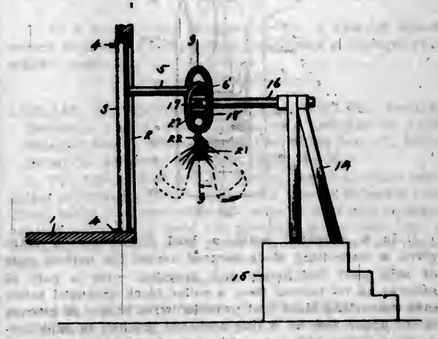


1,398,133. NOZZLE. Carl B. Hoarn, Philadelphia, Pa., assignor to Mary J. Holmes, Philadelphia, Pa. Filed Sept. 25, 1920. Serial No. 412,733. 3 Claims. (Cl. 299—145.)

1. In a nozzle, a tubular member having an opening at an intermediate point of its length for the emission of water and also having movable control means at the outer end of said member, in combination with means surrounding the tubular member and having longitudinal passages to receive water from said intermediate opening and a discharge in communication with said passages, and endwise adjustable tubular means in said surrounding means and equipped to control the discharge thereof and having an interior tapered portion arranged to limit the opening of said movable control means.

1,398,134. LOCKING MECHANISM FOR ROTARY CASTING-MACHINES. Archer A. Landon, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 14, 1916, Serial No. 137,088. Renewed Jan. 26, 1921. Serial No. 440,220. 14 Claims. (Cl. 22—75.)

1. In a machine of the character described, the combination of a carrier, and a support mounted thereon and free to move with respect thereto, with means movable in a plane at an angle with the plane of movement



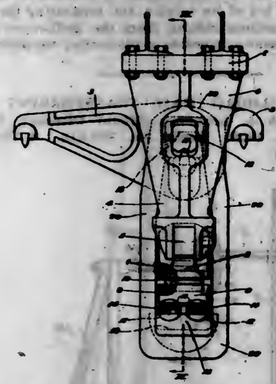
of the carrier for holding the support against movement relatively to the carrier, substantially as specified.

1,398,135. PROCESS FOR WORKING UP RESIDUARY AMMONIUM-CHLORID LIQUORS FROM THE AMMONIA-SODA PROCESS. Theodor Lichtenhahn, Basel, Switzerland, assignor to Elektrizitätswerk Lonza, Gampel and Basel, Switzerland. Filed May 28, 1921. Serial No. 473,378. 1 Claim. (Cl. 23—22.)

The herein described process for the working up of the residuary ammonium chlorid lyes of the manufacture of soda by the ammonia process, in order to gather the carbonates and chlorids contained therein separately and in a technically pure form, which consists in heating the lye in order to drive off the free carbonic acid and the carbonic acid combined with ammonia and to collect these latter as ammonium carbonates, concentrating the remaining lye, according to the quantities of sodium chlorid and of ammonium chlorid contained therein, to ½–⅔ of its volume, cooling it afterward below 25° C. and collecting the precipitated, technically pure ammonium chlorid by separating it from the liquid, evaporating further the said liquid, by heating it to the boiling point, to ½–⅔ of its volume, and separating the precipitated solid sodium chlorid from the mother-lye at a temperature as near as possible to the boiling temperature.

1,398,136. RAILROAD MAIL-TRANSFERRING DEVICE. Peter A. Lundberg, Mount Pleasant, Utah. Filed July 8, 1920. Serial No. 394,612. 4 Claims. (Cl. 258—17.)

1. Suspension means for a mail bag comprising a supporting member having an encircling groove and perforated inwardly of the groove and adjacent each end to permit of alternate use of such ends for purpose



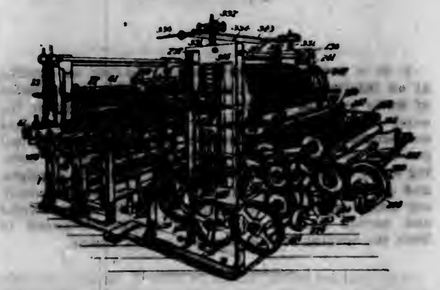
of supporting the bag in the mouth of the latter, and flexible tie means accommodated in said groove and providing means for connecting the mail bag to the said member.

1,398,127. DESPATCH-HOLDER. WILEY LUMBARD, Levasy, Mo. Filed Apr. 22, 1919. Serial No. 291,795. 1 Claim. (Cl. 258—2.)

Means for transferring despatches, including a standard, spaced arms fixedly connected thereto and constituting a loop holder, connected arms mounted to swing on the standard and between the stationary arms, spring means connected to the movable arms for shifting them normally to position between and parallel with the stationary arms, and means upon the stationary and movable arms for engaging loops and holding them to the arms and in lapped relation whereby a loop held between the stationary arms and engaging a loop held by the movable arms will hold said movable arms out of normal position and against the action of the spring.

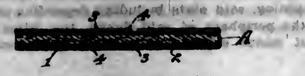
1,398,138. SUSPENSION-BEARING. ROY A. MCCUNE, East Pittsburgh, Pa. Filed Jan. 15, 1921. Serial No. 437,399. 3 Claims. (Cl. 265—71.)

1. In a weighing scale, a load distributer, a main pivot, a connecting block secured across the bottom ends of said load distributer and provided with a pair of grooves on its bottom face, a roller block arranged below said connecting block and provided with a pair of grooves in its upper face on a line with the grooves in said connecting block, and a second pair of grooves in its bottom face extending at right angles to the grooves in its upper face, a pair of rollers mounted in said grooves between said connecting block and said roller block, a load receiving block member arranged below said roller block and provided with a pair of grooves in its upper face in line with the grooves in the bottom face of said roller block, a pair of rollers mounted in said grooves between said roller block and said load receiving block, a main lever passing through said load distributer, a saddle block mounted on said lever, and a pair of links mounted over said saddle block and under said load receiving block to hold all of said parts together.



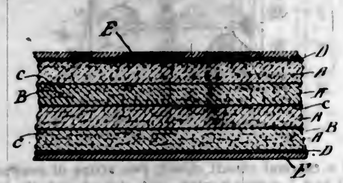
1,398,139. [WITHDRAWN.]

1,398,140. LUGGAGE-CARRIER. MORTON E. NELSON, Albert Lea, Minn. Filed Sept. 9, 1920. Serial No. 409,167. 4 Claims. (Cl. 224—29.)



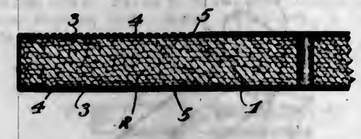
1. A luggage carrier for automobile running boards comprising two members, one of which is adapted to be attached to the running board and the other hingedly and slidably connected with the running board carried member, and coöperating means carried by said members to cause the partial raising of the hinged member when an outward pull is exerted thereon, a slight upward push by the operator causing said member to rise into complete vertical position, and means for locking it in such position.

1,398,141. MACHINE FOR PRODUCING COMPOSITE-METAL LATHS. FREDERIK NORSAGK, New York, N. Y., assignor to Composite Metal Lath Company, New York, N. Y., a Corporation of New York. Filed June 20, 1914, Serial No. 846,408. Renewed Oct. 6, 1920. Serial No. 422,366. 65 Claims. (Cl. 154—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



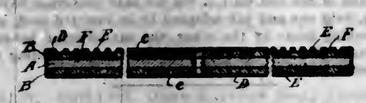
1. In a machine for making a composite metal lath of the character described, the combination with means for pressing together clay or other material and a wire fabric so as to embed the wire fabric in the material, of means for feeding the wire fabric and means for feeding the clay or other material separately to the pressing point.

1,398,142. PRINTING-PLATE MATRIX AND METHOD OF MAKING SAME. EMIL E. NOVOTNY, Logan, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Dec. 18, 1919. Serial No. 345,000. 9 Claims. (Cl. 154—46.5.)



2. A printing plate matrix having a molding face embodying a plurality of layers of a phenolic condensation product, one of said layers containing a relatively low percentage of the phenolic condensation product while another of said layers contains a relatively high percentage of said product.

1,398,143. MOLDABLE COMPOSITION AND METHOD OF MAKING SAME. EMIL E. NOVOTNY, Logan, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Dec. 11, 1919. Serial No. 344,230. 11 Claims. (Cl. 154—46.5.)



2. A molding composition comprising a hard, crisp and compressible body formed of an expanded fiber sheet having incorporated therein and reinforced by a relatively hard synthetic resin and an impression-taking face united with the reinforced fiber sheet.

1,398,144. MANUFACTURE OF SOUND-RECORDS. EMIL E. NOVOTNY, Logan, Philadelphia, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed July 21, 1920. Serial No. 397,926. Renewed May 3, 1921. Serial No. 466,534. 9 Claims. (Cl. 18—48.4.)

1. A sound record comprising a supporting body having a grooved sound-reproducing face, and a sound-repelling barrier interposed between the grooved face and the supporting body.

1,398,145. SOUND-RECORD. EMIL E. NOVOTNY, Logan, Philadelphia, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed July 21, 1920, Serial No. 397,927. Renewed May 3, 1921. Serial No. 466,535. 3 Claims. (Cl. 18—48.4.)

1. A sound record comprising a metallic reinforcing member, a fiber sheet impregnated with a hard and set synthetic resin united with said member, and a grooved face section with a hard and set synthetic resin imposed upon the fibrous sheet.

1,398,146. SYNTHETIC RESIN COMPOSITION. EMIL E. NOVOTNY, Logan, Pa., and DONALD S. KENDALL, Glen Ridge, N. J., assignors to John Stogdell Stokes, Philadelphia, Pa. Filed Oct. 27, 1920. Serial No. 419,937. 15 Claims. (Cl. 106—22.)

3. A new composition of matter comprising a fusible condensation product of phenol and furfural, and a hardening agent, said composition being convertible by heat into a hard, insoluble and infusible body.

6. A potentially reactive composition, comprising a fusible condensation product of phenol and furfural and a hardening agent comprising a methylene containing body, said composition being convertible by heat into a hard, insoluble and infusible body.

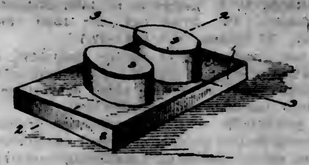
1,398,147. MOLDABLE COMPOSITE BODY. EMIL E. NOVOTNY, Logan, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Oct. 30, 1920. Serial No. 420,746. 12 Claims. (Cl. 91—68.)

1. A moldable composite body comprising a sheet-like body of fibrous material treated with a synthetic resin comprising a condensation product formed from reacting ingredients including furfural.

7. A moldable composite body comprising a sheet-like body of fibrous material impregnated with and having a surface coating of a partially reacted synthetic resinous material, comprising a condensation product formed from reacting ingredients, including furfural.

1,398,148. SOUND-RECORD. EMIL E. NOVOTNY, Logan, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Nov. 2, 1920. Serial No. 421,315. 9 Claims. (Cl. 154—46.5.)

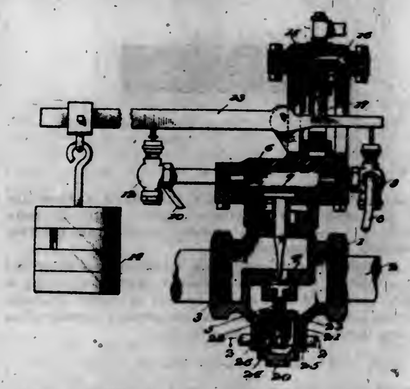
1. As a new article of manufacture, a grooved sound record including a composition comprising a furfural synthetic resin.



1,398,149. METHOD OF MOLDING ARTICLES. EMIL E. NOVOTNY, Logan, Philadelphia, Pa., assignor to John Stogdell Stokes, Philadelphia, Pa. Filed Jan. 21, 1921. Serial No. 438,924. 5 Claims. (Cl. 18—55.)

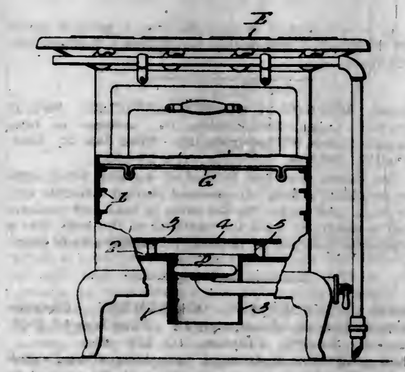
1. The herein described method of molding which comprises providing a body of powdered reacted infusible synthetic resin, and subjecting the same to heat and pressure against a matrix to weld the particles of the body into a homogeneous mass and to fashion the molded article therefrom.

1,398,150. OSTEOPATHIC INSTRUMENT. CHARLES EMERSON POLLARD, Champaign, Ill. Filed June 12, 1920. Serial No. 388,585. 3 Claims. (Cl. 128—69.)



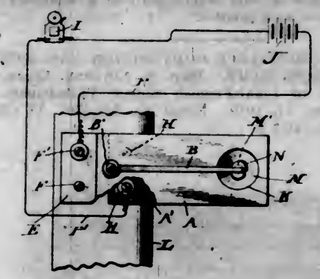
1. An osteopathic instrument comprising a base, and a pair of spaced relatively short cushion blocks secured to the upper face thereof, the upper edges of the blocks which are adjacent each other and adapted to engage the po-

tient's body at each side of the spine being elliptical in form and the long axes of the upper surfaces arranged



transversely of the base, whereby the blocks are closer together intermediate their ends than at their ends.

1,398,151. VALVE. WILLIAM S. RALSTON, Pittsburgh, Pa., assignor to The Chaplin-Fulton Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 16, 1920. Serial No. 396,731. 3 Claims. (Cl. 137—53.)



1. In combination with a valve and its casing, a plug for said casing having an inclosed chamber for a heat radiating fluid in juxtaposition to said valve and separated therefrom by the walls of said chamber, said plug having inlet and outlet ports communicating with said chamber.

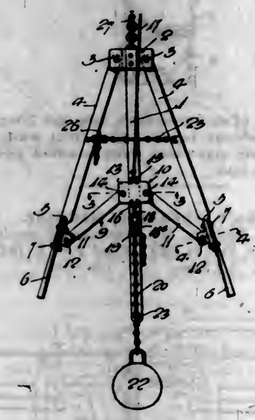
1,398,152. OVEN ATTACHMENT. JOHN C. RAMSAY, Baltimore, Md. Filed Sept. 27, 1920. Serial No. 413,112. 1 Claim. (Cl. 126—39.)

In combination, an oven having a centrally disposed opening in the bottom, a burner disposed beneath and spaced from the opening, a cylindrical sleeve extending downwardly through said opening and surrounding the burner, said sleeve having a lateral annular flange on its inner end resting on the bottom of the oven, retaining the sleeve in place, and a combined article-supporting and flame spreader plate arranged in the over over the aforesaid opening, said plate including depending legs engaged with the periphery of said flange, the latter serving to prevent undue shifting or possible displacement of the plate.

1,398,153. THERMAL CIRCUIT-CLOSER. WALTER V. REICHARD, Paola, Kans. Filed Mar. 3, 1921. Serial No. 450,216. 5 Claims. (Cl. 200—142.)

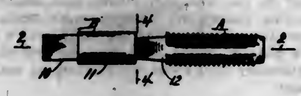
1. In a thermal circuit closer, two strips of conducting material and a spring having an L-shaped end, the strips being arranged one above the other; the upper strip having a hole in its outer end to allow the L-shaped end of the spring to pass through and touch the lower strip and the spring being fastened to the upper strip, in combination with a piece of easily fusible metal attached to the upper side of the upper strip above the opening.

1,398,154. BOX. WALTER W. REID, New York, N. Y. Filed Jan. 6, 1921. Serial No. 435,448. 4 Claims. (Cl. 206—44.)



1. A box of the character described comprising a container with a double end wall and a bottom, said bottom having a tab struck therefrom so as to be substantially in the plane of the end wall, a top for said container having an ear, said ear and tab adapted to be inserted each into the opening made by the other, the ear entering between the double end wall of the container thereby holding the two parts together.

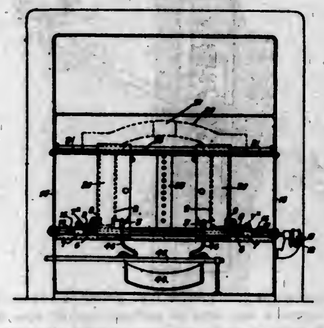
1,398,155. CHIMNEY-CLEANER. JAMES B. ROSE, Tacoma, Wash. Filed Mar. 7, 1921. Serial No. 450,192. 1 Claim. (Cl. 15—41.)



A chimney cleaner comprising a vertical bar, a transversely disposed head rigidly secured to the upper end of the bar, being equipped at its opposite ends with spaced

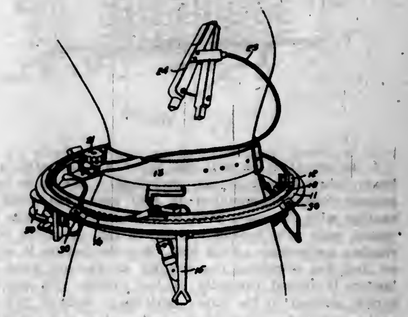
ears, arms pivoted at their upper ends between these ears, the lower ends of said arms being twisted to extend laterally with respect to the body portions, said lateral ends being apertured and carrying ears, scraper-blades, bolts passing through the latter and said aperture in the laterally bent ends of the arms and detachably securing these blades in place, a second head slidably mounted on said bar, toggle links pivoted to this head and to the second

named ears, a weight, a chain connected at one of its ends to the latter, having detachable and adjustable connection at its opposite end with the sliding head, a guide on said bar through which the chain passes, and another chain carried by one of said arms and having adjustable connection with said other arm, serving to limit the expansion of said arms.



1,398,156. TAP. FRANK P. SCHRODER, Philadelphia, Pa. Filed July 28, 1919. Serial No. 313,869. 3 Claims. (Cl. 10—141.)

2. In a tool the combination of cutting means, a shank extending from the cutting means comprising a top portion distant from the cutting means adapted to coact with other means to normally turn the tool, the said shank having a second portion also adapted to receive means to turn the tool, the said second portion adjacent to the cutting means and having a cross-section at a portion thereof smaller in area than any other cross-section of the tool and said small cross-section located at the top end of the said second portion.

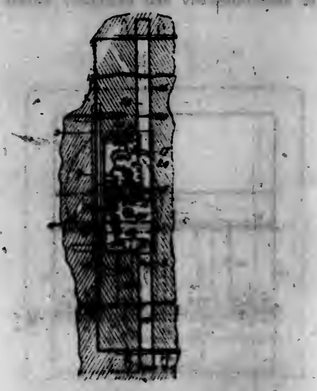


1,398,157. GRILLER. JOHN MATTHEW SHOAR, Liverpool, England. Filed Aug. 30, 1920. Serial No. 407,020. 5 Claims. (Cl. 126—41.)

1. A grilling apparatus comprising a chamber, a grid forming the base of said chamber, heat radiating elements overlying and supported by the grid and extending above the same to form side walls of a grilling chamber, heating means carried by said elements, and a single means cooperating with both of said elements and adapted in movement to simultaneously and uniformly adjust said ele-

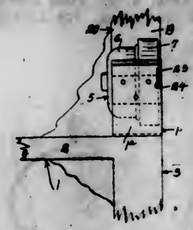
ments in relatively opposite directions, whereby the space between said elements may be varied to subject the article being grilled to the desired heat.

1,398,158. STAGE-COSTUME APPLIANCE. HENRY SKREMKA, New York, N. Y. Filed July 30, 1921. Serial No. 488,673. 13 Claims. (Cl. 2—42.)



1. A stage costume appliance, including means adapted to encircle the body of a wearer, means connected therewith for supporting the costume, and further means for causing a rotary motion of said supporting means with respect to said first named means.

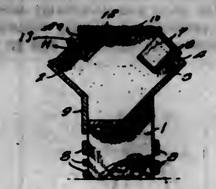
1,398,159. LOCKING DEVICE. HERMAN SONTOW, Wilmington, Del. Filed July 8, 1920. Serial No. 394,646. 3 Claims. (Cl. 70—74.)



1. In locking means of the character described, the combination of a spindle, a latch rigid therewith adapted to engage a keeper, a pinion carried by said spindle, longitudinally movable lock-bars provided with racks meshing

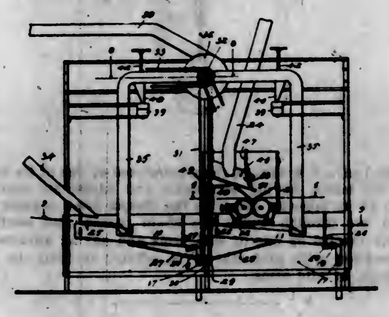
with said pinion, and a key-operated bolt adapted to be moved into the path of movement of one of said locking-

bars to lock both of said connected locking bars and the latch in their locking positions.



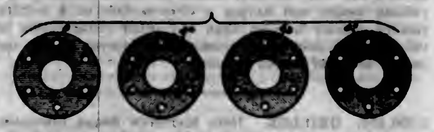
1,398,160. BURGLAR-ALARM. FRED E. SPARKS, AKRON, Ohio, assignor to Automatic Burglar Alarm Company, Charleston, W. W. Va., a Corporation of West Virginia. Filed May 16, 1921. Serial No. 469,979. 2 Claims. (Cl. 116—90.)

1. In combination with an upper window sash and a lower window sash, a bell including a casing having a section rotatably mounted on said lower sash and contacting with the upper sash, a control button, means associated with said button for preventing operation of the ringing mechanism of the bell when the button is extended and for releasing the ringing mechanism when said button is forced inwardly of the casing, and operating strips secured to the inner peripheral wall of the rotatably mounted section of the bell casing and adapted to force the button inwardly of said casing upon rotation of said rotatably mounted section.



1,398,161. COUNTER AND BIN. VIRGIL H. SPINKS, Ruston, La. Filed Sept. 29, 1920. Serial No. 413,523. 1 Claim. (Cl. 211—11.)

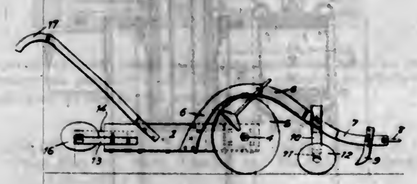
A combined bin and counter comprising a plurality of longitudinally spaced uprights, a counter connecting the upper ends of said uprights, said uprights having edgewise disposed lateral extensions at their upper ends, the upper edges of said extensions being inclined downwardly and outwardly and their lower edges inclined downwardly and inwardly, crossbars connecting the edges of said uprights, boards connecting the upper and lower edges of said extensions to form hopper-like bins below said counter, the boards connecting the lower edges of said extensions at one side projecting into the space between said uprights, and those connecting the upper edges of said extensions forming upper front and rear walls for the bin, a bottom member arranged between said projecting side boards and



the uppermost of said cross bars, said bins being equipped with sight openings in the upper front wall and with closures in their upper rear walls to afford access to the interior of the bins.

1,398,162. GRAIN-CLEANING MACHINE. HARRY S. STANSBURY, Ashland, Md., assignor of one-half to C. Frank Ensor, Verona, Md. Filed Feb. 3, 1921. Serial No. 442,129. 3 Claims. (Cl. 130—18.)

1. A grain cleaning apparatus having primary and secondary riddles and an intermediate crushing mechanism to the action of the latter of which the grain is subjected subsequent to treatment by the primary and prior to treatment by the secondary riddle, said crushing mechanism having coöperative yielding faced drums or rolls and means for communicating motion thereto, a hopper for directing material to the contacting surfaces of said rolls, and a vibratory feed spout for discharging material into the hopper.



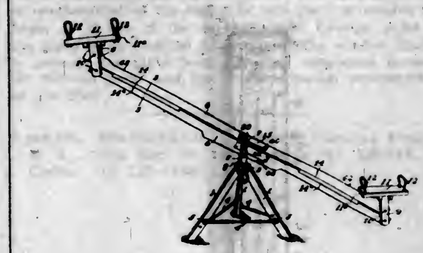
1,398,163. FLEXIBLE DISK-COUPLING. ROBERT J. STOKES, Trenton, N. J., assignor to Thermoid Rubber Company, Hamilton township, N. J., a Corporation of New Jersey. Filed May 24, 1919. Serial No. 299,581. 2 Claims. (Cl. 64—30.)

2. The combination in a flexible coupling, of a driving and a driven shaft; a spider mounted on each shaft; and a series of four disks clamped to the arms of both spiders, each disk being composed of a plurality of layers of fabric

having their warp threads running in the same direction, the disks being so arranged that the warp threads of the several disks are spaced at 45 degrees apart so that the strains to which the coupling is subjected will be evenly distributed through the four disks.

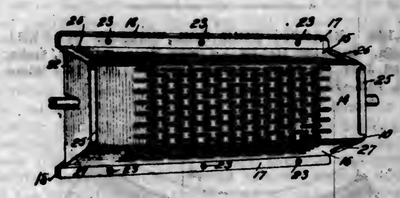
1,398,164. DISK FIELD OR ROAD PLOW. DREW B. THOMPSON, Blakely, Ga. Filed Oct. 2, 1920. Serial No. 414,265. 3 Claims. (Cl. 97—40.)

1. A plow comprising in longitudinal alinement a beam having its forward face in a vertical plane inclined from the line of travel and provided with a stub axle, a cutting wheel mounted on the stub axle and a draw bar.



1,398,165. PROTECTIVE COVERING. NORMAN NEWTON WHITESIDE, New York, N. Y. Filed Dec. 18, 1920. Serial No. 431,697. 3 Claims. (Cl. 2—60.)

1. A waterproof storm shield of paper or the like comprising a sack formed of a front and a back wall integrally connected along one edge and having two opposite edges cemented together leaving the remaining edges free to form an opening, whereby the sack may be inverted and drawn over the head of the user, said sack being of such dimensions as to completely inclose the head and upper portion of the body, said front wall having an observation opening adjacent its point of integral connection with the back wall so as to be opposite the face of the user.



1,398,166. WHIRLING SEESAW. RUDOLPH WINCKEL, Webb City, Mo. Filed Mar. 8, 1921. Serial No. 450,540. 6 Claims. (Cl. 46—22.)

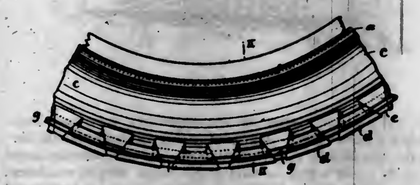
1. In a see saw, a support, a standard held in said support to turn around a vertical axis, a beam fulcrumed on said standard to rock on a horizontal axis and seats on said beam adapted to hold the users in a position transverse of the beam whereby, when the user pushes on the ground to rock the beam on its fulcrum the said beam will also be pushed to whirl the said standard on its axis,

said seats extending in the longitudinal direction of the beam and having handles at each end whereby the operators may sit sidewise and grasp the handles of the seats.

1,398,167. ELECTRIC HEATER. JOHAN R. BAKSTAD, Chicago, Ill., assignor to Holden & White, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 7, 1920. Serial No. 415,292. 6 Claims. (Cl. 219—34.)

1. An electric heater of the character described comprising a horizontally elongated casing having a front, forwardly converging upper and lower sides flanged vertically at their inner edges, a back-plate fitted within the back portions of said upper and lower sides and having flanges to engage a wall and to receive the flanges on said casing, means securing said back plate to the wall independently of said casing, means removably securing the flanges of said casing to the flanges of said back-plate and a heating resistance within said casing and supported from said back-plate, said back-plate forming an air space behind it, and said body casing being perforated for the escape of heated air.

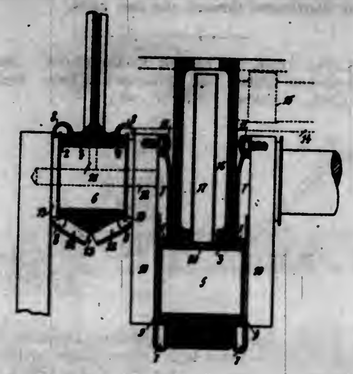
1,398,168. ELECTRIC HEATER. JOHAN R. BAKSTAD, Chicago, Ill., assignor to Holden & White, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 7, 1920. Serial No. 415,293. 6 Claims. (Cl. 219—34.)



1. An electric heater of the character described comprising a vertically elongated body casing perforated for the escape of heated air and having a front, sides and ends, a back plate adapted to be secured to a wall and having its main body portion fitted within the back portion of said casing, means securing the inner edges of said sides to said back plate and removable without disturbing said back-plate, and a resistance heating element within said casing supported from said back plate independently

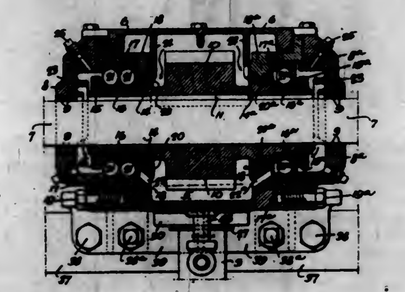
of said casing, the upper and lower ends of said casing terminating at the upper and lower adjacent edges of

said back plate so as to leave a free air space between said back plate and the wall to which the heater may be secured.



1,398,169. ELASTIC TIRE FOR WHEELS OF VEHICLES. RICHARD RALPH & COURT BEADON, Agra, India. Filed July 12, 1920. Serial No. 395,510. 14 Claims. (Cl. 152—16.)

11. Wheel tire and tread comprising a pneumatic tire of elliptical cross section and having the major axis of said ellipse disposed transversely to the plane of said wheel, a circular assemblage of metal blocks encircling said tire, rubber blocks alternated with said metal blocks and strutted against said tire, said rubber blocks spacing said metal blocks apart circumferentially from one another and radially from said tire, circumferential flexible restraining means for said metal blocks, and means on the latter for engaging said restraining means, substantially as set forth.

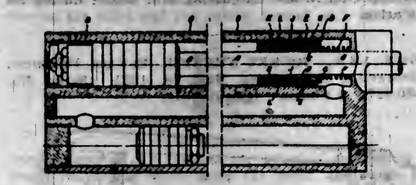


1,398,170. LUBRICATING SYSTEM. JACQUES BIGNAN, Puteaux, France. Filed Mar. 5, 1918. Serial No. 220,581. 4 Claims. (Cl. 184—7.)

4. Lubricating arrangement for connecting rod heads, comprising two circular channels facing each other relative to the crank shaft sleeves, a connecting rod head bush disposed between the said channels, circular collectors which inclose the joint between each channel and the corresponding cheek, a connecting rod head in one with the said collectors and two passages formed in the lower

part of the connecting rod head in order to allow of communication between the collectors and the casing of the motor.

1,398,171. GEAR-BOX. HERMANN BOGATY, Philadelphia, Pa., assignor to The Philadelphia Textile Machinery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 16, 1920. Serial No. 351,901. 4 Claims. (Cl. 74—56.)

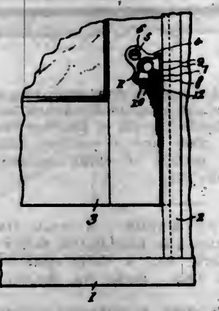


1. The combination of a box; a horizontal and a vertical shaft extending into the box; gear wheels on each shaft, one gear wheel meshing with the other, the gear wheel on the horizontal shaft having an extended hub; ball bearings between the hubs and the casing at each side of the gear wheel; a column projecting from the bottom of the box and encircling the vertical shaft; and a ball bearing between the column and the gear wheel mounted in the vertical shaft.

1,398,172. HYDRAULIC RECOIL APPARATUS FOR ORDNANCE. AXEL BERTHELSEN, Glasgow, Scotland. Filed June 24, 1920. Serial No. 391,299. 2 Claims. (Cl. 89—43.)

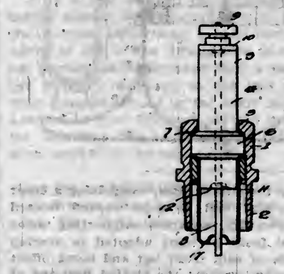
1. In hydraulic recoil apparatus for ordnance, in combination constant leakage apertures and a valve so disposed and so spring loaded as to open under the moment of recoil but to remain closed during the return movement and a second valve controlling the return movement, closed during recoil, but so spring-loaded that it opens

at the beginning of that movement but gradually closes and remains closed during the latter part of the return



movement both valves being located in the annulus between the piston rod and the recoil cylinder in which it operates, as and for the purposes set forth.

1,398,173. SPARK-PLUG. JOHN O. BROCK, Wilson, N. C. Filed May 24, 1920. Serial No. 383,855. 5 Claims. (Cl. 123—169.)



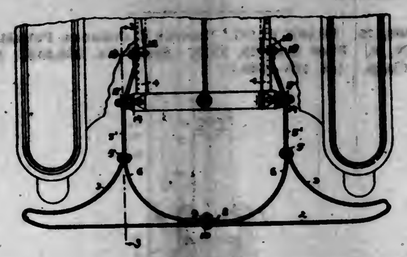
1. In a spark plug, a body, a hollow insulator therein, means for holding the insulator in place, a hollow electrode extending through the said insulator, means for holding the electrode in place, an inner head threaded in the electrode and forming a valve seat, a valve within the hollow electrode operative in conjunction with the said valve seat, and a terminal of high resistance carried by the said head, the said terminal being coiled as and for the purpose described.

1,398,174. SASH-FASTENER. SWEND CARLSON, Butte, Mont. Filed Apr. 8, 1921. Serial No. 459,631. 1 Claim. (Cl. 292—202.)

A window sash fastener comprising a plate adapted to be pivoted to a window sash and having a socket outwardly of the pivot point, a flange extending outwardly from the outer edge of the plate and being formed in substantially the arc of a circle, said flange provided with an intermediate transverse rib having tapering side walls, and with two series of shoulders stepped down in opposite relation from the rib and also having inclined edges, said flange having an interior flaring wall formed in continuation of the socket in said plate to receive the finger or thumb of the operator, said fulcrum point of the plate being situated relatively to the window casing to prevent the plate from swinging completely between its fulcrum point and the window casing, substantially as described.

1,398,175. SPARK-PLUG. HERMON E. CLEMONS, Pulaski, N. Y. Filed May 25, 1918. Serial No. 236,543. 1 Claim. (Cl. 123—169.)

A spark plug comprising an open casing, a non-conducting bushing projecting from one terminal of the casing having an enlarged portion confined within the casing, a center electrode carried by the bushing, a tubular member positioned within the lower end of the casing and spaced from the inner wall thereof and having an outwardly directed flange at its upper terminal bearing against the enlarged portion of the bushing and constituting a gasket therefor, a washer screw threaded in the casing and bearing against the flared terminal of the tubular member to hold the latter and the bushing in position, notches formed on said washer for removing the same from the casing, and thereby releasing the tubular member, and inwardly directed integral fingers carried by the tubular member terminating in spaced relation to the center electrode to provide a spark gap.



1,398,176. RADIATOR FOR AUTOMOBILE COOLING SYSTEMS. JOHN CONLON, Plattsburg, N. Y. Filed Oct. 21, 1919. Serial No. 332,335. 7 Claims. (Cl. 257—129.)

1. A radiator having upper and lower reservoirs, tubes slidably engaging the walls of both reservoirs, and a

single means for engaging the walls of one receptacle for securing the tubes in place and compressing the packing between the tubes in both receptacles in the same direction of movement as the movement of the single means.

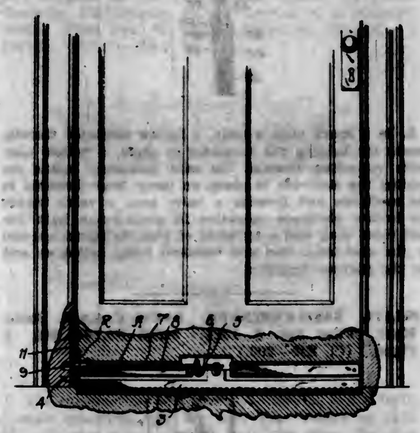
1,396,177. SPRING-BUMPER FOR AUTOMOBILES. WILLIAM G. COX, Cleveland, Ohio, assignor to Cox Brass Manufacturing Company, Albany, N. Y., a Corporation of New York. Filed Sept. 28, 1921. Serial No. 506,660. 3 Claims. (Cl. 293—55.)

3. A spring bumper for automobiles, comprising a front bar having reversely-bent end portions curved toward each other and rearwardly, separate supporting arms having slotted curved front portions adapted to overlap and engage the middle of said front bar and being offset at their rear ends, means uniting the slotted portions of said supporting bars with the front bar with a limited play therebetween, and means adapted to secure the rear offset ends of said supporting bars to the frame of the automobile.

1,396,178. PISTON. CHARLES DE LUBACZEWICZ and EDMUND LOEFLER, New York, N. Y. Filed Nov. 8, 1920. Serial No. 422,707. 4 Claims. (Cl. 74—108.)

1. A piston composed of a phenol condensation product and metal inserts and sheet mica embedded therein.

1,398,179. STOCK-FEEDER. JOHN DIERKS, Sulphur Springs, Tex. Filed Dec. 29, 1919. Serial No. 348,110. 4 Claims. (Cl. 119—54.)

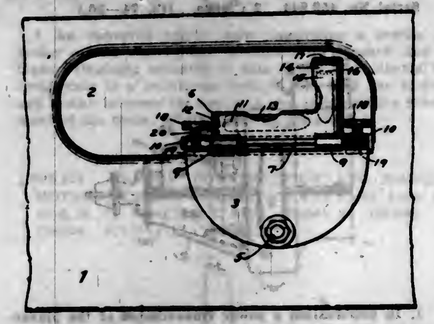


1. A stock feeder including, a supporting frame, an open bottom food hopper suspended on said supporting frame and adapted to oscillate thereon, a bottom, carrying feed troughs, rigidly secured to said hopper, spaced below the oscillation of said hopper, and means positioned on said hopper between adapted to engage an abutment on said supporting frame for jarring said hopper during its oscillation.

1,398,180. SOCKET-WRENCH. EDWARD DIETRICH, Henryville, Ind. Filed Mar. 28, 1921. Serial No. 456,427. 2 Claims. (Cl. 81—61.)

1. A socket wrench comprising an outer casing, said casing being formed of two sections provided with peripheral flanges engaging each other to space the sides of the casing from each other, said casing being provided with a centrally depressed portion forming a pair of guideways, a dog arranged in each of said guideways, a socket mounted to revolve in the casing, said socket being provided with ratchet teeth adapted to be engaged by said dogs, and an operating lever pivotally mounted in said casing and connected to said dogs.

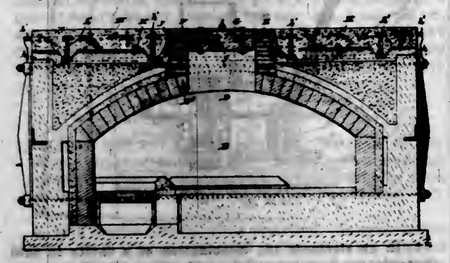
1,398,181. AUTOMATIC WEATHER-STRIP. WILLIAM J. DILLARD and JOHN D. TAYLOR, Portland, Oreg. Filed Dec. 10, 1919. Serial No. 343,765. 1 Claim. (Cl. 20—68.)



In an automatic weather-strip structure, a blade carried by the door and movable downward by the closing of the door, a slot in the sill of the door frame adapted to receive said blade and a resilient filling for said slot, the upper surface of filling normally co-planar with the top of the sill.

1,398,182. SAFETY-RAZOR. WILLIAM DWYER, Pittsburgh, Pa., assignor to Four-In-One Safety Razor Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 23, 1920. Serial No. 368,051. 3 Claims. (Cl. 30—12.)

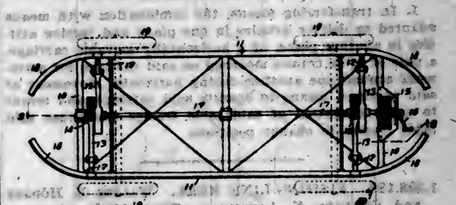
1. In a safety razor, a polygonal clamping plate, a polygonal casing having a depending flange and open at one side, said plate being positioned within the flange of the casing, a polygonal blade positioned between the plate and the casing and fitting within the latter, said blade being sharpened on all of its edges and projecting beyond the casing at the open side thereof, and means for forcing the plate and the casing toward each other, said flange providing an element for gripping the casing between the fingers when using the razor, the flange also serving to protect the user's fingers from being cut by the blade and to protect the unexposed edges of the blade from injury.



1,398,183. ADJUSTABLE STRAIGHTEDGE PLUMB AND LEVEL. PHILIP T. FAGRIE, Seattle, Wash. Filed Apr. 29, 1919. Serial No. 293,542. 4 Claims. (Cl. 33—88.)

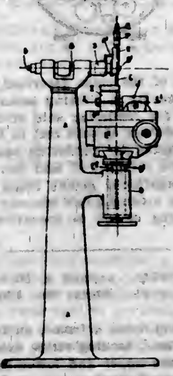
1. The combination with a straight-edge, of clamping plates arranged upon opposite sides of the straight-edge, means for detachably connecting the plates to the straight-edge, said plates having outstanding perforated ears formed thereon at the upper edges of said plates and an angular vial holder arranged above the upper edges of the plates and having perforated ears carried thereby and adapted to be disposed in alinement with the ears of the plates and removable pivot pins extending through the ears of both the plates and vial holder.

1,398,184. INCINERATING-FURNACE. WILLIAM FETZER and JOHN G. FRERES, Springfield, and OTTO A. ELLIOTT, Marion, Ill., assignors to International Sanitation & Development Company, Springfield, Ill., a Copartnership consisting of said Fetzer, Freres, and Elliott. Filed Sept. 18, 1917. Serial No. 192,016. 2 Claims. (Cl. 110—12.)



1. In an incinerating plant, the combination with walls and a furnace, of a throat member extending upwardly from the furnace and carried thereby, a driving floor located adjacent the top of the furnace and through which the throat member loosely passes, and a packing interposed between the throat and the driving floor.

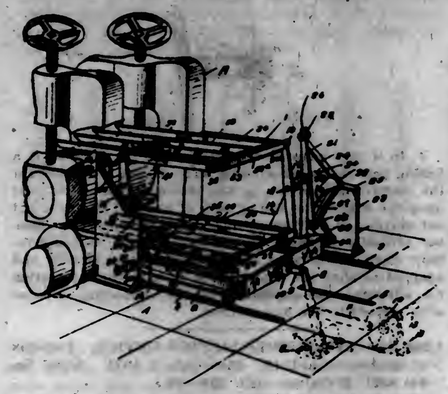
1,398,185. REEL. WILLIAM J. FROHMUTH and DONALD E. CONAGEN, Fort Wayne, Ind. Filed Dec. 8, 1919. Serial No. 343,227. 3 Claims. (Cl. 242—84.1.)



3. In a reel adapted for attachment to the side of a fishing pole or rod, a winding member and a support for the member comprising a base portion adapted to seat upon the side of the fishing pole or rod and having a cut out portion on its forward face, a shaft supporting member pivotally mounted on the base portion and a revoluble member carried by the shaft supporting member and adapted to abut the base portion in said cut-out portion for adjusting the angularity of the supporting member with respect to the base portion.

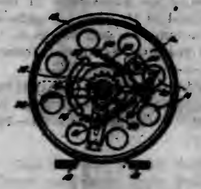
1,398,186. AUTOMOBILE-LIFTING DEVICE. PRESTON C. GRASON, Girard, Ill. Filed Feb. 2, 1921. Serial No. 441,822. 3 Claims. (Cl. 254—89.)

1. An automobile lifting device comprising a caster-supported frame, a lifting frame disposed above the first-mentioned frame provided with an upper surface adapted to seat the axles of an automobile at divers positions thereon, and provided at its opposite ends with duplicate inturned curved extremities, and means to lift the lifting frame relative to the first-mentioned frame.



1,398,187. CUTTER-GRINDING MACHINE. JAMES J. GUEST, London, England. Filed Aug. 18, 1920. Serial No. 404,399. 5 Claims. (Cl. 51—225.)

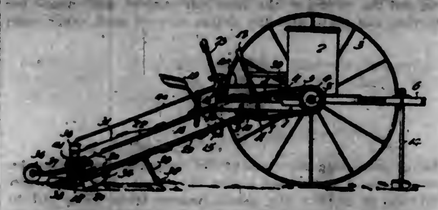
1. In a cutter grinding machine a cutter spindle, a tooth rest carried upon an arm, and means for sliding



said arm upon and rotating it about an axis which intersects at right angles the axis of rotation of the cutter spindle.

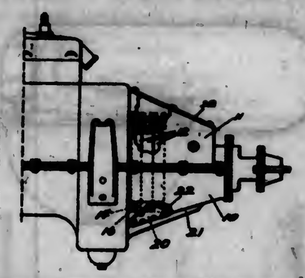
1,398,188. TRANSFER MEANS. JOHN J. HARLEWOOD, Pittsburgh, Pa. Filed May 2, 1919. Serial No. 294,322. 10 Claims. (Cl. 80—47.)

1. In transferring means, the combination with means adapted to deliver articles in one plane and receive articles in another plane, of a horizontally movable carriage, a pair of table frames mounted on said carriage for movement around one another during horizontal movement of said carriage, means to operate said carriage, and means to cause operation of said table frames and cause said table frames to change positions.



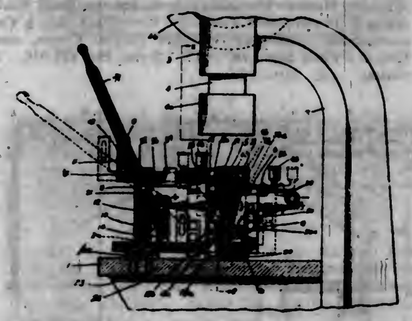
1,398,189. FISHING-LINE REEL. WALTER E. HODGES and CHARLES F. LARENBERG, Flint, Mich. Original application filed Mar. 25, 1920, Serial No. 368,521. Divided and this application filed Mar. 12, 1921. Serial No. 451,920. 5 Claims. (Cl. 242—84.6.)

1. In a device of the class described, a casing, a reel mounted in said casing, a clicking means associated with said reel, means for rendering said clicking means inoperative for the rotation of said reel in both directions of movement, and means for rendering said clicking means inoperative for the rotation of said reel in one direction only, said last mentioned means being operable by the pull on the line of a caught fish whereby to automatically return said clicking means to operative position.



1,398,190. PLANTER. ALFRED A. HOWARD, Waddy, Ky. Filed Jan. 13, 1921. Serial No. 436,982. 4 Claims. (Cl. 111—3.)

1. A planter comprising a frame, an inclined track bar carried by said frame, binding strips extending about the side portions of the upper and lower faces of the track bar and having cam elements at one end of the track bar, a furrow opener carried by said track bar, an endless carrier carried by said track bar and moving longitudinally thereof between the binding strips, normally inoperative plant gripping means carried by the carrier and

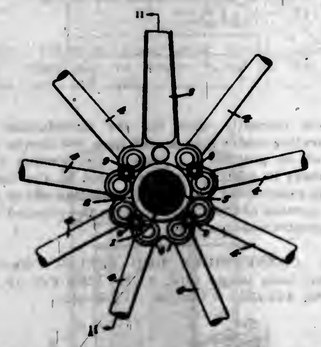


moved to an operative position by said cam elements, and furrow filling means carried by said track bar.

1,398,191. CLUTCH-BAND AND CASING THEREFOR. WILLIAM F. HUDSON, Philadelphia, Pa., assignor to Hudson Motor Specialties Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 16, 1921. Serial No. 452,844. 2 Claims. (Cl. 74—56.)

1. In combination a power transmission of the planetary type including clutch bands each of said bands being of sectional formation, means for removably clamping together the sections of each band, a casing surrounding said transmission which casing is provided with a covered opening immediately adjacent the clamped portion of said sections and being further provided with a covered opening substantially opposite the first mentioned opening.

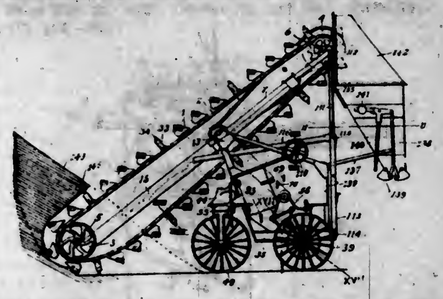
1,398,192. ELECTRODE FOR ANNEALING AND HEATING SYSTEMS. WATSON HURLBURT, Chicago, Ill. Filed Feb. 24, 1919. Serial No. 278,596. 4 Claims. (Cl. 219—9.)



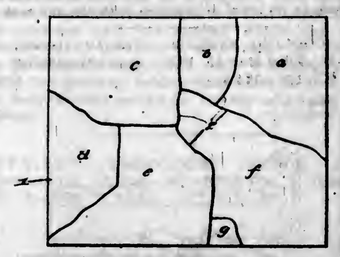
1. In an electrode the combination of a cavity in said electrode, passages connecting said cavity with the contact surface of said electrode, an electrolyte, a container for said electrolyte and means for controlling the supply of said electrolyte.

1,398,193. SAFETY-RAZOR. ANDREW LANGSTAFF JOHNSTON, Jr., Richmond, Va. Filed Apr. 27, 1920. Serial No. 377,063. 9 Claims. (Cl. 30—12.)

1. An improved safety razor comprising a handle, a holder carried thereby and provided with a guard, and a blade swingingly mounted in said holder and adapted to reciprocate in a rectilinear path to and from the guard, and means to cause the swinging and reciprocating movement of the blade, substantially as described.



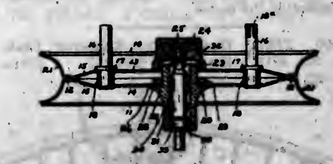
1,398,194. BIG-END CONSTRUCTION FOR RADIAL MOTORS. CHARLES L. LAWRANCE, Bay Shore, Long Island, N. Y. Filed May 7, 1920. Serial No. 379,585. 7 Claims. (Cl. 74—17.)



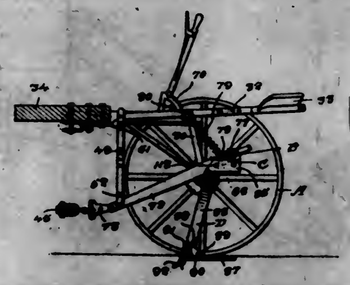
2. In a motor of the class described, a crank assembly comprising a bearing sleeve on the crank pin, and a plurality of auxiliary connecting rods spaced about said bearing and connected thereto each by a joint consisting of a pair of longitudinally disposed end bearings, a bearing rib, and a tubular pin passing through said end bearings, and the interposed end of a connecting rod, said connecting rod being slotted to permit the bearing rib to contact with the lower face of the hollow pin.

1,398,195. EXCAVATING-MACHINE. WILLIAM K. LIGGETT, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Feb. 3, 1920. Serial No. 356,100. 24 Claims. (Cl. 37—24.)

1. In a machine of the class described, the combination with a main frame supported upon laterally disposed traction wheels in the rear of its center of gravity and a centrally disposed steering wheel in advance of said center of gravity, means to actuate said traction wheels to propel the machine, self-locking means to control said steering wheel to guide the machine and a longitudinally extending conveyer supported upon said frame and adapted to gather material from points in advance of said steering wheel and convey it rearwardly to elevated discharge points as and for the purpose set forth.

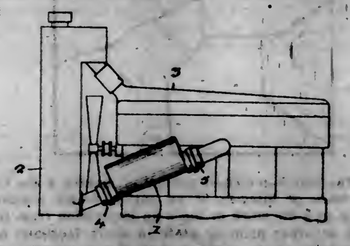


1,398,196. METHOD OF MAKING A DIE. ALBERT A. MCINTYRE, Bonners Ferry, Idaho. Filed Apr. 29, 1919. Serial No. 293,527. Renewed Oct. 11, 1921. Serial No. 507,158. 2 Claims. (Cl. 76—107.)



1. The herein-described method of making a die for the subdivision of integers of an entity, which consists, in making on a die stock or block an impression from the engraved or other printing plate in exact facsimile of the configuration of the entity and its integers to be printed, in subdividing the block on the lines of such configuration, and in interposing cutting rules in such lines of division of the block with the cutting edges of said rules in relief from the cutting or impression side of the block.

1,398,197. FISHING-REEL. ROBERT S. MOSES, Kendallville, Ind. Filed Aug. 3, 1920. Serial No. 401,047. 2 Claims. (Cl. 242—84.1.)



2. In a reel of the class described, a reel hub including a sleeve having a flange thereon, one end of the sleeve being threaded, a reel body including a pair of similar annular disks having their central portions spaced and fitted on the threaded end of the sleeve, a lock nut threaded on the sleeve between said disks and screwed toward said flange to clamp one of the disks against the flange, and a hub cap screwed on the end of the sleeve and bearing against the other disk.

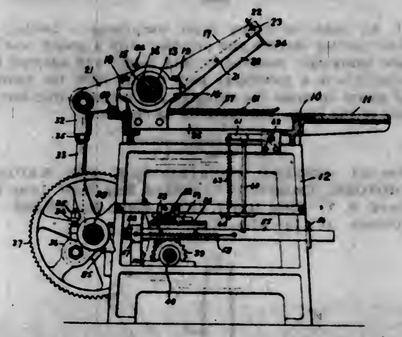
1,398,198. AGRICULTURAL MACHINE. JOHN G. NORTHCUTT and MINER CRAWFORD, Silverton, Tex. Filed July 2, 1920. Serial No. 396,894. 1 Claim. (Cl. 97—34.)

In a machine of the class described, a wheel carrying frame including an arch axle having wheel carrying spindles and a sub-arch connected with the spindles of the axle for swinging movement about the axis of the spindles, an implement beam having a bearing at its rear end pivotally engaging the sub-arch, an adjustable connection between the front end of said beam and a part of the frame, means for adjusting the sub-arch and for securing it in adjusted position and a weeder attachment connected with said implement beam at its point of junction with the sub-arch.

1,398,199. COOLING SYSTEM. WILLIAM OATES, Jr., Lead, S. D. Filed May 17, 1920. Serial No. 382,167. 1 Claim. (Cl. 123—174.)

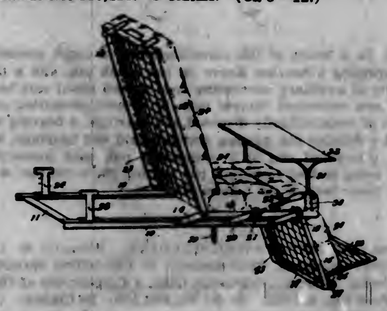
In combination with a water system of an internal combustion engine, a cylindrical drum, an inlet nipple and an outlet nipple projecting from the end, said nipple being arranged adjacent one side of the drum, an upper baffle plate arranged in said drum so as to give the water a zig zag path as it passes therethrough, lower plates having openings formed in their lower edges for permitting the water to drain from the drum when the cooling system is drained, said drum being connected with the pipe line leading from the bottom of the radiator to the inlet of the water jacket of the motor.

1,398,200. TIRE. HARRY OWEN, Roosevelt, Utah. Filed Mar. 22, 1919. Serial No. 284,257. 1 Claim. (Cl. 152—22.)



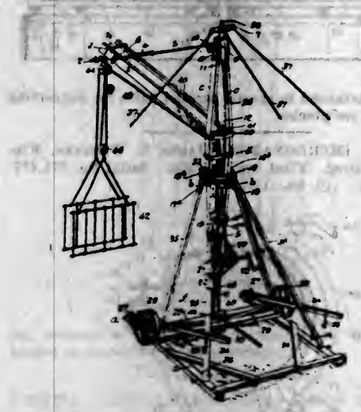
In combination with a tire casing, of a plurality of permanently inflated independently removable spherical air cells adapted to be positioned in said casing in a circumferentially compressed condition and a plurality of flexible annular separators provided with inwardly beveled ends adapted to be positioned in said casing between each of said cells.

1,398,201. BITUMINOUS EMULSION. CHARLES S. REEVE, Grantwood, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Feb. 10, 1921. Serial No. 443,863. 5 Claims. (Cl. 134—1.)



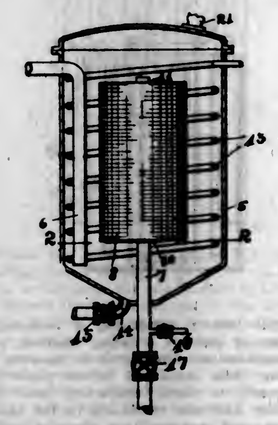
1. The process of producing an emulsion which comprises adding a bitumen in a fluid state to a mixture of clay and water while agitating said mixture and maintaining its temperature at such a point that the bitumen will be dispersed without a substantial amount of coalescence of the same.

1,398,202. SLOTTING-MACHINE. JOHN H. SCARBOROUGH, Philadelphia, Pa., assignor to David Weber, Philadelphia, Pa. Filed Apr. 29, 1920. Serial No. 377,630. 47 Claims. (Cl. 164—41.)



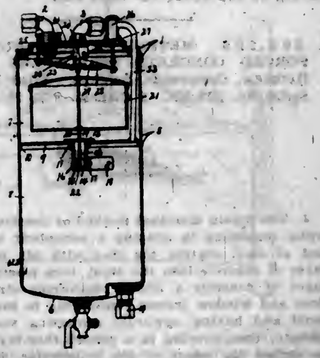
1. Shears normally open for the introduction of a blank, operating means to close and open the shears, means constrained in position to prevent the closing of the shears, means in position to be actuated by the blank to release the constrained means, said operating means adapted at the opening of the shears to force the released means into its constrained position.

1,398,203. CONVERTIBLE BED-SPRING. HENRY A. SCHMIDT, Long Island City, N. Y. Filed Feb. 19, 1921. Serial No. 446,423. 3 Claims. (Cl. 5—12.)



1. A convertible bed spring including a main frame, an auxiliary frame having angular offset terminals pivoted to the main frame, a second auxiliary frame having offset angular terminals also pivoted to the main frame, and a third auxiliary frame pivotally supported upon and between the first and second frames.

1,398,204. HEADED-GRAIN STACKER. JACOB A. SCHOWALTER, near Newton, Kans. Filed Oct. 20, 1920. Serial No. 418,148. 17 Claims. (Cl. 212—59.)



1. A hoist of the character described comprising a base, a mast mounted on the base frame for rotation about its longitudinal axis, and a supporting member mounted on the frame for laterally supporting the mast, said mast being pivotal on said lateral supporting member whereby the mast may be moved to a horizontal position.

1,398,205. FILTER. CHARLES W. SIRCH, Los Angeles, Calif. Filed May 16, 1919. Serial No. 297,577. 2 Claims. (Cl. 210—169.)

1. In a filter in combination with a casing, an inlet pipe and a perforated outlet pipe provided on the casing; a filtering medium comprising layers of fabric and spacing means disposed between the layers of fabric, the spacing means forming the supporting member of the medium and having means for attaching the whole width of the medium at one edge to one side of the outlet pipe of the casing so as to allow a winding of the medium for several times around the pipe.

1,398,206. FUEL-FEEDING DEVICE. WILLIAM SPARKS, Jackson, Mich., assignor to The Sparks-Withington Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 28, 1921. Serial No. 447,196. 16 Claims. (Cl. 158—36.)

1. In a fuel feeding device, an elevated tank comprising an upper chamber, and a lower chamber, an exhaust connection and an atmosphere inlet to the upper chamber, float-actuated means for alternately connecting said chamber with the exhaust means and with the atmosphere, a slide valve controlling the communication between the upper and lower chambers, a counterweight for normally holding said valve in open position, and float-actuated means for moving said valve to closed position.

1,398,207. EMBROIDERY-NEEDLE. JAMES C. THRAILKILL, Chicago, Ill. Filed Oct. 4, 1920. Serial No. 414,498. 1 Claim. (Cl. 112—80.)

The combination of a handle having a side recess, an embroidery needle seating slidably in the handle and projecting therefrom, and a resilient shank carried by the handle and having a latch pin passing through the side recess to engage the needle for locking the same, said needle having keeper apertures for the latch pin.

1,398,208. PORTABLE SHOWER-BATH APPARATUS. LEILA A. TRIAL, Los Angeles, Calif. Filed Sept. 19, 1918, Serial No. 254,855. Renewed Oct. 24, 1921. Serial No. 510,103. 4 Claims. (Cl. 4—26.)

1. In a portable shower bath apparatus, a bag having a seamless bottom; a valve casing inserted upwardly

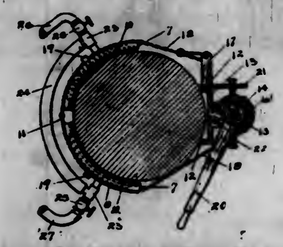
through the bottom; a nut screwed downwardly upon the valve casing against the bottom, there being perforations in the upper end of the casing; a valve seat at the upper end of the casing above the perforations; and a valve stem screwed upwardly into the valve casing and having an end fitting the valve seat.

1,398,209. METHOD OF CONSTRUCTING REINFORCED CONCRETE STRUCTURES. EDGAR VAN BAVEGEM, Oosterzeele, Belgium. Filed May 21, 1919. Serial No. 298,606. 2 Claims. (Cl. 25—155.)

1. The herein described method of constructing concrete walls consisting in shaping a recumbent mold having a bed of clay, coating the clay with oil, pouring a thin layer of concrete into the mold, then placing on the first layer of concrete a ribbed reinforcing structure having door and window frames conforming to the shape of the mold and having upwardly projecting staples attached thereto, then pouring in a second thin layer of concrete to embed the edges of the reinforcing structure, then placing a layer of sand upon the concrete, leaving only the edges of the reinforcing structure and the staples exposed, then pouring in another layer of concrete and leaving openings in this last mentioned layer to expose the staples, then raising the wall and removing the sand.

1,398,210. WHISK-BROOM. GEORGE K. VAN VOAST, Amsterdam, N. Y., assignor to Amsterdam Broom Company, Amsterdam, N. Y., a Corporation of New York. Filed May 10, 1921. Serial No. 468,265. 3 Claims. (Cl. 15—19.)

1. In a broom, in combination, a body portion and a covering for the rear end of the same comprising a sheath of fibers secured thereto the individual fibers being doubled upon themselves and both ends of each fiber being rearwardly directed.



1,398,211. DEVICE FOR DRAINING-RECEPTACLES. HARVEY RAY WALLACE, Brooklyn, N. Y., assignor to Loft Incorporated, New York, N. Y. Filed Mar. 18, 1921. Serial No. 453,525. 4 Claims. (Cl. 221—69.)

1. A device of the class described, including a receptacle, a standard arranged centrally within said receptacle, an annular track arranged above the receptacle and concentric with the standard, a turn table mounted for rotation upon said track, rollers supported by said turn

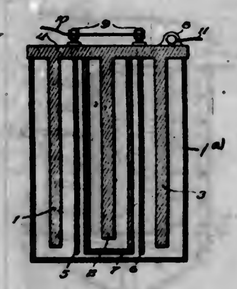


table and arranged in spaced parallel pairs for supporting individual receptacles.

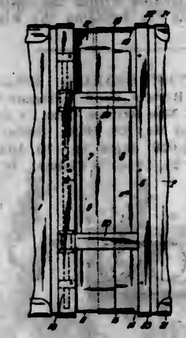
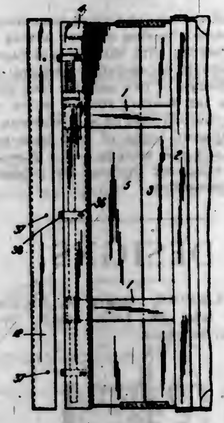
1,398,212. IMPREGNATOR. JAMES R. WEBBLES, Winchester, Oreg. Filed Apr. 5, 1920. Serial No. 371,477. 6 Claims. (Cl. 99—12.)

1. An impregnator comprising an impregnating member of box like construction applicable to the peripheral surface of a post; a packing medium upon the edges of said member; a winch; flexible tension members connecting said impregnating member with said winch; and means to supply a liquid preservative under pressure to said impregnating member.



1,398,213. BATTERY. DAVID H. WILSON, Philadelphia, Pa. Filed May 2, 1919. Serial No. 294,255. 5 Claims. (Cl. 204—38.)

1. An electric battery comprising a receptacle containing the battery solution, a carbon electrode separate from said receptacle and adapted to be inserted therein and comprising three separated carbon plates located in said receptacle, a carbon connecting piece integral with said plates and zinc electrodes in the spaces between the separated carbon plates, whereby there is a simultaneous action on both the inner and outer surfaces of the zinc electrodes and a porous cup surrounding the central carbon plate.

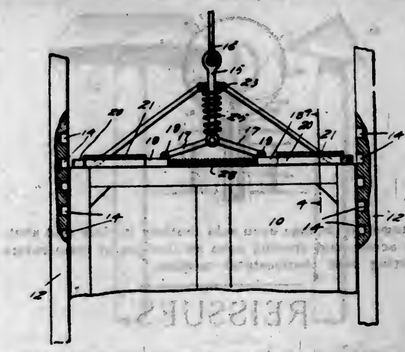


1,398,214. LOOSE-LEAF BINDER. SYDNEY R. WYCHERLEY, Bromley, England, assignor to Spicer Brothers, Limited, London, England. Filed Mar. 10, 1921. Serial No. 451,243. 4 Claims. (Cl. 129—41.)

1. A loose leaf binder comprising clamping bars, one of said bars comprising detachably associated housing sections, leaf-engaging means connecting one of the hous-

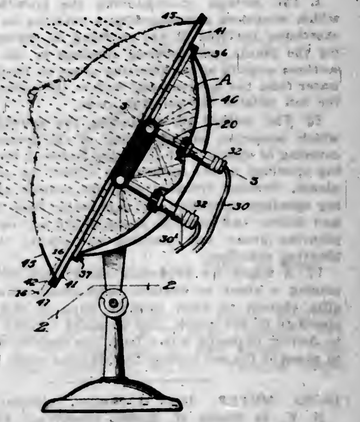
ing sections with the other clamping bar, and a cover hinged to the other housing section.

1,398,215. LOOSE-LEAF BINDER. SYDNEY R. WYCHERLEY, Bromley, England, assignor to Spicer Brothers, Limited, London, England. Filed Mar. 10, 1921. Serial No. 451,244. 5 Claims. (Cl. 129—41.)



1. A loose leaf binder, comprising leaf clamping bars, leaf holding thongs connected to one of the bars, a shaft journaled on the other bar and adapted to have the thongs wound thereon, means at one end of the shaft by which it may be rotated, and means at the other end of the shaft for holding it against rotation in one direction.

5. A loose leaf binder comprising leaf-clamping bars, a roller shaft journaled on one of the bars and having longitudinal grooves, thongs secured to the other bar and adapted to wrap upon the roller shaft, and spring clips embracing the shaft and having portions that press the thongs into the grooves thereof.



1,398,216. SAFETY DEVICE FOR MINE-ELEVATORS. JOHN S. BARNETTE, Jr., Broughton, Pa. Filed Mar. 16, 1920. Serial No. 366,318. 1 Claim. (Cl. 187—84.)

A safety device for a movable body consisting of a plurality of dogs, keepers engageable by the dogs, a bracket having a portion raised above the dogs, an expansive spring engaging the inner end portions of both dogs, a bar slidable in said bracket portion, a cable operatively associated with said bar above said portion, links pivoted to said dogs disposed above said spring and normally

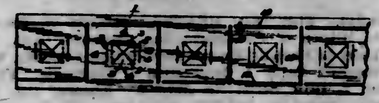
maintained at an angle to each other by said cable, said links being pivoted to said bar, and an expansive spring on said bar below said bracket portion engageable with said links at their highest portions.

1,398,217. ELECTRIC HEATER. EDMUND N. BROWN and MILTON H. SHOMBERG, San Francisco, Calif., assignors to Majestic Electric Development Company, San Francisco, Calif., a Corporation of California. Filed Oct. 2, 1919, Serial No. 327,880. Renewed Oct. 18, 1921. Serial No. 508,611. 8 Claims. (Cl. 219—34.)

1. A heater, comprising a reflector of concave form, the central portion being a surface of revolution of one curvature and the outer surrounding portion being a surface of revolution of a different curvature, and a heating element substantially centered about the focus of said outer portion.

1,398,218. TEMPERATURE-INDICATOR FOR RADIATORS. ABY A. BENSON and HORACE BARNES, Seattle, Wash., assignors, by direct and mesne assignments, to Auto Radio Meter Company, Seattle, Wash., a Corporation of Washington. Filed Nov. 1, 1919. Serial No. 335,204. 8 Claims. (Cl. 116—114.)

1. In an instrument of the class described, a casing provided with a sight opening in its rear wall and a lens



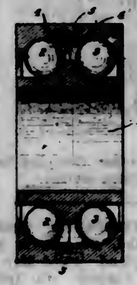
in its front wall, a pair of shutters pivotally mounted to vibrate across said opening, and a thermostatic member

arranged to impinge upon said shutters to close said shutters across said opening upon an increase of temperature affecting said thermostatic member.

REISSUES.

15,221. METHOD AND MEANS FOR ENHANCING THE GROWTH OF PLANTS. CHARLES F. ECKHART, Honolulu, Hawaii. Filed Oct. 15, 1921. Serial No. 508,080. Original No. 1,372,998, dated Mar. 29, 1921, Serial No. 413,173, filed Sept. 27, 1920. 17 Claims. (Cl. 47—36.)

1. The method of enhancing the growth of plants, which comprises superimposing a covering on the ground, exercising portions of the covering to expose soil areas for the plants, and forming openings in the covering at sections outside of the planting areas to receive drainage water from the covering and deliver the water to zones of the soil outside the planting areas.



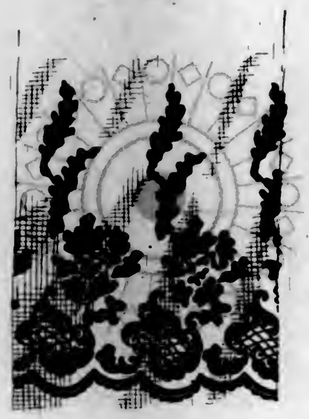
13. The method of enhancing the growth of plants which comprises superimposing on the ground a flexible covering of opaque heat-absorbing material, forming planting openings in the covering to expose soil areas for the plants, forming drainage openings outside of the planting openings to receive drainage water from the covering and deliver the water to areas of the soil outside of the planting areas, and planting the plants through said planting openings.

17. A mulch for enhancing the growth of plants comprising a sheet of flexible water-proof material having slits therein to form foldable flaps to define planting openings in the mulch, and openings outside of the flaps to deliver drainage water from the surface of the mulch to zones of the soil outside the planting areas.

15,232. METER. JOHN H. NORRIS, deceased, New York, N. Y., by EMMA M. NORRIS, executrix. Filed Oct. 8, 1921. Serial No. 506,812. Original No. 1,388,835, dated Aug. 23, 1921, Serial No. 147,536, filed Feb. 9, 1917. 4 Claims. (Cl. 73—[illegible].)

printing a member contacting with the inner surface of said glass and two arms connected with the ends of said member and pivotally mounted within the casing, and manually operable means for swinging the wiper about its pivots.

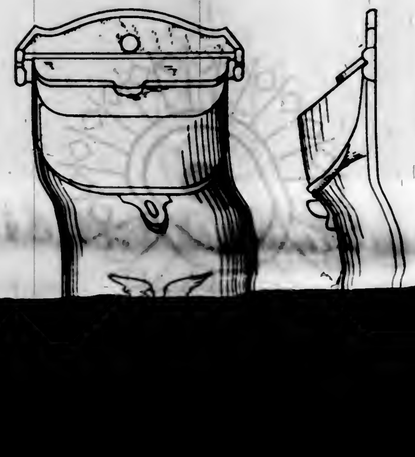
15,233. ANTIFRICTION BEARING. ROLAND WINCHESTER SELLEW, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed May 28, 1921. Serial No. 473,336. Original No. 1,375,019, dated Apr. 19, 1921, Serial No. 383,523, filed May 22, 1920. 8 Claims. (Cl. 64—36.)



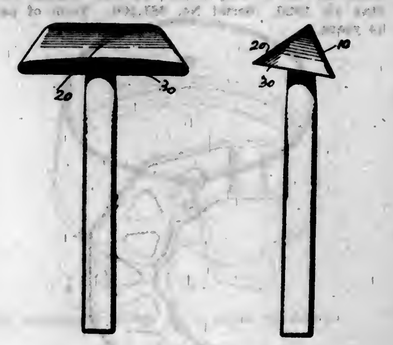
8. A bearing of the type described comprising, an inner and an outer annular bearing element having complementary ball races therein, with balls in said races operating to hold said elements in operative position, one of said elements being formed of two annular ring sections, each section having a ball bearing surface which surfaces cooperate to form the ball race of said element, and means bridging the adjacent edges of said ring sections and overlapping at least one section, and a fused connection between said overlapping surfaces for holding the same against lateral separation.

DESIGNS.

59,699. VEHICLE-TIRE. DANIEL L. BECKER, Oakland, Calif. Filed May 25, 1921. Serial No. 472,603. Term of patent 14 years.

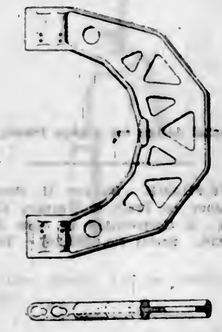


59,700. LACE. CECILIA BERNARD, New York, N. Y., assignor to Blanck & Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 26, 1921. Serial No. 503,388. Term of patent 3½ years.



The ornamental design for lace as herein shown and described.

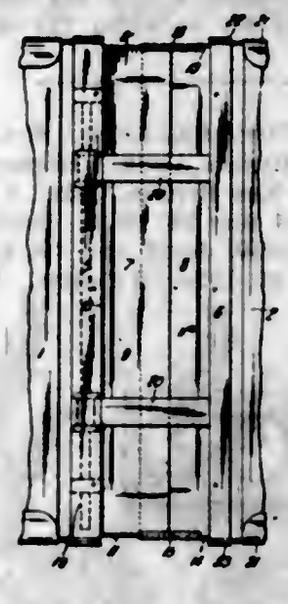
59,701. TOY BANK. JAMES H. BIGALOW, Ravenna, Ohio, assignor to The A. C. Williams Company, Ravenna, Ohio, a Corporation of Ohio. Filed Aug. 16, 1921. Serial No. 492,841. Term of patent 14 years.



59,702. MIXER. HARRY M. BIGELOW, Milwaukee, Wis. Filed Jan. 10, 1921. Serial No. 436,373. Term of patent 7 years.

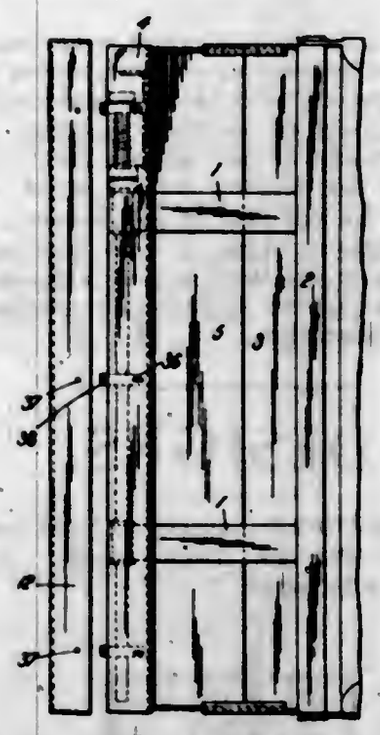
The ornamental design for a mixer, as shown.

59,703. GAGE-FRAME. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 13, 1920. Serial No. 381,204. Term of patent 14 years.



The ornamental design for a gage frame, as shown.

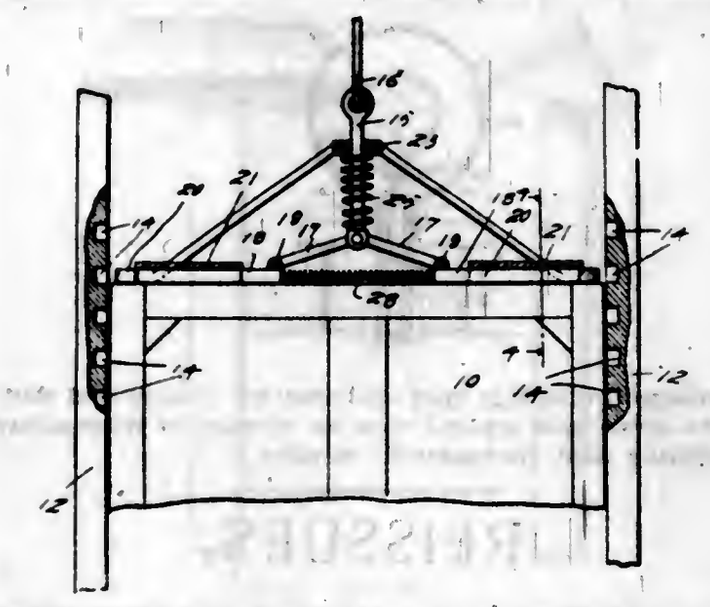
59,704. GAGE-FRAME. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 13, 1920. Serial No. 381,205. Term of patent 14 years.



of said bars comprising detachably associated housing sections, leaf-engaging means connecting one of the hous-

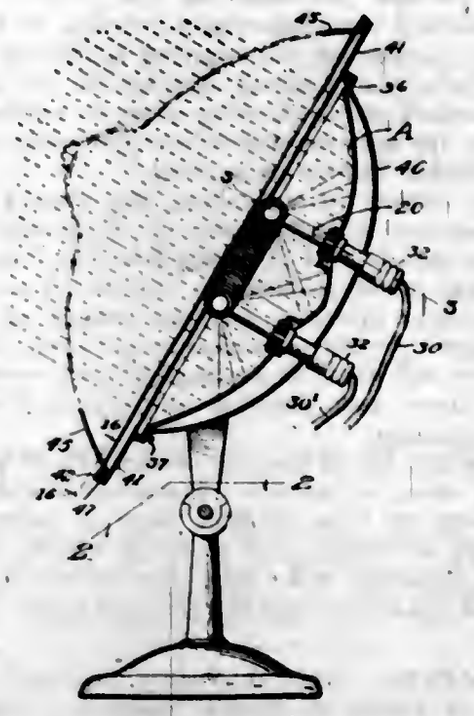
ing sections with the other clamping bar, and a cover hinged to the other housing section.

1,398,215. LOOSE-LEAF BINDER. SYDNEY R. WYCHERLEY, Bromley, England, assignor to Spicer Brothers, Limited, London, England. Filed Mar. 10, 1921. Serial No. 451,244. 5 Claims. (Cl. 129—41.)



1. A loose leaf binder, comprising leaf clamping bars, leaf holding thongs connected to one of the bars, a shaft journaled on the other bar and adapted to have the thongs wound thereon, means at one end of the shaft by which it may be rotated, and means at the other end of the shaft for holding it against rotation in one direction.

5. A loose leaf binder comprising leaf-clamping bars, a roller shaft journaled on one of the bars and having longitudinal grooves, thongs secured to the other bar and adapted to wrap upon the roller shaft, and spring clips embracing the shaft and having portions that press the thongs into the grooves thereof.



1,398,216. SAFETY DEVICE FOR MINE-ELEVATORS. JOHN S. BARNETTE, Jr., Brougbton, Pa. Filed Mar. 16, 1920. Serial No. 366,318. 1 Claim. (Cl. 187—84.)

A safety device for a movable body consisting of a plurality of dogs, keepers engageable by the dogs, a bracket having a portion raised above the dogs, an expansive spring engaging the inner end portions of both dogs, a bar slidable in said bracket portion, a cable operatively associated with said bar above said portion, links pivoted to said dogs disposed above said spring and normally

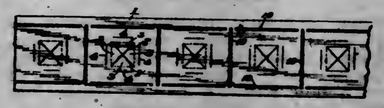
maintained at an angle to each other by said cable, said links being pivoted to said bar, and an expansive spring on said bar below said bracket portion engageable with said links at their highest portions.

1,398,217. ELECTRIC HEATER. EDMUND N. BROWN and MILTON H. SHOMBERG, San Francisco, Calif., assignors to Majestic Electric Development Company, San Francisco, Calif., a Corporation of California. Filed Oct. 2, 1919, Serial No. 327,880. Renewed Oct. 18, 1921. Serial No. 508,611. 8 Claims. (Cl. 219—34.)

1. A heater, comprising a reflector of concave form, the central portion being a surface of revolution of one curvature and the outer surrounding portion being a surface of revolution of a different curvature, and a heating element substantially centered about the focus of said outer portion.

1,398,218. TEMPERATURE-INDICATOR FOR RADIATORS. ARY A. BENSON and HORACE BARNES, Seattle, Wash., assignors, by direct and mesne assignments, to Auto Radio Meter Company, Seattle, Wash., a Corporation of Washington. Filed Nov. 1, 1919. Serial No. 335,204. 8 Claims. (Cl. 116—114.)

1. In an instrument of the class described, a casing provided with a sight opening in its rear wall and a lens

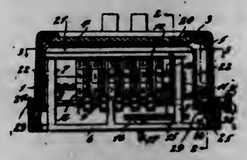


in its front wall, a pair of shutters pivotally mounted to vibrate across said opening, and a thermostatic member

arranged to impinge upon said shutters to close said shutters across said opening upon an increase of temperature affecting said thermostatic member.

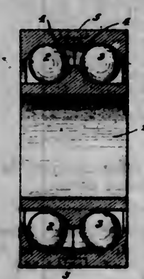
REISSUES.

15,221. METHOD AND MEANS FOR ENHANCING THE GROWTH OF PLANTS. CHARLES F. ECKHART, Honolulu, Hawaii. Filed Oct. 15, 1921. Serial No. 508,080. Original No. 1,372,998, dated Mar. 29, 1921, Serial No. 413,173, filed Sept. 27, 1920. 17 Claims. (Cl. 47—36.)



1. The method of enhancing the growth of plants, which comprises superimposing a covering on the ground, exercising portions of the covering to expose soil areas for the plants, and forming openings in the covering at sections outside of the planting areas to receive drainage water from the covering and deliver the water to zones of the soil outside the planting areas.

13. The method of enhancing the growth of plants which comprises superimposing on the ground a flexible covering of opaque heat-absorbing material, forming planting openings in the covering to expose soil areas for the plants, forming drainage openings outside of the planting openings to receive drainage water from the covering and deliver the water to areas of the soil outside of the planting areas, and planting the plants through said planting openings.



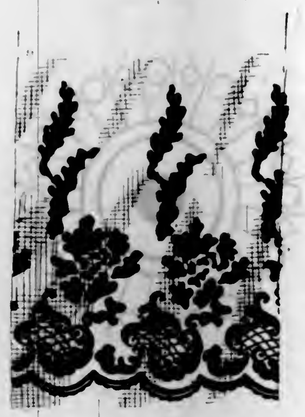
17. A mulch for enhancing the growth of plants comprising a sheet of flexible water-proof material having slits therein to form foldable flaps to define planting openings in the mulch, and openings outside of the flaps to deliver drainage water from the surface of the mulch to zones of the soil outside the planting areas.

15,232. METER. JOHN H. NORRIS, deceased, New York, N. Y., by Emma M. Norris, executrix. Filed Oct. 8, 1921. Serial No. 506,812. Original No. 1,388,835, dated Aug. 23, 1921, Serial No. 147,536, filed Feb. 9, 1917. 4 Claims. (Cl. 235—1.)

1. In a meter, a casing provided with a glass through which parts within the casing are visible, a wiper comprising a member contacting with the inner surface of said glass and two arms connected with the ends of said member and pivotally mounted within the casing, and manually operable means for swinging the wiper about its pivots.

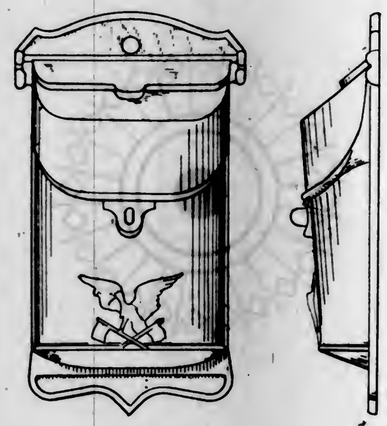
15,233. ANTIFRICTION BEARING. ROLAND WINCHESTER SELLEW, New Britain, Conn., assignor to The Fafnir Bearing Company, New Britain, Conn., a Corporation of Connecticut. Filed May 28, 1921. Serial No. 473,386. Original No. 1,375,019, dated Apr. 19, 1921, Serial No. 383,523, filed May 22, 1920. 8 Claims. (Cl. 64—36.)

8. A bearing of the type described comprising, an inner and an outer annular bearing element having complementary ball races therein, with balls in said races operating to hold said elements in operative position, one of said elements being formed of two annular ring sections, each section having a ball bearing surface which surfaces cooperate to form the ball race of said element, and means bridging the adjacent edges of said ring sections and overlapping at least one section, and a fused connection between said overlapping surfaces for holding the same against lateral separation.



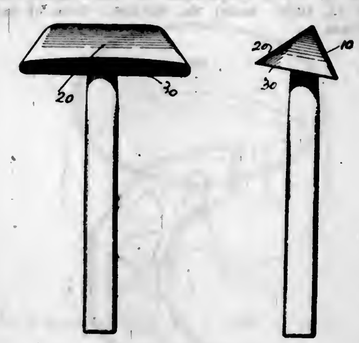
DESIGNS.

59,699. VEHICLE-TIRE. DANIEL L. BECKER, Oakland, Calif. Filed May 25, 1921. Serial No. 472,603. Term of patent 14 years.



The ornamental design for a vehicle tire substantially as shown and described.

59,700. LACE. CECILIA BERNARD, New York, N. Y., assignor to Blanck & Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 26, 1921. Serial No. 503,388. Term of patent 3½ years.

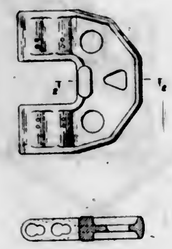


The ornamental design for lace as herein shown and described.

59,701. TOY BANK. JAMES H. BIGALOW, Ravenna, Ohio, assignor to The A. C. Williams Company, Ravenna, Ohio, a Corporation of Ohio. Filed Aug. 16, 1921. Serial No. 492,841. Term of patent 14 years.

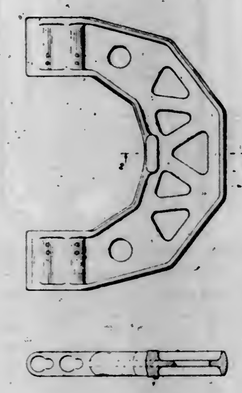
The ornamental design for a toy bank as shown.

59,702. MIXER. HARRY M. BIGELOW, Milwaukee, Wis. Filed Jan. 10, 1921. Serial No. 436,373. Term of patent 7 years.



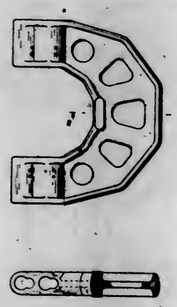
The ornamental design for a mixer, as shown.

59,703. GAGE-FRAME. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 13, 1920. Serial No. 381,204. Term of patent 14 years.



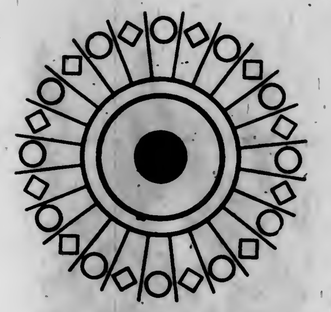
The ornamental design for a gage frame, as shown.

59,704. GAGE-FRAME. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 13, 1920. Serial No. 381,205. Term of patent 14 years.



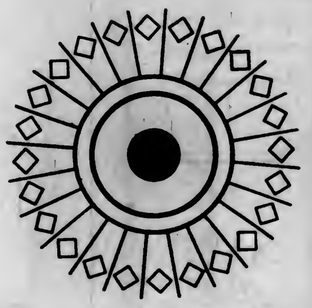
The ornamental design for a gage frame, as shown.

59,705. GAGE-FRAME. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 13, 1920. Serial No. 381,206. Term of patent 14 years.



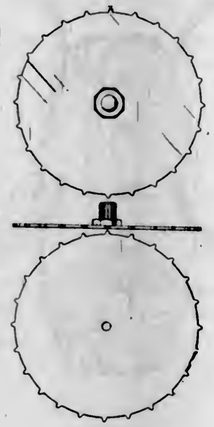
The ornamental design for a gage frame, as shown.

59,706. GAGE-FRAME. BRYANT H. BLOOD, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed May 13, 1920. Serial No. 381,207. Term of patent 14 years.



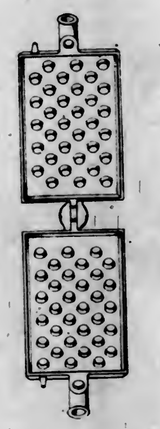
The ornamental design for a gage frame, as shown.

59,707. GAME-DIAL OR SIMILAR ARTICLE. EDMUND BAUDER, Chicago, Ill. Filed June 18, 1921. Serial No. 478,751. Term of patent 7 years.



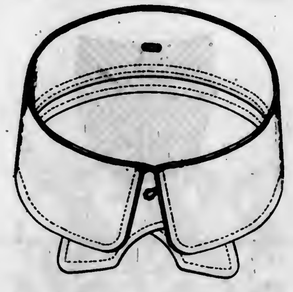
The ornamental design for a game dial or similar article as shown.

59,708. GAME-DIAL OR SIMILAR ARTICLE. EDMUND BAUDER, Chicago, Ill. Filed June 18, 1921. Serial No. 478,752. Term of patent 7 years.



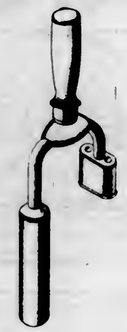
The ornamental design for a game dial or similar article as shown.

59,709. DISK OR ELEMENT FOR A GAME APPARATUS. EDMUND BAUDER, Chicago, Ill. Filed Aug. 29, 1921. Serial No. 496,720. Term of patent 7 years.



The ornamental design for a disk or element for a game apparatus as shown.

59,710. WAFFLE-IRON. CLARA M. BURBANK, Los Angeles, Calif. Filed Apr. 26, 1921. Serial No. 464,705. Term of patent 14 years.



The ornamental design for a waffle iron, substantially as shown.

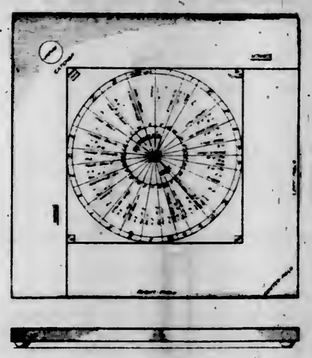
59,711. COLLAR. CARL CHARLES, Rosedale, Kans. Filed Jan. 10, 1921. Serial No. 436,376. Term of patent 3½ years.

The ornamental design for a collar as shown.

59,712. ELECTRIC IMMERSION-HEATER. DAVID H. CLARK, Orangeburg, N. Y. Filed July 2, 1921. Serial No. 482,228. Term of patent 14 years.

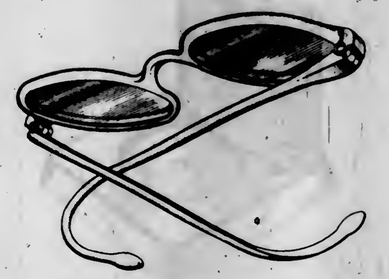
The ornamental design for an electric immersion-heater, as shown.

59,713. STAND FOR A DISPENSING APPARATUS. DAVID H. CLARK, Orangeburg, N. Y. Filed July 2, 1921. Serial No. 482,229. Term of patent 14 years.



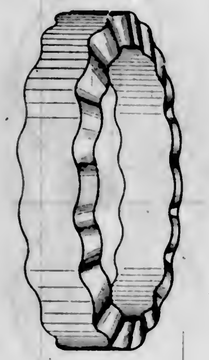
The ornamental design for a stand for a dispensing apparatus, as shown.

59,714. RUBBER HEEL. WALTER HENRY CLARKE, Toronto, Ontario, Canada. Filed June 1, 1921. Serial No. 474,259. Term of patent 14 years.



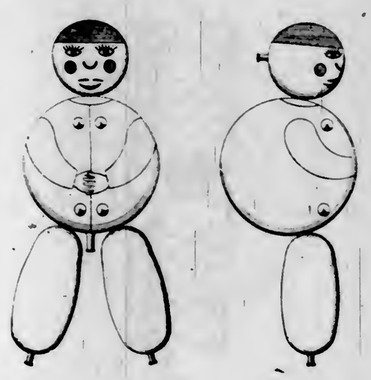
The ornamental design for a rubber heel as shown.

59,715. GAME-BOARD. HARRY T. CLAYTON, Philadelphia, Pa. Filed Sept. 3, 1921. Serial No. 498,560. Term of patent 14 years.



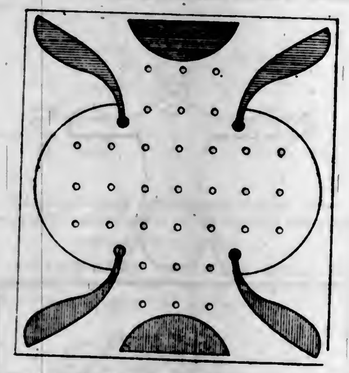
The ornamental design for a game board as shown.

59,716. SPECTACLES. STEPHEN J. CLULEE, Attleboro, Mass., assignor to Bay State Optical Company, a Corporation of Maine. Filed Mar. 23, 1921. Serial No. 454,916. Term of patent 7 years.



The ornamental design for spectacles, as shown.

59,717. SOLID RUBBER TIRE FOR MOTOR-TRUCKS AND THE LIKE. HENRY B. COATS, Veedersburg, Ind. Filed Feb. 14, 1921. Serial No. 445,008. Term of patent 14 years.



The ornamental design for a solid rubber tire for motor-trucks and the like, as shown.

59,718. TOY BALLOON-DOLL. WALTER M. COLVIN, Washington, D. C., assignor of one-fifth to Richard B. Owen, Washington, D. C. Filed June 9, 1921. Serial No. 476,356. Term of patent 14 years.

The ornamental design for a toy balloon doll as shown.

59,719. GAME-BOARD. RICHARD J. DAHIR, Omaha, Nebr. Filed June 23, 1921. Serial No. 479,935. Term of patent 3½ years.

The ornamental design for a game board, as shown.

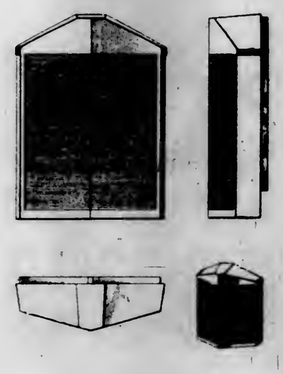
59,720. LENS-PLATE. HARRY DALITZ, Cleveland, Ohio, assignor to The Reliable Manufacturing Company, Cleveland, Ohio. Filed June 29, 1921. Serial No. 481,400. Term of patent 7 years.

The ornamental design for a lens plate for signal lamps, as shown.

59,721. LACE. ELIZABETH ANDERSON DAVIS, New York, N. Y., assignor to Blanck & Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 26, 1921. Serial No. 503,391. Term of patent 3½ years.

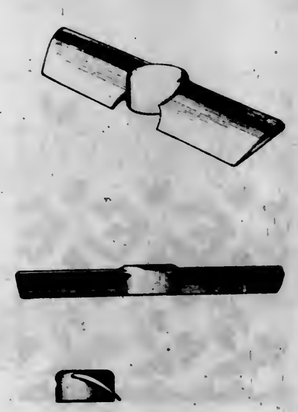
The ornamental design for lace as herein shown and described.

59,722. LACE. ELIZABETH ANDERSON DAVIS, New York, N. Y., assignor to Blanck & Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 26, 1921. Serial No. 503,392. Term of patent 3½ years.



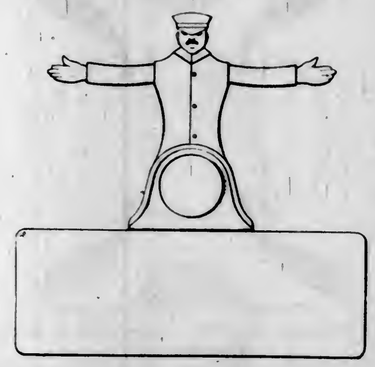
The ornamental design for lace as herein shown and described.

59,723. LACE. ELIZABETH ANDERSON DAVIS, New York, N. Y., assignor to Blanck & Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 26, 1921. Serial No. 503,393. Term of patent 3½ years.



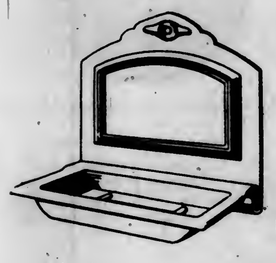
The ornamental design for lace as herein shown and described.

59,724. RADIATOR-SHELL. GEORGE S. DUARTE, New York, N. Y. Filed June 18, 1920. Serial No. 390,043. Term of patent 14 years.



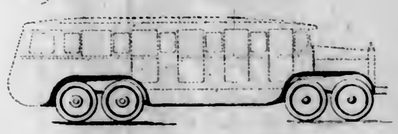
An ornamental design for a radiator shell as shown.

59,725. RADIATOR ORNAMENT. CLARENCE E. ELLIOTT and ORVILLE L. NICHOLS, Kansas City, Mo. Filed July 20, 1921. Serial No. 486,272. Term of patent 7 years.



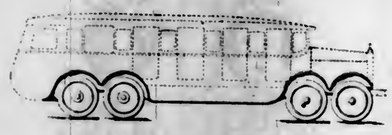
The ornamental design for a radiator ornament, as shown.

59,726. TRAFFIC-SIGNAL. FREDERICK FREMONT ELLIS, Los Angeles, Calif. Filed May 16, 1921. Serial No. 470,019. Term of patent 14 years.



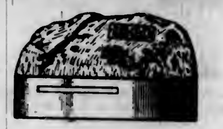
The ornamental design for a traffic signal, as described and shown.

59,727. SOAP-HOLDER. CLAUS E. ERICKSON, Des Moines, Iowa. Filed Apr. 11, 1921. Serial No. 460,494. Term of patent 7 years.



The ornamental design for a soap holder, as shown.

59,728. MOTOR-VEHICLE WHEEL AND FENDER ASSEMBLY. ROLLIN B. FAGEOL, Oakland, Calif. Filed May 26, 1921. Serial No. 472,901. Term of patent 14 years.



The ornamental design for a motor vehicle wheel and fender assembly substantially as shown and described.

59,729. MOTOR-VEHICLE WHEEL AND FENDER ASSEMBLY. ROLLIN B. FAGEOL, Oakland, Calif. Filed May 26, 1921. Serial No. 472,902. Term of patent 14 years.

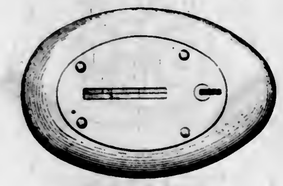
The ornamental design for a motor vehicle wheel and fender assembly substantially as shown and described.

59,730. SAVINGS-BANK. WILLIAM S. FINLEY, Cleveland Heights, Ohio. Filed Aug. 29, 1921. Serial No. 496,721. Term of patent 14 years.

The ornamental design for a savings bank, as shown.

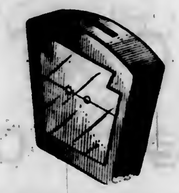
59,731. PENCIL. HOWARD L. FISCHER, St. Paul, Minn. Filed May 13, 1921. Serial No. 469,889. Term of patent 14 years.

The ornamental design for a pencil as shown.

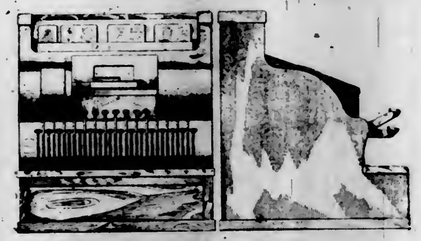


59,732. LAPEL-BUTTON ANCHOR. WILLIAM FISCHER, New York, N. Y. Filed Nov. 19, 1920. Serial No. 425,280. Term of patent 7 years.

The ornamental design for a lapel button anchor as shown.



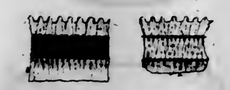
59,733. SAVINGS-BANK. CHARLES FISHER, Chicago, Ill., assignor to The Automatic Recording Safe Company, Chicago, Ill., a Corporation of Illinois. Filed July 18, 1921. Serial No. 485,749. Term of patent 14 years.



The ornamental design for a savings bank, as shown.

59,734. SAVINGS-BANK. CHARLES FISHER, Chicago, Ill., assignor to The Automatic Recording Safe Company, a Corporation of Illinois. Filed June 18, 1921. Serial No. 478,750. Term of patent 14 years.

The ornamental design for a savings bank, as shown.



59,735. CASH-REGISTER. FREDERICK L. FULLER, Ilion, N. Y., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed June 11, 1921. Serial No. 476,940. Term of patent 14 years.

The ornamental design for a cash register, as shown.

59,736. GARMENT-PROTECTOR. MAUDE SINCLAIR GEORGE, St. Louis, Mo. Filed May 23, 1921. Serial No. 471,976. Term of patent 14 years.

The ornamental design for a garment protector, as shown in the drawing.

59,737. WHISTLE. JOHN W. GLENN, Buffalo, N. Y. Filed July 22, 1921. Serial No. 486,896. Term of patent 14 years.

The ornamental design for a whistle, as shown.

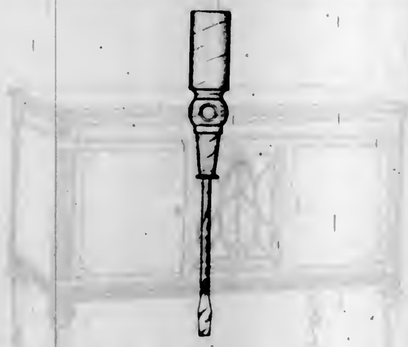
59,738. TOY DOLL. GLADYS GOSS, Nevada, Mo. Filed Oct. 23, 1920. Serial No. 419,100. Term of patent 7 years.

The ornamental design for a toy doll, as shown.

59,739. WRIST-WATCH. FREDERICK G. GRUEN, Cincinnati, Ohio, assignor to The D. Gruen Sons & Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 26, 1920. Serial No. 392,101. Term of patent 14 years.

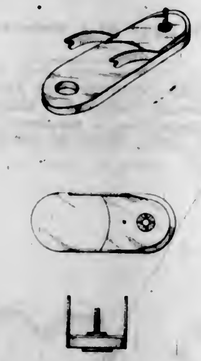
The ornamental design for a wrist-watch as shown.

59,740. WRIST-WATCH. FREDERICK G. GRUEN, Cincinnati, Ohio, assignor to The D. Gruen Sons & Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 26, 1920. Serial No. 392,102. Term of patent 14 years.



The ornamental design for a wrist-watch as shown.

59,741. WATCH-BOW. FREDERICK G. GRUEN, Cincinnati, Ohio, assignor to The D. Gruen Sons & Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 25, 1921. Serial No. 472,598. Term of patent 14 years.



The ornamental design for a watch bow as shown.

59,742. SCREWDRIVER. GEORGE L. HALL, Newark, N. J. Filed June 23, 1921. Serial No. 479,931. Term of patent 14 years.

The ornamental design for a screwdriver, as shown.

59,743. SPARK-INTENSIFIER. GEORGE L. HALL, Newark, N. J. Filed June 24, 1921. Serial No. 480,243. Term of patent 14 years.

The ornamental design for a spark intensifier as shown.

59,744. EMBLEM, PIN, BUTTON, OR SIMILAR ARTICLE. EDWIN C. HEATHCOTE, Brooklyn, N. Y. Filed June 3, 1919. Serial No. 301,576. Term of patent 14 years.

The ornamental design for an emblem, pin, button, or similar article, as shown.

59,745. EMBLEM, PIN, BUTTON, OR SIMILAR ARTICLE. EDWIN C. HEATHCOTE, Brooklyn, N. Y. Filed June 3, 1919. Serial No. 301,578. Term of patent 14 years.

The ornamental design for an emblem, pin, button, or similar article, as shown.

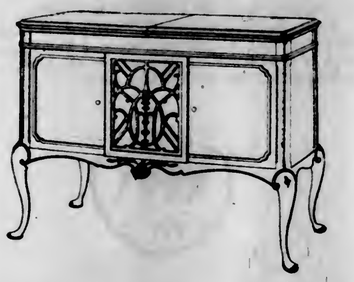
59,746. CASTER-WHEEL. WALTER F. HEROLD, Newark, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 17, 1921. Serial No. 470,479. Term of patent 7 years.

The ornamental design for a caster wheel as shown.

59,747. BLANK FOR AN OPHTHALMIC LENS. HARRY W. HILL, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 27, 1920. Serial No. 426,816. Term of patent 14 years.

The ornamental design for a blank for an ophthalmic lens substantially as shown and described.

59,748. WASHING-MACHINE. HERMAN C. HIRSCHY, Duluth, Minn. Filed Apr. 22, 1921. Serial No. 463,680. Term of patent 14 years.

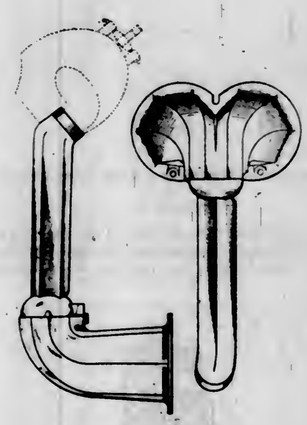


The ornamental design for a washing machine, as shown.

59,749. PHONOGRAPH-CABINET. EDMOND C. HOWARD, Norfolk, Va., assignor to Granby Phonograph Corporation, a Corporation of Virginia. Filed July 15, 1921. Serial No. 485,110. Term of patent 14 years.

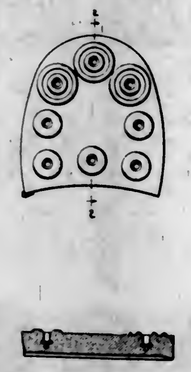
The ornamental design for a phonograph cabinet as shown.

59,750. PHONOGRAPH-CABINET. EDMOND C. HOWARD, Norfolk, Va., assignor to Granby Phonograph Corporation, a Corporation of Virginia. Filed July 15, 1921. Serial No. 485,111. Term of patent 14 years.



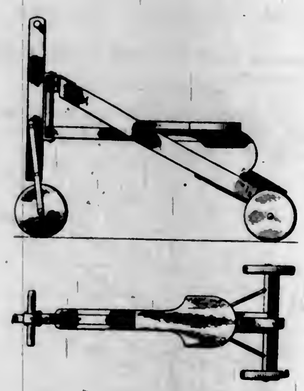
The ornamental design for a phonograph cabinet as shown.

59,751. PHONOGRAPH-CABINET. EDMOND C. HOWARD, Norfolk, Va., assignor to Granby Phonograph Corporation, a Corporation of Virginia. Filed July 15, 1921. Serial No. 485,112. Term of patent 14 years.



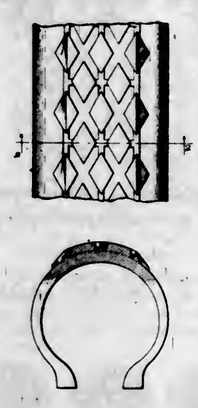
The ornamental design for a phonograph cabinet as shown.

59,752. SOUND-CONDUIT FOR PHONOGRAPHS. EDMOND C. HOWARD, Norfolk, Va., assignor to Granby Phonograph Corporation, a Corporation of Virginia. Filed July 15, 1921. Serial No. 485,113. Term of patent 14 years.



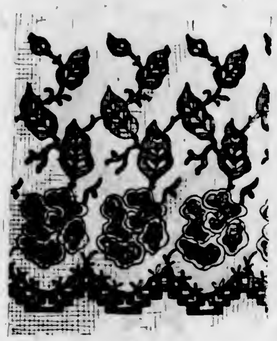
The ornamental design for a sound conduit for phonographs, as shown.

59,753. SHOE-HEEL. ROBERT IRMSLL, Akron, Ohio, assignor to The General Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 27, 1921. Serial No. 496,181. Term of patent 14 years.



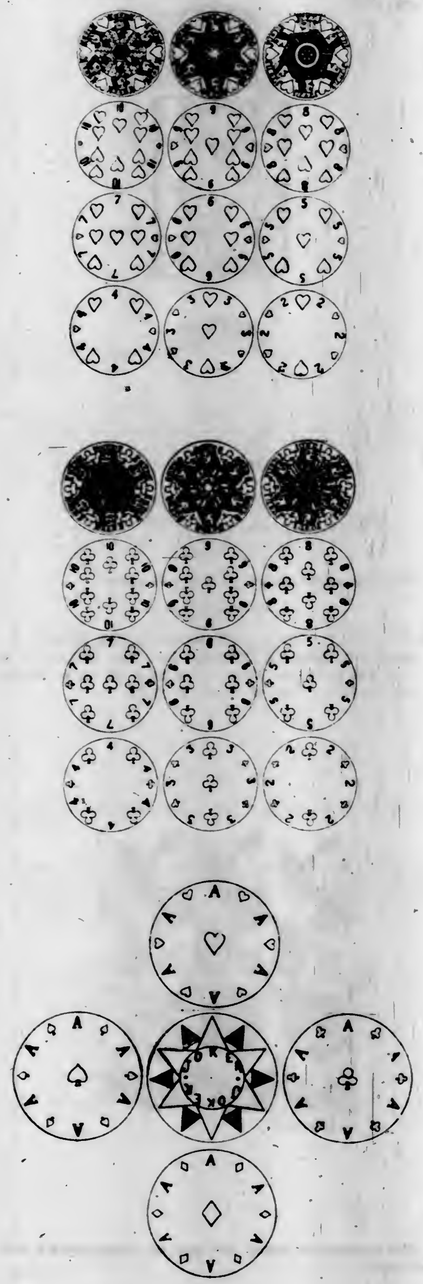
The ornamental design for a shoe heel as rhown.

59,754. CHILD'S VEHICLE. AUGUST C. KLENKE, Berkeley, Calif. Filed Dec. 22, 1919. Serial No. 346,801. Term of patent 3½ years.



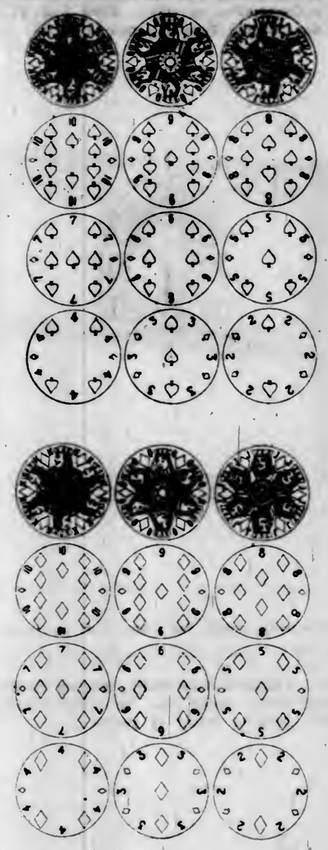
The ornamental design for a child's vehicle, as shown.

59,755. TIRE. KARL B. KILBORN and WILLIAM S. WOLFE, Akron, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 5, 1921. Serial No. 482,611. Term of patent 14 years.



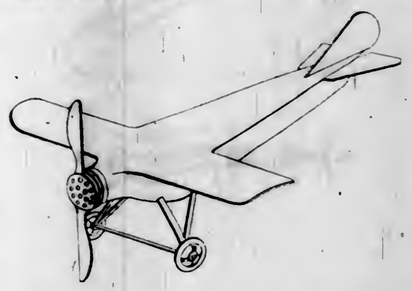
The ornamental design for a tire as shown.

59,756. LACE. THYRA O. KUMALEHTO, New York, N. Y., assignor to Blanck & Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 26, 1921. Serial No. 503,387. Term of patent 3½ years.

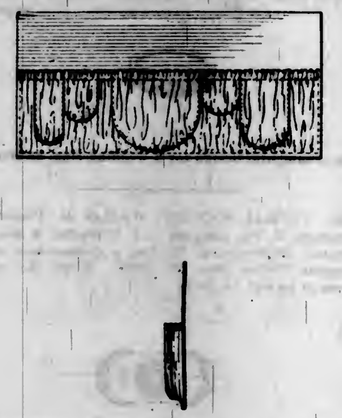


The ornamental design for lace as herein shown and described.

59,757. PACK OF PLAYING-CARDS. JOHN J. LAVER, Chicago, Ill. Filed June 23, 1921. Serial No. 479,937. Term of patent 14 years.

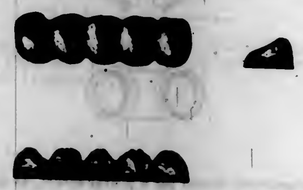


59,757.



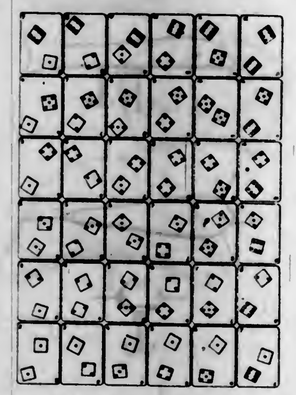
The ornamenal design for a pack of playing cards, substantially as shown.

59,758. CONDIMENT-HOLDER. LELAND LAYNE, Whittier, Calif. Filed June 7, 1921. Serial No. 475,726. Term of patent 7 years.



The ornamental design for a condiment holder, as shown.

59,759. POCKET MEMBER. ESTHER LEVY, New York, N. Y. Filed Jan. 12, 1921. Serial No. 436,834. Term of patent 14 years.

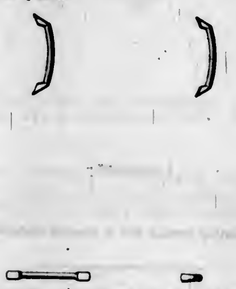


The ornamental design for a pocket member as shown.

59,760. CANDY OR SIMILAR ARTICLE OF MANUFACTURE. CELESTINA MASCONI, Brooklyn, N. Y., assignor to E. Greenfield's Sons, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 31, 1921. Serial No. 457,525. Term of patent 14 years.

The ornamental design for a candy or similar article of manufacture substantially as shown.

59,761. PACK OF PLAYING-CARDS. GEORGE L. MCCARTHY, Rye, N. Y. Filed Sept. 1, 1921. Serial No. 497,715. Term of patent 14 years.



The ornamental design for a pack of playing cards, as shown.

59,762. RIBBON LOOP FOR WATCHCASES. JEREMIAH MCGRATH, Brooklyn, N. Y., assignor to Solidarity Watch Case Company, Brooklyn, N. Y., a Corporation of New York. Filed June 2, 1921. Serial No. 474,575. Term of patent 14 years.

The ornamental design for a ribbon loop for watchcases, as shown.

59,763. RIBBON LOOP FOR WATCHCASES. JEREMIAH MCGRATH, Brooklyn, N. Y., assignor to Solidarity Watch Case Company, Brooklyn, N. Y., a Corporation of New York. Filed June 2, 1921. Serial No. 474,576. Term of patent 14 years.

The ornamental design for a ribbon loop for watchcases, as shown.

59,764. BRACELET. JOSEPH MEGAR, New York, N. Y. Filed Nov. 1, 1920. Serial No. 421,185. Term of patent 3½ years.

The ornamental design for a bracelet as shown and described.

59,765. HOLDER FOR TOWELS AND OTHER ARTICLES. CHAUNCEY A. MICHAELS, New York (Jamaica), N. Y. Filed June 21, 1921. Serial No. 479,385. Term of patent 7 years.

The ornamental design for a holder for towels and other articles as herein shown.

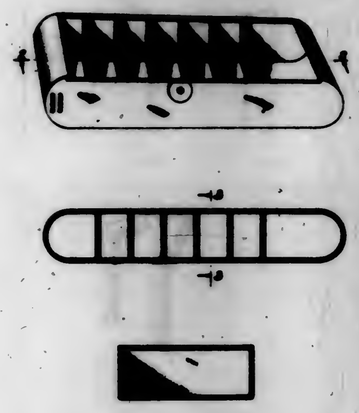
The ornamental design for a brassière, substantially as shown.

59,773. COMBINATION BOOKCOVER AND BOOKMARK OR ARTICLE OF SIMILAR NATURE. BERTRAM RAFF, New York, N. Y. Filed July 21, 1921. Serial No. 486,614. Term of patent 7 years.



The ornamental design for a combination bookcover and bookmark or an article of similar nature, as shown.

59,774. FUSE CUTTER AND SPLITTER. RICHARD RICE, Virden, Ill., assignor of one-half to Harry Vivian, Virden, Ill. Filed June 6, 1921. Serial No. 475,455. Term of patent 3½ years.

The ornamental design for a fuse cutter and splitter, or the like as shown.

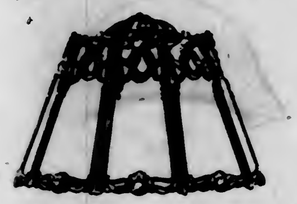
59,775. TACKLE-BOX. WILLIAM SCHEEL, Manitowoc, Wis. Filed June 24, 1921. Serial No. 480,240. Term of patent 14 years.

The ornamental design for a tackle box, as shown.

59,776. LAMP OR OTHER PEDESTAL. FREDERICK ROSTTORNE, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 21, 1921. Serial No. 509,422. Term of patent 3½ years.

The ornamental design for a lamp or other pedestal, as shown.

59,777. LAMP OR OTHER PEDESTAL. FREDERICK ROSTTORNE, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 21, 1921. Serial No. 509,423. Term of patent 3½ years.



The ornamental design for a lamp or other pedestal, as shown.

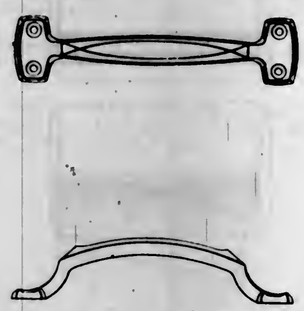
59,778. LAMP OR OTHER PEDESTAL. FREDERICK ROSTTORNE, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 21, 1921. Serial No. 509,424. Term of patent 3½ years.

The ornamental design for a lamp or other pedestal, as shown.

59,779. LAMP OR OTHER SHADE. FREDERICK ROSTTORNE, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 21, 1921. Serial No. 509,425. Term of patent 3½ years.

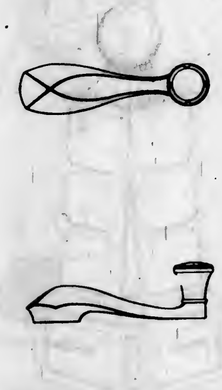
The ornamental design for a lamp or other shade, as shown.

59,780. LAMP OR OTHER SHADE. FREDERICK ROSTTORNE, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 21, 1921. Serial No. 509,426. Term of patent 3½ years.



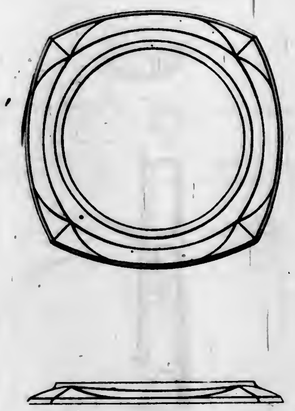
The ornamental design for a lamp or other shade, as shown.

59,781. LAMP OR OTHER SHADE. FREDERICK ROSTTORNE, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 21, 1921. Serial No. 509,427. Term of patent 3½ years.



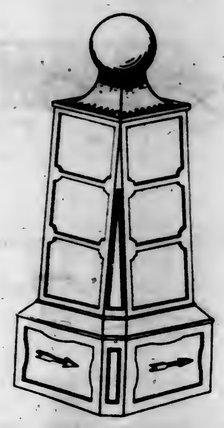
The ornamental design for a lamp or other shade, as shown.

59,782. HANDLE OR SIMILAR ARTICLE OF MANUFACTURE. AUGUST J. ROTH, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Apr. 19, 1921. Serial No. 462,706. Term of patent 3½ years.



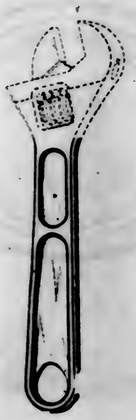
The ornamental design for a handle or similar article of manufacture, substantially as shown.

59,783. HANDLE CONSTRUCTION FOR AN AUTOMOBILE-WINDOW REGULATOR OR SIMILAR ARTICLE OF MANUFACTURE. AUGUST J. ROTH, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Apr. 19, 1921. Serial No. 462,707. Term of patent 3½ years.



The ornamental design for a handle construction for an automobile window regulator or similar article of manufacture substantially as shown.

59,784. TRIMMING FOR AN AUTOMOBILE-DOME-LIGHT OR SIMILAR ARTICLE OF MANUFACTURE. AUGUST J. ROTH, Mount Vernon, N. Y., assignor to The Mount Vernon Company, Silversmiths, Inc., Mount Vernon, N. Y., a Corporation of New York. Filed Apr. 19, 1921. Serial No. 462,708. Term of patent 3½ years.

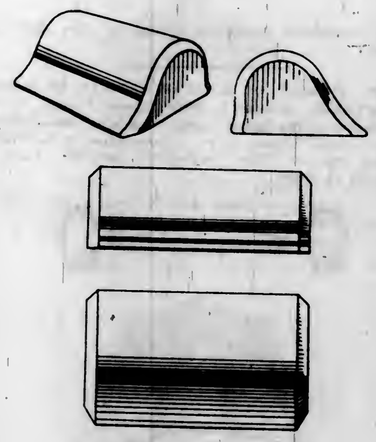


The ornamental design for a trimming for an automobile domelight or similar article of manufacture substantially as shown.

59,785. TRAFFIC-SIGNAL. GEORGE M. RUSSEL, Lawrence, Kans., and OSCAR W. RUSSEL, Kansas City, Mo. Filed July 5, 1921. Serial No. 482,899. Term of patent 7 years.

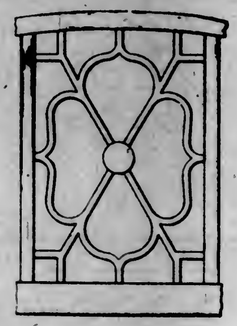
The ornamental design for a traffic signal, as shown.

59,786. HANDLE FOR WRENCHES OR SIMILAR HAND-TOOLS. LEWIS A. SAFFORD, Buffalo, N. Y., assignor to Barcalo Manufacturing Company, Buffalo, N. Y. Filed Oct. 17, 1919. Serial No. 331,485. Term of patent 14 years.



The ornamental design for a handle for a wrench or similar hand tools, substantially as shown and described.

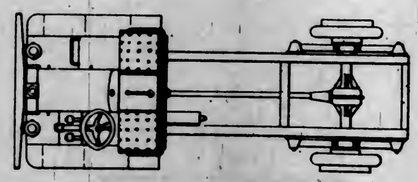
59,787. DOLL. EVALYN R. SCATTERDAY, Columbus, Ohio. Filed July 27, 1921. Serial No. 488,029. Term of patent 7 years.



The ornamental design for a doll, as shown.

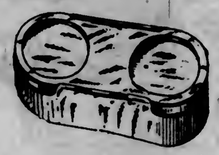
59,788. LAMP-SHADE. SAMUEL ROBERT SCHWARTZ and AUGUST BOSTROEM, New York, N. Y., assignors to said Schwartz. Filed Feb. 11, 1921. Serial No. 444,303. Term of patent 14 years.

The ornamental design for a lamp shade, substantially as shown.

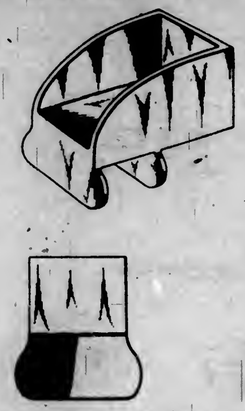


59,789. GRILLE FOR BEDSTEAD END FRAMES. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Mar. 28, 1921. Serial No. 456,890. Term of patent 14 years.

The ornamental design for a grille for bedstead end frames, as shown.



59,790. MOTOR-DRIVEN FARM-TRUCK. ALFRED T. STUBT, New York, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 13, 1920. Serial No. 365,667. Term of patent 14 years.

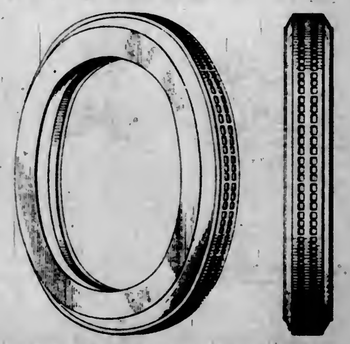


The ornamental design for a motor driven farm truck as shown.

59,791. COIN AND FARE HOLDER. JOSEPH J. SZEPE, Pittsburgh, Pa. Filed July 12, 1921. Serial No. 484,206. Term of patent 7 years.

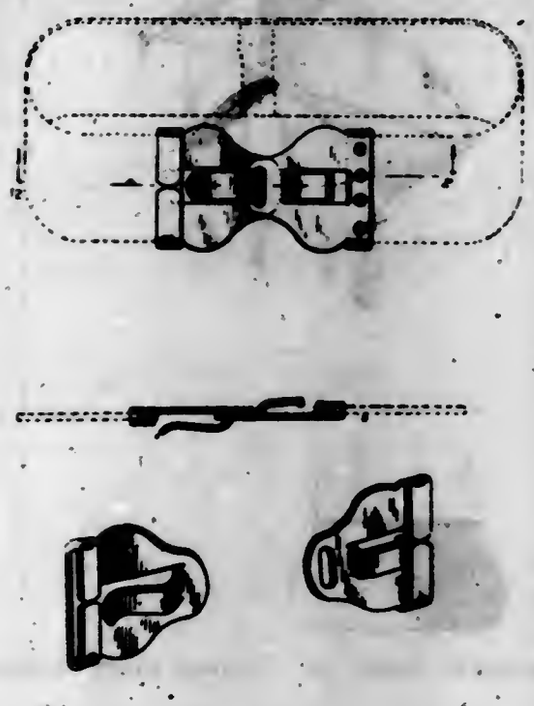
The ornamental design for a coin and fare holder, as shown.

59,792. SPRING-HANGER BRACKET. ROBERT S. TAYLOR, Seattle, Wash. Filed June 6, 1921. Serial No. 475,443. Term of patent 7 years.



The ornamental design for a spring hanger bracket as shown.

59,793. VANITY-CASE, BROOCH, PIN, OR SIMILAR ARTICLE OF JEWELRY. PETER J. THOMPSON, Belleville, N. J. Filed Apr. 5, 1921. Serial No. 458,767. Term of patent 7 years.

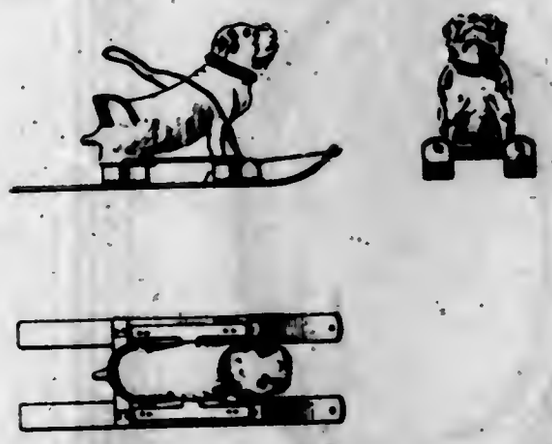


The ornamental design for a vanity case, brooch, pin, or similar article of jewelry, as shown.

59,794. VEHICLE-TIRE. WILLIAM F. TROAST, Lancaster, Pa. Filed Dec. 14, 1920. Serial No. 430,758. Term of patent 7 years.

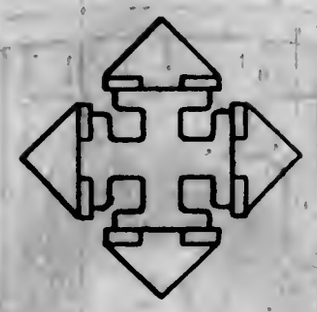
The ornamental design for a vehicle tire as shown.

59,795. CLASP OR HOOK FOR A WAIST-BELT. Anna L. Vilandrie, New York, N. Y. Filed Feb. 1, 1921. Serial No. 441,681. Term of patent 14 years.



The ornamental design for a clasp or hook for a waist belt, substantially as shown.

59,796. EMBLEMATIC BADGE, PIN, OR BUTTON. Arthur G. Warren, Worcester, Mass. Filed Dec. 23, 1920. Serial No. 432,877. Term of patent 14 years.

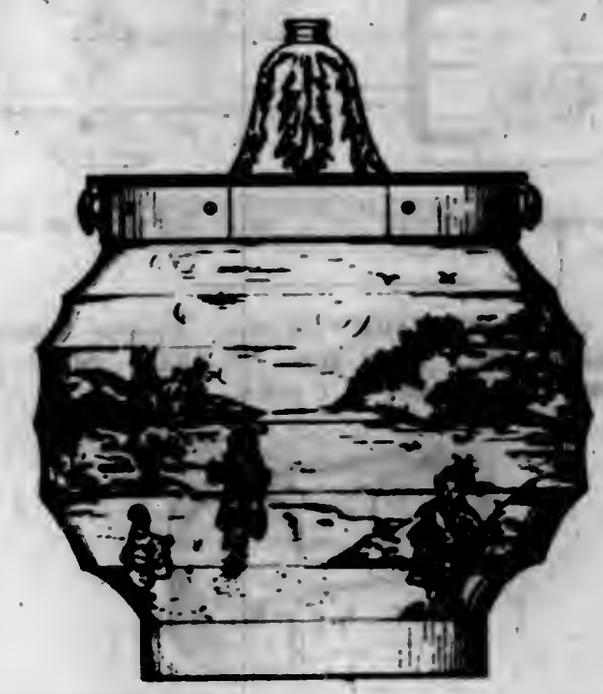


The ornamental design for an emblematic badge, pin, or button, or article of a similar nature, as shown.

59,797. SLED. Gertrude Wakeham, Marshall, Wis. Filed Aug. 12, 1921. Serial No. 491,868. Term of patent 14 years.

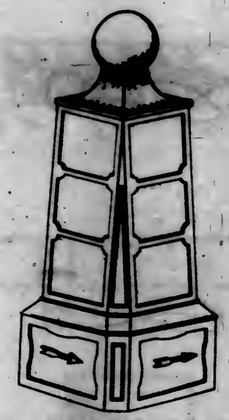
The ornamental design for a sled as shown and described.

59,798. CHARM. Edward L. Wiemo, Providence, R. I., assignor to Potter & Buffington Company, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 15, 1921. Serial No. 461,703. Term of patent 7 years.



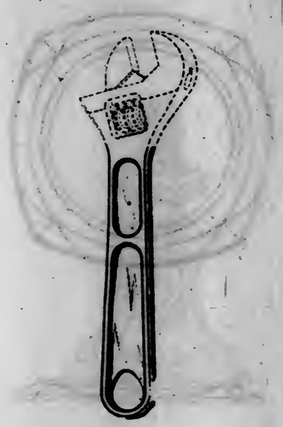
The ornamental design for a charm, as shown.

59,799. BROOCH. Bina M. West, Port Huron, Mich. Filed Mar. 28, 1921. Serial No. 456,497. Term of patent 7 years.



The ornamental design for a brooch, as shown.

59,800. LAMP-SHADE. Mary F. F. Wilson, New Rochelle, N. Y. Filed Mar. 31, 1920. Serial No. 457,524. Term of patent 14 years.

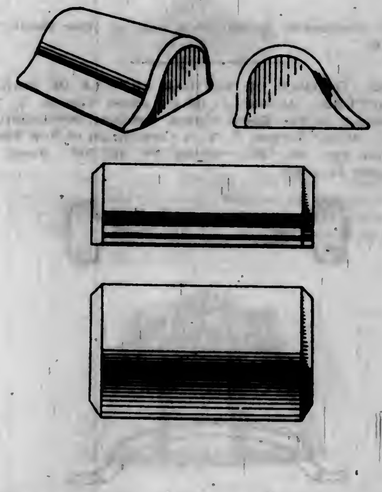


The ornamental design for a lamp shade, as shown.

59,785. TRAFFIC-SIGNAL. George H. Benson, Lawrence, Kans., and Grace W. Benson, Kansas City, Mo. Filed July 6, 1921. Serial No. 482,618. Term of patent 7 years.

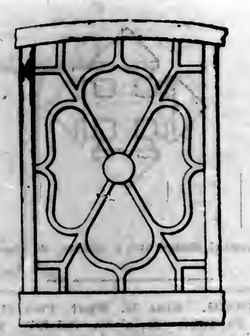
The ornamental design for a traffic signal, as shown.

59,786. HANDLE FOR WRENCHES OR SIMILAR HAND-TOOLS. Lewis A. Sapphon, Buffalo, N. Y., assignor to Barcalo Manufacturing Company, Buffalo, N. Y. Filed Oct. 17, 1919. Serial No. 331,485. Term of patent 14 years.



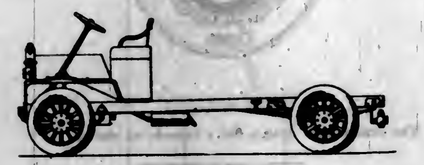
The ornamental design for a handle for a wrench or similar hand tools, substantially as shown and described.

59,787. DOLL. Evalen B. Scattergay, Columbus, Ohio. Filed July 27, 1921. Serial No. 483,619. Term of patent 7 years.

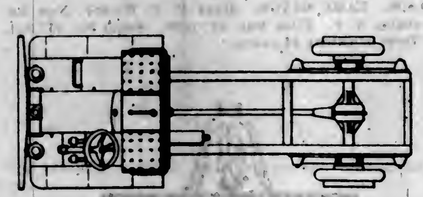


The ornamental design for a doll, as shown.

59,788. LAMP-SHADE. Samuel Robert Schwartz and August Bostrom, New York, N. Y., assignors to said Schwartz. Filed Feb. 11, 1921. Serial No. 444,303. Term of patent 14 years.

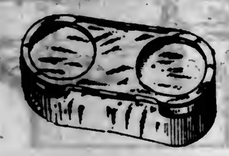


The ornamental design for a lamp shade, substantially as shown.

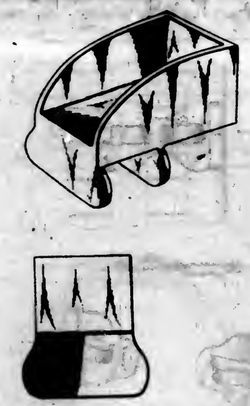


59,789. GRILLE FOR BEDSTEAD END FRAMES. Charles A. Bunge, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Mar. 26, 1921. Serial No. 456,390. Term of patent 14 years.

The ornamental design for a grille for bedstead end frames, as shown.



59,790. MOTOR-DRIVEN FARM-TRUCK. Alfred T. Stuht, New York, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 13, 1920. Serial No. 365,667. Term of patent 14 years.

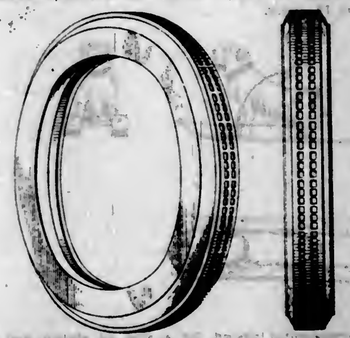


The ornamental design for a motor driven farm truck as shown.

59,791. COIN AND FARE HOLDER. Joseph J. Szepe, Pittsburgh, Pa. Filed July 12, 1921. Serial No. 484,206. Term of patent 7 years.

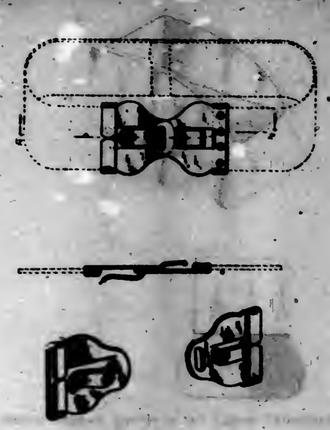
The ornamental design for a coin and fare holder, as shown.

59,792. SPRING-HANGER BRACKET. Robert S. Taylor, Seattle, Wash. Filed June 6, 1921. Serial No. 475,448. Term of patent 7 years.



The ornamental design for a spring hanger bracket as shown.

59,793. VANITY-CASE, BROOCH, PIN, OR SIMILAR ARTICLE OF JEWELRY. Peter J. Thompson, Belleville, N. J. Filed Apr. 5, 1921. Serial No. 458,767. Term of patent 7 years.

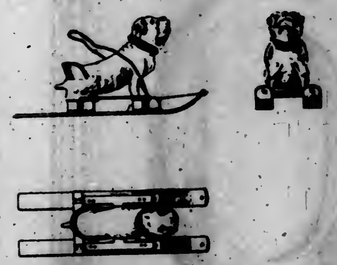


The ornamental design for a vanity case, brooch, pin, or similar article of jewelry, as shown.

59,794. VEHICLE-TIRE. William F. Troast, Lancaster, Pa. Filed Dec. 14, 1920. Serial No. 430,758. Term of patent 7 years.

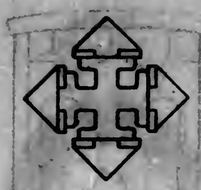
The ornamental design for a vehicle tire as shown.

59,795. CLASP OR HOOK FOR A WAIST-BELT. Anita L. Vreeland, New York, N. Y. Filed Feb. 1, 1921. Serial No. 441,051. Term of patent 14 years.



The ornamental design for a clasp or hook for a waist belt, substantially as shown.

59,796. EMBLEMATIC BADGE, PIN, OR BUTTON. Arthur G. Warren, Worcester, Mass. Filed Dec. 23, 1920. Serial No. 432,877. Term of patent 14 years.

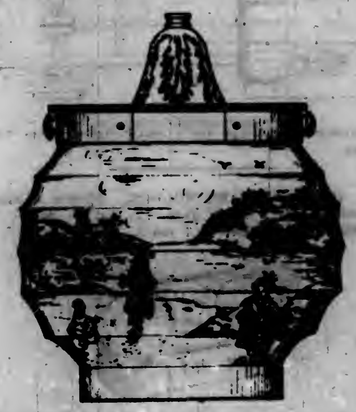


The ornamental design for an emblematic badge, pin, or button, or article of a similar nature, as shown.

59,797. SLED. Gertrude Wakeham, Marshall, Wis. Filed Aug. 12, 1921. Serial No. 491,868. Term of patent 14 years.

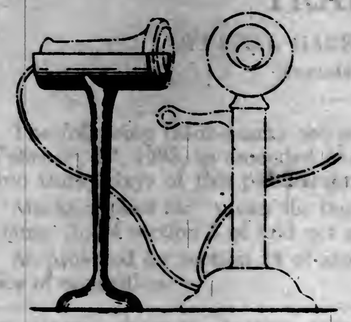
The ornamental design for a sled as shown and described.

59,798. CHARM. Edward L. Weiss, Providence, R. I., assignor to Potter & Robinson Company, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 15, 1921. Serial No. 461,766. Term of patent 7 years.



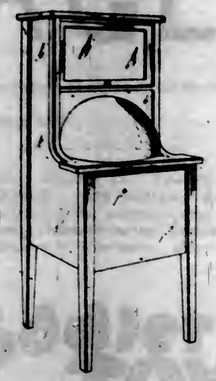
The ornamental design for a charm, as shown.

59,799. BROOCH. Rena M. West, Port Huron, Mich. Filed Mar. 28, 1921. Serial No. 456,497. Term of patent 7 years.



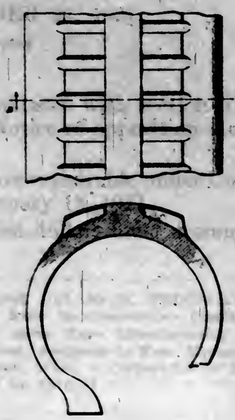
The ornamental design for a brooch, as shown.

59,800. LAMP-SHADE. Mary F. F. Wilson, New Rochelle, N. Y. Filed Mar. 31, 1920. Serial No. 457,524. Term of patent 14 years.



The ornamental design for a lamp shade, as shown.

59,801. TELEPHONE-RECEIVER HOLDER. Benjamin Wien, New York, N. Y. Filed Apr. 9, 1921. Serial No. 460,063. Term of patent 7 years.



The original design for a telephone receiver holder, as shown.

59,802. PHONOGRAPH-CABINET. Charles T. Wittstein, Newark, N. J. Filed June 15, 1921. Serial No. 477,528. Term of patent 14 years.

The ornamental design for a phonograph cabinet, as shown.

59,803. TIRE. William S. Wolfe, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 5, 1921. Serial No. 482,607. Term of patent 14 years.

The ornamental design for a tire, as shown.

59,804. SHEET-METAL STOCK FOR MAKING CELLS OR CONTAINERS FOR ELECTRICAL ACCUMULATORS. Charles Henry Worsnop, Halifax, England. Filed Feb. 28, 1921. Serial No. 448,611. Term of patent 14 years.

The ornamental design for sheet metal stock for making cells or containers for electrical accumulators, as shown and described.

[PUBLISHED NOVEMBER 22, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Particular description of goods.—Phonograph-Record Disks.
Claims use since about Apr. 5, 1921.

Ser. No. 148,906. (CLASS 12. VEHICLES, NOT INCLUDING ENGINES.) BADGER MANUFACTURING CORPORATION, Milwaukee, Wis. Filed June 11, 1921.

BADGER NECESSORIES

Consists of the words "Badger Necessories."
Particular description of goods.—Bumpers, Tire-Carriers, Creepers, Steering-Wheels, Foot and Robe Rails, and Luggage-Carriers.
Claims use since about July, 1919.

Ser. No. 148,931. (CLASS 21. HOROLOGICAL INSTRUMENTS.) JOSEPH DAVIES, New York, N. Y. Filed June 11, 1921.

Particular description of goods.—Watches.
Claims use since Sept. 10, 1917.

Ser. No. 149,180. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) FORSBACKA JERNVERKS AKTIEBOLAG, Forsbacka, Sweden. Filed June 15, 1921.

A.M.C.

Particular description of goods.—Iron and Steel.
Claims use since Apr. 12, 1915.

Ser. No. 149,197. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) CARROLL H. MONTAGUE, Richmond, Va. Filed June 15, 1921.

SAFCRITE

Particular description of goods.—Automobile Electric Lamps.
Claims use since June 14, 1921.

Ser. No. 149,211. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) J. HARVE BAKER, Portales, N. Mex. Filed June 16, 1921.

BAKER'S LEATHER OIL

The words "Leather Oil" appearing in the drawing are disclaimed apart from the mark shown.
Particular description of goods.—Oils for Softening and Preserving All Kinds of Leather.
Claims use since Nov. 6, 1919.

Ser. No. 149,251. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROBERT V. TURNER, Montgomery, Ala. Filed June 16, 1921.

R.V. TURNER'S

Particular description of goods.—Salve for Colds, Catarrh, Croup, Rheumatism, Tonsilitis, Pleurisy, Sore Throat, Piles, Eczema, Tetter, Cuts, Sores, Sprains, Burns, Headache, Earache, Toothache, Corns, and Relief of Pain.
Claims use since July 1, 1920.

Ser. No. 149,252. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TRAGUE AND FILMER, Portland, Oreg. Filed June 16, 1921.

TEAG-MOU

Particular description of goods.—Hair-Tonics.
Claims use since May 14, 1920.

Ser. No. 149,299. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MARVIN S. SMALL, Brooklyn, N. Y. Filed June 17, 1921.

Jesjen

Particular description of goods.—An Indigestion-Corrective.
Claims use since May 18, 1921.

Ser. No. 149,320. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CELITE PRODUCTS COMPANY, Los Angeles, Calif., and New York, N. Y. Filed June 18, 1921.

FILTRITE

Particular description of goods.—A Material for Bleaching and Decolorizing.
Claims use since May 6, 1921.

Ser. No. 149,403. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WALTER M. INGRAM, Baltimore, Md. Filed June 20, 1921.

"RELIANCE"

Particular description of goods.—Air-Pumps.
Claims use since Dec. 10, 1919.

Ser. No. 149,426. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) AMERICAN SAFETY RAZOR CORPORATION, New York and Brooklyn, N. Y. Filed June 21, 1921.

No claim being made to the word "Eversharp" apart from the mark shown in the drawing.

Particular description of goods.—Razors, Razor-Blades, Safety-Razors, and Safety-Razor Blades.

Claims use since June 2, 1920.

Ser. No. 149,465. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MCDOUGALL & YALDING LTD., Yalding, Kent, England. Filed June 21, 1921.

DERRAX

Particular description of goods.—Fungicides, Insecticides, Vermicides, and Similar Compositions for Destroying Life Deleterious to Plants, Trees, Fruits, &c.

Claims use since May 11, 1921.

Ser. No. 149,467. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MCDOUGALL & YALDING LTD., Yalding, Kent, England. Filed June 21, 1921.

DERRI

Particular description of goods.—Fungicides, Insecticides, Vermicides, and Similar Compositions for Destroying Life Deleterious to Plants, Trees, Fruits, &c.

Claims use since May 11, 1921.

Ser. No. 149,540. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE CLAUSEN ZOLLER COMPANY, St. Louis, Mo. Filed June 23, 1921.

KOLOIDAL IRON KI

No claim is made to the exclusive use of the word "Iron" apart from the mark shown.

Particular description of goods.—A Blood and Nerve Tonic in Tablet Form.

Claims use since about Jan. 1, 1921.

Ser. No. 149,574. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) ALBERT N. ANTHES, Fort Madison, Iowa. Filed June 24, 1921.

Particular description of goods.—Shock-Absorbers for Vehicles.

Claims use since about April, 1921.

Ser. No. 149,661. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) S. YOUEL SONS, Hartford, Conn. Filed June 25, 1921.

ELIZABETH PARK

Particular description of goods.—All Kinds of Canned Fruits and Vegetables, Canned Fish, and Shell-Fish.

Claims use since on or about Mar. 6, 1916.

Ser. No. 149,693. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE EMBALMERS' SUPPLY CO., West Port, Conn. Filed June 27, 1921.

DASHOUT

Particular description of goods.—Hand Fire-Extinguisher.

Claims use since May 28, 1921.

Ser. No. 149,886. (CLASS 12. CONSTRUCTION MATERIALS.) BROOKLYN FIRE BRICK WORKS, INC., Brooklyn, N. Y. Filed July 1, 1921.

FIRESEAL

Particular description of goods.—Building-Cement.

Claims use since Jan. 1, 1921.

Ser. No. 149,891. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CLIMAX MOLYBDENUM COMPANY, Wilmington, Del., and New York, N. Y. Filed July 1, 1921.

No claim is made to the word "Molybdenum" or the words "The Commercial Alloy" apart from the mark shown in the drawing.

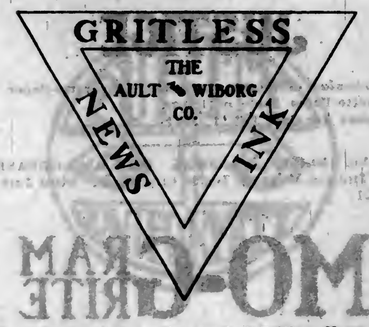
Particular description of goods.—Calcium Molybdate.

Claims use since Jan. 15, 1920.

Ser. No. 150,013. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) THE INDIANA PISTON RING COMPANY, Hagerstown, Ind. Filed July 5, 1921.

Particular description of goods.—Engine Piston-Rings.

Claims use since Mar. 29, 1918.



Ser. No. 150,114. (CLASS 38. PRINTS AND PUBLICATIONS.) JAMES H. RHODES & COMPANY, Chicago, Ill. Filed July 7, 1921.

RHODES' COLOSSUS

Particular description of goods.—House Organ Published Every Two Months.

Claims use since September, 1912.

Ser. No. 150,123. (CLASS 11. INKS AND INKING MATERIALS.) THE AULT & WIBORG COMPANY OF N. Y., New York, N. Y. Filed July 8, 1921.

No claim is made to the words "Gritless News Ink" apart from the mark shown in the drawing.

Particular description of goods.—A Gritless News-Ink.

Claims use since July 1, 1921.

Ser. No. 150,259. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) N. R. ALLEN'S SONS COMPANY, Kenosha, Wis. Filed July 12, 1921.

SUPERBA

Particular description of goods.—Leather.

Claims use since November, 1918.

Ser. No. 150,301. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) AMERICAN STEEL EXPORT COMPANY, New York, N. Y. Filed July 13, 1921.

Particular description of goods.—Electric Batteries.

Claims use since Feb. 15, 1920.

Ser. No. 150,419. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) WILKINSON BROS. & CO. INC., New York, N. Y. Filed July 15, 1921.

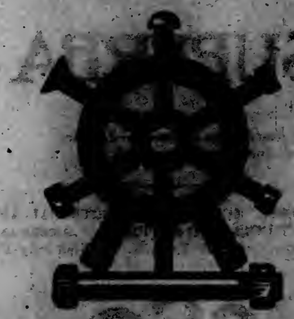
KOSAK

Particular description of goods.—Cigarette-Papers and Cigarette-Tubes Made of Paper.

Claims use since Feb. 1, 1921.

Ser. No. 150,455. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE KNAPP BROS. & CO. INC., New York, N. Y. Filed July 15, 1921.

JUSTICE



Particular description of goods.—Cigarette Paper and Cigarette Tubes Made of Paper.
Claims use since Feb. 1, 1921.

Ser. No. 150,457. (CLASS 13. OILS AND GREASES.) J. THOMAS MONROW, Dodge City, Kans. Filed July 16, 1921.

MO-GRAM

Particular description of goods.—Gasoline, Kerosene, and Distillates, Lubricating Oils and Greases.
Claims use since June 1, 1921.

Ser. No. 150,492. (CLASS 13. HARDWARE AND PLUMBERS' AND STEAM-FITTERS' SUPPLIES.) WHEELING MACHINE PRODUCTS COMPANY, Wheeling, W. Va. Filed July 16, 1921.

Particular description of goods.—Screws and Bolts.
Claims use since Feb. 18, 1921.

Ser. No. 150,498. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) AJAX ELECTRIC SPECIALTY COMPANY, St. Louis, Mo. Filed July 18, 1921.

Particular description of goods.—Electrical Plugs, Receptacles, and Sockets.
Claims use since August, 1918.

Ser. No. 150,507. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE ADAMS Bro. COMPANY, New York, N. Y. Filed July 18, 1921.

THE [illegible]AGE

Particular description of goods.—[illegible] Christmas Trees.
Claims use since May 27, 1921.

Ser. No. 150,561. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MA-DA-HO Sales Co., Cincinnati, Ohio. Filed July 18, 1921.

Ma-Da-Ho

Particular description of goods.—Vanishing Creams.
Claims use since Feb. 26, 1921.

Ser. No. 150,570. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) RAY-DI-CO., Chicago, Ill. Filed July 18, 1921.

RAY-DI-CO.

Particular description of goods.—Electric Motors, Generators, and Motor-Generator Units.
Claims use since Oct. 20, 1920.

Ser. No. 150,576. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) WILLIAM G. WILLIAMS, Elgin, Ill. Filed July 19, 1921.

ZENITH

Particular description of goods.—Adjustable Tables for Use by Doctors, Surgeons, Chiropractics, and Osteopaths and Parts of Such Tables.
Claims use since May, 1916.

Ser. No. 150,645. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) JOHN WRIGHT & EAGLE RANGE, LTD., Birmingham, England. Filed July 19, 1921.

THERMO-X

Particular description of goods.—Radiants or Refractory Heating Elements for Gas-Fires in Which Fire-Clay is the Predominating Material.
Claims use since 1915.

Ser. No. 150,646. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) JOHN WRIGHT & EAGLE RANGE, LTD., Birmingham, England. Filed July 19, 1921.

THERMO-XX

Particular description of goods.—Radiants or Refractory Heating Elements for Gas-Fires in Which Fire-Clay is the Predominating Material.
Claims use since 1919.

Ser. No. 150,649. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) AUSTILANE COMPANY, Philadelphia, Pa. Filed July 20, 1921.

No claim is made to the words "Foot Comfort" apart from the mark as shown.
Particular description of goods.—A Medicinal Foot-Powder.
Claims use since on or about July 8, 1921.

Ser. No. 150,662. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) CATHLEEN DEVLIN, Providence, R. I. Filed July 20, 1921.

The representation of the stove and the words "Stove Polish" not being claimed apart from the mark shown.
Particular description of goods.—Stove-Polish.
Claims use since June 16, 1921.

Ser. No. 150,720. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BLANDING & BLANDING, INC., Providence, R. I. Filed July 21, 1921.

No claim being made to the exclusive use of the words "Purity" and "Uniformity" apart from the mark shown in the drawing.
Particular description of goods.—A Remedy Valuable in the Treatment of Chlorosis, Anemia, Scrofula, and All Impoverished Conditions of the Blood and a Tonic and Restorative in General Debility and Convalescence from Wasting Diseases; a Liquid Petrolatum Combined with Antiseptic and Germicidal Ingredients for Use in Cases of Constipation, a Remedy Indicated in Pulmonary; an Alkaline Antiseptic Powder Useful for Conditions of the Mucous Membrane, Canker, Tonsilitis, Nasal Catarrh, Rhinitis, and Other Ailments of a Like Nature; a Compound for the Treatment of Dyspepsia, Intestinal Indigestion, and Cholera Morbus.
Claims use since Jan. 1, 1914.

Ser. No. 150,766. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE PORCELAIN INSULATOR CORPORATION, Lima, N. Y. Filed July 21, 1921.

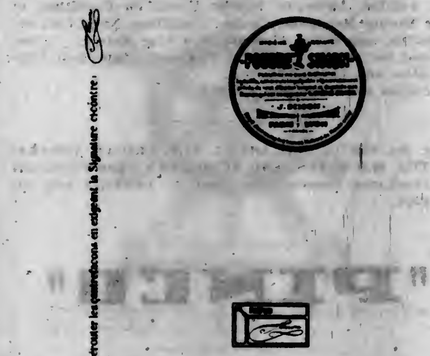
"PINCO"

Particular description of goods.—Electric Insulators Made of Porcelain.
Claims use since about June 21, 1921.

Ser. No. 150,769. (CLASS 12. CONSTRUCTION MATERIALS.) RUTLAND FIRE CLAY CO., Rutland, Vt. Filed July 21, 1921. Under ten-year proviso.

RUTLAND

Particular description of goods.—Plastic Stove-Lining.
Claims use since about Apr. 1, 1883.



Ser. No. 150,771. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. SIMON & CIE., Paris and Lyon, France. Filed July 21, 1921.

All the wording except the several occurrences of the word "Simon" being disclaimed apart from the mark shown.

Particular description of goods.—Face-Cream.
Claims use since 1876.

Ser. No. 150,773. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. SIMON & CIE., Paris and Lyon, France. Filed July 21, 1921.

All the wording except the several occurrences of the word "Simon" being disclaimed apart from the mark shown.

Particular description of goods.—Perfumes, Face-Powders, and Toilet Powders.
Claims use since 1876.

Ser. No. 150,784. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE SANIKLENE CHEMICAL CO., Akron, Ohio. Filed July 21, 1921.

SANIKLENE

Particular description of goods.—Cleaning Preparation with Incidental Water-Softening Properties.
Claims use since Apr. 17, 1921.

Ser. No. 150,793. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES. O. W. WUERTZ CO., New York, N. Y. Filed July 21, 1921. Under ten-year proviso.

Wuertz, New York.

Particular description of goods.—Grand and Upright Pianos, Player-Pianos, and Electrically-Operated Pianos.
Claims use since 1881.

Ser. No. 150,794. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) O. W. WUERTZ CO., New York, N. Y. Filed July 21, 1921. Under ten-year proviso.

O. W. Wuertz, New York.

Particular description of goods.—Grand and Upright Pianos, Player-Pianos, and Electrically-Operated Pianos.
Claims use since 1893.

Ser. No. 150,879. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE M. PROPP CO., New York, N. Y. Filed July 28, 1921.

No claim is made to the exclusive use of the words "Unit of Nine," "Decorative Electrical Sets," "Lamp Tester," and "Socket Plug" apart from the mark as shown on the drawing.

Particular description of goods.—Christmas-Tree Outfits Consisting of Electrically-Lighted Ornaments and Electrical Lighting Sets for Decorative Purposes.
Claims use since about January, 1920.

Ser. No. 151,052. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LAM-TE MANUFACTURING CO., Oklahoma, Okla. Filed July 28, 1921.

Lam-Te'

Particular description of goods.—Liquid Face-Powder.
Claims use since May 2, 1921.

Ser. No. 151,053. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE LIQUID CARBONIC COMPANY, Chicago, Ill. Filed July 28, 1921.

Liquid

Exclusive use of the word "Liquid" apart from the mark as shown being disclaimed.

Particular description of goods.—Carbonic-Acid Gas.
Claims use since June 25, 1916.

Ser. No. 151,061. (CLASS 12. CONSTRUCTION MATERIALS.) OETTINGER LUMBER COMPANY, Greensboro, N. C. Filed July 28, 1921.

Olumco

Particular description of goods.—Dressed Lumber, Shingles, Wall-Board, Mantels, Sash, Doors, Window-Blinds, and Moldings.
Claims use since April, 1917.

Ser. No. 151,140. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) C. BRUNO & SON, INC., New York, N. Y. Filed July 30, 1921.

STRADTONE

Particular description of goods.—Violin-Strings.
Claims use since July 6, 1921.

Ser. No. 151,226. (CLASS 32. FURNITURE AND UPHOLSTERY.) GEORGE M. SCHWARTZ, Columbus, Ohio. Filed Aug. 1, 1921.

SHOWELL

Particular description of goods.—Showcases and Store Furniture.
Claims use since about May, 1911.

Ser. No. 151,242. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) UNITED STATES RUBBER COMPANY, New York, N. Y. Filed Aug. 1, 1921.

'Royal Cord'

No claim is made to the exclusive use of the word "Cord" apart from the mark as shown.

Particular description of goods.—Insulated Wire Cable.
Claims use since May 23, 1921.

Ser. No. 151,271. (CLASS 12. CONSTRUCTION MATERIALS.) INSULITE CHEMICAL COMPANY, Aurora, Ill. Filed Aug. 2, 1921.

INSULITE

Particular description of goods.—Plastic Mastic Material Produced from Natural Asphaltic Material for Use in the Production of Flooring and Deck-Coverings.
Claims use since Dec. 31, 1909.

Ser. No. 151,327. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) JOHN MACAULAY, Detroit, Mich. Filed Aug. 3, 1921.

PERFECTION

No claim being made to the word "Perfection" apart from the mark as shown.

Particular description of goods.—Hop Barley Malt Sugar Syrup for the Manufacture of a Beverage.
Claims use since Jan. 15, 1919.

Ser. No. 151,408. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE STEARNS & FOSTER COMPANY, Lockland, Ohio. Filed Aug. 4, 1921.

GIBRALTAR

Particular description of goods.—Cotton-Batting.
Claims use since Feb. 25, 1902.

Ser. No. 151,410. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE STEARNS & FOSTER COMPANY, Lockland, Ohio. Filed Aug. 4, 1921.

CARDINAL

Particular description of goods.—Cotton-Batting.
Claims use since May 20, 1901.

Ser. No. 151,413. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE STEARNS & FOSTER COMPANY, Lockland, Ohio. Filed Aug. 4, 1921.

WIZARD

Particular description of goods.—Cotton-Batting.
Claims use since Feb. 27, 1911.

Ser. No. 151,414. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE STEARNS & FOSTER COMPANY, Lockland, Ohio. Filed Aug. 4, 1921.

WHITE OWL

Particular description of goods.—Cotton-Batting.
Claims use since Nov. 21, 1910.

Ser. No. 151,415. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE STEARNS & FOSTER COMPANY, Lockland, Ohio. Filed Aug. 4, 1921.

GREAT OWL

Particular description of goods.—Cotton-Batting.
Claims use since Nov. 21, 1910.

Ser. No. 151,420. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE STEARNS & FOSTER COMPANY, Lockland, Ohio. Filed Aug. 4, 1921.

OWL

Particular description of goods.—Cotton-Batting.
Claims use since Jan. 5, 1900.

Ser. No. 151,424. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE STEARNS & FOSTER COMPANY, Lockland, Ohio. Filed Aug. 4, 1921.

BIG OWL

Particular description of goods.—Cotton-Batting.
Claims use since June 7, 1909.

Ser. No. 151,425. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) THE STEARNS & FOSTER COMPANY, Lockland, Ohio. Filed Aug. 4, 1921.

SNOWY OWL

Particular description of goods.—Cotton-Batting.
Claims use since Dec. 6, 1909.

Ser. No. 151,466. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NEW YORK CANNERS, INC., Rochester, N. Y. Filed Aug. 5, 1921.

EMPIRE

Particular description of goods.—Canned Fruits, Canned Vegetables, Fruit Jams, Fruit Preserves.
Claims use since 1879.

Ser. No. 151,467. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NEW YORK CANNERS, INC., Rochester, N. Y. Filed Aug. 5, 1921.

REVERE

Particular description of goods.—Canned Fruits and Canned Vegetables, Fruit Jams.
Claims use since 1886.

Ser. No. 151,468. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NEW YORK CANNERS, INC., Rochester, N. Y. Filed Aug. 5, 1921.

BLUE STAR

Particular description of goods.—Canned Fruits and Canned Vegetables.
Claims use since 1891.

Ser. No. 151,470. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NEW YORK CANNERS, INC., Rochester, N. Y. Filed Aug. 5, 1921.

LILY of the VALLEY

Particular description of goods.—Canned Fruits and Canned Vegetables.
Claims use since 1891.

Ser. No. 151,474. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PACKARD CONFECTIONERY COMPANY, Boston, Mass. Filed Aug. 5, 1921.

BUCK-SHOT

Particular description of goods.—Candy.
Claims use since 1900.

Ser. No. 151,476. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) B. F. PERKINS & SON, INC., Holyoke, Mass. Filed Aug. 5, 1921.

MAN-COOLER

Particular description of goods.—Electric Motor-Driven Fans.
Claims use since July, 1918.

Ser. No. 151,482. (CLASS 12. CONSTRUCTION MATERIALS.) THE A. O. SMITH INTERNATIONAL WORKS, Chelsea, Mass. Filed Aug. 5, 1921.

SMITHCRETE COLUMN

No rights are claimed for the word "Column" apart from the mark shown in the drawing.
Particular description of goods.—Columns Consisting of a Shell of Metal or other Suitable Material Filled with Concrete or the Like.
Claims use since May 1, 1921.

Ser. No. 151,492. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SUNBEAM ELECTRIC MANUFACTURING CO., Evansville, Ind. Filed Aug. 5, 1921.

SUNBEAM

Particular description of goods.—Electric Batteries.
Claims use since Jan. 20, 1921.

Ser. No. 151,514. (CLASS 38. PRINTS AND PUBLICATIONS.) KNIGHTS OF COLUMBUS, New Haven, Conn. Filed Aug. 6, 1921.

COLUMBIA

Particular description of goods.—Monthly Magazines.
Claims use since July, 1921.

Ser. No. 151,560. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE GREAT ATLANTIC AND PACIFIC TEA COMPANY, Jersey City, N. J. Filed Aug. 6, 1921.

ENCORE

Particular description of goods.—Olive-Oil.
Claims use since about Apr. 21, 1921.

Ser. No. 151,579. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE GREAT ATLANTIC AND PACIFIC TEA COMPANY, Jersey City, N. J. Filed Aug. 9, 1921.

ALI BABA

Particular description of goods.—Dried Dates and Figs.
Claims use since about Apr. 21, 1921.

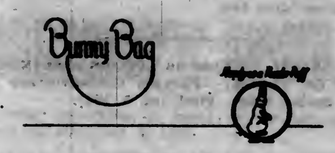
Ser. No. 151,580. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) INTERNATIONAL SALT CO. OF NEW YORK, New York, N. Y. Filed Aug. 9, 1921.

OK

Particular description of goods.—Salt.
Claims use since 1909.

Ser. No. 151,592. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) PERFECTION PRODUCTS CO., New York, N. Y. Filed Aug. 9, 1921.

PERCO



Particular description of goods.—Malt-Syrup for Food Purposes.
Claims use since June 1, 1921.

Ser. No. 151,621. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) HARRY PERUVIAN ARIZONA SEED GROWERS ASSOCIATION, Yuma, Ariz. Filed Aug. 10, 1921.

The vertical lining on the drawing denotes a red color.
Particular description of goods.—Alfalfa-Seed.
Claims use since on or about July 1, 1921.

Ser. No. 151,655. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) BUNNY PRODUCTS COMPANY, Port Huron, Mich. Filed Aug. 11, 1921.

No claim is made to the use of the words "Bug" and "Handy as a Pocket Pal," except when considered with the other features of the mark.
Particular description of goods.—A Cleaning Composition for Cleaning Shoes, Gloves, or other Articles of Skin, Leather, or Textile Fabric, Liquid or Paste.
Claims use since Apr. 15, 1921.

Ser. No. 151,694. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) VERNA O. WATKINS, Atlanta, Ga. Filed Aug. 11, 1921.

The letters and characters are yellow, while the background is black.
Particular description of goods.—Educational-Game Board.
Claims use since April, 1920.

Ser. No. 151,752. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) CRYSTAL SOAP & CHEMICAL CO., Philadelphia, Pa. Filed Aug. 13, 1921.

No claim being made to the words "Fish Oil Soap" apart from the mark shown in the drawing.
Particular description of goods.—Liquid Soap, Powdered Soap, Soapstone Soap, Soap Cakes, and Soap Flakes.
Claims use since June 9, 1921.

Ser. No. 151,824. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) VAL. BLAIS JR. CANDY CO., Milwaukee, Wis. Filed Aug. 15, 1921.

Dreamy Dawn

Particular description of goods.—Candy.
Claims use since July, 1920.

Ser. No. 151,861. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HARRY HOSKINS CANDY CO., San Francisco, Calif. Filed Aug. 16, 1921.

Calchu

Particular description of goods.—Candy.
Claims use since Aug. 1, 1921.

Ser. No. 151,836. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SIDNEY S. MARKS, Brooklyn, N. Y. Filed Aug. 16, 1921.

"DANDROX"

Particular description of goods.—A Remedy for Dandruff, in Unguent Form.
Claims use since January, 1920.

Ser. No. 151,847. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CARL V. POHLSON, Pawtucket, R. I. Filed Aug. 16, 1921.

Dairy Fuel

Particular description of goods.—Chemical Compounds for Coloring Flames.
Claims use since 1914.

Ser. No. 151,859. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ABERDEEN CANDIES, Boston, Mass. Filed Aug. 17, 1921.

Particular description of goods.—Candy.
Claims use since November, 1919.

Ser. No. 151,900. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) ABDOMINAL COUCH COMPANY, St. Louis, Mo. Filed Aug. 18, 1921.

Abdomno

Particular description of goods.—Exercises for Health Purposes.
Claims use since on or about July 11, 1921.

Ser. No. 151,910. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NON-METALLIC TIRES.) DUPLEX TRANSMISSION BANDS, INC., San Francisco, Calif. Filed Aug. 18, 1921.

DUPLEX

Particular description of goods.—Automobile Transmission-Bands.
Claims use since 1919.

Ser. No. 151,959. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE LUTHER CHEMICAL COMPANY, Dayton, Ohio. Filed Aug. 19, 1921.

Spunoint

Particular description of goods.—An Ointment for Aches, Pains, Bruises, Boils, Chapped Skin, Cuts, Colds, Earache, Frost-Bites, Insect-Bites, Piles, Eruptions, Old Sores, Ivy Poisoning, Sprains, Sore Throat, and Sunburn.
Claims use since June 26, 1921.

Ser. No. 151,960. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROHM & HAAS COMPANY, Philadelphia, Pa. Filed Aug. 19, 1921.

INDOPON

Particular description of goods.—Chemicals Used as Discharge-Assistants in Printing on Indigo and Vat Dyes.
Claims use since on or about Jan. 27, 1921.

Ser. No. 151,990. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STEP-ON-IT MANUFACTURING COMPANY, Leicester, Mass. Filed Aug. 19, 1921.

STEP-ON-IT

Particular description of goods.—Composition Used to Remove Carbon from Cylinders and Gas-Passages of Internal-Combustion Engines.
Claims use since Aug. 6, 1921.

Ser. No. 151,962. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) O. BOTO SCHELLBERG, New York, N. Y. Filed Aug. 19, 1921.

"RHU-PHOS"

Combining of the word "Rhu-phos."
Particular description of goods.—Laxatives.
Claims use since February, 1921.

Ser. No. 151,963. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ROBERT DOLAN, Milwaukee, Wis. Filed Aug. 20, 1921.

T D
T D

Particular description of goods.—Leak-Stopping Compound for Automobile Radiators.
Claims use since Apr. 1, 1921.

Ser. No. 151,966. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE GROOVER-STEWART DRUG COMPANY, Jacksonville, Fla. Filed Aug. 20, 1921.

INSURANCE SLEEP

Particular description of goods.—Insecticides for Flies, Mosquitoes, and other Insect Pests.
Claims use since Jan. 1, 1916.

Ser. No. 151,994. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JORDAN MARSH COMPANY, Boston, Mass. Filed Aug. 20, 1921.

"Avoset"

Particular description of goods.—Ink-Eradicator.
Claims use since June 20, 1920.

Ser. No. 152,020. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HENRY J. MCELROY, Los Angeles, Calif. Filed Aug. 22, 1921.

MEPHISTO

Particular description of goods.—Powder for Cleaning Drain-Pipes.
Claims use since Aug. 1, 1918.

Ser. No. 152,025. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) P. H. MURPHY COMPANY, New Kensington, Pa. Filed Aug. 22, 1921.

STANRACO

Particular description of goods.—Railroad-Car Metal Roofs and Parts of Such Roofs—Namely, Fabricated Roof-Sheets, Anchors, Flashings, Seam-Caps, Ridge-Caps, Center Caps, Roof-Castings, and Running-Board Saddles.
Claims use since July 25, 1921.

Ser. No. 152,026. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) P. H. MURPHY COMPANY, New Kensington, Pa. Filed Aug. 22, 1921.

CUPIFER

Particular description of goods.—Railroad-Car Metal Roofs and Parts of Such Roofs—Namely, Fabricated Roof-Sheets, Anchors, Flashings, Seam-Caps, Ridge-Caps, Center Caps, Roof-Castings, and Running-Board Saddles.
Claims use since July 25, 1921.

Ser. No. 152,030. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) VAWTER AND VAWTER, Los Angeles, Calif. Filed Aug. 22, 1921.

Seboron

Particular description of goods.—A Pharmaceutical Preparation Used in the Treatment of Rheumatism, Acute and Chronic; Lumbago, Sciatica, Neuritis, Gout, Kidney and Bladder Troubles, and Uric-Acid Conditions.
Claims use since May 1, 1921.

Ser. No. 152,031. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE BENZOLE ALIZARINE COMPANY LIMITED, London, England. Filed Aug. 23, 1921. Under ten-year proviso.

FLOREANT

Particular description of goods.—Artificial Alizarin Used in the Dyeing and Printing of Textile Fabrics.
Claims use since February, 1886.

Ser. No. 152,090. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN POLITIS, Chicago, Ill. Filed Aug. 26, 1921.

NO-INJO

Particular description of goods.—A Preparation for the Alleviation of Skin-Poisoning, Inflamed and Putrefied Flesh, Open Wounds and Sores of All Description.
Claims use since Aug. 5, 1920.

Ser. No. 152,113. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) ACE MANUFACTURING COMPANY Portland, Me. Filed Aug. 24, 1921.

ACE

Particular description of goods.—A Porcelain-Cleaning Compound.
Claims use since June 1, 1921.

Ser. No. 152,114. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE AMERICAN OIL COMPANY, Providence, R. I. Filed Aug. 24, 1921.

Particular description of goods.—Oil Used in the Treatment of Woolen Fabrics.
Claims use since Dec. 15, 1868.

Ser. No. 152,115. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) AGOL CHEMICAL COMPANY, Washington, D. C. Filed Aug. 24, 1921.

CHLOR-AGOL

Particular description of goods.—Mouth-Wash, Gargle, or Nasal and Throat Spray.
Claims use since May 7, 1921.

Ser. No. 152,116. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) AGOL CHEMICAL COMPANY, Washington, D. C. Filed Aug. 24, 1921.

ANTOL

Particular description of goods.—A Headache and Neuralgia Remedy.
Claims use since July 11, 1921.

Ser. No. 152,121. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) R. R. KINSEY, Atlanta, Ga. Filed Aug. 24, 1921.

KANSO-REX

Particular description of goods.—Antiseptic Healing-Powder.
Claims use since Mar. 2, 1921.

Ser. No. 152,122. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EDWARD J. MOORE SONS, INC., Long Island City, N. Y. Filed Aug. 24, 1921.

Sorbivol

Particular description of goods.—Antiseptic Ointment for Itching and Inflamed Piles, Scalds, Chafing, and Irritations of the Skin.
Claims use since Aug. 1, 1921.

Ser. No. 152,123. (CLASS 8. SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.) MANHATTAN BRIAR PIPE COMPANY, New York and Brooklyn, N. Y. Filed Aug. 24, 1921.

Particular description of goods.—Pipes for Smoking.
Claims use since Aug. 22, 1921.

Ser. No. 152,124. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAVEM ECONOMY PRODUCTS CO., Boston and East Boston, Mass. Filed Aug. 24, 1921.

SAVEM

Particular description of goods.—Compound for the Treatment of Fabrics After Washing.
Claims use since July 15, 1921.

Ser. No. 152,145. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CLARK W. UPP, Oberlin, Ohio. Filed Aug. 24, 1921.

Particular description of goods.—Hair-Eradicator.
Claims use since Jan. 2, 1921.

Ser. No. 152,153. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE ATLAS CANDY MFG. CO. INC., Lynchburg, Va. Filed Aug. 25, 1921.

Wishmore

Particular description of goods.—Chocolates and Candies.
Claims use since July 1, 1921.

Ser. No. 152,166. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ANDREW JERGENS COMPANY, Cincinnati, Ohio. Filed Aug. 25, 1921.

BATEEK

Particular description of goods.—Face-Powder, Talcum Powder, and Perfume.
Claims use since Aug. 12, 1921.

Ser. No. 152,171. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HENRY KAY, New York, N. Y. Filed Aug. 25, 1921.

DR. KAY'S TOP-NOTCH

Particular description of goods.—Mouth-Wash.
Claims use since June 1, 1921.

Ser. No. 152,172. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HENRY KAY, New York, N. Y. Filed Aug. 25, 1921.

DR. KAY'S CELEBRATED

Particular description of goods.—A Mouth-Wash.
Claims use since June 1, 1921.

Ser. No. 152,175. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHARLES LYLE, Memphis, Tenn. Filed Aug. 25, 1921.

Particular description of goods.—Kidney and Liver Medicine.
Claims use since Sept. 26, 1918.

Ser. No. 152,226. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WYE-COE CHEMICAL COMPANY, Denver, Colo. Filed Aug. 25, 1921.

Particular description of goods.—A Medicine for the Treatment of Pyorrhea.
Claims use since July 29, 1921.

Ser. No. 152,227. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LEO M. ABRAHAMS, New York, N. Y. Filed Aug. 27, 1921.

Particular description of goods.—Condensed Milk.
Claims use since June [illegible], 1920.

Ser. No. 152,253. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EARL N. GREENBERG, [illegible]. Filed Aug. 27, 1921.

Particular description of goods.—A Skin-Lotion.
Claims use since Apr. 15, 1919.

Ser. No. 152,255. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SANTA CLARA VALLEY CANNING Co., San Jose, Calif. Filed Aug. 27, 1921.

REDWOOD

Particular description of goods.—Pickles, Vinegar, Fruit Jellies, Fruit Preserves, Mustard, Catsup, Chilli Sauce, Molasses, Fruit Butter, and Fruit Jam.
Claims use since Aug. 24, 1920.

Ser. No. 152,282. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SANTA CLARA VALLEY CANNING Co., San Jose, Calif. Filed Aug. 27, 1921.

Integrity

Particular description of goods.—Canned Fruits and Canned Vegetables.
Claims use since Dec. 25, 1920.

Ser. No. 152,285. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) [illegible] WHOLESALE GROCERY COMPANY, Maryville, Mo. Filed Aug. 27, 1921.

NICKEL PLATE

Particular description of goods.—Coffee.
Claims use since June 29, 1921.

Ser. No. 152,287. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOS. MIDDLESEX, JR., INC., Boston, Mass. Filed Aug. 29, 1921.

Particular description of goods.—Marshmallow Topping.
Claims use since May 18, 1921.

Ser. No. 152,347. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ROSES LABORATORIES, Philadelphia, Pa. Filed Aug. 29, 1921.

CHECKERS

Particular description of goods.—A Remedy for Amenorrhea, Leucorrhea, Dysmenorrhea, Reducing Inflammation, Absorbing Discharges.
Claims use since about June 4, 1921.

Ser. No. 152,358. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ALPINE CHOCOLATES COMPANY, Boston, Mass. Filed Aug. 30, 1921.

Ye Token

The words "Ye Token."
Particular description of goods.—Candy.
Claims use since about June 4, 1921.

Ser. No. 152,418. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BRADFORD R. CAMP, San Francisco, Calif. Filed Aug. 31, 1921.

Crumples

Consisting of the word "Crumples."
Particular description of goods.—Candy.
Claims use since Dec. 1, 1920.

Ser. No. 152,460. (CLASS 32. FURNITURE AND UPHOLSTERY.) McROSKEY & Co., San Francisco, Calif. Filed Aug. 31, 1921.

No claim is made to the words "Sleep on a McRoskey" or the representation of a mattress apart from the mark shown.
Particular description of goods.—Mattresses.
Claims use since 1907.

Ser. No. 152,499. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) THE NEW YORK RECORDING LABORATORIES, Port Washington, Wis. Filed Aug. 31, 1921.

Famous

Particular description of goods.—Phonographs and Phonograph-Records, Record-Albums, Mechanical Phonograph Motors, Reproducers, and Needles.
Claims use since Nov. 16, 1920.

Ser. No. 152,518. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) QUAKER CITY Morocco Co., Philadelphia, Pa. Filed Sept. 2, 1921. Under ten-year proviso.

Particular description of goods.—Kid and Morocco Leather.
Claims use since Aug. 15, 1891.

Ser. No. 152,764. (CLASS 39. TOILET AND LAUNDRY ARTICLES.) The Allen-Hoffman Co., Mount Vernon, N. Y. Filed Sept. 9, 1921.

The Garment Weekly

Consisting of the words "The Garment Weekly."
Particular description of goods.—A Weekly Publication.
Claims use since May 15, 1917.

Ser. No. 152,870. (CLASS 42. MALT BEVERAGES, EXTRACTS AND LIQUORS.) Warren L. Tennis, Tacoma, Wash. Filed Sept. 12, 1921.

APEX MALT SYRUP

No claim being made to the words "Malt Syrup" apart from the mark shown.
Particular description of goods.—Malt-Syrup.
Claims use since Sept. 20, 1920.

Ser. No. 152,903. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Sanstag & Hilser Bros., Inc., New York, N. Y. Filed Sept. 13, 1921.

Madame Pompadour

Particular description of goods.—Hair-Nets.
Claims use since Sept. 1, 1921.

Ser. No. [illegible] (CLASS 39. TOILET AND LAUNDRY PREPARATIONS.) [illegible], Mount Vernon, N. Y. Filed Sept. 16, 1921.

Year Round

Particular description of goods.—Motor-Trucks.
Claims use since June 7, 1921.

Ser. No. 152,956. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) Colgate & Company, Jersey City, N. J. Filed Sept. 16, 1921.

Milady's Delight

Particular description of goods.—Soap.
Claims use since Sept. 7, 1921.

Ser. No. 152,958. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) George A. Luce, Winthrop, Mass. Filed Sept. 16, 1921.

BOSTON LIGHT

Particular description of goods.—Metal-Polish.
Claims use since Sept. 1, 1921.

Ser. No. 153,118. (CLASS 28. PRINTS AND PUBLICATIONS.) Waterson, Berlin & Snyder Company, New York, N. Y. Filed Sept. 19, 1921.

Waterson Berlin & Snyder Co

Particular description of goods.—Sheet-Music and Vocal and Instrumental Musical Compositions.
Claims use since 1918.

Ser. No. 153,120. (CLASS 28. PRINTS AND PUBLICATIONS.) Corona Typewriter Company, Inc., Groton, N. Y. Filed Sept. 20, 1921.

CORONA BULLETIN

Particular description of goods.—Magazines Published Monthly.
Claims use since October, 1918.

Ser. No. 153,236. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. Gumner's Sons Co., Inc., New York, N. Y. Filed Sept. 20, 1921.

PINK LADY

Particular description of goods.—Hair-Nets.
Claims use since Apr. 1, 1921.

Ser. No. 153,311. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) Manna Products Co., Minneapolis, Minn. Filed Sept. 24, 1921.

MANNA

Particular description of goods.—Soap.
Claims use since Sept. 1, 1921.

Ser. No. 153,322. (CLASS 37. PAPER AND STATIONERY.) American Writing Paper Company, Holyoke, Mass. Filed Sept. 26, 1921.

ACCOUNT

Particular description of goods.—Writing and Printing Papers and Mailing-Envelops.
Claims use since Aug. 1, 1910.

Ser. No. 153,451. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) Sidney J. Danjean, Franklin, La. Filed Sept. 28, 1921.

TOOT-SWEET

Particular description of goods.—A Preparation for Use in Cleaning the Hands.
Claims use since about June 1, 1921.

Ser. No. 153,459. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) George F. Kearney, Detroit, Mich. Filed Sept. 28, 1921.

Kearney's MAN O' WAR

Particular description of goods.—Metal-Polish.
Claims use since on or about Oct. 15, 1920.

Ser. No. 153,462. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) Los Angeles Soap Co., Los Angeles, Calif. Filed Sept. 28, 1921.

Particular description of goods.—Washing-Machine Soap.
Claims use since Jan. 31, 1920.

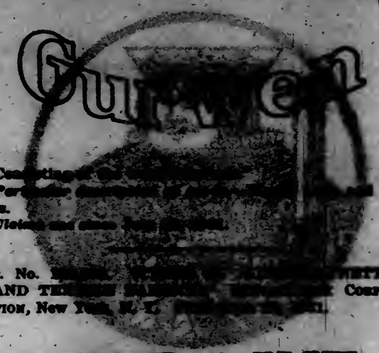
Ser. No. 153,464. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) Theodore L. Lange, Chicago, Ill. Filed Sept. 28, 1921.

Cheriola

Particular description of goods.—A Non-Alcoholic, Maltless, Non-Cereal Beverage Sold as a Soft Drink and Syrup for Making the Same.
Claims use since 1902.

Ser. No. 153,468. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) Midland Polish Company, Pittsburgh, Pa. Filed Sept. 28, 1921.

MI RA ND POLISH



Particular description of goods.—Metal-Polish.
Claims use since Jan. 1, 1921.

Ser. No. 153,470. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) Alfred V. Oxley, Southington, Conn. Filed Sept. 28, 1921.

GASTOX

Particular description of goods.—Shoe-Dressing.
Claims use since Feb. 1, 1921.

[illegible] INCLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) [illegible], Inc., Philadelphia, Pa. Filed Sept. 30, 1921.

Consisting of the [illegible]
Particular description of goods.—[illegible] and Carpets.
Claims use since [illegible].

Ser. No. [illegible]. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) [illegible] Corporation, New York, N. Y. [illegible].

ARTLAINE

Particular description of goods.—Broad-Silk Piece Goods.
Claims use since on or about Jan. 15, 1921.

Ser. No. 153,536. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) Cheloidon Piano Company, Boston, Mass. Filed Sept. 30, 1921.

Particular description of goods.—Pianos.
Claims use since Mar. 23, 1921.

Ser. No. 153,539. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) Cheloidon Piano Company, Boston, Mass. Filed Sept. 30, 1921.

Particular description of goods.—Pianos.
Claims use since Mar. 23, 1921.

Ser. No. 153,597. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Gladly Hair Net Company, Inc., Wilmington, Del., and New York, N. Y. Filed Oct. 1, 1921.

699

Consists of the arbitrary numeral "699."
Particular description of goods.—Hair-Nets.
Claims use since Aug. 1, 1921.

Ser. No. [illegible]. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Gladly Hair Net Company, Inc., Wilmington, Del., and New York, N. Y. Filed Oct. 1, 1921.

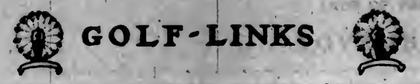
999

Consists of the arbitrary numeral "999."
Particular description of goods.—Hair-Nets.
Claims use since Aug. 1, 1921.

Ser. No. 153,603. (CLASS 49. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) Herman Kassen, Philadelphia, Pa. Filed Oct. 1, 1921.

Particular description of goods.—Malt Extract.
Claims use since May 2, 1921.

Ser. No. 153,620. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) Price and Teeple Piano Company, Chicago, Ill. Filed Oct. 1, 1921. Under ten-year proviso.



Particular description of goods.—Pianos and Player-Pianos.
Claims use since 1873.

Ser. No. 153,673. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) J. A. Migel, Inc., New York, N. Y. Filed Oct. 3, 1921.

Particular description of goods.—Broad Silks in the Piece.
Claims use since July 14, 1921.

Ser. No. 153,674. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) J. A. Migel, Inc., New York, N. Y. Filed Oct. 3, 1921.

Particular description of goods.—Broad Silks in the Piece.
Claims use since July 14, 1921.

Ser. No. 153,675. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) J. A. Migel, Inc., New York, N. Y. Filed Oct. 3, 1921.

Particular description of goods.—Broad Silks in the Piece.
Claims use since July 1, 1921.

Ser. No. 153,706. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) Wausau Abrasives Company, Wausau, Wis. Filed Oct. 3, 1921.

"RUFF STUFF"

Particular description of goods.—Sandpaper.
Claims use since Jan. 1, 1921.

Ser. No. 153,718. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Empire Notion Co., New York, N. Y. Filed Oct. 4, 1921.

Net-pin-pak

Consisting of the word "Net-Pin-Pak."
Particular description of goods.—Hair-Nets.
Claims use since July 15, 1921.

Ser. No. 153,751. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Clarence Whitman & Son, Inc., Katonah and New York, N. Y. Filed Oct. 4, 1921.

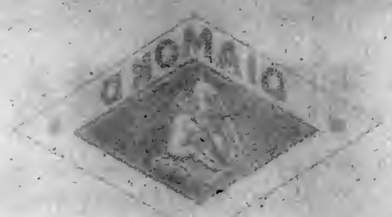
WHITMANCO

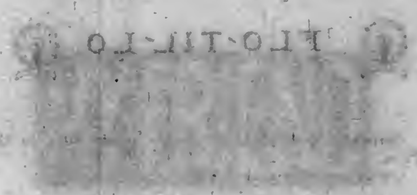
Particular description of goods.—Cotton Sheets and Pillow-Cases.
Claims use since Sept. 13, 1921.

Ser. No. 153,797. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) The Diamond Bottling Corporation, Waterbury, Conn. Filed Oct. 6, 1921. Under ten-year proviso.

Particular description of goods.—Non-Alcoholic, Non-Cereal, Maltless Beverages Sold as Soft Drinks and Syrups for Making the Same.
Claims use since Jan. 30, 1893.

Ser. No. 153,821. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) Marston-Greening Co. Inc., Los Angeles, Calif. Filed Oct. 6, 1921.





Particular description of goods.—Fountain-Syrups, Fruit Punch, Root-Beer Syrups and Extracts, and Maltless Cereal and Non-Cereal Beverages Containing Less Than One-half of One Per Cent. Alcohol.
Claims use since Nov. 6, 1918.

Ser. No. 154,009. (CLASS 41. CANES, PARASOLS, AND UMBRELLAS.) Advertising Distributors Ass'n., New York, N. Y. Filed Oct. 12, 1921.

Two-in-One

Particular description of goods.—Umbrellas.
Claims use since about Aug. 1, 1921.

COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Sixth Circuit.

CLEMENTS v. KIRBY.

Decided June 7, 1921.

[274 Fed. Rep., 575.]

1. PATENTS—SUIT TO OBTAIN PATENT HELD NOT BARRED BY ABANDONMENT.

A suit under Revised Statutes section 4915, (Comp. St. sec. 9460) to obtain a patent, not commenced until more than a year after a decision of the Court of Appeals of the District of Columbia in interference proceedings, *Held* not barred because of abandonment of the application, under Revised Statutes, section 4894, (Comp. St. sec. 9433,) by "failure to prosecute the same within one year after any action therein," where complainant thereafter diligently prosecuted his application in the Patent Office, though that Office decided that it was concluded from further action therein by the decision of the court.

2. SAME—DECISION OF COURT OF APPEALS IN INTERFERENCE NOT CONCLUSIVE OF RIGHT TO FILE NARROWER CLAIMS, AND REFUSAL OF PATENT OFFICE TO HEAR NEW CLAIMS GROUND FOR SUIT IN EQUITY.

A decision of the court of appeals in an interference proceeding is not necessarily conclusive as to claims of the respective parties which were not put in issue, and the refusal of the Patent Office to consider narrower claims subsequently presented by the defeated applicant, on the ground that it was concluded by the court's decision, *Held* to justify a suit under Revised Statutes, section 4915, (Comp. St. sec. 9460.)

3. SAME—DECISION OF PATENT OFFICE HELD NOT APPEALABLE.

A decision of the Commissioner of Patents that he was concluded by the judgment of the court of appeals in interference proceedings and was without jurisdiction to consider further claims presented by the defeated applicant, *Held* not appealable, under Revised Statutes, section 4909, (Comp. St. sec. 9454.)

4. SAME—SUIT TO OBTAIN PATENT HELD MAINTAINABLE.

Where the Commissioner has refused to act on new claims presented by an applicant defeated in interference proceedings, on the ground of want of jurisdiction, the applicant is not required to resort to mandamus to compel his action as a condition precedent to the bringing of suit under Revised Statutes, section 4915, (Comp. St. sec. 9460.)

5. SAME—DECISION OF COURT OF APPEALS REVIEWABLE IN EQUITY SUIT.

The Court of Appeals of the District of Columbia, in respect to its action in patent cases, is one of the tribunals of the Patent Office, and its decision is in no sense a final decree which cannot be collaterally attacked, but is subject to review as to all matters decided in a suit in equity under Revised Statutes, section 4915, (Comp. St. sec. 9460,) though it will be followed unless the contrary is established by convincing testimony.

6. SAME—COMPLAINANT IN EQUITY SUIT HELD ENTITLED TO PATENT.

Complainant in equity to obtain a patent *Held*, under the evidence, entitled to patent for the invention covered by patent for a vacuum-cleaner issued to another.

7. SAME—DEFEATED PARTY LIABLE FOR COSTS IN EQUITY SUIT TO OBTAIN PATENT.

The provision of Revised Statutes, section 4915, (Comp. St. sec. 9460,) authorizing suits in equity to obtain a patent, that "all the expenses of the proceeding shall be paid by the applicant, whether the final decision is in his favor or not," applies only to those cases just previously mentioned therein, where there is no opposing party and the bill is served on the Commissioner only.

APPEAL from the District Court of the United States for the Eastern Division of the Northern District of Ohio; D. C. Westenhaver, judge.

Suit in equity by George Clements against James B. Kirby. Decree for defendant, and complainant appeals. Reversed, and decree directed for complainant.

Mr. Peter S. Grosscup (*Messrs. Parker & Carter* and *Mr. Francis W. Parker* on the brief) for the appellant.

Mr. Charles Neave (*Mr. H. E. Smith* and *Mr. Merrell E. Clark* on the brief) for the appellee.

Before KNAPPEN, DENISON, and DONAHUE, Circuit Judges.

DENISON, *Cir. J.*:

Bill filed under Revised Statutes, section 4915, (Comp. St. sec. 9460,) to procure for Clements the patent issued to Kirby May 23, 1916, No. 1,184,469. Clements and Kirby were contesting applicants in the Patent Office with reference to an improvement in vacuum-cleaners, whereby the suction-intake could be diverted from the regular nozzle to a more distant hose-connected nozzle. The primary elements of such a structure are the pump or fan chamber and the suction-chamber. The two are divided by a partition having an opening. The suction-chamber is provided with a suitable intake-nozzle, and the pump-chamber has a tangential outlet to the dust-receptacle. By the suction effect of the pump, the dust is pulled through the intake-nozzle suction-chamber and the partition-opening into the pump-chamber, and is therefrom blown out to the dust-receptacle. Each of the contesting applicants improved this old structure by making an opening in the outer shell of the suction-chamber, directly opposite and registering with the partition-opening, and inserting through the outer shell-opening and tightly into the partition-opening an open-ended tube for a hose connection, whereby the suction pull was cut off entirely from the normal suction-chamber, and this function transferred to the suction nozzle at the outer end of the hose. This improvement has demonstrated its utility and has been largely adopted.

It is quite obvious that the possible presence of the inserted tube is an essential part of this inven-

tion; for, without it, the invention did not exist. How this conception should be formulated is a matter of arbitrary rule; and while such rules are convenient or even necessary in the Patent Office practice, their application ought not to go to such an extent as to divert the patent from the true inventor to another. When the matter of formulation is considered in connection with the structure here described, it appears that the Patent Office procedure forbade uniting in the same claim two elements which do not simultaneously coöperate, but which have alternative and successive use. Accordingly, it was required that the inserted hose-tube should not be named as a positive element of the claims, but that the inventive thought should be expressed in terms of the basic structure adapted to receive the inserted tube. Whatever language is selected for this purpose, confusion at once arises. If it has the broadest meaning, referring to any construction having oppositely-disposed openings into which such a tube might have been inserted, without regard to whether the desired transfer of function was accomplished, it at once is apparent that there can be no valid patent to either contestant, because so broad a construction would cover earlier structures. If it is confined to a precise adaptability—which may be called the moderately broad construction—to receive such a particular tube in such a manner as to operate successfully for the purpose now desired, there might or might not be patentability, depending (perhaps) on whether any earlier such precise adaptability was analogously purposeful or merely accidental. If it is given the narrow meaning, implying that a suitable tube is present ready for use and that provision for changing is the essence of the invention, patentability is not challenged upon this record—though it is difficult to comprehend how there is substantial distinction between the optional insertion of the tube thereby implied and the actual presence of the tube as a named element in the combination. It is not easy to see why a claim should not have been permitted including both an element like this removable tube, which has an active function when it is in place, and an element like the suction-chamber which coöperates with the tube to furnish its setting, although the chief function of the suction-chamber is temporarily dormant. However that might be (a subject later mentioned), it is this confusion—which later became worse confounded—which has caused the trouble in this case.

Clements was the senior applicant. His attorneys conceived that the inserted tube was an element of his invention, and drew claims upon this theory. They were rejected, and the Examiner said:

> Applicant can only cover, in this application, such a construction, complete in itself without any additions to or subtractions from it, as adapts it to any desired class of work or to such classes of work as may be done by it by the mere changes of adjustment of the parts, without removing any of the parts or adding other parts or substituting one part for another.

The applicant amended the claim without prejudice, insisting that the objections went only to the form, and not to the substance, of the invention. Eventually, the applicant and the Examiner agreed upon the proper *form*, as expressed in claims 1 and 2 quoted in the margin,[1] and they became the only claims remaining in the application.

[1] 1. A vacuum cleaner consisting of a casing provided with a pump chamber and a suction chamber separated therefrom by a dividing wall provided with an opening, the walls of the suction chamber terminating in a suction nozzle and the suction chamber provided with an opening registering with the opening in the dividing wall and adapted to receive a cap closing it or a hose tube extending into the inner opening, substantially as set forth.

2. A vacuum cleaner comprising a pump chamber, a suction chamber having an outlet opening to the pump chamber, a suction nozzle and an inlet opening, and a removable closure for said inlet opening, said openings adapted to receive a connecting inlet tube.

In the meantime, Kirby had come into the Office, the structure of one of his drawings being substantially identical with Clements in the respects now involved. His claim which called for the suction-chamber with its nozzle and the hose with its connection, was rejected as an aggregation. He then adopted, at the suggestion of the Office, Clements's claims 1 and 2, and an interference was declared with these two claims as the two counts of the issue. The parties both regarded the use of the substitutable hose connection, passing through the suction-chamber and cutting it off, as the invention in controversy. Kirby's preliminary statement (his pleading on the interference issues) claimed conception in May, 1911, followed by reduction to practice and filing of application on August 19, 1911. Clements claimed conception in October, 1910, reduction to practice in January, 1911, followed by application filed June 14, 1911. The proofs seem to show without question that Clements had an operative, experimental device in February, ordered castings in April, and made his first commercial machines as early as May, 1911. These embodied the alternative hose connection. Kirby testified that in September, 1910, he was manufacturing a vacuum-cleaner which had the customary opening in the dividing-wall between the suction-chamber and pump-chamber, and which had in the outer wall of the suction-chamber and directly in line with the partition-opening, a removable cap; this removable cap being for the purpose of permitting access to the interior for cleaning purposes. Later and about December, 1910, he made a hole in the cap and fastened therein a tube or suction-hose and closed his suction-chamber nozzle by a separate plug. He says:

> Then, later on, by extending this cap in far enough to reach the dividing wall, it automatically shut off the suction nozzle and connected the hose with the fan chamber. This idea of extending the cap in deeper was the thought that I had about the 1st of May, 1911.

Obviously, upon the preliminary statements and this testimony and the conception of the meaning of the issue held by both parties, there was no escape from a decision in favor of Clements. Some testimony taken was said to have suggested to Kirby the question whether the issue ought not to be interpreted broadly enough to reach the construction made by him in September, 1910. Accordingly, he proved this construction more fully in rebuttal, and on October 1, 1913, applied to the Examiner of Interferences to transmit the file to the Primary Examiner in order that he might amend the declaration of interference so as to remove the existing indefiniteness. The Examiner of Interferences reviewed the evidence and held that the Primary Examiner, in formulating the claims to be allowed and the issue, had considered the invention as that construction which included "provision for changing from one kind of cleaner to another;" that the claims of the issue were neither indefinite nor alternative; and that Kirby's motion was unduly delayed. He therefore denied Kirby's application; and the Commissioner, on appeal, affirmed the action of the Examiner of Interferences, referring to the obvious fact that if the issue should be amended, and Kirby's statement dated back, Clements would have the right to take further testimony, since there would then be an issue upon which he had never been heard.

The interference itself then came on for hearing before the Examiner. He first considered Kirby's motion to amend and date back his preliminary statement, and denied it, both on account of the delay and because the evidence which Kirby had taken was not sufficient to sustain his case, even upon the broad interpretation of the issue which he wished to have adopted. In substance, the Examiner gave to the claim what we have called the moderately broad

construction, and held that Kirby's request to amend his statement was immaterial, since even with this relatively broader construction, Kirby must fail on the proofs—Kirby announcing that he did not care to take further proofs. Proceeding to the merits upon this moderately broad issue, the Examiner awarded priority to Clements, upon proofs which seem to be too clear for controversy. On appeal, the Board took the third or narrowest view of the meaning of the issue, and observed that with the broadest view, which called merely for the existence of the two openings in general alinement, a patent must be refused, as the Primary Examiner had also held, because of earlier patents showing that general construction. The Board recommended that, after priority was determined, the successful applicant should be required to use a formulation including the removal tube as a positive element, in order that there might be no misunderstanding as to the scope of the invention. Proceeding to the subject of priority, and with this view of the issue, the Board also affirmed the award of priority to Clements—as, indeed, it must.

Thereupon Kirby, insisting that the broadest construction was the proper one and that the Board had held it unpatentable, asked that the matter be remanded to the Primary Examiner in order to redraft the issue so as to confine it to what was patentable. The Commissioner denied this application, for the reason that, when one construction of claims would make them unpatentable and another would make them valid, the latter construction is the one that should be adopted. Upon Kirby's appeal from the decision of the Board denying the motion to amend and awarding priority to Clements, the Commissioner affirmed the Board. He held that the narrower construction confining the invention to a structure fitted for and intended for receiving the removable hose-tube was the right construction; that the broadest one (and probably he means the moderately broad one) would make the invention unpatentable; and that, with this view, there was no occasion for Kirby to amend his primary statement, and the case against him on priority was clear. There was then an appeal to the court of appeals of the District. Error was assigned because Kirby should have been allowed to amend his preliminary statement and because priority should have been allowed to him. The court of appeals, on May 28, 1915, filed its opinion in which it gave its attention mainly to the distinction between the broad and narrow constructions of the issue, and held that it should have, for interference purposes, the broader construction, and concludes:

> It is apparent that appellant's motion to amend his preliminary statement would have been granted, but for the interpretation placed upon the claim, and we are of the opinion that it should have been. His evidence very clearly establishes the fact that, several months prior to the earliest date which may be given the appellee, he manufactured and sold cleaners answering the requirements of the counts as we have construed them. The decision is therefore reversed and the case returned to the Patent Office for appropriate action.

Thereupon the various tribunals of the Patent Office took the view that the interference had been finally decided by the court of appeals, and that an award of priority to Kirby had been made by that court, and that a patent must issue to him, and not to Clements, containing the claims which formed the issues in the interference. Clements moved that the claims be amended, so as to specify the narrow construction, and that priority be thereupon awarded to him. The Commissioner denied this motion upon the ground that the court of appeals decision was conclusive, both as to what was decided and as to what might have been decided. Clements then moved to dissolve the interference upon the ground that under the broad construction the issue was unpatentable. The Commissioner refused to accept this view, holding again that the Patent Office had no further authority to consider the question of priority, and that there was no longer any existing interference. Clements then amended his application, inserting claims positively including the hose connection as an element. These claims were rejected on the interference record. Clements appealed to the Board, and the Board affirmed. Clements appealed to the Commissioner, and the Commissioner affirmed. In the meantime, and while this last appeal was pending before the Board, and on the 22d day of May, 1916, the patent issued to Kirby, containing the claims which had been in interference and five others, which included the removable tube as a positive element; and Clements, on June 16, 1916, filed this bill in the court below, under Revised Statutes, section 4915, (U. S. C. S. sec. 9460.)

The parties made a stipulation that a copy of the interference record should be received in evidence, and, together with copies of patents and other proceedings, should constitute the entire record in the case. It being thus ready for final hearing, Kirby made a motion to dismiss, upon two grounds: first, that such a bill was maintainable only after the refusal of the patent by the court of appeals, which refusal the bill did not allege; and, second, that, if there had been such refusal, Clements's proceeding in the Patent Office was abandoned under Revised Statutes, section 4894, (U. S. C. S. sec. 9438,) by failure to prosecute within a year after the last action. The bill was permitted to be amended to allege, in terms, a refusal by the court of appeals through the proceedings which had been recited, and the court postponed the motion for argument until the final hearing. Upon such hearing, the bill was dismissed, because not filed within a year after the action of the court of appeals, and with an opinion which did not indicate that the trial court had considered any other question.

The result reached by the Patent Office tribunals has worked a plain miscarriage of justice. It is beyond reasonable doubt that Clements, and not Kirby, was the first to use the inserted tube to shift the intake-nozzle to the distant position, or to think of using it, or to make a device which accomplished this result. It had been held by the Primary Examiner, by the Examiner of Interferences, by the Board, and by the Commissioner that this was the only patentable invention involved, and this conclusion was not criticised by the court of appeals; yet the patent therefor has been issued to Kirby and refused to Clements.

The question chiefly considered by the court below, and to which the arguments of counsel are largely directed, is whether an applicant, who is refused a patent by the Commissioner, must exhaust any existing remedy by appeal to the court of appeals, before he may resort to his remedy under section 4915. It is claimed for Clements that a resort to appeal is optional by the very words of the statute, "refused, either by the Commissioner *or* by the * * * court," that the legislative history of the law confirms this view, and that the decisions to the contrary are *obiter* or ill-considered; while it is contended for Kirby that we should apply what is called the distributive theory, and hold that, in those cases where there is no appeal from the action of the Commissioner to the court of appeals, his final action should be treated as the refusal contemplated by section 4915, while, in those cases which may be appealed, this remedy must be followed before the other remedy can be invoked. See *Smith* v. *Muller*, (C. C.,) (75 Fed., 612;) *McKnight* v. *Metal Co.*, (C. C.,) (128 Fed., 51). We do not find it necessary to decide this question, and for the purposes of this opinion only we accept the distributive theory; and we come to consider the character of the action which the court of appeals took in this case.

It is not clear, on this fact [illegible] whether the court of appeals intended to [illegible] what we have called the [illegible] of the [illegible] We have concluded that the latter was the true intent. It seems quite obvious that there was nothing patentable in merely [illegible] and [illegible] claims which, under the construction given to the [illegible] by the Patent Office tribunals had all held that this was not new with [illegible] party, and that to give the term this broadest construction would [illegible] and the Commissioner and apparently [illegible] broad construction of an interference issue would make it unpatentable and the narrow one would make it patentable, the narrow should be taken as the true meaning. The court of appeals did not criticise any of these conclusions. The cases upon which it relied, (*Miet* v. *Young*, 29 App. D. C., 251; *Lindmark* v. *Hodgkinson*, 31 App. D. C., 612,) to the effect that the broader construction should be adopted, did not disclose any such situation as here existed, but pertained to situations where there was a possible choice between broad and narrow without destroying the whole subject-matter.

A claim to that precise adaptability, which would permit the insertion of the tube so as to make a fairly close joint at each opening, and thereby, of itself, cut off the suction from one nozzle and transfer it to the other, was not anticipated upon this record, and that limitation is fairly called for by the language of the issue. The two openings do not "register," nor is the inner opening "adapted to receive * * * a hose tube extending into the inner opening," nor are the two "openings adapted to receive an inlet tube" in the sense which the context fairly requires, unless the inner opening is not only in suitable alinement with, but is at least no larger than, the outer one; for, if it is larger, no tube which can pass through the outer opening can be received in or extended into the inner opening in such manner as to cut off the suction and accomplish the sole object of the invention. True, the fan suction might have been powerful enough, so that a leak around the outside of the tube when it entered the inner opening would have only weakened and not destroyed the suction pull at the distant nozzle; but substantially to cut off the primary nozzle was the whole object of the invention, and this required the close adaptation and registration. A consideration of all the circumstances, aided by the strong presumption that the court of appeals did not intend to do a vain thing, requires that this meaning should be given to its reference to "the broadest interpretation which they will reasonably support" and to the structure which "would readily permit the change from one kind of cleaner to another."

(1) We must have grave doubt whether the action of the court of appeals was intended to be an award of priority to Kirby upon an issue as to which Clements could persuasively claim he had never been heard, or to be anything more than a remand to permit an amendment of the pleadings and further proceedings thereon; but we pass that question and assume that, as Kirby contends, the action of the court is rightly to be constructed as an award of priority upon the two claims involved, and as final, in the sense that the Patent Office could only execute and not review. Was, then, the filing of this bill barred by the delay of more than one year between May 28, 1915, and June 16, 1916? There is no limitation statute which provides that a bill, under section 4915, based upon a refusal by the Commissioner or the court of appeals, must be filed within one year after such refusal—as counsel in argument seem more or less to assume. The only limitation of this character results from the [illegible] [illegible] [illegible]

lost, was error. The court below did not consider the merits, but that does not affect our duty to do so. The record was complete and there was a final hearing. The settled policy of the law is against piecemeal appeals, and they are approved only in special cases. We see no reason why the case should go back for further hearing. It is true that the physical exhibits used in the interference were not shown to the court below, and those for Kirby have not been sent to this court; but the interference record makes it clear that they are cumulative and of no controlling importance.

(5) It is well established that the court appealed to under section 4915 has full jurisdiction to re-examine all matters determined by the court of appeals. The latter becomes, for this purpose, one of the tribunals of the Patent Office, and its decision is in no sense a final decree, which cannot be thus collaterally attacked, though it will be followed unless the contrary is established by convincing testimony. (*Morgan* v. *Daniels*, 153 U. S., 120; 14 Sup. Ct., 772; 38 L. Ed., 657; *Coursen* v. *O'Connor*, (C. C. A., 7,) 227 Fed., 390, 394; 142 C. C. A., 414; and see *Baldwin Co.* v. *Howard Co.*, (Apr. 11, 1921,) 254 U. S. ——; 41 Sup. Ct., 405; 65 L. Ed. ——.)

(6) It is clear to us that, upon the moderately broad issue as we have defined it, priority should have been awarded to Clements, and that the record permits no other result. Kirby himself testifies that in his structure of September, 1910, the inner opening was so much larger than the outer one (five-sixteenth of an inch in diameter) that any tube which could have been inserted through the latter into the former would not have cut off the suction-chamber, and that, about the 1st of May, 1911, he first thought of accomplishing the object of the invention in controversy, and he did so by extending the tube across the suction-chamber and by enlarging the outer opening so as to make it the same size as the inner one, so that the tube would fit both. Thus he, for the first time, conceived and reduced to practice the "registering" and the "adaptability" which are called for by the claims, even with the moderately broad construction which we think the court of appeals gave to them. Clements's priority in this respect was found by all the Patent Office tribunals and is hardly in dispute. It seems that the court of appeals overlooked the insufficiency of Kirby's construction of September, 1910, in the respect to which we have referred; and counsel for Clements say, in effect, that they did not call the court's attention to it because not believing that it could become material.

If the patent had not issued to Kirby, there might be embarrassment about granting relief to Clements as to his narrower claims, because they would not have been subjected to that revision and modification which ought to precede the action of the court, and mandamus might be necessary; but Clements is asking precisely and only the claims which the Patent Office has found properly formulated and allowable, as against all prior rights, and has included in the patent issued to Kirby. They are seven in number. The first two are those which were in interference. The remaining five are different formulations of the narrower conception, which include the hose connection or tube as a positive element. The formal objections of the Patent Office on the ground of aggregation have been overcome, either by a change of opinion on its part or by some particular wording which avoids the objections—it is not material to determine which.

(7) The decree should be reversed, and the record remanded, with instructions to enter a decree in favor of Clements pursuant to this opinion. The costs of this court and of the court below should go against Kirby. We think that the provision of section 4915, that—

all the expenses of the proceeding shall be paid by the applicant whether the final decision is in his favor or not,

applies only to those cases which had just been mentioned, viz., "where there is no opposing party" and the papers are served on the Commissioner only.

ADJUDICATED PATENTS.

(U. S. C. C. A. N. Y.) The Munger patent, No. 888,568, for demountable rim for automobile-tires, *Held* valid and infringed. *Munger* v. *Perlman Rim Corporation*, 275 Fed. Rep., 21.

(U. S. D. C. R. I.) The Sampson design patent, No. 55,428, for design for collar-holder, *Held* valid and infringed. *Sampson* v. *Silverman*, 275 Fed. Rep., 123.

Patents Nos. 1,306,219 to 1,306,953.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 292—No. 5. TUESDAY, NOVEMBER 29, 1921. Price—$5 per year.
(PUBLISHED DECEMBER 2, 1921.)

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Interference Notices.

Department of the Interior,
United States Patent Office,
Washington, D. C., November 9, 1921.

Adolph Fuchs, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Joseph R. Pellegrino, Massena, N. Y., for patent and patent granted December 16, 1919, No. 1,325,193, to Adolph Fuchs, 238 Holbrook avenue, Detroit, Mich., and a notice of such declaration sent by registered mail to Fuchs at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Adolph Fuchs, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Department of the Interior,
United States Patent Office,
Washington, D. C., November 9, 1921.

Russel & Miller Milling Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Edgar O. Challenger, of Produce Exchange, New York, N. Y., for registration of a trade-mark and trade-mark registered December 24 1895, No. 27,508, to Russel & Miller Milling Co., of Valley City, N. D., and West Superior, Wis., and a notice of such declaration sent by registered mail to said Russel & Miller Milling Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Russel & Miller Milling Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Department of the Interior,
United States Patent Office,
Washington, D. C., November 21, 1921.

Julius Medvecsky, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the patent of Francis W. Borkes, 1006 East 27th street, Cleveland, Ohio, granted Nov. 4, 1919, No. 1,320,528, and application for patent of Julius Medvecsky, 95 Wilbur avenue, Long Island City, N. Y., and a notice of such declaration sent by registered mail to Medvecsky at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Medvecsky, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

KARL FENNING,
Assistant Commissioner.

Department of the Interior,
United States Patent Office,
Washington, D. C., November 23, 1921.

Travers Bros. Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Columbian Rope Company, Auburn, N. Y., for registration of a trade-mark and trade-mark registered Mar. 12, 1901, No. 36,034 to Travers Bros. Co., 107 Duane street, New York, N. Y., and a notice of such declaration sent by registered mail to Travers Bros. Co. at the said address having been returned by the post-office undeliverable, notice is hereby given that unless said Travers Bros. Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Asst. Commissioner.

NOTICE—DESIGN PATENTS.

When an application for a design patent is found allowable, the patent will be granted for the term asked in the application papers unless specific request has been made for notice prior to allowance so that the term may be extended. Hereafter the Office will delay allowance and notify the applicant ONLY in cases where a specific request is filed.

Condition of Applications Under Examination at Close of Business November 19, 1921.

Room No.	Divisions, Examiners, and subjects of inventions. (Oldest new case, Nov. 5; oldest amended, Dec 24.)	Oldest new application and oldest action by Assistant Commissioner since remand. New.	Amended.	No. of pending cases in division.

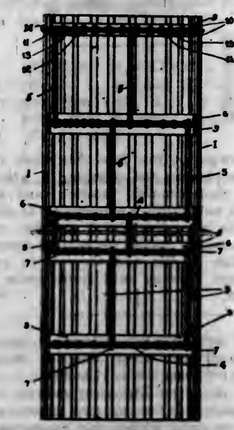
PATENTS

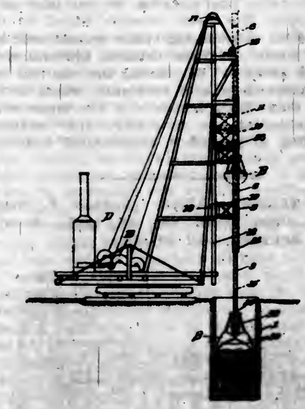
GRANTED NOVEMBER 29, 1921.

1,398,219. BEARING. EDWARD GOODRICH ACHESON, Jr., Niagara Falls, N. Y. Filed Jan. 31, 1921. Serial No. 441,165. 8 Claims. (Cl. 64—10.)



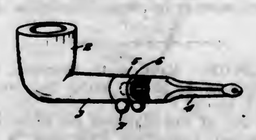
1. A method of forming bearings of the self-lubricating type, which consists in casting the bearing about an inlay of vulcanized fiber impregnated with graphite.

1,398,220. BEARING. EDWARD GOODRICH ACHESON, Jr., Niagara Falls, N. Y. Filed Jan. 31, 1921. Serial No. 441,164. 8 Claims. (Cl. 64—10.)



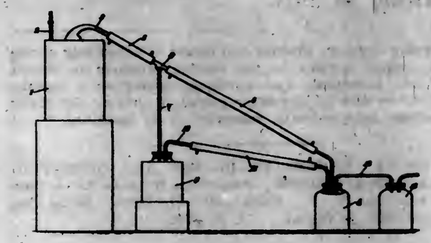
1. A bearing of the character specified, having recesses in the inner face thereof, and filling members of vulcanized fiber impregnated with graphite held in the recesses.

1,398,221. CONSTRUCTION OF CAISSONS, COFFERDAMS, AND THE LIKE. CHARLES S. BOARDMAN, Buffalo, N. Y., assignor to Lackawanna Steel Company, Lackawanna, N. Y., a Corporation of New York. Filed Dec. 18, 1919. Serial No. 345,726. 8 Claims. (Cl. 61—34.)



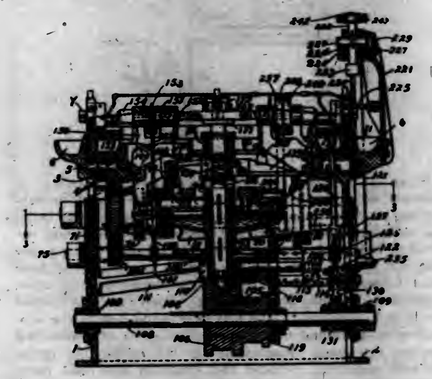
1. A structure of the character described comprising an inclosing wall of steel sheet piling sections and bracing members therefor and means to detachably secure the piling sections to the bracing members to permit of the assembling and handling thereof as a unitary structure and to thereafter permit of driving the piling sections independently, substantially as described.

1,398,222. EXCAVATING-BUCKET AND OPERATING MEANS THEREFOR. FREDERICK WILLIAM BOND, Ransomville, N. Y. Filed Jan. 19, 1920. Serial No. 352,369. 5 Claims. (Cl. 37—30.)



1. An excavating bucket comprising a plurality of movable segments or blades suitably fulcrumed, a supporting cylinder member centrally arranged with relation thereto, inwardly directed operating levers rigidly secured to the respective bucket blades adjacent their upper marginal edges, a centrally arranged operating cylinder fitted to move vertically within the supporting cylinder, connections between the operating cylinder and the bucket levers and supporting links pivotally connected to the supporting cylinder and to the operating levers and operating sheaves supported respectively by the supporting cylinder and operating cylinder and centrally arranged there within, substantially as described.

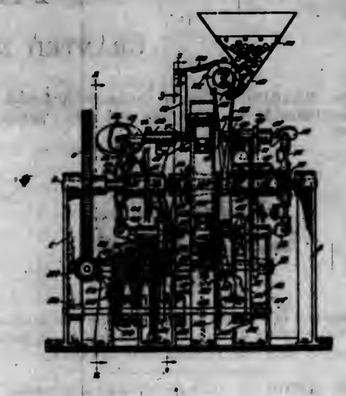
1,398,223. PIPE-REST. FREDERICK E. CHAPMAN, Middletown, Conn. Filed Dec. 26, 1919. Serial No. 347,307. 1 Claim. (Cl. 131—12.)



A pipe including a ferrule having two rests of substantially spherical form and comprising substantially an integral part of said ferrule, the curves of said rests merging directly with the curve of the ferrule, thereby forming an acute angle at the meeting points of the two surfaces.

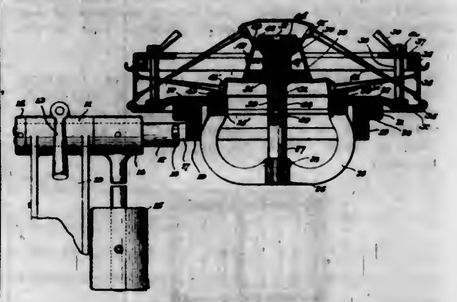
1,398,224. PROCESS FOR PRODUCING HIGHLY-CONCENTRATED HYDROCHLORIC ACID. JOHN FABIAISSON, Elizabeth, N. J., assignor to The Kalbfleisch Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 9, 1918. Serial No. 261,784. 8 Claims. (Cl. 23—1.)

1. The process of producing highly concentrated hydrochloric acid which comprises distilling hydrochloric acid of a strength above 14° Bé., cooling the resulting vapors to form a hydrochloric acid condensate whose HCl content is less than the HCl content of the vapor mixture, and then subjecting the remaining vapor mixture to further cooling to produce a concentrated hydrochloric acid.



1,398,225. TURRET-LATHE. NATHAN F. FRETTER, Cleveland, Ohio. Filed Aug. 18, 1917. Serial No. 186,859. 29 Claims. (Cl. 29—38.)

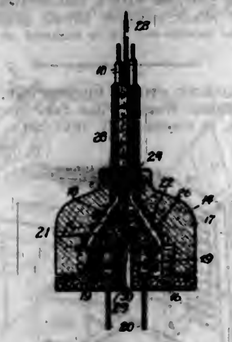
1. In a machine of the character set forth, the combination of a tool, mechanism for operating the tool, a work holder, an actuating member which, when moved in one direction and in a given plane will create relative movement between the tool and work holder, and means for moving said member in reverse directions in different planes.



1,398,226. LATHE. NATHAN F. FRETTER, Cleveland, Ohio. Filed Dec. 5, 1917. Serial No. 205,485. 18 Claims. (Cl. 29—38.)

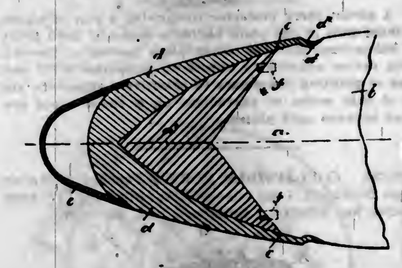
1. In apparatus of the character set forth, the combination of opposed supporting structures, a series of spindles rotatably and reciprocably sustained by each structure, the spindles of each series being disposed about a circle, means for driving the spindles, a cam for moving each spindle longitudinally, a shaft carrying each cam and radially disposed with respect to the circular disposition of the spindles, a shaft parallel to the spindles and situated centrally thereof, gearing through which the latter shaft drives each of the former shafts,

and a tool carried by each spindle and opposed to the tool of the other and between and in operative relation to which tools a piece of work is adapted to be supported.



1,398,227. APPARATUS FOR ASSEMBLING WIRE WHEELS. LEWIS FINN, Philadelphia, Pa., assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 18, 1919. Serial No. 324,527. 18 Claims. (Cl. 29—87.)

1. In an apparatus of the class described, the combination of a table, means for clamping a wheel rim on said table in a predetermined position, and means for clamping a wheel hub, having a plurality of spoke seats formed therein, in a predetermined position relative to said rim, said clamping means permitting access to the inside of said hub at the end thereof, to permit the insertion of spokes through said spoke seats from the inside of said hub.



1,398,228. ATTACHMENT-PLUG. BERTRAM J. GRIGSBY, Chicago, Ill. Filed Jan. 12, 1918. Serial No. 211,530. 11 Claims. (Cl. 173—322.)

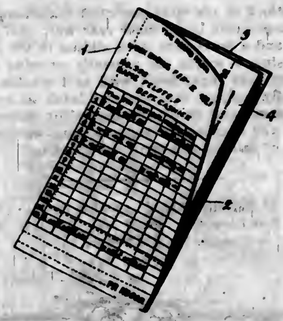
1. Attachment plugs for electrical devices comprising a terminal receptacle embracing two members of insulating material between which the conductors of the cord are adapted to be confined, said members being provided with opposing gripping salients spaced longitudinally of said cord, and the salients of the two members being formed on respective external and internal

tapered portions thereof, with means to force said members toward each other and against said conductors.

1,398,229. ARMOR-PIERCING PROJECTILE. ROBERT ABBOTT HADFIELD, Westminster, and ALEXANDER GEORGE MCKENZIE JACK, Sheffield, England. Filed Dec. 17, 1918. Serial No. 267,202. 10 Claims. (Cl. 102—28.)

1. An armor piercing projectile having a pointed ogival shaped head made in separate parts fitted together one in front of another, the rear part being formed in one piece with the body of the projectile and having its peripheral surface of ogival shape flush with and forming a continuation of the ogival surface of the remaining front portion of the head of the projectile.

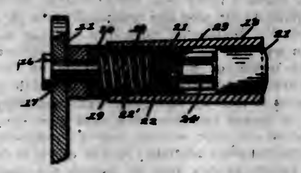
1,398,230. MILKING MACHINERY. SELDEN H. HALL, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 3, 1920. Serial No. 356,000. 4 Claims. (Cl. 31—73.)



1. A vacuum pipe line for a milking system comprising an air pipe adapted for connection at one end to a vacuum pump and at the other end to a milking machine unit, of a coupling interposed in said air pipe and adapted to prevent the passage of contaminating liquids or solids to the vacuum pump, said coupling comprising means to deflect the flow of air, a receptacle at the air deflecting point wherein said contaminating liquids or solids are trapped, and means to reduce the speed of the air outgoing from the receptacle below the speed of the incoming air.

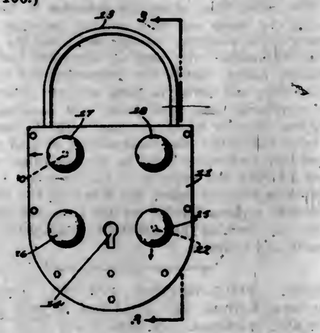
2. A vacuum pump line for a milking machine system comprising an air pipe line composed of an air pipe section adapted for connection with the milking machine unit and an air pipe section adapted for connection with a vacuum pump, of a coupling having an inwardly and downwardly extending inlet connected with the first air pipe section and an upwardly and outwardly extending outlet of larger capacity than said inlet connected with the second air pipe section, and a receptacle suspended from said coupling wherein the flow of air is deflected and which functions as a trap to prevent the passage of contaminating liquids or solids from the first air pipe section to the second air pipe section.

3. The combination with a vacuum pipe line for a milking system, having a vacuum pump and a milking machine connection, of an air deflector in said pipe line between the pump and said milking machine connection, comprising a coupling having an inwardly and downwardly extending inlet and an upwardly and outwardly extending outlet of larger capacity than said inlet, means for connecting the vacuum pipe to said inlet and outlet to form air-tight joints, a removable receptacle suspended from said coupling having a receiving chamber communicating with the lower ends of the inlet and outlet, and means for forming an air-tight joint between the receptacle and coupling.



4. The combination with a vacuum pipe line for a milking system, having a vacuum pump and a milking machine connection, of an air deflector in said pipe line between the pump and said milking machine connection, comprising a coupling having an inwardly and downwardly extending inlet and an upwardly and outwardly extending outlet, means for connecting the vacuum pipe to said inlet and outlet to form air-tight joints, a removable receptacle suspended from said coupling having a receiving chamber communicating with the lower ends of the inlet and outlet, the cross-section of said outlet being of gradual decreasing area in the direction of the flow of air whereby the velocity of the outgoing air from the chamber is reduced below the speed of the incoming air to prevent sucking foreign matter from the chamber, and means for forming an air-tight joint between the receptacle and coupling.

1,398,231. TIME-RECORD FOLDER. CHRISTIAN H. HANSEN, Norfolk, Va. Filed Dec. 6, 1920. Serial No. 428,655. 2 Claims. (Cl. 285—1.)

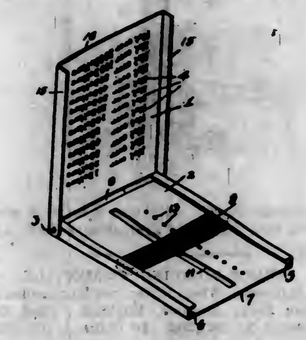


1. The combination with a folder bearing an appropriate imprint adapted to receive a time card record thereon, of a pay envelop adapted to be inserted in said folder, said envelop having an independent differently printed time record thereon covering a period of time similar to the record on said folder whereby to balance the record on said folder, and bearing data to identify it with said folder.

1,398,282. LOCKING DEVICE FOR OPERATING-HANDLES. MAXIM JACOBSKY, New York, N. Y. Filed Mar. 23, 1921. Serial No. 454,694. 3 Claims. (Cl. 70—128.)

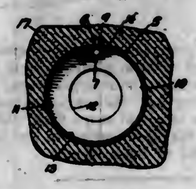
1. A lock of the character described comprising a stationary fork, a controller lever, a hollow handle having a reduced end, a bolt passed into said handle and secured to said lever, a sleeve within said handle connected therewith, means for normally holding said handle on said bolt in its forward position with its reduced end between the prongs of said fork, means for locking the handle in this position, and means for permitting a withdrawal of said handle and of its reduced end from between the prongs of said fork, for allowing an operation of the controller by said bolt and handle.

1,398,233. PADLOCK. ANDY KULIKOFF, Pittsburgh, Pa. Filed May 3, 1921. Serial No. 466,452. 4 Claims. (Cl. 70—106.)



2. A padlock of the class described comprising a casing having a depression in its inner rear wall, and a shackle, a vertical and a horizontal latch sliding in the depression of said casing, a spring for normally pressing said horizontal latch into engagement with said shackle, a spring for normally holding said vertical latch in engagement with said horizontal latch, and means for successively interrupting the engagement between both latches and between one of said latches with the shackle.

1,398,234. COMBINATION ANGLE-TOOL. HARRY A. LANDIS, Red Lion, Pa. Filed Mar. 2, 1921. Serial No. 449,039. 4 Claims. (Cl. 145—67.)

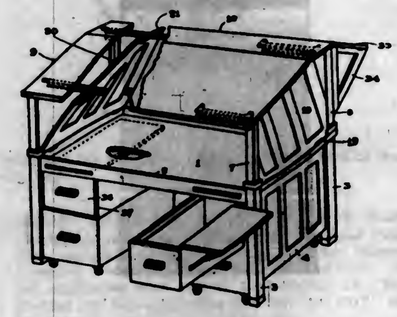


1. A tool of the class described comprising a handle or manipulating section, and a universal joint member including a jointed incasement and joined shank members loosely journaled in said incasement and adapted to flex to any angle within substantially 90°, one of said shank members being provided with a tool-receiving socket, the other of said shank members having projecting means with which the handle section is adapted to interlock.

1,398,235. POCKET CHECK-PROTECTOR. OTIS KARL LINSCOTT, Tekoa, Wash. Filed June 27, 1921. Serial No. 480,646. 6 Claims. (Cl. 101—297.)

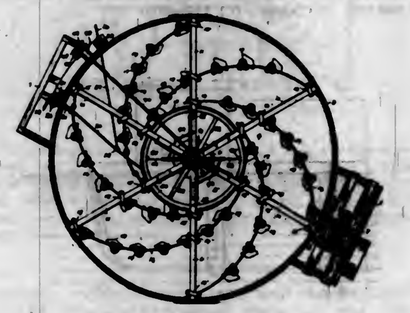
1. A pocket check protector comprising a pair of plates, the inner face of one plate having a series of fixed printing characters, and the other plate having a movable inking device adapted to selectively coöperate with said series of printing characters to selectively reproduce any one of said series of characters on a check when presented between said plates.

1,398,236. COLLAPSIBLE CORE. FREDERICK MEYER, East Northport, Long Island, N. Y. Filed Feb. 17, 1920. Serial No. 359,219. 4 Claims. (Cl. 25—128.)



1. A collapsible core for use in constructing concrete bodies and the like, said core comprising an open tube composed of spring material, one of the free side edge portions of said core being provided with an inwardly directed bead, a shoulder in connection with which the other side edge portion of the core operates to form a continuous core which is normally closed by the spring qualities thereof, and ring members adapted to operate within the core at the end portions thereof, said ring members being cut out to receive said bead and serving to lock the side portions of the core against inward movement.

1,398,237. DESK. JOHN MICHAELS, Westmount, Quebec, Canada. Filed Dec. 27, 1920. Serial No. 433,406. 7 Claims. (Cl. 45—6.)

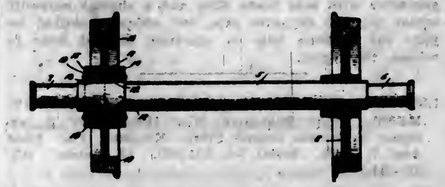


1. A desk comprising a frame supported from the floor at each corner, a table top having a writing section and a ledge section hinged together and having supports from writing section and ledge projecting downwardly into and vertically slidable in said frame adjacent to the ends, a plurality of cables engaging said table top supports at

the lower portions thereof and passing over pulleys for lifting said writing and said ledge sections of the top, weights attached to said cables and approximating the

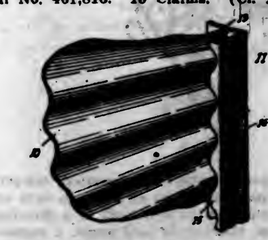
weight of the table and its supports and panels at the ends forming rigid supports for the writing top and ledge in the extreme high position of said table top.

1,398,238. MIXING-MACHINE. HUGH MISCAMPBELL, Duluth, Minn. Filed Mar. 26, 1921. Serial No. 455,876. 3 Claims. (Cl. 259—34.)



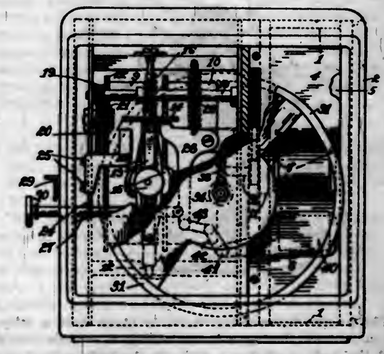
1. The combination with a rotative mixer of the class described comprising a rotative receptacle having a centrally disposed concentric drum therein, of a plurality of radially disposed arms extending outwardly from the axis of said drum, spirally disposed plow supporting beams carried by said radially disposed arms, spaced plow stanchions fixed to said beams and depending therefrom, and plows fixed to the lower ends of said stanchions, those upon the stanchions supported by one beam being set to act in the opposite direction to those carried by the next adjacent beams, substantially as and for the purpose described.

1,398,239. SOLVENT FOR PYROXYLIN BODIES. ROWLAND BRITTAIN MITCHELL, Athol, Mass., assignor to Athol Manufacturing Company, Athol, Mass., a Corporation of Massachusetts. Filed Sept. 22, 1920. Serial No. 411,960. 6 Claims. (Cl. 134—79.)



6. A pyroxylin solvent mixture containing acetone, an aliphatic alcohol, a lower member of the benzene series of hydrocarbons and acetanilid.

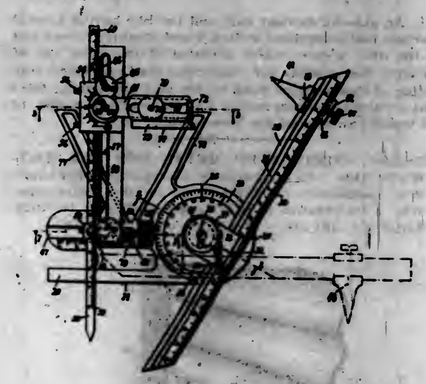
1,398,240. AXLE. GEORGE F. MORGAN, New York, N. Y. Filed July 14, 1921. Serial No. 484,591. 2 Claims. (Cl. 295—35.)



1. An axle for railway cars and the like having journal bearings and comprising a fixed wheel mounted at one end of the axle, a loose wheel mounted at the other end of the axle, and a collar for supporting the loose wheel consisting of two sections fixed on the axle and having their line of division substantially half way of the length of the bearing surface of the loose wheel.

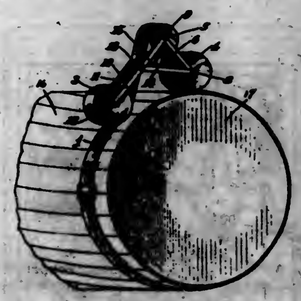
1,398,241. CORRUGATED METAL END FOR RAILWAY-CARS. CARL THEODOR OSTERBERG, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Apr. 16, 1921. Serial No. 461,816. 15 Claims. (Cl. 105—410.)

1. In a railway car construction, a corrugated metallic end plate, in combination with a pair of angular corner posts each having an end flange or web for attachment of the end plate, means for damming the outer valleys of the corrugated end plate at the vertical edge of the end flange or web, and means for securing the corrugated end plate to the corner posts at points between the dams and the angle of the post.



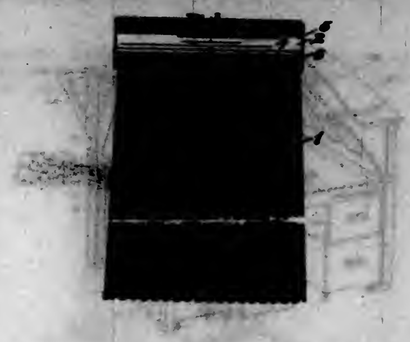
1,398,242. SHUTTER FOR MOTION-PICTURE APPARATUS. REINHART W. PITTMAN, New York, N. Y. Filed Sept. 3, 1920. Serial No. 407,891. 5 Claims. (Cl. 88—19.4.)

1. In a camera, the combination of film feeding means to intermittently advance the film, a motor arranged to



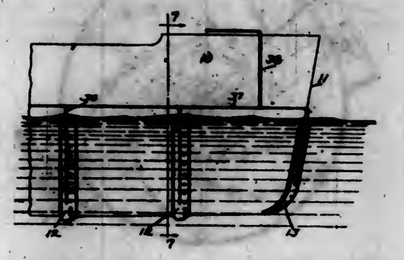
actuate the feeding means, a speed governor for the motor including a disk and a stationary arm, a control lever arranged to stop the feed mechanism and motor by engagement with said brake disk, and a shutter normally across the film exposure axis, but which is shifted beyond the exposure axis on operation of said lever to release the motor.

1,398,243. MEASURING AND PLOTTING INSTRUMENT. FRITZ ROSSKOPF, West Hoboken, N. J., assignor to Martin Joseph Prisio, Kingston, Pa. Filed Aug. 7, 1920. Serial No. 401,930. 13 Claims. (Cl. 33—94.)



1. An instrument of the class described, comprising a body having arms arranged at an angle to each other, a slide movable relatively to said body in a direction perpendicular to the bisectrix of said angle, a member connected to move in unison with said slide and having an edge parallel to said bisectrix, and an arm pivoted to said member.

1,398,244. PROCESS OF PRODUCING LAMINATED CONSTRUCTIONS AND APPARATUS FOR USE IN CONNECTION THEREWITH. STEPHEN THOMAS, Long Island City, N. Y., assignor, by mesne assignments, to L-W-F Engineering Company, Inc., College Point, Long Island, N. Y., a Corporation of New York. Filed Mar. 21, 1917. Serial No. 156,485. 11 Claims. (Cl. 154—2.)



2. The process of securing strips in place upon a body, which comprises placing a band having a shiftable arch around the body, applying a strip to the body within the arch, and shifting the arch to place the pressure of the band on the strip.

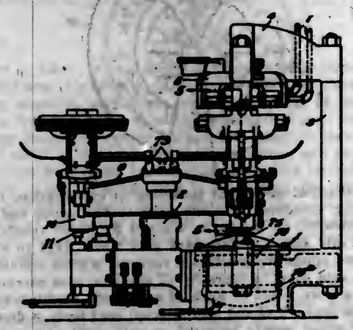
1,398,245. MOP. SAMSON L. TOVLETS, New York, N. Y. Filed Jan. 28, 1921. Serial No. 439,784. 1 Claim. (Cl. 15—54.)

A mop comprising a bundle of mop material, a continuous reinforcing strip extending completely around the mop material and secured thereto, the mop material and strip being doubled over with the meeting edges of said strip secured together to form a loop at the upper end of the mop, with an aperture extending through said strip on the line of the fold to the interior of said loop.

1,398,246. APPARATUS FOR SUPPLYING AIR TO THE EXTERIOR OF HULLS OF SHIPS. F. G. TRASK, Ross, N. D. Filed May 27, 1919. Serial No. 300,108. 4 Claims. (Cl. 114—67.)

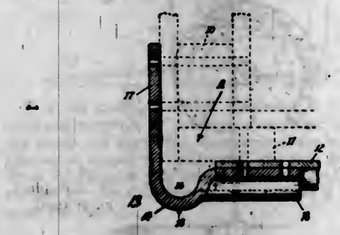
1. In apparatus of the character described, an inner plate curved longitudinally to conform to the curvature of the hull of the ship and secured thereto, an outer shell arranged near the plate and extending in proximity thereto throughout substantially its entire length, said outer shell having one edge thereof spaced from the plate to provide an air discharge slot, said outer shell having a top, a strip of elastic material carried by the top and adapted to engage with the inner plate, a set of pins connected with the outer shell and having screw-threaded engagement with the inner plate, and compressible coil springs surrounding the pins and arranged between the outer shell and the inner plate, and means to supply compressed air into the outer shell.

1,398,247. APPLIANCE FOR HOLDING FILMS FOR DENTAL RADIOGRAPHS. THOMAS B. S. WALLACE, Chicago, Ill. Filed Feb. 24, 1920. Serial No. 360,891. 10 Claims. (Cl. 250—94.)



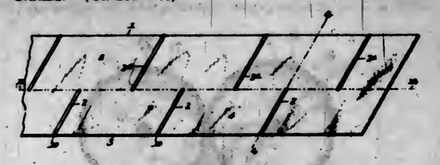
1. A holder for film packs for dental X-ray photography comprising separable coöperating members provided with

spring elements adapted to engage a film pack and having elements for positioning the holder with reference to the



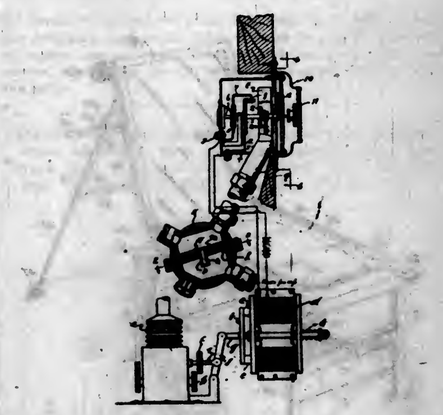
teeth and for manually holding said structure in desired positions.

1,398,248. IRONING-MACHINE. CHARLES E. WARNAM, Cincinnati, and DANA H. BENJAMIN, Cleveland Heights, Ohio, assignors to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Original application filed July 2, 1917, Serial No. 178,286. Divided and this application filed Nov. 13, 1917. Serial No. 201,786. 17 Claims. (Cl. 68—9.)



2. An ironing machine, comprising a bed, a coöperating chest, said bed and chest being relatively movable, a neckband former, a back corner ironer movable into coöperating relation with the neckband former, an automatic means actuated by operation of the machine for producing said ironer movement.

1,398,249. CORRUGATED-METAL END FOR RAILWAY-CARS. WILLIAM F. WOODLAND, Wauwatosa, Wis. Filed Apr. 16, 1921. Serial No. 461,766. 13 Claims. (Cl. 105—410.)

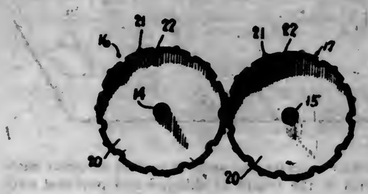


9. In a railway car end construction, a pressed-steel corner post having a corrugated end flange and a side attaching flange angularly disposed with relation thereto, the corrugations of the end flange extending from the edge of the post toward the angle formed by the flanges and being gradually merged therein.

1,398,250. SHEET-ROOFING. EDWARD J. YETTER, Denver, Colo. Filed May 9, 1921. Serial No. 468,097. 7 Claims. (Cl. 108—7.)

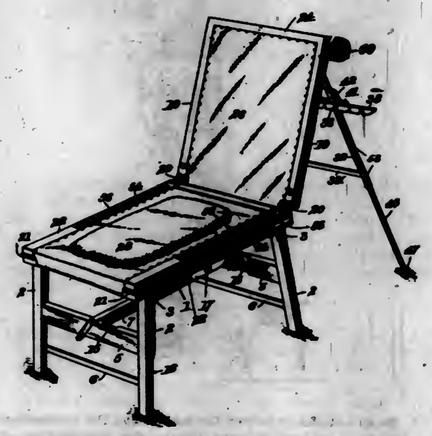
1. A shingle representing strip of roofing material made of the width of the length of shingles and provided with raised rib members on its weather exposed side positioned in offset centrally spaced order in two rows along the length of said strip and arranged to define the outlines of separately laid shingles having an exposed surface of standard width.

1,398,251. AIR-COMPRESSING APPARATUS. HENRY J. APPLETON, Detroit, Mich. Filed Mar. 24, 1920. Serial No. 368,280. 6 Claims. (Cl. 200—81.)



1. In an automatic switch for controlling the connection or disconnection with driving means, the combination of a rotating switch element provided with a metal portion and a fiber portion, a magnet that can be set at a determined position in the path of rotation of the rotating switch element and pushed into contact with the metal portions to establish a circuit until the rotation of the switch element brings the fiber portion around and breaks the circuit, and means for driving the rotating switch element in rotation in accordance with the increase in pressure in a container.

1,398,252. CIDER-PRESS. ARLIE BARTLEMAY, Bluffton, Ind., assignor to Red Cross Manufacturing Company, Bluffton, Ind. Filed Oct. 16, 1919. Serial No. 331,227. 1 Claim. (Cl. 100—47.)



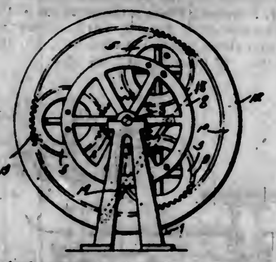
In apparatus of the character described, a crushing and pressing element comprising a body mounted for rotation, said body being of general cylindrical configuration and having longitudinally disposed ribs standing out radially beyond its general periphery and having longitudinally disposed grooves located in its peripheral portion, the ribs being spaced at equal distances apart, the grooves being spaced at equal distances apart, the spaces between the ribs being equal in transverse dimension to the corresponding dimension of the spaces between the grooves, the transverse dimensions of the ribs being less than the transverse

dimensions of the grooves, the ribs being located midway between the grooves and spaced from the adjacent edges

thereof whereby arcuate sections of the peripheral portion of the body are interposed between the adjacent edges of the ribs and grooves.

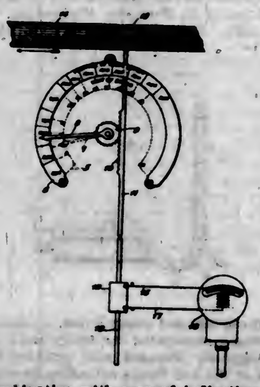
1,398,253. FOLDING CHAIR AND BED. FRANK BLANDO, New York, N. Y. Filed Feb. 23, 1921. Serial No. 447,130. 10 Claims. (Cl. 155—49.)

1. In a folding chair, the combination with hinged legs, of cross pieces connecting said legs together in pairs, a brace having notches to engage certain of said cross pieces for retaining the legs in extended position, an arm hinged to the chair and to said brace for supporting the latter and permitting it to be folded flat upon the chair when disengaged from said cross pieces, said legs being adapted to fold upon one another over said brace, and a latch mounted on said arm to engage over a cross piece extending between the folded outer pair of legs for retaining both pairs in folded position.



1,398,254. OIL-BURNER. CARL E. BROWN, Columbus, Ohio, assignor to Parker Manufacturing Company, Dayton, Ohio. Filed July 9, 1919. Serial No. 309,694. Renewed Oct. 3, 1921. Serial No. 505,113. 1 Claim. (Cl. 158—64.)

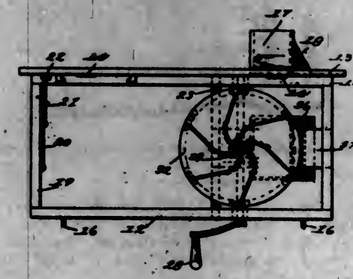
A burner comprising a casing having a flue provided with openings; a support on the casing; and a U-shaped generator embodying an upper arm slidably mounted on the support, and a lower arm slidably mounted in the openings, the lower arm having a combustion orifice normally located within the flue and adapted to be disposed outside of the flue when the generator is slid endwise, the openings in the flue being elongated transversely of the casing, whereby the generator may be slid transversely from a



point relatively close to one side of the casing, to a point relatively close to the opposite side of the casing.

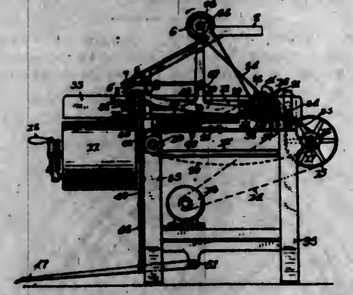
1,398,255. GEARING. WILLIAM BRUBAKER, Tolna, N. D. Filed Jan. 13, 1919. Serial No. 270,968. 1 Claim. (Cl. 74—34.)

A mechanical movement including in combination, two supporting standards, a shaft fixed to the upper end of said standards, an internally toothed fly wheel revolubly held on said shaft, a stationary gear wheel fixed to said shaft, two oppositely positioned carrying wheels revolubly held on said shaft, a plurality of studs on said carrying-wheels, a gear wheel on each of said studs meshing with said fixed gear wheel and said internal gear teeth, a driven sprocket wheel loosely mounted on said shaft adjacent to said flywheel, and a pitman connecting said driven sprocket wheel to one of said stud-wheels, whereby on rotating said fly wheel, said connected sprocket wheel is rotated, as and in the manner set forth.



1,398,256. VALVE-CUT-OFF-CORRECTION INSTRUMENT FOR LOCOMOTIVES. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y. Filed May 28, 1920. Serial No. 384,854. 9 Claims. (Cl. 234—1.)

1. The combination with a speed indicating instrument for locomotives, of an indicating device associated with



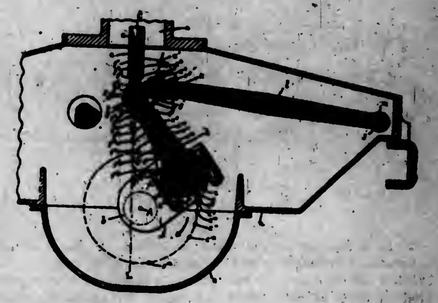
the speed indicator, and to be read in conjunction with the latter, said device having means operatively connected with the valve operating means whereby the correct position of the cylinder valve cut-off can be maintained in accordance with the driving speed, as indicated by said indicating instrument.

1,398,257. CABBAGE-SLICER. MIKE CHERASTEK, Passaic, N. J. Filed Apr. 7, 1920. Serial No. 371,844. 1 Claim. (Cl. 146—11.)

In a slicer of the character described, a cutter disk, comprising a plurality of wings, beveled and curved cutting edges on said wings, the cutting edge of one wing in a different plane than the edge of the next adjoining wing, bands to connect the meeting edges of two adjoining wings at the periphery of said cutter, and means for securing said bands to said wings, a spider having a plurality of curved wings with beveled edges, the inner ends of said first named wings adapted to be secured to the wings of said spider by rivets passed from above into said spider wings, substantially as described and for the purpose set forth.

1,398,258. NAILING AND TACKING MACHINE. HERBERT E. COOLEY, West Bend, Wis. Filed June 22, 1918. Serial No. 241,827. 8 Claims. (Cl. 144—2.)

1. A box nailing machine comprising a frame, a drum rotatably mounted at one end, a clamping bar pivoted to the frame and extending lengthwise above the drum, foot-controlled means for depressing the bar down onto the drum to clamp a box forming sheet thereto and means carried by the clamping bar for nailing a sheet wound upon the drum.



1,398,259. TIRE-COVER. HARRY S. DUBB, New York, N. Y. Filed Oct. 16, 1920. Serial No. 417,400. 1 Claim. (Cl. 150—54.)

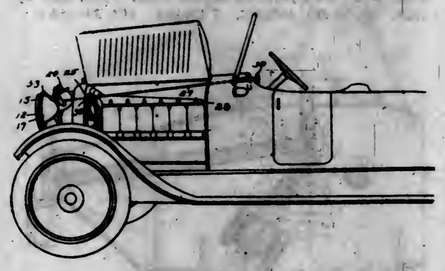
A tire cover consisting of a pair of spaced apart circular side walls, a permanent peripheral strip secured along the outer edges of said side walls for approximately one half the circumference thereof, stringers secured along the remaining portions of the peripheral edges of said side walls between the ends of said permanent strip, and having series of interlockingly engageable fingers, a slide

for interlocking and releasing said fingers, movable along the stringers, and cover strips secured to overlie the said stringers, one of which has an inwardly projecting flap normally covering the series of interlocking fingers and the slide.

1,398,260. ENGINE-DRIVE. EUGENE A. FORD, Newton, Mass., assignor to R. E. D. Engine Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 14, 1921. Serial No. 452,362. 7 Claims. (Cl. 74—14.)

3. In an engine, a cylinder, a crank-shaft, piston rod, connecting rod and guide link, said guide link being mounted on a fixed pivot at one side of the center line of the cylinder and the connecting rod having a laterally projecting arm beside the wrist connection which is pivoted to said link, and the crank being set at one side of the cylinder center line toward the pivot of the link.

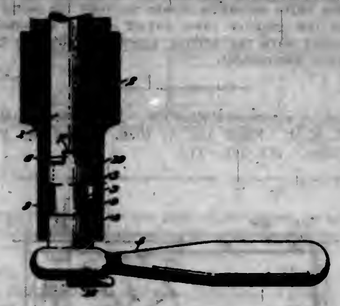
1,398,261. METAL CONTAINER. HUGO P. GRIESER, New York, N. Y. Filed Sept. 23, 1920. Serial No. 412,273. 11 Claims. (Cl. 220—67.)



1. A sheet metal container adapted to receive contents liable to fermentation, said container provided with sheet metal ends, the ends and body of the container being connected by an air-tight seal, said ends provided with a plurality of outwardly projecting corrugated ribs, the corrugations being so spaced as to prevent the flexing of the metal between corrugations, the corrugations through-

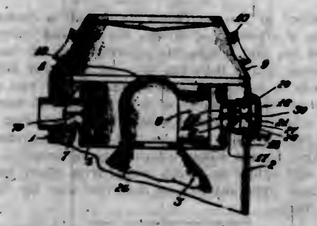
out their length rising to the level of the edge of the rim of the container, so that adjacent containers when stacked one on top of the other will have the corrugations of their adjacent tops and bottoms in contact with each other, the

distance between the ends of adjacent containers being filled with the metal corrugations, whereby the adjacent ends as well as the rims support each other against the shock of their contents.



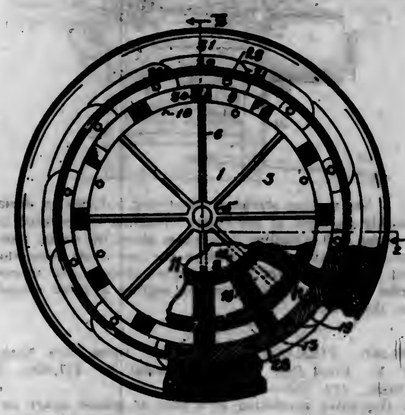
1,398,262. CONTROLLING DEVICE FOR AUTOMOBILE-HEADLIGHTS. JAMES E. GRAY, Newton, Iowa. Filed Oct. 18, 1920. Serial No. 416,709. 3 Claims. (Cl. 240—61.)

2. In a device of the class described, a plurality of supports, a horizontal shaft pivoted in said supports, a bracket on each end of said shaft, a lamp vertically pivoted in each of said brackets, means for operating said lamps in unison comprising a rod parallel to said shaft and attached to the body portion of each of said lamps by a universal pivot substantially midway between the vertical axis and a horizontal central line through said lamps perpendicular to said vertical axis, means for imparting longitudinal and lateral movement to said rod comprising a rod arranged transversely with the said first rod having one end adjacent and provided with a right angular extension, a sleeve slidably mounted on said extension and pivotally connected to the first said rod, means for rotating, or moving said second rod longitudinally, means for locking said second rod.



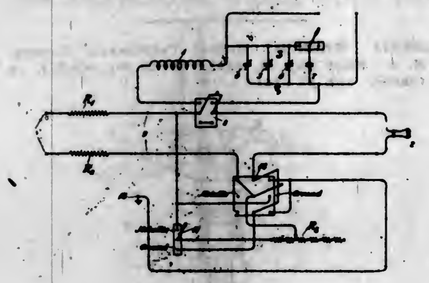
1,398,263. DETACHABLE VALVE-HANDLE. FREDERICK F. HALS, Medford, Mass. Filed July 7, 1920. Serial No. 394,514. 3 Claims. (Cl. 74—33.)

1. In a device for dispensing gasolene or the like having a valve, the combination of a valve stem, a sleeve guard surrounding the stem in spaced relation thereto and extending beyond the free end thereof, a tubular element having a sliding fit in the space between the guard and the stem and means on the tubular element and on the



stem remote from its end defining an interlocking engagement.

1,398,264. HOT-AIR FURNACE. AUGUSTUS F. HARTER, Oak Park, Ill., assignor to Cribben & Sexton Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 15, 1921. Serial No. 461,465. 8 Claims. (Cl. 126—102.)

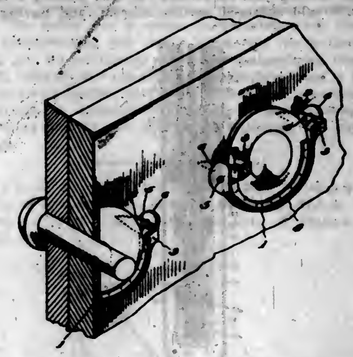


1. A hot-air furnace having angularly disposed clean-out openings in its outer wall, a radiator, a clean-out pipe for the radiator adjustable to extend through either opening to discharge outside the furnace, and a closure-cap set into said pipe independently of the outer wall.

1,398,265. VEHICLE-WHEEL. WARREN H. HINES, Flint, Mich., assignor of forty-nine one-hundredths to Ellen V. Hines, Flint, Mich. Filed Mar. 24, 1919. Serial No. 284,826. 2 Claims. (Cl. 152—30.)

1. A vehicle wheel comprising a pair of circular disk-like plates arranged in spaced relation, said plates provided with hubs to receive an axle, a ring arranged at the periphery of said plates, a second ring positioned between said plates, and separated from said first ring, each ring provided with a series of separated radially-extending apertures each aperture in one ring being in radial alinement with an aperture in the other ring, a radially-shiftable spoke having an enlarged outer end mounted in each pair of openings, an abutment on each spoke arranged inwardly of the outer ring, a tubular rubber block surrounding each spoke and positioned between said abutment and the outer face of the inner ring, a rim spaced from and encircling the outer ring, said rim provided in its inner face with a series of recesses to receive the outer ends of said spokes, a tubular block of rubber around each spoke extending between the rim and the outer ring, and an elastic tire mounted on said rim.

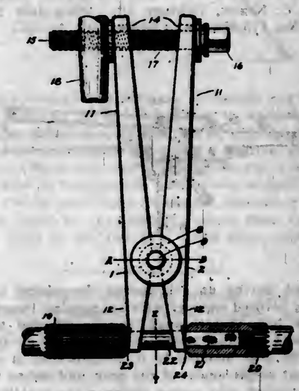
1,398,266. ELECTRICAL INDICATING AND MEASURING DEVICE. HARRY W. HITCHCOCK, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 7, 1920. Serial No. 371,954. 5 Claims. (Cl. 175—183.)



2. In an electrical measuring instrument the combination of a circuit having induced therein a voltage wave, the form of which it is desired to investigate, a circuit comprising inductance, capacity and an indicating device adapted to be brought into resonance for component frequencies of the voltage wave induced in the said first circuit, and means associated with the said second circuit whereby it may be shunted so that part of the current set up by the said voltage wave may be diverted therefrom.

1,398,267. PREPARATION OF LEAD ARSENATE. JOHN KIRBY, MATHEW S. HOPKINS, and CHARLES BAKER BERNHART, Reading, Pa. Filed July 28, 1921. Serial No. 488,156. 12 Claims. (Cl. 23—13.)

1. The method of making lead arsenate, which consists in treating an insoluble compound of lead with a solution containing arsenic in the presence of a sulfonated compound of an aromatic hydrocarbon.



1,398,268. DEVICE FOR SUPPORTING WASHERS WHILE UPSETTING THE COÖPERATING BOLTS OR RIVETS. CHARLES MAUNDERS, Chilco, British Columbia, Canada. Filed Jan. 29, 1920. Serial No. 355,003. 6 Claims. (Cl. 78—46.)

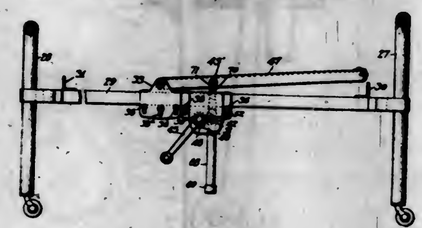
1. A device for holding a washer on a bolt and close against the timbers which are to be secured by the bolt, while the bolt is being headed, comprising a substantially semi-circular band, means for securing said band

in position to support a washer, and means for withdrawing the band from the washer.

1,398,269. ROLL-SPREADER. ALBIN W. NELSON, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1920. Serial No. 425,201. 1 Claim. (Cl. 29—85.)

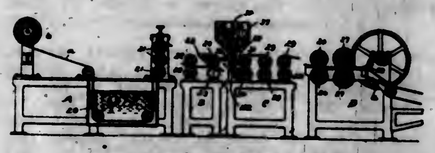
An instrument of the character described comprising a pair of levers, circular grooves formed on both sides of each lever concentric with the fulcrum center, a disk formed to loosely fit in the groove on one side of the pair of levers, a ring loosely fitting the groove on the opposite side of the pair of levers, a retaining washer for said ring and means connecting the washer and disk comprising a centrally located stud the portion between the washer and disk serving as a fulcrum for the levers.

1,398,270. ELECTRODE FOR ELECTRICAL WATER-LEVEL-INDICATING APPARATUS AND OTHER ELECTRICAL APPARATUS. WALTER D. NICKUM, Glendale, Calif. Original application filed Sept. 16, 1918, Serial No. 254,345. Divided and this application filed Oct. 13, 1919, Serial No. 330,392. Renewed Oct. 29, 1920. Serial No. 420,580. 6 Claims. (Cl. 200—82.)



1. An electrode means for low water indicators, consisting of a rod of insulating material having an enlarged

portion and having an extension beyond said enlarged portion, electrodes mounted on said extension, a metal tube surrounding said insulating rod and making a tight joint with said enlarged portion thereof, and having an

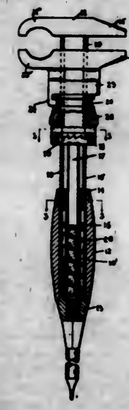


elongated screw threaded shank and an annular shoulder, and an outer tube screwing on said shank and making a tight joint with said shoulder and provided with external means for attachment to a support.

1,398,271. BED OR ATTACHMENT THEREFOR. MOSES C. NIXON, Chicago, Ill. Filed July 11, 1917. Serial No. 179,986. 12 Claims. (Cl. 5—12.)

1. A bed having an attachment comprising a pivoted member, a pivoted support with an opening therein and a transverse hole therethrough, a gear adapted to be rotated in said opening, means connecting the pivoted member and the gear adapted to be reciprocated in said hole and prevent displacement of the gear, and means to rotate the gear around said means whereby the position of the pivoted member may be adjusted.

1,398,272. PROCESS OF PRODUCING ORNAMENTAL ROOFING. FREDERICK C. OVERBURY, Hillsdale, N. J., assignor, by mesne assignments, to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 6, 1917. Serial No. 152,492. 1 Claim. (Cl. 91—67.9.)



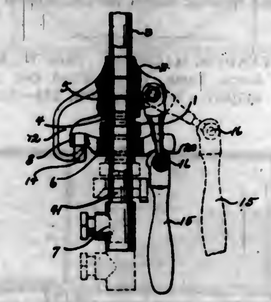
The herein described process of making mineral surfaced ornamental roofing elements, which consists in passing a sheet of adhesive-coated fibrous material under a mass of crushed mineral material, consisting of alternating strata of differently colored material, each stratum consisting of alternating bodies of differently colored material, and causing said differently colored mineral materials to adhere in irregular areas of different colors with intervening areas having a mixture of colors thereon, and then partially embedding said mineral materials by pressure into the adhesive coating of said sheet.

1,398,273. MIRROR AND COMB HOLDER FOR HATS. GUSTAV PESETERNAK, Trenton, N. J. Filed May 4, 1921. Serial No. 466,773. 2 Claims. (Cl. 2—108.)

1. In a holder of the type described, means providing a pocket adapted to hold a comb, and a slidable catch in said holder adapted to engage the end tooth of the comb to hold the same against displacement from said pocket.

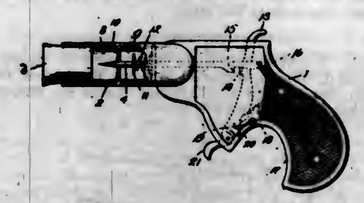
1,398,274. WRENCH. GUSTAV PESETERNAK, Trenton, N. J. Filed May 11, 1921. Serial No. 468,651. 4 Claims. (Cl. 81—161.)

1. A wrench comprising a shank presenting arcuate screw threads, a jaw slidable thereon, a nut on said shank having a swivel engagement with said jaw, said nut having arcuate threads adapted to engage with and disengage from the screw threads on the shank by partial rotation of the nut, said nut having serrations formed on its rear face, and a spring-pressed disk slidable and non-rotatable on said shank having on its front face serrations similar to and adapted to engage the serrations on the nut.



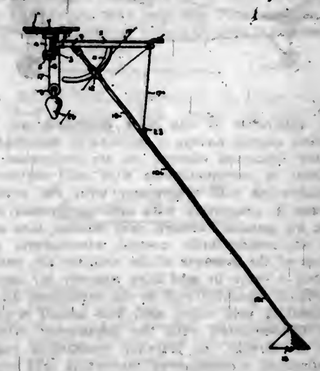
1,398,275. GRAIN CLEANER, SEPARATOR, AND DRIER. WILLARD A. PETTYS, Wilcox, Nebr. Filed June 4, 1918. Serial No. 238,155. 3 Claims. (Cl. 130—15.)

1. In a grain separating structure comprising a trough shaped rectangular chute, upper and lower spaced series of screening members, each of said screening members having upper and lower parallel inclined guides secured to the inner sides of the chute, screening frames of different mesh supported by the said guides, an upper and lower independent series of hinged shutters constituting



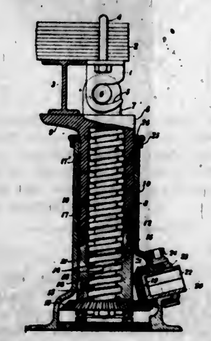
a flooring for the chute and baffle plates for the upper and lower series of screening members, and independent means to selectively open either series of shuttters to regulate the air draft within the chute.

1,398,276. COUPLING. HARRY E. PHELPS, Brooklyn, N. Y., assignor to C. Kenyon Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 13, 1919. Serial No. 344,588. 10 Claims. (Cl. 285—172.)



1. A coupling for the air bags used in the vulcanization of the casings of pneumatic tires, comprising an entered member and an entering member having co-acting seat portions of substantially unalterable form and fastening means for said members including co-acting parts capable of movement with said members, and constituting the sole means for enabling said members to be forcibly drawn together and held in locked position.

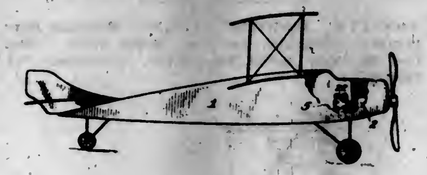
1,398,277. TOY PISTOL. MICHAEL PILNACEK, New York, N. Y. Filed Jan. 17, 1919. Serial No. 271,579. 1 Claim. (Cl. 42—54.)



A toy pistol embodying a barrel provided with an open forward end adapted to receive a pellet embodying an explosive charge, a partition extending across the barrel intermediate its ends and provided with an aperture, said partition dividing the barrel into a forward firing chamber and a rear operating chamber, a firing pin extending through the operating chamber and projecting through the aperture in the partition, a spring seated within the rear end of the barrel and exerting a forward pressure on the firing pin, a lever coöperating with the firing pin, a spring coöperating with the lever for manipulating the lever forwardly to actuate the firing pin, an additional spring for maintaining the firing pin in coöperative relation with said lever and a trigger for normally holding said lever in restraint, whereby when the trigger is actuated the lever is released and operates the firing pin for the purpose of exploding the explosive charge.

1,398,278. LIGHTING-FITTING. WILLIAM JOHN PULLOCK, Germiston, Transvaal, South Africa. Filed Dec. 30, 1919. Serial No. 348,421. 3 Claims. (Cl. 240—69.)

1. A lamp fitting comprising an extensible rod adapted to carry a lamp at its end, a support to which said rod is pivoted to swing in a vertical plane, frictional means for adjustably positioning the rod, a flexible cord suspended from a fixed part and providing a bight, a weighted pulley adapted to compensate part of the weight of said extensible rod in said bight, said cord thereafter extending from a point on the support remote from the pivot and being fixed to the rod at a point also remote from the pivot.



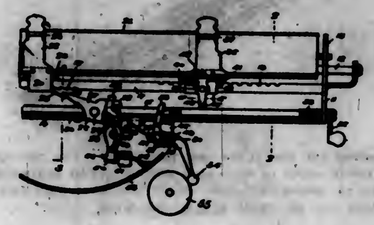
1,398,279. LIFTING-JACK FOR MOTOR AND OTHER VEHICLES. FREDERICK LIONEL RAPSON, Liverpool, England. Filed Apr. 12, 1918. Serial No. 228,100. 5 Claims. (Cl. 254—86.)

1. A lifting jack for use on motor and other vehicles, and means including a pintle and an open hook for de-

tachably hinging the lifting jack to the vehicle in position to swing automatically by gravity beneath the axle of the vehicle, whereby the jack may be applied to either end of either axle for elevating the wheel and may be removed and carried in the vehicle after use.

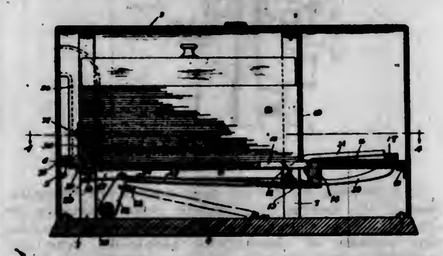
1,398,280. DEVICE FOR ENABLING AN AIRPLANE-MOTOR TO DEVELOP ITS FULL POWER AT HIGH ALTITUDES. FRED I. RAYMOND, Two Buttes, Colo. Filed June 5, 1918. Serial No. 238,405. 10 Claims. (Cl. 244—80.)

1. In apparatus of the class described, an internal combustion engine having a carbureter manifold and a carbureter connected thereto, an air compressor having its exhaust in communication with said carbureter, an inlet connecting said compressor with the outside air, and means in connection with said compressor to maintain the air passing through said exhaust into said carbureter at substantially normal atmospheric pressure regardless of the pressure of the exterior air, said means comprising a valve in said inlet whereby air may be fed at a variable regulable rate to the carbureter and means for controlling said valve, said last named means being entirely disassociated with the compressor exhaust.



8. In an airship, an internal combustion engine, an air compressor, a passageway connecting said compressor with the engine cylinders, aneroid means to control the admission of air to said compressor to maintain the air delivered by it to said cylinders at a substantially constant predetermined pressure regardless of the altitude of said airship, and an aviator's compartment containing the air compressor and the aneroid means.

1,398,281. ELECTRIC THERMO-REGULATOR. ERNEST H. RUDDIGER, Bismarck, N. D. Filed Apr. 28, 1920. Serial No. 377,313. 2 Claims. (Cl. 200—140.)

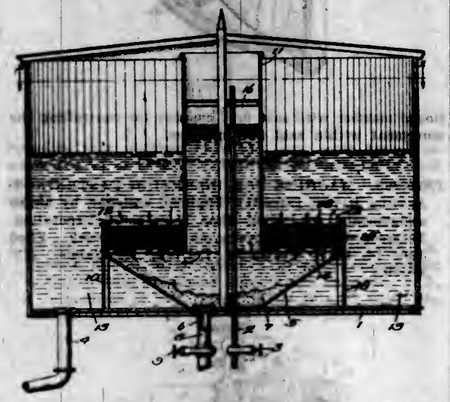


1. In a device of the class described, the combination of a shell having an expansible liquid therein, an insulating plug carried by said shell and having a longitudinal bore extending therethrough, a standard rising from said plug, a switch lever fulcrumed on said standard, a float movable in said bore on the surface of said liquid, a shank connecting said float with said lever, and a binding post carried by said plug in the path of movement of said lever, whereby when the float is lowered the lever will engage the post to close a circuit and the rising of the float will disengage said lever and break the circuit.

1,398,282. MARGIN-GAGE DEVICE. CHARLES SPIRO, New York, N. Y. Filed Apr. 28, 1919. Serial No. 293,070. 22 Claims. (Cl. 197—63.)

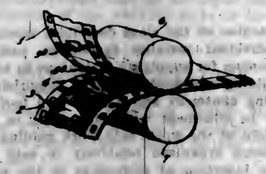
1. In a typewriter, a carriage provided with a platen, a gage bar mounted upon said carriage, a margin gage freely slidable on said bar, means to secure said gage upon the bar, and means upon a relatively fixed part to control said securing means for retaining or releasing said gage.

1,398,283. VENDING-MACHINE. FRED W. STICE and JESSE H. STICE, Tama, Iowa. Filed Oct. 18, 1920. Serial No. 417,537. 3 Claims. (Cl. 211—8.)



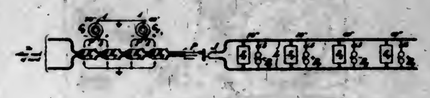
1. In a vending machine, the combination of a delivery slide, a stop thereon, actuating mechanism yieldably connected with the slide, and a detent pivotally mounted between its ends adjacent the slide and provided at one end with an upper member normally in the path of the stop and with a lower member extending under the stop, the opposite end of the detent being disposed in the path of a coin whereby an inserted coin will rock the detent and release the stop.

1,398,284. WEATHER-STRIP. FREDERICK A. STICKLE, Cincinnati, Ohio, assignor to Edmund H. Lunken, Cincinnati, Ohio. Filed Nov. 3, 1919. Serial No. 335,413. 3 Claims. (Cl. 20—69.)



1. A weather strip comprising a longitudinally extending metallic strip formed up centrally to act as a wiping strip, means for mounting the strip so that it can spread transversely thereby lowering the central formed up portion, and a non-yielding abutment mounted under the strip, spaced therefrom to allow yielding thereof, and formed up centrally to act as a stop upon undue depression of the formed up portion of the strip to prevent caving of the metallic strip.

1,398,285. FILTERING APPARATUS. INOS B. TANNER, Chicago, Ill., assignor to Joseph E. Nelson & Sons, a Firm composed of Joseph E. Nelson, John E. Nelson, and William H. Nelson, Chicago, Ill. Filed Apr. 9, 1919. Serial No. 288,770. 6 Claims. (Cl. 210—140.)



1. Filtering apparatus including a stand pipe that is rectangular in cross section; a basin whose bottom is below and spaced apart from the lower end of the stand pipe, said basin having a rectangular rim; rectangular frames coupling the sides of the stand pipe with the sides of the basin rim; and filtering material at said frames.

1,398,286. METHOD OF COLORING MOTION-PICTURE FILMS. GOTTLIEB TAUSSIG, New York, N. Y. Filed Mar. 19, 1921. Serial No. 453,560. 2 Claims. (Cl. 101—149.)

1. The method of coloring films which consists in printing and developing a positive film from a negative, then printing a reverse positive film from the same negative, thereafter coating the emulsion surface of the reverse positive with a gun cotton solution which covers all portions of the emulsion side of the reverse positive, except those portions corresponding to the portions of the positive which it is desired to color, then applying color to the coated side of the reverse positive, thereafter removing the color from all parts of the reverse positive except from the uncoated portions thereof, and finally bringing the emulsion side of the reverse positive into contact with the emulsion side of the positive, while maintaining the characters of the reverse positive and of the positive in registration, whereby the color carrying reverse positive serves to print or color the positive.

1,398,287. SELECTIVE SIGNALING SYSTEM. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 15, 1920. Serial No. 351,604. 4 Claims. (Cl. 179—86.)

1. In a selective signaling system, line conductors, biased frequency selective signaling devices associated therewith, condensers in series with said devices, and means for associating with said line current of one frequency or another, having a larger ordinate in one direction than in the other.

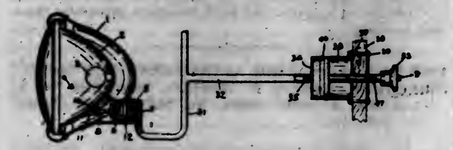
1,398,288. FASTENER. EDMOND M. WATKINS, Trenton, N. J. Filed Nov. 21, 1919. Serial No. 339,596. 4 Claims. (Cl. 24—251.)

1. A fastener comprising jaws hingedly connected, one of said jaws having a stud and the other of said jaws being provided with a socket member, said socket member comprising a housing, pivoted stud retaining arms in said housing, a pintle in the housing serving as a common fulcrum for said arms, and stud releasers extending from said housing.

1,398,289. INDICATING ATTACHMENT FOR SOUND-RECORDS. ROBERT B. WHEELAN, New York, N. Y. Filed Mar. 4, 1920. Serial No. 363,208. 18 Claims. (Cl. 274—42.)

1. In combination with a sound record disk, a plurality of independently movable illustrations mounted upon the disk, means to automatically actuate said illustrations to cause them to disappear from view one by one after that portion of the record relating to the illustration in view has been reproduced.

1,398,290. AERIAL TORPEDO OR MINE. MEADE WILDRICK, U. S. Army, assignor of one-half to Oscar I. Straub, Fort Howard, Md. Filed Jan. 27, 1917. Serial No. 144,969. 9 Claims. (Cl. 102—2.)

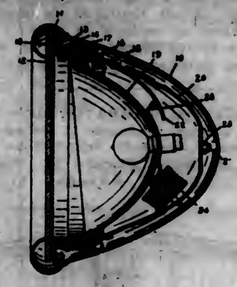


9. The combination of an explosive shell which automatically sinks when dropped in the water, a buoy, a flexible connection from the buoy to the shell, a reel with which the flexible connection cooperates and which is ro-

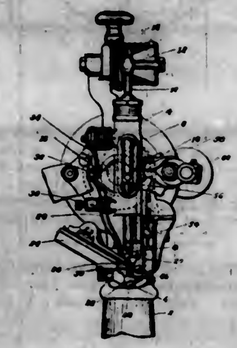
tated by the flexible connection as the shell sinks in the water, and automatic firing mechanism for the shell

whose operation is controlled by the reel, substantially as described.

1,396,291. FLUID-CONTROLLED ACTUATING MEANS. SAMUEL F. ARBUCKLE, Indianapolis, Ind. Filed Aug. 2, 1918. Serial No. 248,078. 11 Claims. (Cl. 230—35.)



1. A fluid actuating means including expansible and contractible mechanism connected with the means to be actuated, means for creating a partial vacuum to operate said mechanism, and manually operated means in connection with said vacuum creating means to regulate the degree of vacuum created.

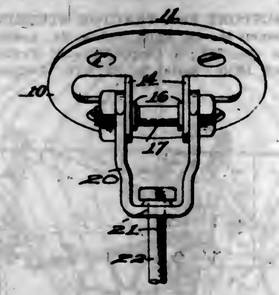


8. A fluid actuating means including means for incasing a column of fluid, means at one end of said column to be actuated by the fluid for moving a movable object, a piston at the other end of said column, of fluid for actuating the fluid, a hollow piston rod, a hollow head on the outer end of said piston rod so that there is a passageway to the open air from the column of fluid, a normally operated valve in said head for opening said passageway, and a spring in said head for holding said valve closed.

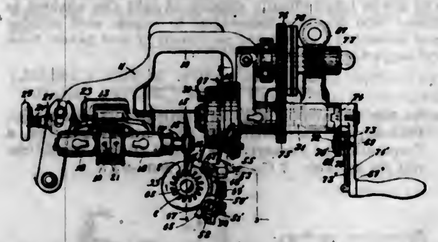
1,396,292. TWO-WAY-TILTING REFLECTOR FOR LAMPS. SAMUEL F. ARBUCKLE, Indianapolis, Ind., assignor to United States Automotive Corporation, Connersville, Ind., a Corporation of Delaware. Filed Sept. 20, 1919. Serial No. 325,230. 3 Claims. (Cl. 240—41.)

1. A lamp having a movable reflector therein, a member removably mounted in said lamp on which said reflector is pivotally mounted for permitting the vertical tilting thereof, a second member in which said first mentioned member is pivotally mounted for permitting the lateral turning of said member and reflector therein, an actuating means mounted between said first member and reflector for tilting the latter, and a second independently mounted actuating means connecting said second mentioned member with said first member for controlling the movement within said first member.

1,396,293. MACHINE FOR INSERTING FASTENINGS. ARTHUR BATES, Leicester, England, assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 14, 1917. Serial No. 174,742. 27 Claims. (Cl. 1—19.)



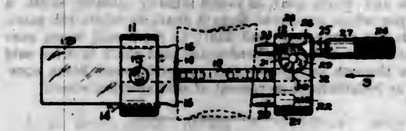
1. In a machine of the class described, mechanism for inserting individual metallic fastenings comprising a throat, mechanism for supplying fastenings to said throat, and work guiding and feeding means comprising a shoe upper engaging abutment and a shoe feed foot arranged substantially in alinement with each other in the direction of the feed of the work, said work guiding and feeding means being organized relatively to said throat to facilitate the insertion of fastenings in the upper of a boot or shoe in position to secure the upper to the shoe sole, and said feed foot operating to feed the work between successive fastening insertions by engagement with the shoe upper.



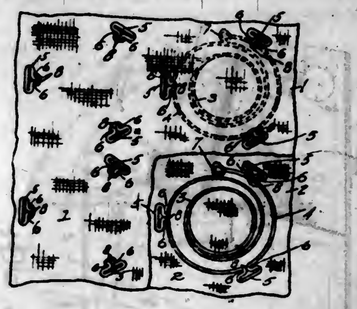
1,396,294. ADJUSTABLE PIPE-HANGER. HJALMAR G. CARLSON, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 22, 1919. Serial No. 339,902. 1 Claim. (Cl. 248—61.)

A pipe hanger comprising a sheet metal supporting plate for attachment to a surface and having a surrounding rim adapted to engage that surface, and provided with screw holes for receiving attaching screws, the plate having two perforations therethrough, the metal cut out being bent at an angle to the plate into parallel position and perforated to form supporting lugs, a pivot bolt supported

in the last-named perforations, and a hinge member pivoted on said bolt for supporting a pipe hook, said hinge member being of U-shaped construction and engaging the outer surfaces of said supporting lugs, and the metal surrounding that punched from the lugs, being forced inwardly so as to form a circular flange surrounding each perforation on the inner side to strengthen the lug and increase the length of the bearing for the bolt.



1,396,295. GRINDING APPARATUS. FREDERICK M. FURBUSH, Revere, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 30, 1917. Serial No. 183,496. 42 Claims. (Cl. 51—225.)



1. In combination, a grinding wheel, a cutter support, and means for rotating the wheel and support relatively to one another through varying distances depending upon the displacement of the working faces of the teeth to be ground.

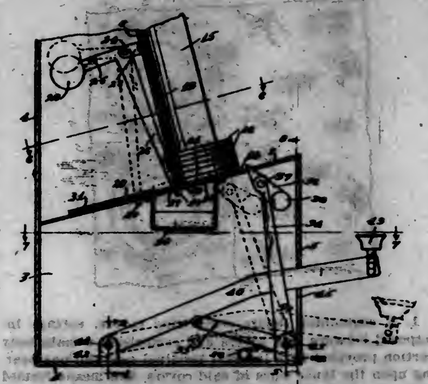
1,396,296. MICROMETER TAPER-GAGE. CHARLES J. GOGUEN, Worcester, and JAMES J. PROVOST, Auburn, Mass., assignors to Brown & Sharpe Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed June 5, 1920. Serial No. 386,774. 6 Claims. (Cl. 33—167.)

1. In a taper gage, the combination with a supporting frame, of a rest adjustable as a whole thereon having two separated surfaces in the same transverse plane for engagement with one side of the tapered work to be measured, and two abutments located opposite, and in the same plane as said rest for engagement with the opposite side of the work, one of them being adjustable independently of the other.

1,396,297. MATTRESS OR THE LIKE. CHARLES A. HERMANN, Milwaukee, Wis. Filed Nov. 22, 1920. Serial No. 425,685. 5 Claims. (Cl. 5—13.)

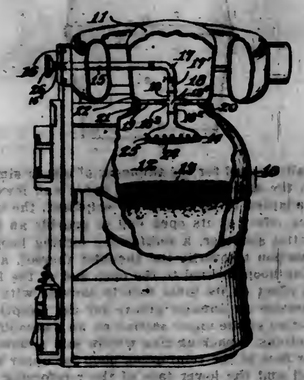
1. A cushioning device comprising covers, springs interposed between said covers and comprising a main body portion provided with integral terminal convolutions bearing upon the inner sides of said covers, and means formed integral with said terminal convolutions to engage and positively retain said covers in contact with said terminal convolutions.

1,396,298. METALLIC SHIPPING-BARREL. WILLIAM C. IRVIN, San Francisco, Calif. Filed Feb. 12, 1921. Serial No. 444,522. 1 Claim. (Cl. 220—5.)



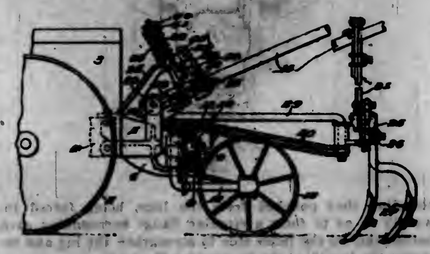
A metallic barrel for the shipment of oils or similar commodities, the same comprising an upper and lower conical section, adapted to be nested for shipment, the upper section being offset at its open end to provide an outer circumferential shoulder, a reinforcing locking hoop secured to said section to overlie the shoulder thereof, a reinforcing locking hoop secured to the open end of the lower section and offset on its inner face to provide with the face of said section an annular groove for the reception of the offset portion of the upper section on an assembling of the barrel sections, a packing ring within said annular groove, the upper face of the reinforcing hoop for upper section of the barrel and the lower face of the reinforcing hoop for the lower section of the barrel being downwardly inclined outwardly, a channeled split lock band adapted to embrace the reinforcing hoops and provided with inclined faces for engagement with the inclines of said hoops to draw together the barrel sections on circumferential pressure being applied to said lock band, and means for uniting the ends of the lock band on the barrel sections being assembled.

1,396,299. CHANGE-MAKER. GEORGE F. MCGILL, Chicago, Ill. Filed Apr. 19, 1920. Serial No. 374,855. 9 Claims. (Cl. 133—4.)



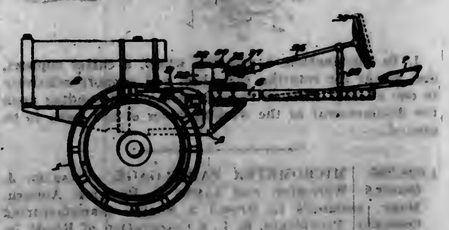
1. A change maker comprising a tube for holding a stack of coins, stationary means for supporting said coins, an

apertured slidable coin support, gravity acting slidably positioning therethrough for normally holding said slidable



coin support in position underneath said coins, and a counterweighted ejector for discharging the lowermost coin in said stack from the tube.

1,398,300. MEANS FOR PROMOTING COMBUSTION. CHARLES MCVEETY, Cheltenham, Pa. Filed Apr. 15, 1921. Serial No. 461,479. 1 Claim. (Cl. 126—112.)

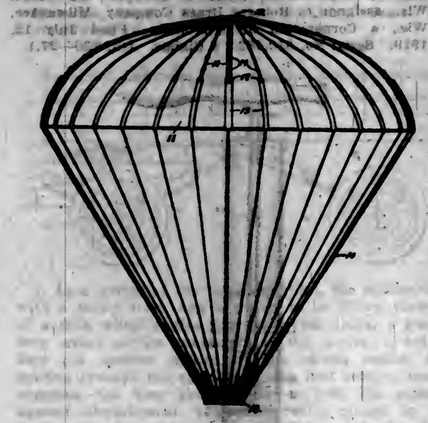


An apparatus for the promotion of combustion, comprising a furnace, a radiator secured over the upper open end thereof by means of a cup socket, an air inlet tube extending across said radiator and projecting from an opening in the side of said radiator, a four way fitting, connections between said inlet tube and the upper vertical arm of said fitting, an air distributor secured to the opposite arm of said fitting, extendible arms on the horizontal arms of said fitting and means to position said arms on ledges formed by said cup socket whereby said distributor is secured centrally within the combustion chamber of said furnace, above the fire bed, at a point where the combustion is most intense, so as to be surrounded on all sides by the gases ascending from said fire bed whereby said gases may mix with the escaping air from said distributor substantially as described.

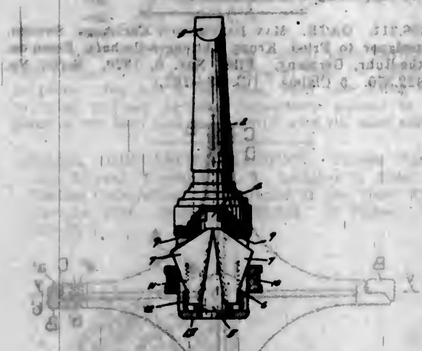
1,398,301. SUPPORT FOR TRACTOR STEERING-HANDLES. JOSEPH MASON, Philadelphia, Pa., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed June 2, 1920. Serial No. 387,524. 7 Claims. (Cl. 97—30.)

1. The combination with a machine of the class described having a frame and a handle vertically movable with respect thereto, of means for supporting said handle in normal position, means for supporting said handle in raised position comprising a pivoted arm having a shoulder adapted to engage a member movable with said handle, and means longitudinally slidable on said arm adapted to render said shoulder inoperative to engage said member and operable by an upward movement of said handle from its supported position.

1,398,302. TRACTOR STEERING-GEAR. JOSEPH MASON, Philadelphia, Pa., assignor to S. L. Allen & Co., Inc., a Corporation of Pennsylvania. Filed Oct. 21, 1920. Serial No. 418,409. 7 Claims. (Cl. 280—97.)



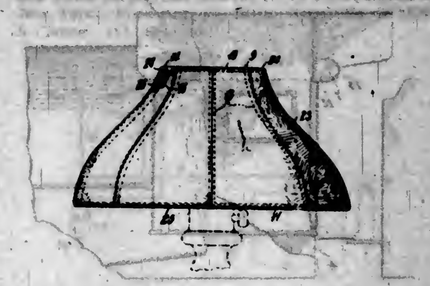
1. In tractor steering mechanism, the combination of a worm and worm gear, a longitudinally slidable shaft, a steering wheel connected to said shaft to rotate the same, means for connecting said shaft to drive said worm gear directly, and means for connecting said shaft to drive said worm through interposed gearing, said means being operable by longitudinal movement of said steering wheel.



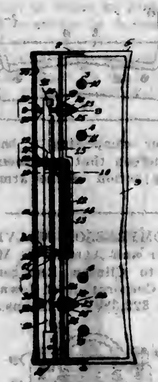
1,398,303. PARACHUTE AND PROCESS OF FOLDING THE SAME. LOUIS C. STRICKLER, Chicago, Ill. Filed Oct. 28, 1920. Serial No. 419,667. 4 Claims. (Cl. 244—32.)

1. A folded parachute comprising, the combination with the folded parachute body of cylindrical periphery radially enlarged upon the parachute body adjacent the perimeter thereof, said pocket being open at its outer end, and shroud cords each extending from the perimeter of the body in-

wardly in substantially a straight line through one of the pockets to the inner end of the pocket and thence outwardly through the pocket in a helical coil substantially filling the pocket from its inner end to its said open outer end.



1,398,304. CHUCK FOR TAPER AND STRAIGHT-SHANK DRILLS. BRADY PARMENTER, Birmingham, Ala., assignor to A. L. Atwood, Birmingham, Ala. Filed Aug. 15, 1919. Serial No. 317,859. 3 Claims. (Cl. 279—58.)

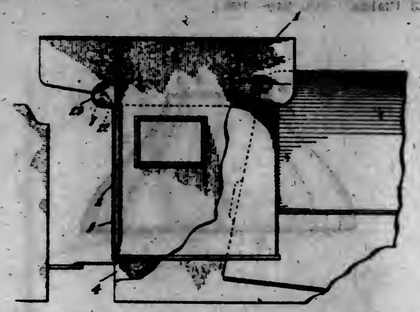


1. A drill chuck having a cylindrical externally threaded body with longitudinal slots in its forward end, jaws disposed in said slots, each having a reversely sloping back and heel, spitags mounted at the forward end of the body and each connected to a jaw so as to hold the tool engaging faces of the jaws converging inwardly and rearwardly with their heels slidably engaging the inner edge of the wall of the rear end of their respective slots, and a nut in threaded engagement with said body which is adapted to engage the backs of the jaws and throw them in to their work.

1,398,305. LAMP-SHADE. ADOLPH STEMMER, Philadelphia, Pa. Filed Mar. 15, 1920. Serial No. 366,266. 3 Claims. (Cl. 240—109.)

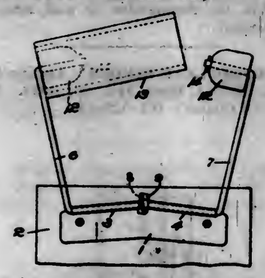
1. A lamp shade having a frame including upright ribs made of channel wire providing cavities between their sides; and a cover in the form of an endless band having looped portions inserted within said cavities and clamped therein due to the compression of said sides; substantially as described.

1,398,306. LOOSE-LEAF BINDER. ARTHUR B. SELDEN, Rochester, N. Y. Filed Jan. 20, 1921. Serial No. 438,575. 18 Claims. (Cl. 129—8.)



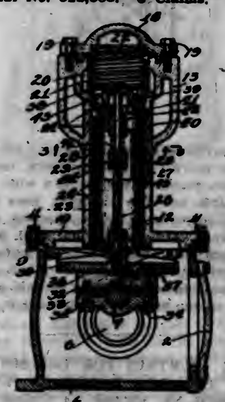
1. A loose leaf binder comprising two binder members, impaling means carried by said members, means for locking said members together comprising a wide projection on one of said parts and two clamping jaws on the other of said parts cooperating with opposite sides of the projection, one of said jaws being rigid with the part by which it is carried, the other being movable and both having arms projecting laterally therefrom in one direction, and a cam member operating in said arms to effect the movement of the movable clamping jaw.

1,398,307. CURTAIN FOR LOCOMOTIVE-CABS. HERBERT S. THOMPSON, Peekskill, N. Y. Filed Nov. 9, 1920. Serial No. 422,928. 4 Claims. (Cl. 105—358.)



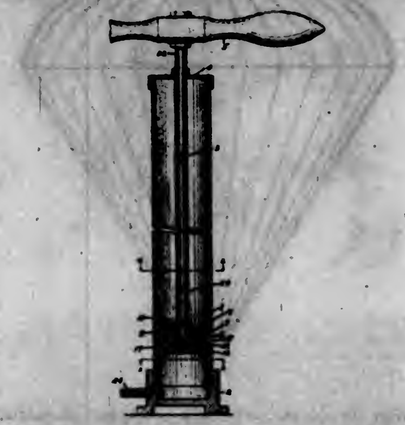
2. In a locomotive cab having an opening, a hinged

hood adjacent the top of said opening, a curtain for closing said opening and having one end supported



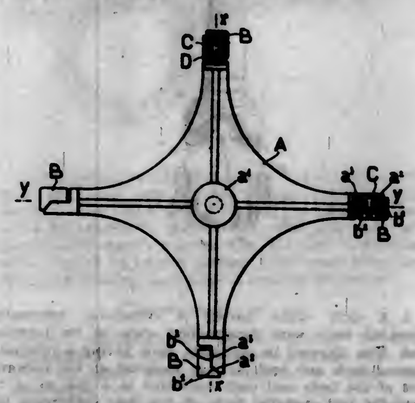
within said hood, and means for raising the curtain and storing it within said hood.

1,398,308. PAPER-HOLDER. Walter L. Weeks, Patchogue, N. Y. Filed Sept. 20, 1919. Serial No. 325,158. 9 Claims. (Cl. 211—31.)



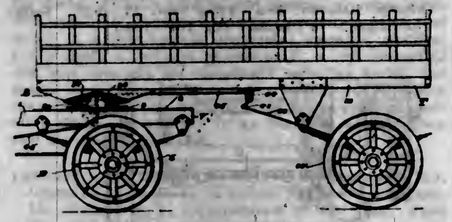
5. A paper holder comprising a back, roll holding arms so movable thereon that movement upward causes automatic spreading action of the arms to receive the paper roll.

1,398,309. COMPRESSOR VALVE MECHANISM. William Wishart and Albert H. Morrell, Clinton, Iowa, assignors to Clinton Refrigerating Company, Clinton, Iowa, a Corporation of Iowa. Filed Sept. 8, 1919. Serial No. 322,383. 5 Claims. (Cl. 230—34.)



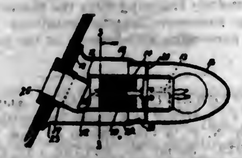
2. The combination with a crank-shaft, of a piston, a valve thereon, slidably interfitting members connecting the crank-shaft with the piston to cause the piston to reciprocate when the crank-shaft rotates, and a bearing member disposed between said interfitting members to operate the valve.

1,398,310. AIR-PUMP. Robert C. Kennoth, Milwaukee, Wis., assignor to Roberts Brass Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 12, 1919. Serial No. 310,462. 4 Claims. (Cl. 230—27.)



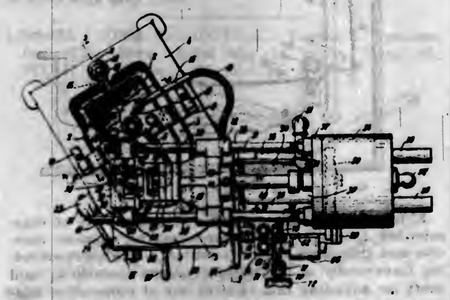
1. An air pump, having in combination a piston head provided with a depending flange, partially inclosed by a cup leather, a tubular piston rod leading through the piston head, and provided with an air inlet near its upper end, a valve disk loosely supported within the space inclosed by said depending flange, and adapted to seat upwardly against the piston head, means for supporting the valve in open position, said valve supporting means comprising a resilient member removably anchored to the depending flange, and provided with valve supporting arms.

1,398,311. GAGE. Max Bartholdy, Karlskoga, Sweden, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Nov. 6, 1920. Serial No. 422,370. 5 Claims. (Cl. 33—162.)



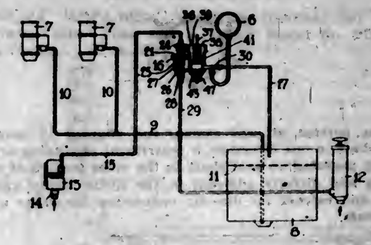
5. A gage comprising a body having four radially disposed arms, cooperating measuring members separably carried by the extremities of said arms, the ends of said arms being provided with radially disposed abutment faces and inclined abutment faces inclined to the measuring direction, said measuring members being provided with similarly-shaped cooperating faces and means for fixing said members to said arms, as and for the purpose described.

1,398,312. HITCH STRUCTURE. John Q. Black, Nashville, Tenn. Filed Sept. 13, 1920. Serial No. 409,876. 2 Claims. (Cl. 280—33.1.)



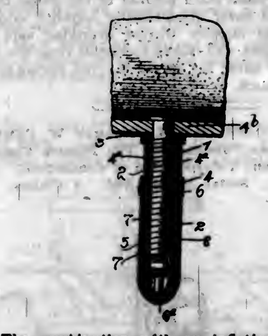
1. In a device of the class described, the combination with a motor truck and a trailer to be drawn thereby, of a fifth wheel section carried by the truck, a second fifth wheel section connected to the trailer, a hollow king pin member carried by the second section and passing through the aperture in the first section, means engaging the king pin member to lock the sections against displacement, a guiding device carried by the locking member and alined with the bore in the king pin member, and a flexible brake operating member passing over the guide and through the bore.

1,398,313. DASH-LAMP. Carl Brammimg, Chicago, Ill., assignor to Accessories Manufacturing Company, a Corporation of Illinois. Filed Jan. 3, 1921. Serial No. 434,674. 4 Claims. (Cl. 240—7.)



1. A dash lamp comprising a tubular shell having its base oblique to its axis, an integral tube for holding a connector plug and a bulb base, such tube being bent to bring its end portions respectively normal to the plane of the shell base and parallel with the shell axis.

1,398,314. DIE-CASTING MACHINE. George Waldemar Bungay, Brooklyn, N. Y., assignor to Acme Die Casting Corporation, a Corporation of New York. Filed Apr. 14, 1919. Serial No. 289,849. 15 Claims. (Cl. 22—69.)



11. A casting machine having, in combination, a receptacle for the material to be cast, a nozzle above the surface of the material to be cast and adapted to communicate therewith upon moving of said receptacle.

1,398,315. FUEL SUPPLY AND REGULATING SYSTEM FOR AIRCRAFT-ENGINES. Ernest Halsewell Cawthra, Buffalo, N. Y., assignor to Curtiss Aeroplane and Motor Corporation, Buffalo, N. Y., a Corporation of New York. Filed Apr. 26, 1919. Serial No. 292,695. 6 Claims. (Cl. 158—36.)

1. In a liquid fuel supply and regulating system for aircraft engines, the combination of a fuel mixing or charge forming device for the engine, a liquid fuel tank adapted to contain liquid fuel for supply to said fuel mixing device and the engine, connections interposed between said fuel tank and said fuel mixing device through which the liquid fuel is adapted to be supplied to the mixing device, means associated with said tank and connections for creating a difference in pressure between the system and the surrounding atmosphere and thereby forcing fuel from the tank and through the connections to the said fuel mixing device, and regulating means associated with said system which is adapted to maintain a predetermined differential pressure between said system and the surrounding atmospheric air in either an atmosphere of increasing pressure or an atmosphere of decreasing pressure.

1,398,316. DUST-CAP AND SLEEVE FOR INFLATING VALVE-TUBES. Elba O. Collins, Chillicothe, Ohio. Filed Sept. 16, 1919. Serial No. 324,091. 2 Claims. (Cl. 152—12.)

2. The combination with an inflating valve stem including an inflating check valve holder, of a valve stem dust cap fitting the inflating valve stem and having its bore of less diameter than the stem, whereby the wall of the closed end of the cap may bear yieldably with pressure on the check valve holder and prevent it from unscrewing, a spacing sleeve of pliable material between the open end of the cap and the rim of the wheel, serving to accommodate stems of excessive lengths and hold them in place, said sleeve also serving to preclude foreign matter entering the opening of the rim through which the stem passes.

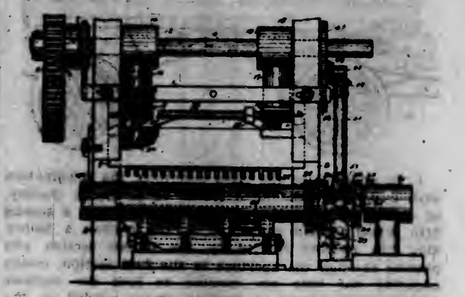
1,398,317. DOOR-CLOSER. Thomas E. Collins, Chicago, Ill. Filed Dec. 22, 1919. Serial No. 346,725. 1 Claim. (Cl. 16—46.)

In a door closer the combination of a compact casing comprising two flat cupped shaped members, provided

with aligned bearings, a shaft rotatably mounted in said bearings and provided with a spindle on one end thereof, extending beyond the bearings sufficiently to receive a drum or the like, a spring motor having a comparatively large number of windings mounted around said shaft

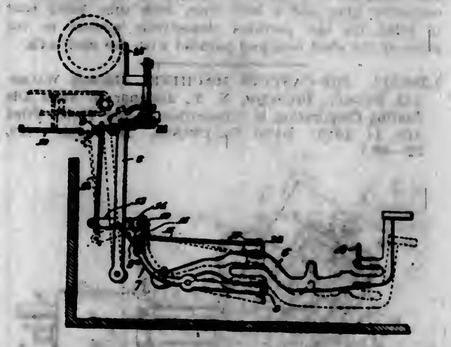
in one portion of said casing, and adapted to operate said shaft in one direction, a centrifugal expanding brake loosely mounted on said shaft in the other portion of said casing and directly adjacent to the spring motor and a pawl and ratchet for directly connecting the brake with the shaft.

1,398,318. TOILET-SEAT COVER. HENRY B. COURCHENE, Ill. Filed Apr. 29, 1920. Serial No. 377,482. 1 Claim. (Cl. 4—18.)



In combination, a toilet seat, a main cover hinged thereto, a hole in said cover, a supplemental cover fitting said hole, an annular plate secured to the upper side of said supplemental cover and extending beyond the edge thereof to afford a flange seating against the upper surface of the main cover, an annular plate secured to the lower surface of the main cover closely adjacent to the edge of the hole, an offset clip secured to the under face of the supplemental cover and overlying said last-named annular plate, a spring-pressed latch secured to the under face of said supplemental cover diametrically opposite said clip, the spring-pressed member thereof overlying said last-named annular plate, and means accessible from the under face only of the cover for retracting the spring-pressed member of said latch.

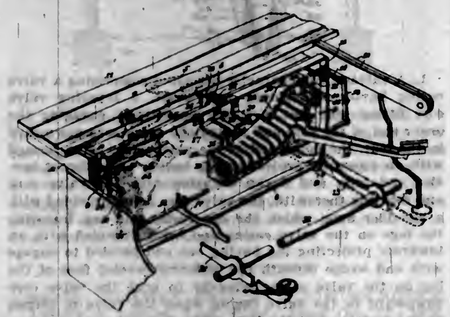
1,398,319. HOOD-CATCH. NORMAN W. CUMMINS, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 11, 1921. Serial No. 468,765. 4 Claims. (Cl. 292—114.)



1. A hood catch comprising a buffer frame struck up from sheet metal and having medially disposed ears, a pivot pin passed through the ears to provide a rockable mounting for the frame, a buffer element carried on one end of the frame for impingement against the head of a motor vehicle, and a hood engaging hook member pivoted to the opposite end of the buffer frame for effecting a rocking of the latter to impinge the buffer element against the hood when the hook member is engaged with the hood.

1,398,320. PIPE-PERFORATOR. GEORGE W. DUNSWORTH, Houston, Tex. Filed Sept. 13, 1919. Serial No. 323,482. 6 Claims. (Cl. 164—106.)

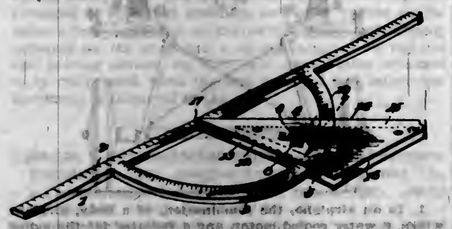
1. A pipe perforator, including a tubular die, disposed to receive the pipe, which is fitted thereover, roller bearings wherein the pipe rests, a row of punches opposing said die, means for simultaneously reciprocating said punches into cooperation with the die, whereby a row of perforations is cut through the pipe, a jaw to which said pipe is secured, a pair of annular ratchets carried by said jaw, an oscillating yoke, dogs carried by said yoke and alternately engaging with the respective ratchets for imparting successive partial rotations to the pipe following the successive withdrawals of the punches therefrom.



1,398,321. TYPEWRITING-MACHINE. ALONZO B. ELY, Groton, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Mar. 20, 1919. Serial No. 283,702. 12 Claims. (Cl. 197—98.)

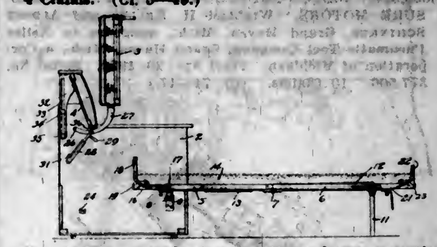
1. In a typewriting machine, the combination of character-key levers, an escapement-operating element operable each time a key lever is actuated, a rock shaft extending transversely of the machine, means operable by said shaft for adjusting said element out of cooperative relation with the escapement, said shaft having spaced pairs of oppositely disposed flat surfaces, a rock-arm having a U-shaped head adapted to embrace the bar and pivotally engage either of said pairs of flat surfaces, and a link detachably connected with one of said key levers at one end and connected at its other end with said rock arm.

2. In a typewriting machine, the combination of character key levers, a universal bar operable directly by the key levers, a vibrating member shiftable fore and aft of the machine by the universal bar, an escapement operating device pivotally held to said member to swing vertically relatively thereto, means for normally holding said device in a substantially horizontal operative position, a rock shaft, a rock-arm on said shaft, a link connecting said rock arm and the escapement operating device, and means connecting one of said key levers with said rock shaft for rocking the shaft to swing the escapement operating device downwardly to an inactive position when said key lever is actuated.



1,398,322. TYPEWRITING-MACHINE. ALONZO B. ELY, Groton, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed Mar. 20, 1919. Serial No. 283,703. 20 Claims. (Cl. 197—83.)

1. In a typewriting machine, the combination of character keys, a member operable by each key for actuating an escapement and a ribbon vibrator, type bars operable by said keys, and means operable directly by one or more of the type bars for preventing operation of the escapement when said member is operated.

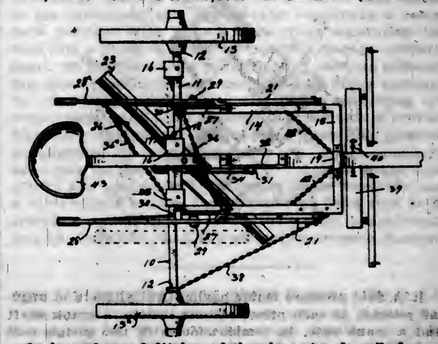


2. In a typewriting machine, the combination of case shift mechanism, character keys, a member operable by each key for actuating an escapement and a ribbon vibrator, type bars operable by said keys, and means operable by one or more of the type bars for preventing operation of the escapement when said member is operated, said case shift mechanism being operatively connected to impart a relative movement between said member and said type-bar-operated means into and out of cooperative relation with each other.

1,398,323. COMBINATION-TOOL. FRANK X. FREYDER, Iowa City, Iowa. Filed May 14, 1919. Serial No. 297,027. 6 Claims. (Cl. 33—75.)

1. A tool of the character described comprising a rigid base, an arch shaped angle gage plate consisting of a single graduated element having its two ends rigid on said base within the length thereof, an angular protractor arm movable on said plate and adapted to contact with said base at either side of said gage plate, and means for locking said protractor arm to said plate.

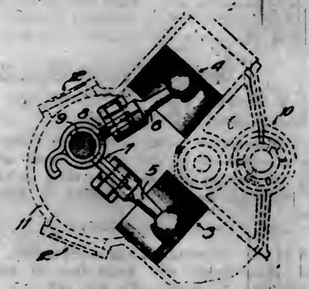
1,398,324. SOFA-BED. RALPH B. HOSNER, San Francisco, Calif. Filed Feb. 8, 1919. Serial No. 275,855. 4 Claims. (Cl. 5—49.)



2. A bed structure having a mattress frame, a section slidably mounted on an end of the frame, and a board foldably mounted on said section to form, in one position, a foot or head board and adapted to fold over the mattress.

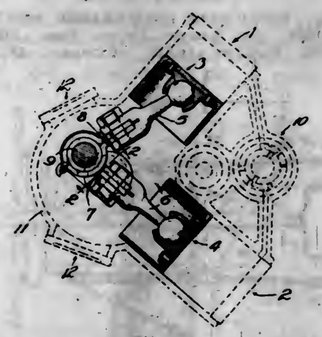
1,398,325. NUT LOCK OR FASTENER. JAMES W. IVORY, Philadelphia, Pa. Filed Dec. 30, 1920. Serial No. 433,985. 3 Claims. (Cl. 151—45.)

1. A nut lock consisting of a resilient washer plate of bowed form with an opening therein to be fitted over the threaded end of a bolt or the like, and a lip on the side of said plate having an inturned end, and a nut having in its side a recess in which said inturned end of said lip is seated and thereby connected.



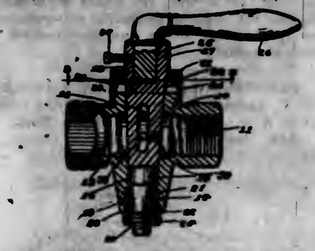
1,398,326. TWO-WHEEL ROAD-GRADER AND FIELD-DITCHER. ASA JOHNSON, Dayton, Tenn. Filed Oct. 13, 1920. Serial No. 416,676. 10 Claims. (Cl. 37—7.)

1. A grader and ditcher of the character described comprising an axle, traction wheels mounted thereon, a tongue connected to the axle, a frame attached to the axle and extending forward therefrom and connected to the tongue, downwardly extending brackets on the forward corners of the frame, scraper supporting beams operatively connected to the extremities of the brackets and extending



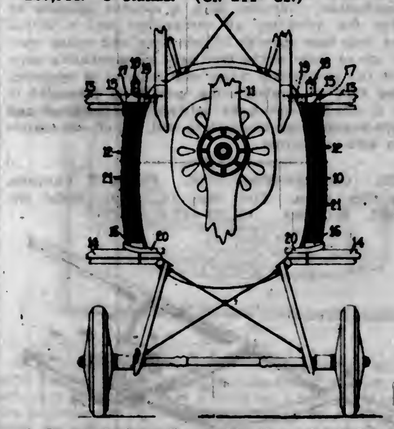
rearward therefrom, a scraper blade tiltably mounted upon the beams, oppositely disposed levers operatively connected to the beams to raise or depress them, means for holding the levers in adjusted positions, and a lever operatively mounted upon the frame and having operative connections to said blade whereby the blade may be tiltably adjusted.

1,398,327. PISTON-ROD TOGGLE FOR FLUID-PRESSURE MOTORS. WILLIAM H. KELLER and ALBERT SCHINKER, Grand Haven, Mich., assignors to Keller Pneumatic Tool Company, Grand Haven, Mich., a Corporation of Michigan. Filed Apr. 29, 1920. Serial No. 377,506. 10 Claims. (Cl. 74—17.)



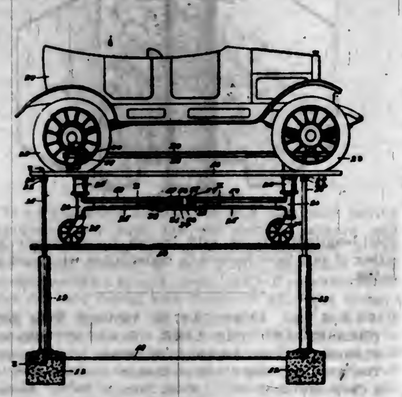
10. In a fluid pressure motor, a toggle connection comprising two complementary members having means of attachment to a piston rod and having spaced curved straps forming half of a rotatable bearing, the straps in one of said members being integrally joined by a cross element, and the straps in the other of said members being integrally joined to form a curved hook adapted to receive the said cross element and interlock therewith.

1,398,328. PISTON-ROD TOGGLE FOR FLUID-PRESSURE MOTORS. WILLIAM H. KELLER and ALBERT SCHINKER, Grand Haven, Mich., assignors to Keller Pneumatic Tool Company, Grand Haven, Mich., a Corporation of Michigan. Filed Apr. 29, 1920. Serial No. 377,507. 3 Claims. (Cl. 74—17.)



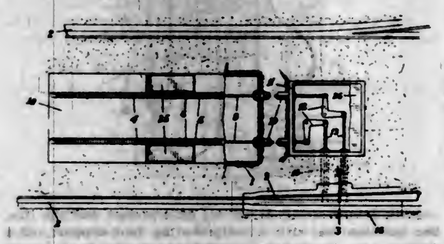
1. A fluid pressure motor having two cylinders in angular relation to each other, pistons therein, a crank shaft and a crank case, in combination with two piston rods each having an end connected with one of said pistons, the opposite end carrying clamping means, a separable part toggle connection bearing upon said crank shaft and rigidly clamped to one of said piston rods, a separable part toggle connection having spaced curved portions bearing upon the first mentioned toggle connection and rigidly clamped to the other of said piston rods, interengaging means for locking in operative position the outer ends of the separable parts of the second mentioned toggle connection, said means comprising integral bars extending across the outer ends of said curved portions, one of said bars carrying an outwardly curved hook adapted to engage the other of said bars between its said curved portions and interlock therewith, and lateral detachably covered openings through said crank case arranged to expose said toggle connections.

1,398,329. STOP OR WASTE COCK. JOHN GRANVILLE KING, Pine Bluff, Ark. Filed Sept. 27, 1920. Serial No. 413,004. 13 Claims. (Cl. 251—97.)



1. A valve of the character described comprising a valve casing having a tapering valve seat, a tapering valve core fitting said seat, a spring operatively engaging the lower end of the core and urging the valve core downward in the seat, the upper end of the valve casin being formed with an upwardly projecting lug having an undercut beveled end face, and a cap engaging over the valve core and rotating therewith, the valve core being provided with a shoulder upon which the cap rests, said cap inclosing the lugs on the valve casing and being provided with an inwardly projecting lug having one end beveled to engage with and wedge beneath the undercut beveled face of the lug on the valve casing whereby to urge the valve core downward in the valve casing when the valve is turned to one position and the lugs engaged.

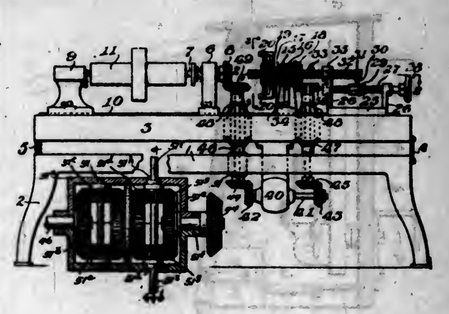
1,398,330. RADIATOR FOR AIRPLANES. CHARLES B. KIRKHAM, Nassau Boulevard, N. Y., assignor to Curtiss Aeroplane and Motor Corporation, Buffalo, N. Y., a Corporation of New York. Filed Dec. 23, 1918. Serial No. 267,944. 8 Claims. (Cl. 244—31.)



1. In an airplane, the combination, of a body, airplane wings, a water cooled motor, and a radiator for the motor including spaced headers arranged to engage with separate airplane wings.

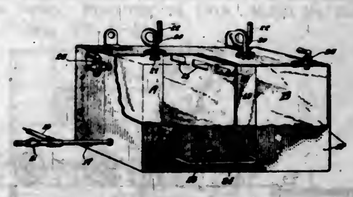
1,398,331. HOISTING APPARATUS. ARTHUR D. LIGHTNER and EDWARD HOLMES, Toledo, Ohio, assignors to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 7, 1917. Serial No. 205,996. 10 Claims. (Cl. 254—2.)

1. A hoisting apparatus comprising the combination of a frame, adjustable in length and mounted on suitable supporting wheels; a plurality of lifting jacks carried by said frame; an upper frame carried by said lifting jacks and provided with transversely adjustable members and longitudinally adjustable means to receive and support a motor vehicle; and means for simultaneously and equally operating said jacks to lift said motor vehicle.



1,398,332. RAILWAY-SWITCH-THROWING DEVICE. ARCHIE J. LINLEY, Lodi, Calif. Filed Oct. 15, 1920. Serial No. 417,206. 1 Claim. (Cl. 246—340.)

In a railway switch, the combination with a movable switch point, of an arm pivoted ahead of the switch and arranged to be moved about its axis by a vehicle on the rails, a rod connected to the switch point and slidably mounted on the arm, and a spring mounted on the rod and bearing against the arm, said spring being arranged to be compressed when the arm is moved and before any movement is imparted to the rod.

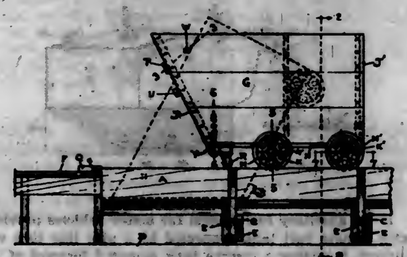


1,398,333. BALANCING-MACHINE. JACOB LUNDORFF, Philadelphia, Pa., assignor to Carlson-Wenstrom Co., a Corporation of Delaware. Filed June 4, 1918. Serial No. 238,139. 13 Claims. (Cl. 73—51.)

1. A balancing machine, comprising a support for a body to be tested, a pair of weights connected to be revolved in unison and adjustable simultaneously in the same direction along parallel paths located upon opposite sides of, and in a plane at right angles to their common

axis of rotation, and means to revolve a body upon said support and said weights in synchronism.

1,398,334. AUXILIARY FUEL-TANK FOR MOTOR-VEHICLES. HARRY LUTSKY, Stapleton, N. Y. Filed July 15, 1920. Serial No. 396,573. 2 Claims. (Cl. 158—46.5.)



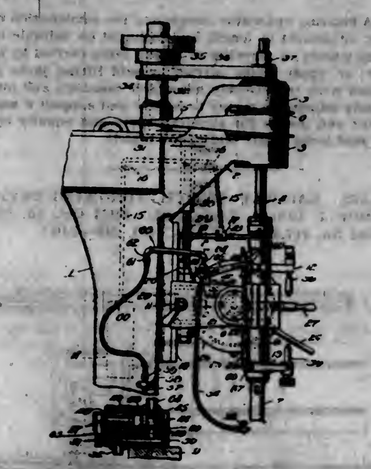
1. An auxiliary fuel system for motor vehicles provided with a main fuel tank connected by a pipe line to a carbureter, including a reserve tank mounted forward of the carbureter and connected to said pipe line to receive a fuel charge from the main tank and to deliver such charge to the carbureter, said reserve tank comprising a receptacle provided with a vertical partition separating the tank into a pressure compartment and a storage compartment, the partition being provided with passages adjacent the upper portion thereof functioning as filling openings for the storage compartment and means connecting the compartments at a point adjacent their bottoms to provide for filling the storage compartment from the pressure compartment and for discharging the storage compartment into the pressure compartment; the said means comprising a by-pass mounted externally of the receptacle and a valve in said by-pass, the arrangement being such as to provide a construction in which the storage compartment may be alternately used as a storage or pressure chamber.

1,398,335. SAFETY-FUSE SWITCH-BOX. WALTER A. HEINRICH and CLAUDE L. MATTHEWS, St. Louis, Mo., assignors to W. N. Matthews and Brother, Inc., St. Louis, Mo., a Corporation of New Mexico. Original application filed Apr. 18, 1917, Serial No. 161,721. Divided and this application filed July 8, 1918. Serial No. 243,746. 2 Claims. (Cl. 217—60.)

1. A fuse box having a door hinged at one edge, means at the free edge of the door for yieldingly latching the same in a closed position, a slotted link pivotally connect-

ed to the door, a stud or projection on the box passing through the slot in said link, and a robust portion on the end of said link for yieldingly engaging said stud or projection to hold said door in an open position.

1,398,336. ANIMAL-FEEDING DEVICE. IVAR MATTSON, Fairfield, Iowa. Filed Apr. 27, 1921. Serial No. 464,983. 12 Claims. (Cl. 104—80.)



1. In animal feeding devices, the combination of an extended feed-trough having track-ways on its upper edges, a feed truck having a rectangularly shaped receptacle, and four pairs of wheels adapted to run on the track-ways journaled on lower portions of said receptacle, one pair of the wheels being journaled near the meridian line of the receptacle and the other pair of wheels being journaled near to one end of the receptacle, whereby the truck will be nearly balanced when resting on all the wheels and a slight downward pull on the extended end of the receptacle next to the control wheels will cause it to tip downward and dump the receptacle into the trough.

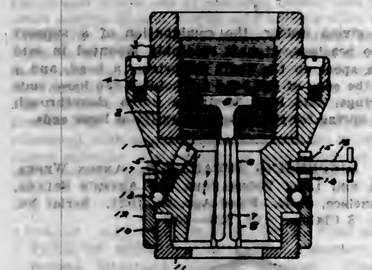
1,398,337. DRAIN-PAN FOR CLOTHES-WRINGERS. WILLIAM H. MEYER, St. Louis, Mo., assignor, by mesne assignments, to The Davis Sewing Machine Company, a Corporation of Delaware. Filed Feb. 7, 1920. Serial No. 357,654. 8 Claims. (Cl. 68—32.)

1. A wringer provided with pressure rolls, a trough located below said rolls to receive water passing therefrom, said trough having a water outlet, and a drain-pan below said trough, said drain-pan comprising water deflectors declined downwardly from opposite sides of the wringer and inlet pockets communicating with the respective water deflectors, each of said inlet pockets being adapted to register with said water outlet to receive the water flowing therefrom, and said drain pan being shiftable longitudinally of said trough to selectively locate either of said inlet pockets in registration with said water outlet.

1,398,338. LUBRICATING DEVICE FOR DRILL-PRESSES AND THE LIKE. JAMES F. MERRIMEE, Cincinnati, Ohio, assignor, by mesne assignments, to The Avey Drilling Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 6, 1919. Serial No. 302,167. 10 Claims. (Cl. 77—55.)

1. In a lubricating device for drill presses and the like, the combination with a reciprocating tool support, of a flexible pipe for delivering lubricant to the tool, a normally stationary valve casing connected to said pipe and to a source of supply, a valve in said casing, and means automatically actuated by said reciprocating support for opening and closing said valve on the working and return strokes respectively of said support, substantially as described.

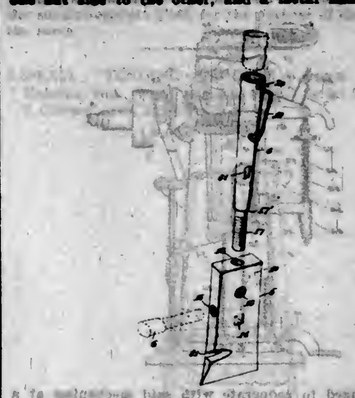
1,398,339. ART OF MAKING JAMS, JELLIES, AND MARMALADES OF FRUITS. EUDO MONTI, Turin, Italy. Filed Mar. 28, 1919. Serial No. 285,906. 4 Claims. (Cl. 99—11.)



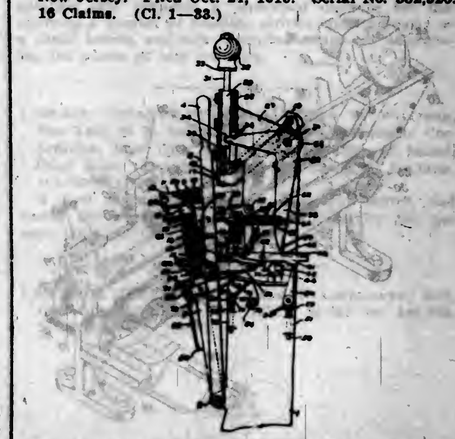
1. The process of preparing pectin which comprises exhausting fruit which contains pectin with water and concentrating the pectic solution by warming in vacuum, the temperature of the pectic solution being at all times kept below the temperature at which the flavoring and dietetic ingredients of the particular fruit treated would be altered.

1,398,340. ALARM MECHANISM. FREDERICK V. PETERS, Los Angeles, Calif. Filed Jan. 4, 1921. Serial No. 434,852. 3 Claims. (Cl. 116—91.)

1. In an alarm the combination of a base plate having an upturned arm with the end turned outward and pierced; an attaching bolt mounted in said arm; a cup shaped casing secured to said plate; an alarm clock mechanism mounted in said casing, the bell of which forms a cover for said casing and means to wind the spring; another shaft mounted in said casing, said last shaft having an operating arm that projects through a slit in the casing and a plurality of projecting pins, one of said pins being adapted to engage the oscillating member of the alarm mechanism and prevent its operation when the device is positioned and set for use, and another pin being adapted to engage the trigger lug when positioned and set for use; and a trigger adapted to hold the other parts of the device against operation as long as the door or window or transom is not moved after the device is set.



1,398,341. CHUCK. EMIL L. PFUNDER, Windsor, Conn., assignor to The J. M. Ney Company, Hartford, Conn., a Corporation of Connecticut. Filed May 19, 1919. Serial No. 298,077. 5 Claims. (Cl. 279—59.)

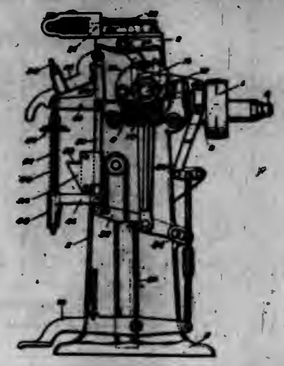


1. A chuck comprising a body having a tapering opening, a tapering spring collet located in said opening and provided with jaws, said jaws being contracted by the tapering walls of the opening when forced therein, a flanged collar movable longitudinally on the body with the flange engaging the larger end of the collet and adapted to force it into the tapering opening, a sleeve rotatably mounted on the body, means connecting the sleeve and collar so that the rotation of the sleeve will move the collar longitudinally, said sleeve and body being provided with complementary ball grooves, with an opening through the body to said grooves, balls in said grooves, and means closing said opening.

1,398,342. TRAPPER'S COMPOUND TOOL. CHESTER W. PLEASS, Sands, Mich. Filed July 16, 1920. Serial No. 396,732. 2 Claims. (Cl. 306—30.)

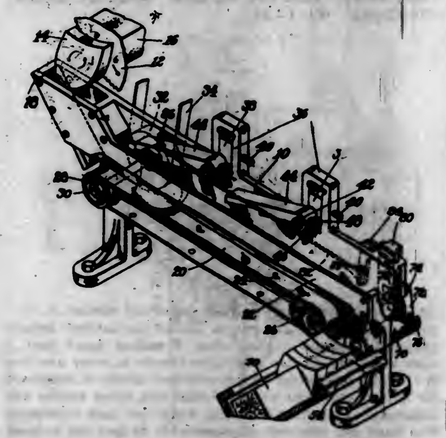
1. A tool of the character described, comprising a solid metal tool-head having one edge sharpened to form a cutting blade and provided with an axial threaded aperture in the butt end and a side threaded aperture adjacent the butt-end and extending through the tool-head from one flat side to the other, and a metal handle member having a threaded stem at one end to alternately engage in said axial and side apertures, and also formed with a socket in its other end to receive a wooden handle.

1,398,343. HEEL-BUILDING MACHINE. JOSEPH H. PORA, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 24, 1919. Serial No. 332,926. 16 Claims. (Cl. 1—33.)



1. In a heel building machine, the combination of receiving means into which a pile of lifts may be built into the form of a heel, means for securing the pile of lifts together, and means rendered effective by movement of the pile of lifts to position for treatment by the securing means to control the latter and permit its operation only when the heel conforms to a predetermined standard.

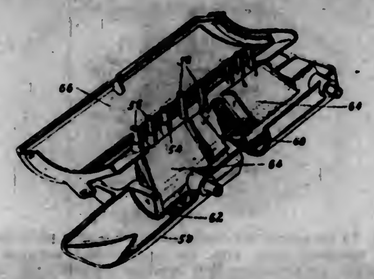
1,398,344. LAST-PULLING MACHINE. JOHN H. RICHARDSON, Melrose Highlands, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 27, 1917. Serial No. 193,599. 28 Claims. (Cl. 12—1.)



1. A machine of the class described having, in combination, shoe holding means, last holding means, mechanism

for effecting relative movement of the said holding means, including movement lengthwise of the shoe and last to separate a shoe and its last, and unyielding abutment

means arranged to coöperate with said mechanism at a determinate point in said relative separating movement to augment said relative lengthwise movement.

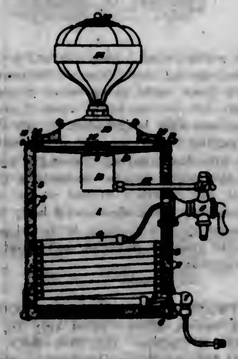


1,398,345. MACHINE FOR ARRANGING HEEL-BLANKS. RALPH C. SIMMONS, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 24, 1918. Serial No. 259,579. 15 Claims. (Cl. 12—42.)

1. The combination with a heel blank receiving trough, of means for delivering blanks in succession to the trough, a reciprocating plunger having a limited stroke arranged to engage and advance the column of blanks in the trough, and means for varying the stroke of the plunger to accommodate blanks of different thicknesses.

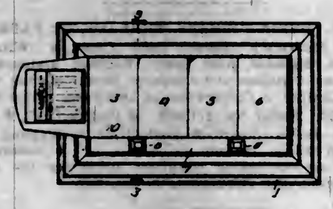
1,398,346. FASTENER-FEEDING MECHANISM. WILLIAM C. STEWART, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Jan. 23, 1919, Serial No. 272,683. Patent No. 1,364,215, dated Jan. 4, 1921. Divided and this application filed Mar. 3, 1920. Serial No. 362,960. 11 Claims. (Cl. 1—6.)

11. In mechanism of the class described, the combination with means for separating individual fasteners from a source of supply and for releasing said fasteners, of a fastener receiving tube extending downwardly from said separating means and displaceable from its operative position, and a member controlled by said tube to move



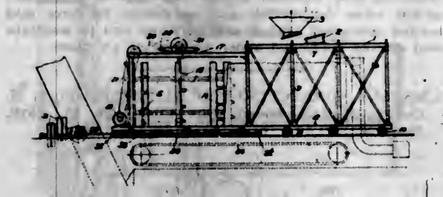
automatically in consequence of such displacement of the tube into a position beneath the point of delivery of the fasteners for intercepting fasteners released from the separating means after the tube has been displaced.

1,398,347. TWINE-HOLDER. WILLIAM J. STOTT, Worcester, Mass. Filed Oct. 22, 1920. Serial No. 418,661. 5 Claims. (Cl. 242—140.)



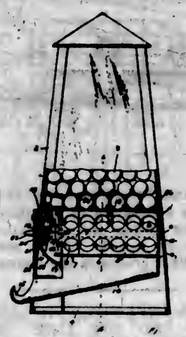
2. In a string holder, the combination of a support having two bearings, a shaft rotatably mounted in said bearings, a spool on the shaft comprising a head, and a spring on the edge of the head for holding the loose ends of the strings, said head having a notch therethrough under said spring for receiving a plurality of loose ends.

1,398,348. DISPENSING APPARATUS. ANTON WEBER, Oakland, and LEON VOORSANGER and ARTHUR SELLER, San Francisco, Calif. Filed Apr. 26, 1921. Serial No. 464,654. 8 Claims. (Cl. 225—26.)



1. A beverage cooling and dispensing apparatus comprising a cooling chamber, a removable cover therefor provided with a passage therethrough, a decanter detachably carried by the cover to extend upwardly therefrom and disposed with its discharge communicating with said cover passage, said decanter and cover removable as a unit from said chamber, a valve controlled cooling pipe within the chamber and disposed with its inner end to coöperate with said cover passage and a portion of said pipe extending exteriorly of the chamber, a threaded coupling connection between the cover passage and the inlet end of said cooling pipe, whereby on the rotation of said cover the same is capable of securing to and removal from the chamber and a valve adapted for interrupting the flow of liquid from the decanter when the cover and decanter are removed as a unit from the chamber.

1,398,349. DESK-PAD. MILTON WEINMAN, Chicago, Ill. Filed Apr. 12, 1920. Serial No. 373,203. 3 Claims. (Cl. 281—38.)



1. A desk pad comprising a base having a portion which is supported by the desk, said base being higher at one end than at the other and having an upper inclined face, a plurality of sheets of paper carried by said base and resting upon said inclined face so that one end of said sheets is lower than the other end, each sheet being divided into a series of sections upon which memoranda may be placed, a holding piece of rigid material on the top of said sheets and at one edge thereof and covering a small portion of said sheets, said holding piece removably holding the edges of said plurality of sheets of paper in position on said base, the material of the said sections being perforated substantially in alinement with the edge of said holding piece so that the sections may be separately and independently removed while the holding piece is in position, an extension connected with said base and in alinement with said sheets, said extension carrying a sectional calendar, the sections of said sheets of paper being removable independent of said calendar.

1,398,350. APPARATUS FOR USE IN THE MANUFACTURE OF SUPERPHOSPHATE. FREDERICK WILLIAM ROGERS WILLIAMS, London, England. Filed Feb. 4, 1919. Serial No. 274,924. 3 Claims. (Cl. 83—6.)

1. Apparatus for use in the manufacture and disintegration of superphosphate comprising a stationary bed for the reception of the block of superphosphate, a reservoir mounted upon a truck-like frame and adapted to reside above said stationary bed and inclose said block of superphosphate and also for movement above said block, a rotating cutter carried by said truck-like frame exterior to the reservoir whereby the movement of said frame effects removal of the reservoir from above the stationary bed and corresponding movement of the cutter toward the superphosphate block for the purpose of disintegrating the same.

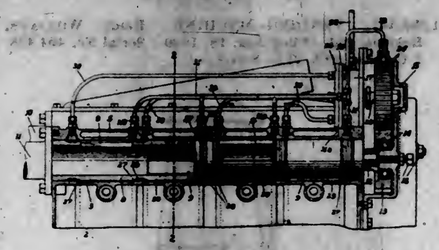
1,398,351. VENDING-MACHINE. BRICE WILLIAMS, Kokomo, Ind. Filed Aug. 18, 1920. Serial No. 404,428. 2 Claims. (Cl. 211—8.)

2. In a vending machine a cylinder having series of openings therein for the reception of vendible articles, an additional cylinder having a plurality of openings arranged singly therein, independently operable means for rotating said cylinders a prescribed distance for discharging a number of vendible articles simultaneously or a single article, and coin controlled means for determining the release of said cylinders.

1,398,352. PEANUT-BUTTER. WALTER W. WILLISON, New York, N. Y., assignor to Thermokept Products Corporation, New York, N. Y., a Corporation of Maine. Filed Sept. 15, 1919. Serial No. 323,868. 1 Claim. (Cl. 99—11.)

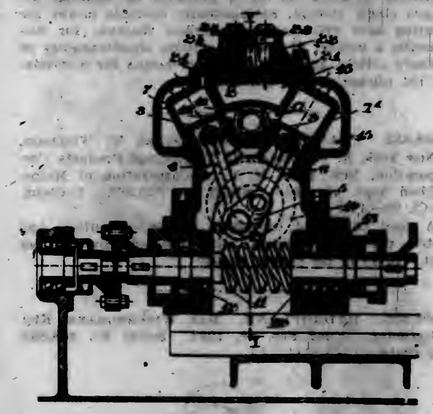
A food compound consisting of peanut butter, and water, the water content being substantially ten per cent. (10%) of the peanut butter.

1,398,353. HYDROPLANE. MAX WINCKELMANN, Kiel, Germany. Filed Feb. 28, 1921. Serial No. 448,655. 2 Claims. (Cl. 244—2.)



1. In a hydroplane, a decked boat-shaped buoyant body, supporting planes at the sides of the body and at (or near) the height of its deck, propellers with shafts at the sides of the said body, and members adapted to hold the said propeller shafts at the height of the deck of the body during the flight of the hydroplane and to hold the shafts in a raised position when the hydroplane alights or rises from the water.

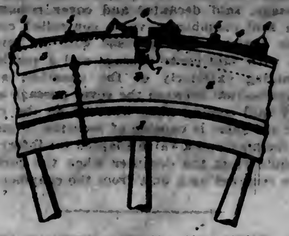
1,398,354. INTERNAL-COMBUSTION ENGINE. HENRY WRIGHT, Fresno, Calif. Filed Oct. 28, 1919. Serial No. 332,719. 9 Claims. (Cl. 123—59.)



1. In an internal combustion engine, in combination with a cylinder thereof, a cylindrical casing connected

with the cylinder and opening therefrom, a valve sleeve rotatably mounted in the casing and having a port adapted to communicate with the cylinder opening at some period in its rotation, a peripheral oil groove in the sleeve beyond each end of the port, a longitudinal

groove in the casing connecting the peripheral grooves, means whereby a circulation of oil through the grooves may be had, and means for automatically cutting off the flow during the passage of the port in the sleeve over the longitudinal groove in the casing.

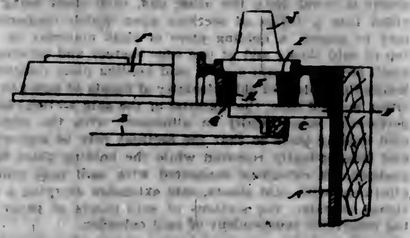


1,398,355. COMPRESSED-AIR MECHANISM FOR MOTOR-CARS AND THE LIKE. MARIUS ADNOT, Caluire, France, assignor to Société Lyonnaise d'Industrie Mecanique, a Societe anonyme of France. Filed May 2, 1921. Serial No. 466,144. 1 Claim. (Cl. 230—24.)

Air compressing mechanism for motor cars and the like comprising inclined air compressing cylinders, pistons in said cylinders, connecting rods connecting said pistons to said crank shaft, a worm wheel on said crank-shaft, a worm gearing with said worm wheel, an elastic joint coupling said worm to the motor shaft, a chamber in communication with said cylinders, a piston valve movable in said chamber, a spring acting on said piston valve which obturates the air admission ports of said cylinders when the pressure of the compressed air attains a determined value and valves regulating the delivery of the compressed air.

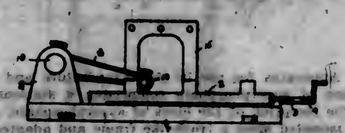
1,398,356. ANTISKID DEVICE. STEVEN BEKER, Unionville, Mich., assignor of one-half to Charles B. Rathbid, Unionville, Mich. Filed July 22, 1920. Serial No. 398,189. 1 Claim. (Cl. 152—16.)

A tire protecting armor comprising a series of hingedly connected links adapted to surround the tire, each link having a rectangular opening in the tread portion thereof, a central transverse rib extending between the side walls



of the opening and spur blocks carried by the tread links and adjacent each end of the opening.

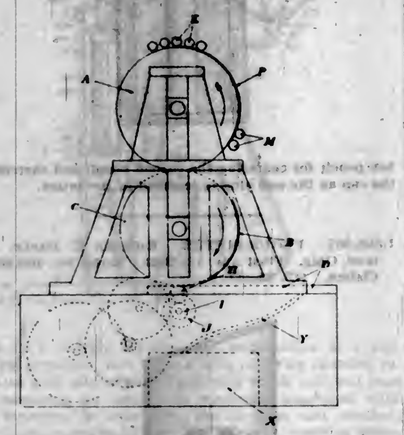
1,398,357. DYEING FIBERS, THREADS, OR FABRICS. JOHN FAIRWEATHER BRIGGS and CHARLES WILFRED PALMER, Spondon, near Derby, England, assignors to American Cellulose and Chemical Manufacturing Company Limited, a Corporation of Delaware. Filed Sept. 21, 1920. Serial No. 411,805. 6 Claims. (Cl. 8—5.)



1. The herein described method of facilitating the dyeing of fibers, threads or fabrics of or containing cellulose acetate, which comprises subjecting the same to the action of a thiocyanate in solution.

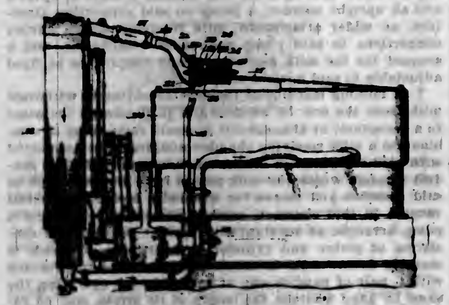
1,398,358. BATTERY-COVER. GLENN J. BUNDY, Detroit, Mich., assignor to Detroit Battery Company, Detroit, Mich., a Corporation of Michigan. Filed June 29, 1918. Serial No. 242,561. 2 Claims. (Cl. 204—29.)

1. The combination with a battery plate and a terminal connection therefor, of a cover having an apertured capped portion through which said terminal passes, a resilient gasket surrounding said terminal within said cup, a sealing compound in said cup above said gasket and a petticoat above said sealing compound and surrounding said terminal within said cup, said resilient gasket being contractible and expansible to force said sealing compound against said petticoat and to maintain said sealing compound under pressure at all times.



1,398,359. CONNECTING-ROD ALINER. SAMUEL M. CAMPBELL, Rock Island, Ill. Filed Apr. 21, 1919. Serial No. 291,707. 5 Claims. (Cl. 33—180.)

4. A device of the class described, comprising a plate provided on its upper face with a piston supporting



device; a piston measuring device mounted at one side of said piston supporting device; and means for supporting the connecting rod of a piston on a line parallel with the plane of said measuring device.

1,398,360. PRINTING-MACHINE. VICTOR EUGENE LOUIS CHAUVETTE, Paris, France. Filed July 1, 1920. Serial No. 393,354. 4 Claims. (Cl. 101—130.)

1. A printing machine comprising a rotary printing cylinder, a transfer cylinder, said cylinders running constantly and at the same speed, and being mounted respectively in a fixed position with regard to each other, a reciprocating bed, means for rotating the cylinders, means for reciprocating the bed, a printing surface secured on the printing cylinder and extending over one third of the circumference of the cylinder and an ink table constituted by the remaining two thirds of said circumference and adapted to engage inking rollers suitably disposed.

1,398,361. HYDROCARBON-MOTOR. HAROLD D. CHURCH, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 8, 1917. Serial No. 185,218. 3 Claims. (Cl. 123—178.)

1. A hydrocarbon motor having an aperture in its top opening from the water jacket, a housing secured over said aperture with its interior in communication with said water jacket through said aperture and having a discharge passage to the radiator and a passage leading to the return from the radiator, and a thermostatic valve within said housing controlling said passages.

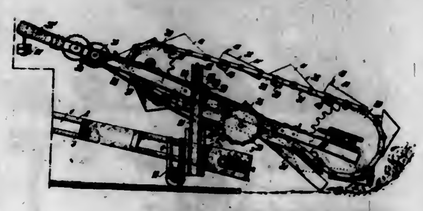
1,398,362. DETONATING ALARM. WILLIAM H. COOK, Toledo, Ohio. Filed Jan. 6, 1921. Serial No. 435,362. 11 Claims. (Cl. 116—83.)

1. A detonating alarm embodying a holder for a detonator, a mounting for the holder including a flat spring, a base for the mounting including an impact receiver against which the holder may throw a detonator, and a trigger carried from the base to engage and hold the holder against spring action, said holder being carried and anchored by the flat spring against movement other than directly to strike the impact receiver when released by the trigger.

1,398,363. HAND-STAMP. WILL T. CASSELLS, Cincinnati, Ohio. Filed Sept. 19, 1921. Serial No. 501,629. 3 Claims. (Cl. 101—111.)

2. In a device of the character described, a series of rolls and means for supporting same, a tension means, a series of endless rubber bands passing over said rolls and said tension means, a handle, means connected to the supporting means for the rolls and said handle, whereby by the turning of the handle the said tension means are increased or diminished.

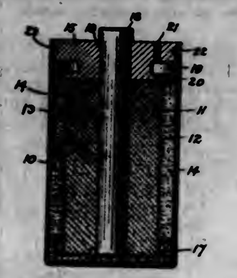
1,398,364. SAMPLE-DISPLAY DEVICE. JACOB DAVIDSON, New York, N. Y. Filed May 14, 1920. Serial No. 381,263. 3 Claims. (Cl. 211—34.)



1. A display device comprising a pair of sections of stiff material made from a single length of such material and being folded over into substantially parallel relation to

receive flatly therein a portion of a merchantable article being displayed, another portion of such article adapted to

lie exteriorly of the sections and in a flat condition against the outer face of one of said sections.



1,398,365. MATERIAL-LOADING MACHINE. ARTHUR C. DENNIS, Seattle, Wash. Filed Apr. 7, 1920. Serial No. 372,040. 21 Claims. (Cl. 37—24.)

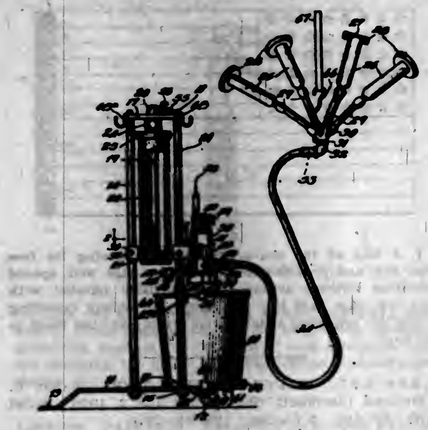
1. In a machine of the character described, the combination with a boom suspended intermediate its ends to permit universal movement about the point of suspension, and having a traveling excavating element; of a material receiving member located beneath the boom and over which the excavating element is ascendable.

1,398,366. DRY CELL. HAROLD DE OLANETA, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed Sept. 2, 1919. Serial No. 321,068. 31 Claims. (Cl. 204—29.)

1. A dry cell of the Leclanché type comprising a sheet metal cup, a cartridge therein of less height than the cup having an upwardly projecting carbon pencil as a part thereof, a body of paste interposed between the side surface of the cartridge and the side wall of the cup and extending approximately to the level of the upper cartridge surface, and a preformed end plug of suitable insulating material snugly fitted within the mouth portion of the cup and having an opening whereby it is fitted over the car-

bon pencil for centering the carbon pencil and cartridge in the cup as the end plug is inserted in the latter.

1,398,367. FLOUR-SIFTER. RICHARD T. EARLE, Portland, Oreg. Filed Apr. 13, 1921. Serial No. 460,867. 5 Claims. (Cl. 83—60.)



1. A flour sifter comprising a cup, a foraminous bottom in said cup, a helical coil spring extending across said bottom, and means for alternately flexing and releasing said spring.

1,398,368. MILKING-MACHINE. CHARLES ENDORF, Jr., Chicago, Ill., assignor to The Burton Page Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1918. Serial No. 249,790. 14 Claims. (Cl. 31—98.)

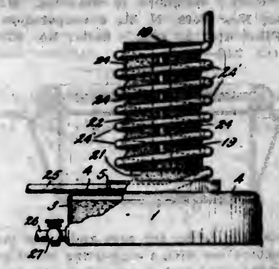
1. In a milking machine, the combination of a supporting structure having a base to sustain a milk receptacle and an upright member, a pump on said supporting structure, an udder attachment, milk receiving means having connections to said pump and udder attachment, and a support for the milk receiving means adapted to be fixed adjustably to said upright member.

7. A milking machine of the type operating to withdraw milk from the cow by suction and to discharge the same to a receptacle at atmospheric pressure comprising in combination a milk receiving chamber adapted to be associated with said receptacle, a cluster of teat cups, a flexible conduit through which the milk passes from the teat cups to said chamber and means for gradually creating a partial vacuum in said chamber, conduit and cups, comprising a pump arranged in substantially upright position and consisting of piston and cylinder members one of which is movable downwardly to create a suction and is provided with a pair of handles one at each side for operating the same by hand whereby the length of its stroke may be varied by the operator to vary the intensity of each suction impulse applied to the cow's udder.

9. In a milking machine, the combination of teat cups, a milk receiving chamber with which the teat cups are connected, a hand operated exhaust pump of variable stroke for exhausting the air from said chamber, and a pressure gage to indicate the condition of pressure in the milk receiving chamber while the pump is being operated.

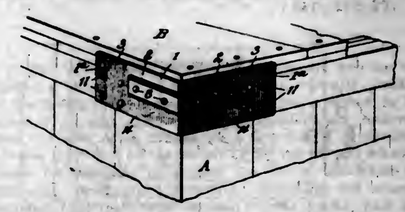
13. In a milking machine, the combination of a supporting structure, teat cups, a milk receiving chamber associated with said structure and with which said teat cups are connected, an exhausting apparatus associated with said structure for exhausting the air from said chamber, and clamping means for clamping the milk receiving chamber to said structure so that it may be readily removed therefrom.

14. In a milking machine, the combination of an udder attachment, an exhausting apparatus adapted to produce intermittent suction impulses, a milk receiving chamber connected with said exhausting apparatus and udder attachment from which and the udder attachment substantially all of the milk is discharged automatically between each suction impulse of the exhausting apparatus, said exhausting apparatus comprising piston and cylinder elements, one of which is stationary and the other of which has a relatively long stroke and is capable of movement by the operator of the machine for variable distances and at variable speeds, for the purpose specified.



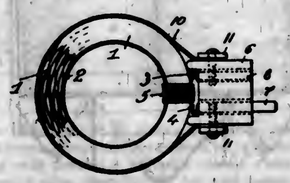
1,398,369. DOOR-LOCK. GEORGE ERNE, Kreuzlingen, Switzerland. Filed Apr. 29, 1920. Serial No. 377,651. 2 Claims. (Cl. 70—29.)

2. A door lock comprising a bolt, independently operable handles for operating said bolts, separate alined spindles connected with said handles, a spur lever connected with each spindle at its inner end for independently retracting said bolt, and a key-operated blocking device for the door bolt.



1,398,370. LIQUID-FUEL VAPORIZER. GEORGE P. EUSTIS, Washington, D. C. Filed Nov. 9, 1920. Serial No. 422,897. 14 Claims. (Cl. 158—97.)

1. A method of burning alcohol without a visible flame which consists in causing the alcohol to be absorbed by a stove comprising a porous and mineral body, supplying oxygen thereto, igniting the body and maintaining a flame until the same is at a red glow, shutting off the

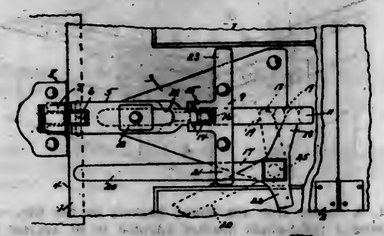


supply of oxygen until the flame is extinguished, then admitting oxygen in sufficient quantities only to maintain the stove at a red glow and without a visible flame.

1,398,371. CORNER-IRONS FOR BASKETS, BOXES, &c. FREDERICK W. GOEDEKE, Evansville, Ind. Filed Mar. 31, 1921. Serial No. 457,401. 4 Claims. (Cl. 217—69.)

1. A corner iron for boxes, baskets or the like, comprising a right-angle bracket adapted to fit against and be secured to the outside of the corner of the box and having longitudinally-disposed channels on the inner faces of the arms of the angle-bracket formed by pressing out the metal thereof, said channels joining at the angle of the bracket, and forming an embossed housing, and a horizontally-disposed plate adapted to bridge across the space between the arms of the bracket at the inside thereof, said plate being adapted to bear against the top or the bottom edge of the corner of the box or basket, and having at its outer edges perpendicular flanges adapted to fit and be secured within the channels and to be housed therein to permit the arms of the bracket to be flat against the box.

1,398,372. COIL-MOUNTING. ROBERT F. GOWEN, New York, N. Y., assignor to De Forest Radio Telephone and Telegraph Company, New York, N. Y., a Corporation of Delaware. Filed July 23, 1920. Serial No. 398,521. 13 Claims. (Cl. 175—362.)



1. The combination with a wire coil having wire terminals, of a block of insulating material having electrical terminals therein connected to said wire terminals, and a strap extending around the outer surface of said coil, and secured at its ends to said block.

1,398,373. RETAINING DEVICE FOR GAGE-CASES. Carl E. Chaseman, Fairfield, and Herbert B. Chesman, Stratford, Conn., assignors to Manning, Maxwell & Moore, Inc., New York, N. Y., a Corporation of New Jersey. Filed Apr. 2, 1920. Serial No. 370,752. 5 Claims. (Cl. 248—28.)
